Your cost would be predicated on your income—nothing else—and at first you would not be getting any service. While the Government is tooling up, you would be paying and the percentage would go on up as the dream unfolds. According to Mr. Rodney Crowther, of the Baltimore Sun, the total cost of the medical and hospital insurance program alone would run about $6,000,000,000 a year from the start, with the General Treasuary contributing about $1,500,000,000. The medical education, grants for hospital construction, and other features of the health program would cost, he estimates, $1,000,000,000 to $2,000,000,000 the first year, and in a few years about $3,000,000,000 annually. Ultimately, the entire health program would cost between $10,000,000,000 and $13,000,000,000 a year.

As a beneficiary of all this, if ill, one would probably be herded into a group of patients, many of them with trifling or imaginary ailments, but determined to have maximum attention.

If you needed a specialist, under the plan you could have the one of your choice in theory, but you would first have to get some official to approve your case. After all the red tape, you might or might not get the specialist you want. Obviously, everybody could not get to the No. 1 expert.

An English doctor told me recently that the worst feature of the British scheme is that hypochondriacs—people with imagined ills—have so crowded institutions demanding treatment that the really sick are lost in the shuffle. Conscientious doctors often are harassed to the point of becoming nervous wrecks.

Insistent demands for attention by the multitude would play havoc with research. Small-time ward leaders would have a grand opportunity for fixing it so the faithful could get to see "Doctor Blank."

Government doctors would tend to become cogs in a machine. Their assignments and careers would be dependent on currying favor with, and gracefully accepting instructions from the higher-ups. Red tape and filling out, in triplicate, quantities of forms would consume countless hours. Bureaucrats would tell the medical practitioner, the surgeon, dentist, laboratory technician, and registered nurse where, when, and how to practice. Blind obedience would be rewarded; initiative and development of new techniques frowned upon.

Anyone who has had contacts with Army or Navy Medical Departments in time of war has seen cases where great surgeons were busy treating malaria and obstetricians or brain specialists caring for blistered feet. He has known of cases where outstanding experts were compelled to use methods or treatments with which they were not in accord because some less skilled officer with higher rank told them what they must and must not do.

In war, such situations can hardly be avoided, but, under normal conditions, they would be well-nigh intolerable.

Under the American system of free enterprise, we have made astonishing progress in combating disease and increasing the average span of human life. As we have been the most successful, how foolish we would be to discard our way for the schemes of nations that have lagged behind.

Our physicians, surgeons, dentists and nurses are giving the citizens of the United States the best service that any country in the world has ever had. Our practitioners devote long hours to charity work. Their ethics, self-sacrifice, and devotion to duty are a great American tradition. Our people receive needed medical care, whether or not they are able to pay. The old family doctor is one of the finest heroes of American life. Why do we need to change so much to make a few needed improvements?

The best available estimate is that not more than 20 percent of the population to any appreciable degree is handicapped in obtaining adequate medical service, either because of lack of means or because of where they live. This minority should receive a helping hand, but it should not be done at the cost of freedom. We will never be able to keep a full-scale hospital at the elbow of every desert-wanderer or lonely lighthouse keeper. We can never entirely destroy the advantages of thrift and of having money in the pocket.

Of course. the advocates of socialization will not be satisfied to halt with the field of medicine, if they conquer it. Lawyers, educators, engineers, all professions had best prepare for similar attacks.

Mr. Speaker, let us not deceive ourselves. We are approaching another fork in the road. If we again take a turn to the left we may never be able to find our way back to the straight and narrow path of self-reliance and unlimited horizons. The sweet, sugar-coated pill which we are being offered is also a pink pill—pink like a fellow traveler. An overwhelming majority of the medical profession warn us against it. We better do what the doctor orders and refuse the pink pill. If we don't, Uncle Sam may be sicker than we think.

An Open Letter to the Secretary of Agriculture

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. GOODWIN. Mr. Speaker, some of us from New England feel strongly the financial risks in some of the implications in the recent proposal of the Secretary of Agriculture to replace our present system of support prices with a new experimental system of direct subsidies. In connection with a search for some less expensive plan for easing the strain of high cost of living, I invite further public consideration of what appears to be a very simple and practical idea suggested in an open letter sent to the Secretary of Agriculture last November by Leavitt C. Parsons, publisher of Northeastern Poultryman, a farm paper published in Boston, Mass. The letter follows:

BOSTON, MASS., *November 6, 1948.*
Hon. CHARLES F. BRANNAN,
Secretary of Agriculture,
Washington, D. C.:

I am very sorry I did not have more time to talk with you in Atlantic City a week or so ago, because I am most anxious to get your serious comments on a project I have been studying which, if acted upon promptly and courageously, would help to ease some of our present problems by immediately reducing the cost of living. I feel that a large part of the huge stock of agricultural products that the Government has had to take over in the parity price-support program in order to secure maximum production can now be advantageously used to cut the cost of living through distribution in kind for the benefit of the taxpayers and consumers whose money made the purchase possible. I think this could be applied by you at once to reduce prices at the consumer levels for bread and flour and for milk, poultry, and eggs. Cotton clothing, edible oils, and oilseed end products, like paints, may also be similarly benefited later, but I'm writing you particularly about the treatment of basic foods. In other words, I want your opinion on the feasibility of a suggestion to avoid the hurtful criticism of the agricultural support plan as solely a

subsidy benefiting only one special group. I believe there lies in the continued purchase of high-priced surplus a risk of consumer hostility toward the farmers, and I would like to see an expansion of the original plan to serve as a subsidy for the benefit of all our citizens without losing the present price and profit incentives which insure a strong nation through an abundance of crops and the farmers' freedom from want.

Last year, according to the Department of Commerce, individual incomes in the United States reached a peak of $190,000,000,000 and the first 6 months in 1948 are reported to have been even greater than that rate. The Department estimates that about 69 percent of the net consumers' income is spent in retail stores compared with only 60 percent before the war. They say food stores and women's wear stores get the most of this increase. Further figures indicate that at present 31 cents of the consumer's dollar goes for food against 24 cents before the war. Under the present system of support prices the grain buying agricultural groups get no cash benefit from the huge grain crops we are now raising because the price that they are forced to pay is set arbitrarily by the present antiquated parity formula. Since bread and dairy products and poultry products represent the largest cash outlay in the average household budget, the consumers can expect no relief from these supported prices unless something is done by Washington to relieve the pressure.

The present high purchase prices of grain result also in a squeeze being worked on dairy farmers and poultrymen as well as on those who buy feed for fattening livestock. It is the farmers' reaction to this squeeze that explains the present national shortage of animal units which have dropped from 170,000,000 to 152,000,000 on the farms. Many feel that your Department is not without some responsibility for this situation, because these animal units constitute the protein food reserves of this Nation and their producers need the encouragement of a protective marginal profit. This has been denied them by the operation of the present parity formula that prevents their buying lower cost feed as should now be possible.

I would also like to point out that, as I see it, the financial burden for providing money to support the present huge cereal crops was not covered in the present 1948–49 budget, large as it was. It looks as if this would constitute a further direct claim on the taxpayers in an already excessively tax-ridden economy. This tax burden is in addition to a continued high price for bread, milk, and eggs which cannot go down materially in the face of the $2 support price for wheat and a proportionately abnormal support level for other cereals and oil-bearing seeds which now enjoy a legal claim on the Government for loan or for purchase; in other words, although we have a total cereal crop of 6,500,000,000 bushels the cost of living expressed in terms of the workman's necessities of life must continue high. Our high support price, although stimulating even greater farm production, must also continue to stimulate new wage-price spirals in labor relations.

I think the American people are completely unaware of the additional tax burden they now face as a result of the bounty of nature. It is not unlikely that a half year's cost of the Marshall plan may be exceeded by the new and unbudgeted cash requirements of the Commodity Credit Corporation in meeting its immediate legal obligation to provide funds for purchase and for loans on the 1948 surplus crops. Unhappily, the President's budget of last January made no adequate provision for this extensive financing. In the part devoted to the CCC (pp. 1149–1176), the prospective operations of that Government agency were expected to show a net income to the group of $37,894,300. The President explained that he expected loan repayments and foreign purchases to offset expenditures for procurement. However, all this has now changed, and definitely for the worse. It is now apparent that the parity support-price program may need in excess of $2,500,000,000 to meet the current obligations of this fiscal year.

Now, I'm not advocating that the parity-support price covering cereals should be abandoned. In the present world picture any grain surplus is a factor of national economic strength. I do feel, however, that the American people, as taxpayers and as consumers, should not continue to be doubly penalized by the Government's obligation to buy crops with their money and without personal benefit to them. They now suffer direct taxes to provide for the purchase and, in addition, pay indirect taxes in the higher cost of living brought about by the present support-price level on basic food commodities.

This second penalty also applies unfairly to all those farmers that buy grain and, according to your Department, figures of August 15 explains the different course of market trend in two types of farm products during the past year. I feel this whole situation can be cured and prices reduced nationally by direct action from your Department. This can be accomplished by two simple steps.

First, set aside from the assortment of purchased and pledged farm crops controlled by Commodity Credit Corporation a reasonable amount for Europe, measuring such amount so as to reflect truly minimum European needs and not to create a padded vehicle for the disposition of a possibly politically embarrassing grain surplus. Second, compute the relationship of the remaining amount of crops taken over by loan or purchase to the total domestic supply as indicated by the production and carry-over of any commodity. Then give American citizens whose taxes made these purchases possible the benefits of American farm abundance by using this surplus directly to reduce the domestic cost of bread and milk and egg production. It is my personal opinion that in the absence of any sudden war the cash cost of the so-called surplus agricultural products that will be taken over by the Government from American farmers during the current budgetary year will almost equal the value of entire American farm production in some prewar years. Unless some such step is taken there is no relief in sight for the taxpayer and no immediate HCL benefit to American labor, no matter how much the farmer produces and how great the glut.

The extent of the demand on the Treasury in excess of the budgetary estimates will run from two and a half to three billion dollars and may even exceed that amount. Potatoes will call for nearly $100,000,000. Your Department has announced the purchase of flaxseed to September 22 at a cost of $102,000,000 not provided in the budget. Soybean purchases at the present rate of decline in the crop that runs 50 percent greater than the 10-year average may cost from 100 to 150 million dollars more. Official announcements indicate that to October 30 over $200,000,000 have been paid out for purchase and loans for wheat involving 100,000,000 bushels. If the purchase at present rates, totals three or four hundred million bushels above what is shipped to Europe the Treasury must provide an extra six or eight hundred million dollars against a budget estimate of $2,000,000 income from wheat operations. Government purchases of corn may exceed 600,000,000 bushels or about one-sixth of the crop. Since Europe doesn't like much corn, this involves a further investment by the CCC of between eight or nine hundred million dollars.

Although the oat crop equals the wheat crop in bushels, the price ranges only one-third of wheat. However, oats have been selling below the Government-support price and substantial further aid will be called for. The budget allows only one million for loans on oats which it optimistically expected to be wiped out by repayments.

Although I have accumulated much supplemental data, I need not encumber this letter with added discussion of peanuts, barley, rice, and other feed and foodstuffs, since your own information is always more currently accurate than any that I might secure. However, I have reviewed these to indicate that the average taxpayers who are also the average consumers that make our great domestic markets are in large part unaware that they are all contributing directly and indirectly funds for such immense Government farm financing while most of the benefits accrue to only one particular group.

The same arguments that here apply to food could also be applied to other crops. In cotton this year I understand the Government will very likely have to take over at a high support level over 6,000,000 bales of a crop that totals only a little over twice that amount and the same tragic investment with one-sided benefits holds for many other less important commodities.

If our Government allows this situation to continue with its unfair burden on our people, particularly on American labor, I feel those who are in a position to cure it and who don't act, are responsible for any penalties that may befall our national economy. New legislation does not appear necessary, nor need we wait until 1950 for the operation of the new farm bill. The present legal rights and obligations of both farmer and your Department are clearly and definitely established. Some fair means of relief can be brought about by your courageous decision to make available immediately the benefit of all these Government purchases to the American people who are all consumers of bread, milk, and eggs. In its simplest form, this means you will deal directly with only three groups of people. I feel that you already enjoy the power to exercise the same kind of freedom in the disposition of commodities taken over to protect the farmer as the law has given you in the free choice of the crops to which the Commodity Credit Corporation can extend its aid in the form of loans and purchases. The three groups most important in their contribution to cutting the high cost of living through such cooperation would be: 1. The flour mills. 2. The feed mills, and 3. the holders of future contracts.

In the first group, your properly qualified representative could negotiate a trade along the following lines: Tell the millers that after making adequate provision to hold back grain for Marshall plan requirements and a safe margin for carry-over, you would then use the balance for distribution to the American people. Acting upon the same authority that permits the free distribution of food for school lunches and the sale of potatoes at a fraction of their cost, sell these millers for $1 and other considerations all surplus wheat. If this amounted to 20 percent of the total crop, give them 20 percent of their 1948 purchases, understanding, however, in consideration of this bonus they must reduce the trade price of their end product by an amount proportionate to the savings secured through accepting CCC grain. The net result would be to move flour into the channels of trade at a lower price per barrel, and thus through bakeries and retail grocers to cut the cost of bread.

In the case of feed mills, it may be more complicated because of the greater variety of products but the principle is the same. You could offer them the CCC excess Government-controlled corn and wheat and soy and flaxseed, and any other feed supplements understanding that they in turn would pass along to the dairymen and poultrymen and livestock feeders their end product at a proportionately lower price. Thus through cutting

the cost of producing milk and eggs and meat, competition in a free economy would expand production and bring down consumers' living costs.

As to the dealers in future contracts, I'm concerned about them only because they are a necessary part of the machinery of hedging through which big processors avoid speculating in their inventory and confine their profits to their special operations. Sellers are not concerned with this proposal, but buyers of grain contracts who in good faith intend to take a bona fide delivery should be entitled to receive from the Government the same proportionate distribution at their point of delivery as would any of the millers dealing in spot-delivery contracts.

Summarizing this operation, certain obvious and desirable objectives are immediately achieved.

1. The Government is able to cut the cost of living at once, for all these price adjustments would react marketwise immediately.

2. The positive downward trend in the cost of living would definitely end the wage-price inflationary spiral which has also contributed to high prices.

3. This feed cost reduction would renew enough individual profit incentive to make possible a quicker reestablishment of our shamefully short national animal protein reserve.

4. This would not cancel out or weaken the present parity support price system as applied to field crops, but would bring about a lower cash-out cost of living for farm producers which would tend to bring down the parity formula averages against which present excessive prices are computed.

5. It would mean a saving to the American people of from twelve to twenty billion dollars a year, representing the mark-down in terms of new consumer prices brought about by the lower cost adjustment at the point of production.

6. Such clear-cut decisive action is called for in the present crisis which may grow progressively worse. This plan gives to the American people an example of the kind of dramatic and courageous leadership they like to expect and to which they are entitled.

7. Finally, such a plan which obviously encourages the reestablishment of herds and flocks without penalizing the grain growers means also the expansion of our grasslands and thus the building of a new defensive resource against the risk of infertile desert wastes that mark historically the economic decadence of Babylon and China.

I hope you will give this proposal serious consideration.

Sincerely yours,

LEAVITT C. PARSONS,
Publisher, Northeastern Poultryman.

Post Office Workers, Long Imposed On, Should Be Heard

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

POST OFFICE WORKERS, LONG IMPOSED ON, SHOULD BE HEARD

For a long time now the postal employees have patiently hoped that the Government for which they work would make it possible for them to enjoy a higher standard of living, a standard becoming to those in their country's employ. Their hopes have not been realized and once more it seems as if their very natural and justified aspirations are to be completely ignored.

House and Senate bills, with bipartisan sponsorship, would give them aid, but nothing whatever is being done about these bills. Apparently it is the intention of those who do not want the living conditions of postal workers and their families improved, to do nothing, for no hearings on the bills have been scheduled.

These conscientious workers have enjoyed few improvements in their living standards in recent years. The pay of others has jumped, but theirs shows no such agility. And what they ask is really very little, coming from employees who have had so little before this. In addition to an increase in pay, they want veteran employees to be given credit toward promotion for the time they spent in the armed forces. That is, they do not want veterans to suffer for having fought. They ask for 26 days of vacation and 15 days sick leave, which is what all other Federal civil-service workers have been given. A few other small, reasonable and logical improvements in compensation are included in their legislative program.

And nothing at all is being done about the bills that would bring them relief. This is an old and manifest injustice. There should be hearings at once. The public as a whole should know under what handicaps the postal employees live and work. They are deserving workers. They must be heard.

Labor-Management Bill

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. PHILBIN. Mr. Speaker, there are few questions presently confronting the Nation more vital than the preservation of industrial peace. If this House can enact a labor measure which will in effect accomplish that end, it will have performed a genuine public service.

When the Taft-Hartley bill was originally pending before the House, I spoke and voted in opposition to it. I subsequently voted to uphold the Presidential veto of that measure. At the time I pointed out, in substance, the various objections to such sweeping and unprecedented legislation restrictive of labor organizations and particularly hampering free collective bargaining. I expressed the fear that punitive laws, directed against a class, were inconsistent with American principles and would cause suspicion, distrust, and ill-will between labor and management and lead to further strife, dissatisfaction, strikes, and other undesirable unsettled social and economic conditions. I also expressed my fears of retaliatory effects.

Clearly my fears and apprehensions have been abundantly fulfilled. Strikes may not have increased in numbers; indeed the contrary is true. But just as I had feared, a spirit of hostility and antagonism has developed among the laboring people who believed, and still believe, that the act was designed to crush or impair labor organizations and imperil their freedom of action in the economic sphere which Americans prize so highly.

Current legislative confusion concerning the shape of labor legislation has not served to alleviate the deep and keenly felt resentment of working people and their leaders that the Congress is endeavoring to regiment and place in a strait-jacket all those who insist upon the rights of recognition, representation, and collective bargaining for labor groups.

There is no question presented here concerning public-welfare strikes because whatever the final shape of this legislation ample power will reside in officials of this Government to protect the Nation against irresponsible and harmful interference with the rights and interests of the American public. The same is true of economic boycotts and jurisdictional strikes and the infiltration of Communists and subversive forces into the field of labor-management relations. Adequate controls are also provided against abuses and excesses which threaten industrial stability. Financial accountability is assured; the rights of individual workers secured as well as the legitimate rights of management. That is as it should be.

I gravely and sincerely question the punitive approach to the solution of these great social and economic questions. Let us stand by the Constitution, by the basic principles of free enterprise for capital and labor, working together, which have enabled this Nation to grow and develop into the greatest instrument ever known in history for conserving the rights of the individual and promoting the common good and the happiness of people. No sound progress can be based in this free country upon laws which the average working man and woman believe to be aimed at the continuity of the representative organizations they have established, as a vital force for protecting their wage and social standards and safeguarding them against hardship, discrimination, and exploitation.

Let us make collective bargaining work effectively, not only in the interest of the working people but also in the interests of the employers and the broader interests of the Nation.

A united America, a strong, integrated, harmonious America, is one of the great needs of the hour. Let us banish bitterness and strife among the classes. Let us have industrial peace and world peace, peace at home and abroad, peace and harmony among labor and management and every other group of the American people. I must oppose the measure presented by the distinguished gentleman from Georgia.

Wear Honor Rosettes—Rodino and House Leader Only "Knights" in Congress

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following

article that appeared in the Newark Star-Ledger, Sunday, April 3, 1949:

WEAR HONOR ROSETTES—RODINO AND HOUSE LEADER ONLY "KNIGHTS" IN CONGRESS

WASHINGTON.—Knighthood is in flower in the Halls of Congress. And you'd never know it unless you knew the meaning of the inconspicuous rosettes in the coat lapels of Representatives PETER W. RODINO, JR., of Newark, N. J., and JOHN W. MCCORMACK, of Massachusetts, House majority leader.

The rosettes, with white crosses on a black field, entitle MCCORMACK and RODINO to be referred to as "sir," "knight," or "excellency."

"Sir" PETER and "Sir" JOHN wear the rosettes because they are members of the Knights of Malta, Italy's greatest decoration for men who have distinguished themselves as benefactors of humanity.

The only two "knights" in Congress, RODINO was decorated in 1945 and MCCORMACK won his award last year. Neither knew of the other's decoration until January 3, when RODINO, a freshman Democratic Congressman, walked up to introduce himself to the House leader. The handclasp between the two men was more than an introduction; it was an understanding of each other that words cannot describe.

RODINO was knighted by Prince Chigi, grand master of the Sovereign Military Order of Malta, for work in helping Italians during World War II. The Congressman was one of the first professional men in Newark to enlist for service after the Jap attack on Pearl Harbor. He also was one of the first to go overseas as a member of the First Armored Division.

AT ANZIO BEACH

He took part in the African invasion and was among the United States soldiers who hit the beach at Anzio. What he saw there he'll never forget, particularly the picture of young boys and girls and old men and women who wanted no part of war but were victims of an Italian government which declared war on the United States. So when Italy threw in the sponge RODINO remembered the broken bodies and wearied faces of the young and old and decided to do something about it.

He conceived the "package brigade"—which meant long hours of writing letters to his folks in Newark and to his many friends all through the State of New Jersey asking them to send food or clothing to him for the people of Italy.

PLAN A SUCCESS

The plan was so successful that soon the packages began flowing into RODINO's quarters at a terrific rate. All told, his appeal brought 4,000 packages to Italy, and he delivered every one himself—some to hospitals, some to charitable institutions, but most of them to individuals he had seen suffering from malnutrition in cities, towns, and villages captured by United States forces.

Soon officials of the Italian Government wanted to know who RODINO was. They learned that he had risen from a private to a captain, being commissioned on the field.

Prince Chigi decorated him as a Knight of Malta. King Umberto decorated him with the highest order of knighthood that Italy could bestow on a foreigner. He made him a knight of Saint Marurizio and Lazzaro. All told, RODINO won 18 decorations for his "extracurricular" activity while still a combat officer in the American Army.

STATUE FOR DAUGHTER

One of his most-prized possessions is a statue of St. Bernadette, which was presented to him by Countess Ratti, sister of the late Pope Pius XI, with instructions that it be given to his daughter, Margaret Ann, as a memento of her daddy's good work in behalf of the people of Italy.

RODINO's efforts for the people of Italy did not cease when the war ended. As a Knight of Malta, he was named a special American emissary to aid relief there in cooperation with the Italian Red Cross.

He was instrumental in sending 20,000 packages of food, clothing, and medical supplies to Italy during postwar days.

Like RODINO, Congressman MCCORMACK won his decoration as a Knight of Malta for his work in behalf of humanity throughout the world, particularly Italy.

Both Congressmen are outstanding Catholic laymen and because of their knighthood are entitled to march ahead of fellow laymen at all religious exercises. MCCORMACK'S wife holds the rarest award from the Pope. The medal entitles her to be known as "Countess Harriet," and as such has precedence even over her husband at Catholic functions.

The Reporter—A New Magazine

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. JAVITS. Mr. Speaker, there is appended hereto the No. 1 article entitled "The Bold New Program," of a new national fortnightly magazine "of facts and ideas," published in New York, the volume 1, No. 1, of which was issued on April 26, 1949. It is under the editorial direction of Prof. Max Ascoli, the distinguished editor, author, and educator, who escaped from the Fascist terror in Italy to become one of the leading editors and philosophers of the democratic resistance to totalitarianism of our day. The new magazine promises to fill an important place in the consideration of our governmental policy and to be one of the most distinguished journals of our day.

Professor Ascoli says of his new magazine:

We are publishing The Reporter because we think there is room in the United States for a type of reporting free from obsession with headline news and from the conceit of opinions. We believe that the national and international facts which affect the lives of the American people can be gathered, selected, and interpreted with a sense of their causes, interrelation, and possible outcome. We believe that they can be reported in the perspective of what they mean to the American people and what the American people can do about them.

A NEW ERA, A NEW MAGAZINE

The American national interest is definitely tied to the welfare of a large section of the world, but at the same time America is not rich enough or powerful enough to endow the world or to rule it. In the former enemy countries still under American occupation, in the 16 European nations of the Marshall plan, in Asia and in Latin America, to a various and different extent, there are hundreds of millions of people whom America can help—but only if they are willing to cooperate freely with America. The safety and power of America largely depend on the cooperation that we can elicit from nations which are the objects of American assistance. America alone cannot do the job of setting the world on its feet.

If America were what the Communists say it is—an empire in the making—or if it were the hub of an international, which is about the same thing, the problem would be much simpler. We could rule foreign countries with our stooges, we could, as we pleased, use or destroy their resources for the benefit of our own economy, and we could induce their unmanageable leaders to plunge themselves into obscurity—or out of a window. As it is, given the kind of people we are, we have no choice. We must work to create, at home and abroad, the positive conditions that make for freedom, for safeguards of personal and national independence, and for peace.

The article referred to follows:

THE BOLD NEW PROGRAM—CAN WE LEARN TO EXPAND CIVILIZATION IN A CIVILIZED WAY?

Not long after President Truman delivered his inaugural address, Secretary of the Interior Krug told the Eighty-first Congress that American reserves of certain industrial materials were "virtually nil." Krug was not out to chill the Nation's blood: He was not at that moment telling the usual story of resources that had been plundered or squandered in the customary reckless ways. He was referring to resources that the United States had never contained in quantity—minerals and metals, for the most part, with singular, useful properties. In the last few decades, American technology has learned how to use them in the production of everything from truck bodies to antitank shells; having discovered the advantages of these largely "un-American" materials, our technicians now cannot get along without them. They come from most of the continents and islands of the world. If they were to cease coming, American production would be severely disorganized. Some phases of it could scarcely continue at all.

American technology runs largely on electricity. To be controlled, electricity must be insulated. Mica, the best insulator known, comes primarily from India. American technology is built very largely of steel, partly of aluminum. Chrome is a necessary ingredient of stainless steel. The best chrome ore comes from Russia. Aluminum has replaced steel for many purposes. The best bauxite, the ore from which aluminum is extracted, comes from Latin America. The harder the uses to which steel and aluminum are put, the higher the temperatures they must withstand, the greater the pressures they are designed to resist—the more they must be alloyed with metals like cobalt and chromium, molybdenum, and vanadium and nickel.

Altogether there are about 150 metals and minerals on which the prosperity of the United States in peace, and the security of the United States in war, depend. Not many are found in sufficient quantity and quality on the mainland or our island possessions. In 1946, the United States imported from overseas 97 percent of its manganese, 100 percent of its tin ore, 73 percent of its tungsten, 40 percent of its vanadium, 47 percent of its bauxite, and unusually high percentages of about 90 other indispensable metals and minerals.

The United States' dependence on the rest of the world is most conspicuous when it comes to metals, but it is not confined to them. In 1946, all the fiber and natural rubber consumed by American industry, and one-quarter of the vegetable oils, were shipped in from overseas. Nor is it likely that, among metals, our impoverishment will continue to apply only to obscure ones; the supply of high-grade rich iron ore in the Mesabi Range can be expected to last only a generation or so.

The percentages show the proportion of key minerals imported by the United States the year after the war ended. During war, America requires far more substantial imports. The weapons of modern warfare, guided missiles, jet planes, and so on, require an increasing amount of chrome, bauxite, and the rest. Congress has appropriated $800,000,000 to stock-pile such materials, but no adequate reserve of them can ever be ac-

cumulated. The industries of cold war—even those of peace—consume the metals and minerals too rapidly. If American industry is to maintain its present output, still more if it is to expand, the supply of raw materials from the rest of the world must be abundant and dependable.

The scarce metals and minerals prevent us from reverting to continental or even hemispheric isolationism. If the pressing demands of technology could force us into technocracy, we would have to plant the American flag on every land in the world. We cannot even dream of doing this; and under no circumstances would we do it. We need the availability of raw materials without assuming the burden of conquering and ruling over every country where they are to be found. We do not want forcefully to impose a pax Americana; we would not know how to. Neither do we want to establish a new type of dollar diplomacy—a scarce-metals diplomacy. We need a global policy as vast and at the same time as intricate and varied as the globe itself. We need an efficient system of organization, in which the possessors and the consumers of the raw materials, participate as equals.

With this problem confronting America, the President proclaimed, on Inauguration Day, his program of making the benefits of our scientific knowledge and industrial progress available to underdeveloped areas.

In these areas—the zones of the diseased, the shabbily dressed, the inadequately fed—a large part of the raw materials that the United States requires lies under or grows in the earth. Now that we count so heavily upon these underdeveloped areas, their inhabitants, for our sake as well as for theirs, cannot remain underdeveloped. If we can effectively pass on to them some measure of technical skill, adequately supported by capital investment, they will be able to produce or extract or grow their special materials in greater volume and with greater steadiness than they can now. The same and similar skills can raise their standards of living, lower their death and disease rates, and provide them with more to eat and to wear. The part of our patrimony that the program offers to share—our technical ability—is, says the President, inexhaustible.

The generosity of the idea is matched only by the difficulty of its realization. Carried out hurriedly, on the assumption that each one of our skills is by itself a miraculous cure-all, the project might bring about nasty results.

The introduction of a new technique presents only minor difficulties in a society that already employs a multitude of modern techniques. By using hybrid corn, European farmers can get larger crops from the same land without increasing their labor. Europe is prepared to make use of the augmented supply; the roads and railroads, the depots and mills to handle the extra corn are already there. But bringing a new technique into a nonindustrial society—where the texture of civilization is spotty and precarious—may be profitless and even highly dangerous.

One of the dangers is that, with the acquisition of a new medical or technological skill, an area will be confronted by an explosive, and temporarily unmanageable, increase in population. In 1945, a village of 3,000 people in British Guiana was chosen for an experiment in the elimination of malaria. Previously, the birth rate and the death rate of the village were evenly balanced. Three hundred and fifty of every thousand children died in infancy. By 1947, DDT had exterminated most of the malaria mosquitoes. The birth rate had doubled; infant mortality had gone down to sixty-seven a thousand. So now the suburb needs more of everything—food, houses, and furniture—and if these are not provided, poverty may keep the population down as disease once did.

The simple passage of a skill from the West to the East, Africa, and the islands—instruction in killing flies, opening mines, cross-pollenizing plants, or operating machines—may mean very little in itself even when it is not actually hazardous.

Not long ago, for example, the British discovered a method of doing away with the tsetse fly, which for centuries had prevented the raising of healthy cattle in South Africa. If South Africa receives sufficient quantities of tsetse killer, it can be made safe for steers. Not enough feed, however, can be grown in or near the best cattle country to support large herds. There is suitable lands for cultivating feed farther north, but it cannot be used until it is cleared and drained, until roads and houses are built, and machinery is installed. If all this were done, a railroad would have to be built to bring the feed to the cattle and another to move the cattle to the sea for export. The elimination of the tsetse fly, in itself, will not increase the world supply of meat, unless it is accompanied by an array of other skills and enterprises of great magnitude.

A great many techniques—each of which picks up where another leaves off—will have to be introduced into the backward areas. This means the shipment of machines, the importation of fuel to make them function, the establishment of training schools.

All this requires capital. The capital can come only from the governments and the businessmen who have it—mostly those of the west. Foreign investors will shy away from enterprises in underdeveloped areas unless they are protected against some of the hazards of investment—sudden nationalization of their properties or discriminatory taxation. They will not invest unless the underdeveloped areas have sound credit and currency systems and agree to abide by certain common rules of business behavior.

With rules established, an additional incentive for private investors to risk their capital in overseas projects could be provided by a scheme to insure private investors against the abnormal business risks that they would not encounter in domestic investment. The wider the risk is spread, the more countries the insurance scheme embraces, the lower the premium investors would have to pay for protection. The United States Government might well take the initiative in setting up this insurance fund for American investors.

How much America can afford to invest overseas is almost impossible to calculate. In 1948 net private long-term American investment abroad reached $761,000,000. A yearly investment of $2,000,000,000 overseas in the immediate years ahead would make a tremendous contribution to the task, and appears comfortably within our capacity. If a climate of hope and confidence is created in which investment could thrive, the primary difficulty would, in fact, be to choose which of the almost unlimited projects foreseeable should be the first to be tackled.

Before the proper climate is created, technology needs to be rescued by another skill—economics—and by another type of know-how—politics.

Knowledge of economics and politics is needed to make sure that the first effects of industrialism on technologically innocent peoples are not wretchedness and rebellion.

Fortunately, the burden of the program does not fall entirely on the United States. Europe can provide many of the products necessary for development, and Europe's need for new sources of raw materials is much greater than ours.

The leaders of the nations participating in the Marshall plan are aware of the fact that the 4-year program will fail irreparably if not enough raw materials start coming in, between now and 1952, from nondollar areas. This is a necessary condition if the Marshall-plan countries are ever to approach the volume of production and of exports that they are supposed to reach within the next 3 years.

The President's new program can be conceived and carried on over a span of decades. The best that we can hope is that by 1952 it will have made a substantial start. It must be developed and articulated enough to take over when the Marshall plan ends. In the period from now till 1952, American investment to help develop the resources of backward areas would be added insurance for the success of the European recovery program, as well as insurance for adequate continuing supplies of the raw materials we need.

The international-payments troubles in Europe can be relieved, in large measure, by the operation of the new program, for they are partly the result of the breaking of the nineteenth century three-cornered trade whereby, for example, far eastern countries earned dollars from their raw-materials exports to the United States, used those dollars to buy supplies from Europe, and thereby provided Europe with dollars to pay for the excess of Europe's imports from the United States. A strong flow of American dollar investment in areas that have little money or industrial skill but plenty of resources would be the best guaranty of a return to freer and steadily expanding world trade.

Finally, America now has a chance to get out of a rather awkward schizophrenia. This Nation, dedicated to the cause of free enterprise and of capitalism, has to a large extent left to the Government the monopoly of foreign spending an investment—an embarrassing and rather silly contradiction.

Was it the need of scarce raw materials that prompted the announcement of the new program, or was it the necessity of obtaining through a peaceful policy that which we could not conceivably conquer by force of arms? Or perhaps it was the awareness of our responsibilities toward the world and at the same time of the limitations of our resources, for we haven't the means to continue indefinitely the Marshall plan or to extend it to Latin America, Asia, and potentially, the whole world. There may be some truth in any one of these motives and in a hundred more. There is always a rather distant relationship between a policy and the various motives that have contributed to its enactment. Moreover, our country has the curious habit of announcing and reaching basic policies as if they were casual improvisations. This was the case when Franklin D. Roosevelt announced the policy of the unconditional surrender and when the idea of the Marshall plan first came out. It is the case with point four. It usually turns out that there was some thinking and planning before the announcement of a new policy, and then, when the announcement is made, thinking and planning proceed with ever-increasing momentum because of the expectation it has aroused in the outside world.

This new program is likely to affect the UN radically, although no one knows now in what measure the UN will contribute to carrying it through. Perhaps the UN can be better strengthened by regional or even bilateral agreements than by debates and resolutions on what to do with the Charter. All these partial agreements buttress at various spots the structure of the UN and provide the conditions for its strength. If multilateral trade is gradually reestablished, the UN will be the gainer. If new nations just emerging from colonialism find in western know-how the way to accelerate the pace of their progress, the UN will again be the gainer.

The major characteristic of the new program is that no matter from which side it is considered, it makes sense. It is rounded, well-balanced—even if it is, and will for

sometime remain, little more than a program for reaching a program. It depends on America, but it doesn't make America the Atlas that sustains the world. It presents extraordinary difficulties, which can be overcome if the technicians and experts of western civilization apply the experience and the knowledge they are supposed to possess and the countries to be developed are willing to accept their responsibilities. The greatest danger is that the program will be carried through by single-minded experts, each following his own approach and technique, independent and unconscious of all the others that are needed if the job is to be done. The program is a formidable test of our capacity to act. It is a greater test of our capacity to think.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mrs. DOUGLAS. Mr. Speaker, within the past few days a trial examiner of the National Labor Relations Board has decided a case which is of much importance and controversy in my State. It is the Di Giorgio Farms case. The decision reveals certain basic evils not only of the Taft-Hartley law but of its counterpart, the Wood bill, H. R. 4290. I refer specifically to the injunctive and secondary-boycott provisions, so drawn in each instance as to be used to frustrate the congressional will and to injure unions even beyond the professed intent of the Taft-Hartley supporters. Let me point out a few of the facts.

Di Giorgio Farms is a huge agricultural enterprise, covering over 11,000 acres. Some phases of Di Giorgio's business go beyond the agricultural industry. About 1,200 Di Giorgio workers, unsatisfied with their wages and working conditions, organized into two unions to bargain collectively with Di Giorgio. But Di Giorgio rejected a demand that it bargain, and the workers, being agricultural laborers, were not entitled to the benefits and protections of the labor-relations law. They could not use the processes of the Labor Board to require that Di Giorgio bargain with them. The workers had no alternative but to strike. Efforts were made by interested persons to bring about a settlement of the issues, and the matter was the subject of editorial comment in the California press, but Di Giorgio still refused to meet with the unions.

Di Giorgio complained to the general counsel of the Labor Board that the two unions of striking workers were inducing and encouraging employees of other employers to cease doing business with Di Giorgio. The general counsel obtained an injunction against these two unions and also against two other unions whose members had respected the picket lines of the striking agricultural workers. Can we, as legislators, be honestly proud of a law which denies to some workers the right to legal protections accorded to workers in other industries, but which nevertheless subjects them to the liabilities of that law?

The trial examiner, however, decided that the two unions of agricultural workers cannot rightfully be prosecuted under the Taft-Hartley law since the law itself denies to them the right to seek an election or to require Di Giorgio to bargain. But so long as the injunction is outstanding against the unions they must refrain from engaging in conduct which is lawfully their right. Here is an evil in the law which flows from the injunctive provisions and from the separation of functions within the Labor Board by which the general counsel is supreme unto himself. He is empowered to seek injunctions on the call of anti-union employers and to use injunctions to prevent collective bargaining.

But this is not the only evil of the Taft-Hartley law which is pointed out by the decision in the Di Giorgio case. The decision has been publicized in the California press as a victory for agricultural unions and as a substantiation of their claims that they may not be prosecuted under a law whose benefits are denied to them. Although there is some basis for this reaction, there is no reason for jubilation by agricultural workers.

If I understand the decision correctly, from a realistic point of view the victory is largely Di Giorgio's. Legislative history shows that it was not the intention of Congress to prohibit secondary boycotts with the purpose of requiring an employer to bargain where the union had been certified by the Labor Board. Here the agricultural workers tried to secure a certification, but the general counsel and the Board held that they could not do so because agricultural laborers are exempt from the protections and benefits of the legislation. Had the agricultural workers been entitled to achieve a certification, then Di Giorgio would have been required by law to bargain collectively. There would have been no violation of the law by any of the four unions. But the examiner decided that the two secondary unions, which did not cross the picket lines, violated the secondary boycott provisions of the law. Here is another basic evil of the legislation. The very provision which disqualifies agricultural unions from the benefits of the law, works an added hardship by making it unlawful for other unions to aid them to secure collective bargaining, although unions which are not disqualified from using the procedures of the law may legally seek the aid of other unions to obtain recognition and collective bargaining.

Because of the injunctive and inequitable features of the law and the great and unreviewable powers of the general counsel, we have a situation where workers in sympathy with the legitimate efforts of Di Giorgio's employees are forced to continue at work against their will and to aid the antiunion employer in his refusal to accept the democratic procedure of collective bargaining. It is a strange and wrongful law which denies the right of collective bargaining to a group of workers and simultaneously strengthens the hand of the employer in his refusal to recognize and deal fairly with the legitimate aspirations of his workers.

The Wood bill preserves these basic evils of the Taft-Hartley Act. The Lesinski bill, while it does not place agricultural workers on the same footing as other employees and does not require farmers to bargain with agricultural unions, does eliminate the added hardships I have mentioned. It will receive my support.

Analysis of Patronage in Our Political System

EXTENSION OF REMARKS
OF
HON. WALTER K. GRANGER
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. GRANGER. Mr. Speaker, last Sunday in his usual broadcast, Charles Collingwood, a prominent news commentator and news analyst, confined his broadcast largely to the subject of patronage.

Patronage, because of an honest and forthright statement of the President at his recent news conference, filled the air and newspapers with horror stories. They had discovered that patronage was a part of our political system.

Mr. Collingwood very ably puts patronage in its proper prospective—good or bad—in relation to our political system. He points out what it has been in the past and what it will be in the future. He recognizes political realities and separates them from the hypocritical political nonsense that has filled the airways and newspapers recently.

The broadcast follows:

Political Washington—that is to say, Washington, for this Capital breathes, sleeps, and subsists on politics—Washington is still echoing President Truman's announcement of a loyalty test for Federal patronage. Now, the bestowal of Government jobs according to party loyalty is one of those things like vice, corruption, and the man-eating shark to which the American public believes itself to be unalterably opposed. It's an institution which has engaged the attention of reformers since the founding of the Republic, and by general consent, politicians refer to it as they would to a disreputable relative—which is to say, seldom. Therefore President Truman created considerable hue and clamor when he hinted broadly the other day that the time-honored congressional privilege of naming people to fill Government jobs would go only to good Democrats and one way of telling a good congressional Democrat was by how he voted, as for instance, on the bill to repeal the Taft-Hartley Act, now before the House. Editorial writers all over the country pounced upon the incident, commentators commented, pundits pontificated, politicians shook their heads, for the President, in his ingenuous way, had brought out into the open a subject which politicians believe is better left in decent obscurity. Patronage is not a popular American political institution. In most minds it conjures up sordid images of deals, incompetence, spoils, and boondoggling. It is not a popular institution, but it happens to be an institution which is part and parcel, and a key part and parcel, of the way our American democracy works. And since the President has revealed it in its

nakedness, it might be worth analyzing its importance in our political picture.

The Federal Government employs in the neighborhood of 2,000,000 people; 92 percent of them are covered by civil service. The remaining 150,000 are excepted from the civil service requirements. Of course, a number of the civil-service jobs like postmasterships are subject to political control, but a number of the non-civil-service jobs are of a technical nature where politics doesn't enter in, so we can take a hundred and fifty thousand as a rough estimate of the number of jobs an administration controls. Only a few of these jobs are what you would call plums, that is, paying above $5,000 a year, or involving a good deal of power and influence. Nevertheless, the power of filling those hundred and fifty thousand jobs is a very considerable one. The way that power is exercised is what we call the patronage system.

And the patronage system is the lifeblood of our political organization. American politics is an intricate, delicate, vastly complex mechanism involving thousands of people. Willard Kiplinger, of the Kiplinger News Letter, has estimated that there are in this country a million professionals who make a business of politics. They range from the doorbell ringers on the precinct level up through Members of Congress to the President himself. The whole thing represents rival networks of party workers which theoretically should reach every citizen of the United States. Now, these people have a regrettable tendency to want to get something out of it—jobs, influence, power, prestige. There are some workers in the vineyard of politics who may do it for sheer love of the game. There are some who do it from an idealistic desire to get a better government, but it is one of the things that is wrong with American politics that there are so few of these. Most politicians are in politics for its rewards, tangible or intangible. Therefore it follows that a healthy American political organization, under the present scheme of things, must have some rewards or the promise of some rewards to hand out to its workers. Otherwise it rots and withers away. And that is why as long as American politics is organized the way it is you will never get rid of patronage or the spoils system, or whatever you want to call it. But we digress. These 150,000 jobs, more or less, to which political appointments may be made are used to nourish the organization of the political party in power—in the present case the Democratic Party. They are passed around where they will do the party the most good. It is customary for party leaders, like Congressmen and men who would like to be Congressmen, to have considerable say about who gets what jobs in his area. This allows him to get his men in important places, to be sure of their loyalty, and to build up a hard-working political machine to further his and the party's political progress. This is important to a Congressman who wants to get reelected. And this is what caused the loud screams from those Congressmen who thought the shoe fit when President Truman suggested that Congressmen who didn't go along with him weren't going to get any patronage. When Representative HÉBERT, of Louisiana, complained that the President was doing no more than buying votes he wasn't objecting to the spoils system—he was objecting to not getting any of the spoils. For Mr. HÉBERT is one of that large group of southern politicians who do not see eye to eye with President Truman, and it was largely to them that President Truman's implied threat was addressed.

Congressman HÉBERT and his like-minded colleagues professed themselves to be very incensed at the President's suggestion that they might be swayed by patronage. Actually, vulgar as it may seem, the distribution of Federal jobs has played a decisive role in some of the greatest events in American history. President Truman's political sin was not that he planned to use it, but that he came right out and talked about it. The thirteenth amendment—which abolished slavery—was only ratified because of the most flagrant use of patronage by Abraham Lincoln. In 1864 Lincoln decided that there had to be an amendment abolishing slavery or else the whole issue of the Civil War would be in doubt. To do this, he found it necessary to bring Nevada into the Union, but he lacked three votes in the House to get Nevada in. So Lincoln called in Assistant Secretary of War Dana and said, "Get the votes of so and so, and so and so, and so and so." Dana said, "What do they want?" Lincoln said, "I don't know. It makes no difference. We must carry this vote or be compelled to raise another million men. It's a question of three votes or new armies. Whatever promises you make," said Lincoln, "I will perform." Well, as it turned out, two of the men wanted internal revenue jobs, and the third wanted a job in the New York customs house. The jobs were promised. The following October, Nevada became a State and promptly ratified the thirteenth amendment. Thus, through the judicious use of patronage, Abraham Lincoln abolished slavery. There's a twist to the story, though. After Lincoln was killed and Andrew Johnson succeeded him, Johnson refused to deliver on the appointments. "I have observed," said Johnson loftily, "that such bargains tend to immorality." Whatever they tended to, Johnson's reneging on the bargain helped open such a breach between Congress and himself that he was very nearly impeached. The importance of patronage to Congress was underlined in a famous incident of the last century when the two New York Senators, Roscoe Conkling and William Platt, resigned their seats because President Garfield refused to appoint their man as collector of customs in New York.

President Cleveland used patronage to force the repeal of the Silver Purchase Act. And it was only by the use of this same weapon that Woodrow Wilson was able to get the Senate to confirm Judge Brandeis' nomination to the Supreme Court.

The fact is that patronage is just about the most persuasive argument that a President has with Congress. It is immensely important now because the real political problem in Washington today is the relations between the President and the Congress.

Although the President and Congress are kept poles apart by the Constitution, there are two main avenues by which he can influence the Legislature. One is public opinion and the other is patronage. The President is using both, and he will continue to. He has to. It's the way our system works. That is why one of the half dozen most important men in Washington today is a man you never hear about. He is not in Congress. He is not in the Cabinet. He holds no public office. His name is William Boyle and he is the Democratic National Committee's chief patronage dispenser. He is the man who decides who will get what, who makes the fine distinction between rival factions, who sees that the proper wheels of the Democratic machine get greased. That's how this whole patronage thing came up. Last Wednesday, Boyle, MCGRATH, and other Democratic sachems had a session with the President to get the patronage system streamlined. The next day at his news conference President Truman was asked about it, and it was then that he outlined his now famous loyalty test for Democrats getting patronage. Of course it is based on loyalty. It always has been. That's what patronage means. Jim Farley, who dispensed the jobs in Roosevelt's administration made no bones about it. He said he had a twofold duty, namely to place in office loyal Democrats who at the same time will have the ability to serve in their positions to the credit of their party and their country. So it is now—so it has always been. And patronage to loyal followers is not just a Democratic monopoly. The Republicans do the same thing—or would if they ever got a chance. Last year at this time when the sweet scent of victory hung heavy in Republican nostrils, the GOP-controlled Senate held up thousands of Presidential nominations—11,000, to be exact—because they wanted to put Republicans in those jobs instead of the Democrats President Truman nominated.

Patronage is not, perhaps, a very pretty part of our political life, but it is an essential one, as we are now organized. All the fuss and pother over President Truman's frank admission that jobs will go to those who go down the line with the party, will not change the system one iota. It's like the lady who told the philosopher that she had decided to accept the universe. "By heaven, madam," he said, "you'd better." The patronage system is part of our political universe and no amount of high-minded statements, polite distaste, or viewing with alarm is going to change it. There is just one way to get rid of patronage in politics, and that is for enough people to care enough about politics to be willing to work as hard without thought of reward, as the million professional politicians work today with the carrot of jobs, power, and influence dangling before their noses. Until that happens, it will be as Huey Long once observed. "The man who pulls the plow gets the plunder in politics."

The North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address entitled "The North Atlantic Pact" which I delivered over NBC from radio station WMAL, Washington, D. C., on Friday, April 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NORTH ATLANTIC PACT

The President has sent the North Atlantic Pact to the Senate of the United States for consideration. Between now and the time the Senate ratifies or rejects the pact we will hear it praised or condemned—newspapers and radios will be so full of it that the average person will assume one or a number of things about it, but always it will be considered as a single thing with a single purpose. It will be mentioned as something to stop Russia. It will be called an invitation to war. It will be given credit for bringing about a united Europe. It will be mentioned as one complete break with isolationism. It will be many things to many persons. Little that we hear will tell the real story. First of all, the pact is not a thing all by itself. I should like to talk to you about it as I would attempt to explain it to students interested in governments and international relations.

First let me say this—those of us who have been working for better world organization for years are sometimes considered impractical—we are said to be interested in things far off. What we need, say some people, is

a Congress made up of people who are thinking of our immediate interests and not far-off world affairs. I started working for an organized world the year I left college in 1906 and most of that time I have been an idealistic dreamer. Two World Wars have taught us that far-off disputes are very close to us. In fact the only persons in the United States who now think that our international affairs are not important are those who had no relatives in the last war and who pay no taxes.

What is it the President sent us when he sent to the Senate the North Atlantic Pact. He sent us a treaty. The pact will, therefore, be considered just as any other treaty. If it is ratified it will be done, as our Constitution prescribes, by a two-thirds majority. And when it becomes accepted by the other nations we, then, become bound by its provisions and those provisions become part of the law of the land. Under our constitutional system we will be bound to respect the treaty, assume the obligatons under it, and, if we are to be a good member of the community of nations that adhere to the treaty, then we must be ready to do our whole part. But we will be told that we ourselves will be the judges of what our part is—and that is true because our own independence will not be destroyed. International promises are moral promises, first of all, and moral promises may be forgotten if a nation does not wish to live up to them.

That brings us to the biggest of all problems in the development of international law and the substitution of law, duty, morals, promise-keeping and good faith for war. Just as force is the key to keeping the wrongdoer from hurting his neighbor in our civil and State affairs, just so in the final analysis force will keep a wrongdoer among nations from taking advantage of his neighbor. In society any member of society must obey the wishes or at least act within the rules of that society. Just so in international affairs, whenever a community of nations is set up by an agreement the will of that community is expressed by the rules of the community. In a sense then, by the North Atlantic Pact 12 nations have created a community and the pact is their rule for behavior in case one nation either within the group or from without becomes a wrongdoer and, let us say, becomes an aggressor and carries war against one then all will unite to put the aggressor down. Thus you see a wrong against one becomes a wrong against all and all unite to throw the preponderance of the united force against the wrongdoer. If nations learn to act that way in their international affairs, they create a community of nations as large as those who agree to join in the obligations and responsibilities of the pact.

The Atlantic Pact carries the theory that an attack on one will be considered an attack on all. Thus is laid down a principle of collective action or defense.

Let's look at this, first, from the standpoint of history and then from the standpoint of the development of international law. When the Thirteen Colonies began having trouble with England, the mother country, our founding fathers realized that unity of the Thirteen Colonies in withstanding what they considered aggressive action against them was the only successful way in which force of the mother country could be met. When the people of Massachusetts were attacked, Jefferson wrote that an attack on one colony should be considered an attack on all. By that he meant that if England carried war against Massachusetts his own State of Virginia should unite with the others in helping repel the attack. That was collective defense, no more no less. It was effective too—effective in war and all had to fight. We discovered our unity and we decided that unity was good for us in peaceful ways as well as in war and the United States of America became a fact and war between the States seems now completely out of reason. While we maintain an Army and a Navy, the thought of using either against ourselves or any one of the 48 States seems so much out of harmony with our community of interest that we do not rely upon force to maintain any of our peaceful interests among the 48 States. Still, force or the theory of force is always there. Historically, then, collective defense seems feasible.

If any person within a State breaks the rules of the State he is punished by the State and I am sure, after our experiences in the War Between the States, if one of the 48 States tried to be an aggressor and attempted to carry war against another State the force of the United States of America would be used against such a State. Collective defense has therefore shown its power and its possibility.

Now let us see how the same idea has developed in an international way and what it has done in international law. We must remember that collective defense or collective security has its origin in a theory that the whole is greater than any of its parts and that if the whole can be united against a part the whole will have its way. After we became the United States of America and our responsibilities became great as a member of the family of nations and the United States had territory to defend which belonged to all the States and not to any one, that is, after the Northwest Territory became Territory of the United States and after Mr. Jefferson bought Louisiana, we were a great country with great responsibilities in an international sense.

In 1811 under President Madison's recommendation the Congress gave notice to the world that activities close to our borders would be considered as probably threatening our security. Later President Monroe made the pronouncement in 1823, which we now call the Monroe Doctrine, that American welfare, and we might add American peace and security, was dependent upon the peace and security of our neighbors. And Jefferson again, as he did so often, put the ideas in proper words, that all America seemed to understand, when he said, "Let us make this hemisphere one of liberty and freedom." Here we developed a community of interest. An interest which the rest of the world began to respect.

When we come down to President Wilson's time we find him calling this community of interest a regional understanding, implying that the Monroe Doctrine was not just a one-nation pronouncement but that it had community significance and was recognized by the world as being definitely significant. From that time the nations of the Americas began to see that all had one interest—the unity of the Americas. Already the Pan American Union had been set up and was functioning and the Monroe Doctrine was fast becoming a multilateral understanding and all the states in all three Americas were beginning to see duties and responsibilities to each other.

In 1947 the Rio Pact came into being. This was not only a regional undertaking, but it had in it the collective-defensive idea and the words "an attack on one shall be considered an attack on all." This happened after the setting up of the United Nations Charter which provided for the recognition of regional understandings for collective security. Now two great parts of the world—the Americas and the North Atlantic countries, twenty-odd nations in the first and 12 with possible growth in the second—have made within the United Nations these two great regional pacts.

I have said the North Atlantic Pact had possibility of growth. The pact itself provides for that and if other nations join they must come in by the treaty process, assuming the duties, obligations, and responsibilities of the other nations.

Now what have we done in international law? For years text writers have held that wars have been started by willful aggression. How to stop the aggressor then becomes the problem. The family of nations, each being independent within its borders, was recognized. International law was the law which controlled nations in their dealings with one another but war was always recognized as being a possible way of settling differences. War was called the last reason or word of kings. War in theory had to be just to be recognized as proper, but the role of justice remained with the state that went to war.

Then came attempts to find substitutes for war. First came the Court of Arbitration to settle differences so nations would not have to go to war. The First World War produced the theories of a League to Enforce the Peace. After the end of the war we had the League of Nations. With the League came the idea of collective security and the notion that state boundaries should be protected. This was an attempt to put down an aggressor and the whole force of all the states was to come to the support of each other to put down a wrongdoer. After that came the Briand-Kellogg Pact which declared that war should not be used to accomplish a national purpose. This, in theory, outlawed war, and, with war being outlawed people thought that war would be no more. But aggressors arose and we had war in the Mediterranean, then Europe, and finally in the Pacific and we were caught in the Second World War. Now we are thinking hard about how that war got started, the mistakes we made, the things we failed to do and the terrible costliness of it all in death and destruction of wealth. And now we see that war doesn't pay. Look what has happened to both the victors and the vanquished of the two world wars. In one of our Foreign Relations Committee meetings someone said, we simply can't afford to lose a war. I asked, can we afford to win another one—because victory brings responsibility, and peace actually has to be endured just as we had to endure the war. Peace will be costly but it will be worth it.

The North Atlantic Pact represents an almost universal acceptance of the concept of popular sovereignty. How then could America stand in any other place than she stands today in not only supporting and furthering, but actually leading, the culmination of that pact and the universal acceptance of the theory behind it. The spirit of the pact is that such a thing as happened under Hitler, Mussolini and Tojo shall not happen again. The North Atlantic Pact is in complete harmony with the theories of collective security and the action of all the nations of the world to that end.

The pact complements the United Nations. It would be a great implementation to the effort to maintain peace and a great protector of those activities which promote peace. It would help much in removing the causes of war. The Atlantic Pact and the United Nations together represent the greatest strength yet created in the world to substitute peaceful processes for settlements of controversies between nations for the archaic and barbaric notion of "fighting out controversies."

Only a thoughtless person can imagine that we can change the habits of mankind overnight. Ambitious men will strive to get control of government. The threat of the single-will dictatorship surrounds us, but in unity there is strength. If the sensible, peace-loving, democratic peoples of the world will unite, nothing can stop their progress. The experiences of two world wars, the experiences of our own history, the experiences of those peoples who have brought about economic, political and educational freedom for

their own people show that in these institutions there is mighty strength. Individual man acting for the good of men is invincible. We want to develop that individual, which is the basis of freedom. There can be no freedom without men working with a social conscience. The North Atlantic Pact is one more instrument of democratic action in an attempt to substitute the will of the peoples for the will of an autocrat. That it will succeed, there is no doubt in my mind.

Federal Government Expenditures

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on April 21, 1949, in this city, before the American Society of Newspaper Editors.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The budget of the United States is read by only a very few, but today it is the most important current publication in the world. What it contains affects the daily lives of millions of people in foreign lands. It implements world policy. It finances tremendous national programs at home. It influences State and local governments. It subsidizes industry and agriculture. It extends directly to the pocketbooks of millions of individuals at home. It is a document of 1,500 pages and contains thousands of items which add to astronomical figures. It deals with the annual spending of nearly one-fourth of the total annual earnings of 142,000,000 Americans. Under the most simplified methods of budget procedure, the complexities of its administration are extremely great, but, under existing methods, the budget confusion is so fantastic that I have frequently heard sincere colleagues of mine differ by as much as from $4,000,000,000 to $6,000,000,000 in estimates of spending.

No sooner is the budget submitted to the Congress than the President begins to send in supplemental requests which require supplemental and deficiency appropriations. So far, in this fiscal year, one deficiency bill has been enacted, carrying a total of $1,700,000,000, and a second deficiency bill is now under consideration. Our budget procedure is vastly complicated by authorizations before appropriations, which preclude economy.

The Federal Government of the United States is the biggest financial operation on earth, and nothing is as economically important to as many people as the fiscal situation of this country. Yet, under present legislative procedure, neither Congress nor the American public has an opportunity intelligently to analyze fiscal legislation. We attempt to finance vast domestic and world programs through legislative processes in which it is impossible to know whether income and outgo are in balance until after the budget is enacted.

The procedure is archaic and the language is confusing. We enact the budget in terms of appropriations, but we must balance with revenue in terms of expenditures. There is no readily available facility for either Congress or the public to translate current and previous appropriations into terms of annual expenditures either by items or by totals.

As Congress passes spending bills under present procedure, it has no idea as to what the over-all total of either appropriations or expenditures will be.

Congress breaks down the appropriation side of the budget message into a dozen or more bills, each dealing with a group of activities. Each bill is handled by a different subcommittee in each House of Congress. They are brought in one by one for passage over a period of 6 months. They are not accompanied by an annual expenditure estimate. There is no way of telling what the total of either appropriations or expenditures is, and there is no way of comparing the effect of the action on the bills with the revenue situation.

A long initial step toward clarity in budgetary legislation and intelligent consideration by the Congress and the public would be taken by the adoption of a single appropriation bill, which would consolidate and total all appropriation items into one act and specify how much of each item could be obligated in the ensuing year. It would be accompanied by a report translating appropriations into expenditures. And, it would be considered as a whole in full view of the revenue side of the fiscal situation. Other Senators and I have introduced such a resolution, providing for a single appropriation bill.

Now, these are days of supersonic speeds and stratospheric altitudes. But to analyze the Federal budget in a 10-minute speech would require the ultimate of both—in combination. All I can offer is a "Byrd's" eye view of our fiscal situation.

The estimates I will give you have been months in preparation and have been checked and rechecked after conference with various officials of the Government, including, especially, those from the Treasury and the Budget. Under tonight's limitation of debate, I cannot elaborate on these estimates as fully as I would like but, within the next week, I will deliver a speech in the Senate, giving my reasons for these predictions in the fullest details.

Here is the "Byrd's" eye view of fiscal 1949, 1950, 1951:

Fiscal 1949 (ending July 1, 1949):	
Income	$39,500,000,000
Expenditures	40,300,000,000
Deficit	815,000,000
Fiscal 1950 (ending July 1, 1950):	
Income	40,900,000,000
Expenditures	44,200,000,000
Deficit	3,200,000,000
Fiscal 1951 (ending July 1, 1951):	
Income	40,900,000,000
Expenditures	48,400,000,000
Deficit	7,000,000,000

These are not appropriation figures. They are expenditure estimates. There is a vast difference. Appropriations are not necessarily expended in the year in which they are approved.

Appropriations enacted in a high revenue year may actually be spent in a low revenue year.

As expenditures, you probably will regard these projections as conservative when you realize that they include no more than a moderate increase for agricultural subsidies, even under the present program. This would rise sharply with a precipitate decline in farm prices. These estimates do not contemplate at all the adoption of the new, so-called Brannan plan, which may cost billions more.

These estimates do not contemplate a 70-group air force. They do not cover any expansion of universal military training, as recommended by the President. If vast projects like the St. Lawrence seaway, new TVA's etc., were undertaken, they would be in addition. These estimates do not include the proposed medical care insurance plan, the cost of which, when fully effective, has been estimated at from $6,000,000,000 to $10,000,000,000 annually. This program would be financed from a pay-roll-tax trust fund, outside the regular budget.

It is obvious that unless there are acts of heroic retrenchment by Congress—and there is no evidence of this to date—these figures do represent an ultra conservative estimate of the expenditure side of the Federal budget.

My estimates on the income side are dependent on a continuance of the high level of prosperity that existed when the President's budget was submitted.

I am not a prophet, nor do I intend to indulge in crystal gazing. You can do that as well, or better, than I can. Yet, the perilous fiscal situation confronting us is emphasized by the statement of the experts from the Joint Committee on Internal Revenue Taxation that a 10-percent recession in the aggregate personal incomes of all citizens (the chief yardstick by which tax revenue is measured) means a loss of $5,000,000,000 annually in the present tax revenue. Should even this minor recession occur, the deficit estimates I have given to you would be increased by $5,000,000,000, while a 20-percent recession would mean a loss in tax revenue of $10,000,000,000.

The $64 question is: Are we able to maintain the high level of national prosperity, or is our national income seeking a lower level? We do know that under current tax rates, the Federal tax revenue drops in a ratio of about $1 for every $4 reduction in the aggregate of our personal incomes.

The fiscal year 1951 will be the critical year in Government finances, because the full impact of any business decline now would be felt in taxes due during the year which follows. And it is in fiscal year 1951 that we shall reach the delivery dates on huge military production contracts which we have authorized, and it is then that we shall begin paying off heavily also on long-term civilian commitments as the current housing legislation, and other heavy construction projects.

To me, the fiscal picture of our Government is bleak. The prospects are fraught with the gravest public consequences. The crisis is virtually upon us. We have only three courses open. The first is a drastic reduction in spending. The second is a substantial increase in taxes. The third is large-scale deficit financing.

The third course is unthinkable to me. Under current circumstances its adoption would shatter public confidence in Federal securities at a time when the debt is a quarter of a trillion dollars. The citizens who own bonds would ask themselves if the Government cannot balance its budget in this period of prosperity, and in time of peace, then will the budget ever be balanced again? If Congress once again embarks on deliberate deficit financing, I, for one, gravely doubt if ever again the Federal budget will be in balance. Our credit will be wrecked and our system of government destroyed.

Are new taxes the answer? What would be the result of a substantial tax increase on a business economy when it is already receding? By all the rules, new taxes at such a time may easily accelerate a minor business decline into a major recession. Business is never more sensitive to new costs and taxes than it is on a declining market.

Reduction in Federal expenditures can be accomplished only if there is a desire for it and a will to do it. Actually, we have assumed—and we still are assuming—tremendous long-term-expenditure commitments without organized thought for any offsetting retrenchment, and there is no

appreciable inclination to even a token reduction.

Yet, the Federal Government is permeated with waste and inefficiency. With the exception of the interest on the debt, and several other items of similar character, there is not a single category of Federal expenditures that could not absorb a 10-percent reduction in administrative costs without impairment of essential functions.

When we speak of Federal spending, it is significant that the Truman budget submitted in January contains some 40 spending proposals—exclusive of military and foreign commitments—which require new legislation. Some of these, it is true, are for continuation of projects already undertaken, but many of them will open up completely new fields for Government spending.

In contrast with this record, the Truman budget did not recommend the elimination of a single one of the thousands of functions, services, and activities of the Federal Government.

In this connection, it is notable that the number of Federal employees has increased at the average rate of more than 285 a day for the past year, and today the total is about 2,105,000. In fact, all public employees—local, State and Federal—now number more than 6,800,000. This is equal to one public employee among each 9 persons in the entire labor force of the United States.

Any picture of our tax system must include the State, municipal and local taxes. These taxes have recently been increased at such a rapid rate that no current estimate of the total is now available, but it is reasonable to assume a total tax take of at least $16,000,000,000 in addition to the Federal levies.

Another peril we may have to face is that, with Federal deficits may come simultaneously deficits in municipalities, States and localities. Unless retrenchment comes promptly, and there is, I repeat, no evidence in sight to warrant this belief, fiscal 1951, beginning July 1, 1950, will present a serious financial crisis to the Federal Government. Will we meet the issue by sane practices of retrenchment and elimination of waste, or will we place staggering new taxes on a business economy which every prospect indicates will be ebbing to lower levels?

The decision the Congress and the Executive then make may determine our form of government for many years to come. We have gone a long way in Government spending since 1932, when Franklin Roosevelt denounced what he termed the reckless extravagance of the Hoover administration, saying that Mr. Hoover "had thrown all discretion to the winds." Mr. Hoover was then spending about four billions annually, and now we are paying our Federal employees alone nearly $7,000,000,000 each year.

Private enterprise is the foundation stone upon which this Nation has built its freedoms and its progress. It is a good system, and in most respects it is tough and durable. But, we know that it cannot survive excessive regimentation; it cannot survive excessive taxation; and it cannot survive excessive Government competition.

To analyze the Federal budget is a huge job and a tiresome task. But, it is of absorbing interest to those who have been conscious of the trend which has been developing in this country for some time now—toward greater and more powerful Central Government; toward more all-inclusive control over the daily lives of our people and the activities of our business. It is still going forward at a rapid pace.

Unless this trend is halted, we are headed for regimentation equal to that which is now suffered by the English, if not worse. Our strength is the strength of the private enterprise system. Strike it down, and we shall be as Samson with his locks shorn. Foster it, and, throughout the years to come, we shall be the greatest nation on earth—a free nation with capacity and incentive to continue as the mass producer of more goods and materials than all the rest of the world combined. This we can do—in private enterprise—with only 6 percent of the world's population.

Those who, willfully or otherwise, would destroy the American enterprise system, would destroy the freedom of people everywhere. We, alone, are bearing the standard of freedom today. Without the light from our torch, freedom and progress will perish in the world.

Retaining and Improving the American System of Medical Care

EXTENSION OF REMARKS

OF

HON. RUSSELL B. LONG

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. LONG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very excellent address made by my colleague [Mr. ELLENDER] on the subject How To Retain and Improve the American System of Medical Care. This address was delivered before the California Medical Association, in San Francisco, Calif., on Friday, April 29, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Dr. Cline, ladies and gentlemen, I feel highly honored that you have invited me to come to California to express my views before your organization on a vital issue now before the Congress—"How best to retain and improve the American system of medical care." I am happy to share your program with Senator CAIN, a Republican—a more or less rare specimen in Louisiana. My distinguished colleague and I are in agreement, however, that compulsory health insurance will do violence to our way of life—it will destroy initiative, incentive, and freedom of action, the handmaidens of a system that has given us the highest standard of living and the best medical care of any nation on earth.

For over one-quarter of a century, I have represented my constituency in the legislative halls of Louisiana and Washington, and I have directed much of my attention to the problems confronting your profession. Much progress has been made by the medical profession. I believe I hold a fuller measure of appreciation than most laymen for its splendid achievements.

Those achievements are numerous and far-reaching. A few will bear mentioning: We enjoy better health than the people of any other country on the face of the globe. The average life span has increased from 49 years in 1900 to 67 years in 1948. Our mortality rate established an all-time low in 1948, less than 10 for each 1,000 of our population. We have more doctors, nurses, and hospital beds per capita than any other country. We are blessed with more resources for scientific research than any other nation. And, most important, until now we have enjoyed a political climate favorable to the independent, unfettered medical research that has given birth to these blessings.

I repeat: Until now we have enjoyed a political climate favorable to the independent, unfettered medical research that has given birth to these blessings. Today, the medical profession is under cruel attack. Make no mistake about it. There is a strong and determined movement under way to revise completely our national medical establishment. It has been declared inefficient, irresponsible, and inadequate. As a magic cure for its ills, the reformers would institute a system of socialized medicine. Call it compulsory health insurance, or call it anything else, it cannot escape the appellation of these ugly words "socialized medicine."

Your profession is opposing this effort vigorously, and rightly so. Its members recognize the inherent dangers of such a plan. They know it would destroy the compelling incentive that has sparked American medicine to its great heights—the incentive to learn, to study, to create, to improve existing techniques and to discover new and better ones. They recognize that under its baleful influence scientific achievement would stop its advance and level off on a plane of mediocrity. They know that such a device would destroy the doctor-patient relationship, so universally accepted as an indispensable element of any cure. They know that the scheme would signal the end of medical specialists. To be sure, a new crop of specialists would develop. They would be created, not by the hard route of study and experience, kindled in the sound American spirit of free enterprise and competition, but by Government edict, and savoring of politics. It is inevitable that under socialized medicine the study and practice of medicine would carry no more appeal to our youth than would any other Government position.

As a Member of the Senate who has observed, at close quarters for 13 years, the inefficiencies of Government administration, it requires no stretch of my imagination to picture the chaos and confusion and the enormous administrative cost of a medical program conducted under political direction. It is equally clear to me that such a program, patterned along the lines of President Truman's plan, and starting out as a compulsory health insurance proposal, would eventually and inevitably develop into the same system as is now expanding in Great Britain. The British started years ago with compulsory health insurance, the first phase of socialized medicine. Then they moved last year into its second phase, wherein the patient has a theoretical selection of doctors, and the doctors have the choice of payment on a per capita or a salary basis. Those who choose the per capita basis find that the Government controls their annual income by limiting the number of patients each doctor serves. It is only a matter of time before the British will drift into phase three—complete socialized medicine. The doctors, dentists, and other medical personnel will become salaried employees of the Government, and patients will be assigned by a central bureau.

Your profession is joined in its opposition to socialized medicine by millions of sound-thinking Americans who believe that we achieved greatness, and can retain greatness, only by our adherence to a free competitive system. I know that the majority of the Members of the Congress will strenuously oppose any plan that smacks of socialized medicine. Speaking for myself, I shall in the future, as I have the in the past, strive to maintain a sound, adequate, self-sustaining medical establishment, free from governmental control and restrictions. I wish to make it clear, however, that my policy is not one of obstinate, obstructive opposition. Rather, it is my desire to work with the doctors, dentists, nurses, and other

members of the medical profession to develop a program that will function under our system of free enterprise, and will make available to all segments of society more and better medical care within their ability to pay.

Because of my interest in your problems, and as a result of my legislative experience, I feel a definite responsibility to advise you that you should not maintain a completely negative attitude toward pending legislation. You should foster a plan of your own to counter the attacks made against you. You should cooperate with your lawmakers in an effort to remedy the conditions that give rise to the plans now being proposed.

No one will deny that there are serious inequities in our system of medical care. In spite of the great advances of the medical profession, the evidence shows that thousands of our people go without adequate medical care because they cannot afford to pay the cost of hospital and professional treatment. Many families have had to use their life savings and plunge heavily into debt because of one brief period of severe illness or accident. There are thousands living in our rural sections who are without adequate care because of a lack of clinical and diagnostic facilities or, very often, because of the absence of the services of a general practitioner.

The loudest cries for socialized medicine have come from the following groups: The Government planners, always seeking another experimental toy; the Socialists, who openly advocate absolute Government control; the Communists, who support any proposition that may disrupt our economy and ripen our country for revolution; the loafers who seek any opportunity to get something for nothing. Those groups are the most vociferous, but they are in the minority. Aside from them, however, there is a vast number of honest, sincere, conscientious Americans who believe that something should be done to provide adequate medical and hospital care to all segments of our population within their ability to pay. These people have no ulterior political motives and they are not concerned with social reform. They think of medical care in terms of their own families and neighbors. Many of these people are looking to the State and Federal Governments for relief from an oppressive burden.

The Congress has made a start toward solving the problem. A serious deficiency in our medical establishment is the acute shortage of hospital beds, particularly in sparsely settled areas. In 1946 we enacted a Hospital Act, of which I was a cosponsor. Federal funds in the amount of $75,000,000 per year are authorized, to assist the States to construct hospitals and health facilities. I am cosponsoring a bill to enlarge that program. A recent hospital survey shows that in order to provide the minimum facilities commensurate with good health, the number of existing hospital beds in the United States should be doubled. That will require an expenditure of billions of dollars. We do not expect to meet that goal overnight, but we must substantially accelerate the hospital construction program.

Not only must we build more hospital facilities and distribute them throughout the country on a basis of need, but we must also make those facilities available to all income groups. My State of Louisiana has been providing for many years, facilities for the sick who are financially unable to assist themselves. We operate, at State expense, seven charity hospitals located in various parts of the State, with a capacity of 4,000 beds. Doctors, nurses, operating facilities, laboratories, and medicines are provided at those hospitals, without charge to those who are unable to pay.

Doctors in Louisiana strenuously objected to the program when it was inaugurated, but they soon found that a tremendous load of charity cases was removed from their shoulders. Now they cheerfully contribute a portion of their time free of charge to these charity patients, and the State furnishes all other services.

The same system that has worked so well in Louisiana may be extended to other States. That system might be further improved by providing home and office medical treatment for the low-income group.

I believe that a comprehensive and sound program can be worked out in Congress, whereby the Federal Government, by making grants-in-aid to the States, could assist them in providing adequate medical care for those who are not financially able to pay. Full control and authority for carrying out the programs must be at the State level. I want no part of any plan that will be conducted and managed from Washington.

Several bills have been introduced which embrace that philosophy. I believe they are worthy of your consideration. The grants-in-aid, provided in some of the bills, would be used by the States for broadening the distribution of their medical and hospital services to make them available to all. Part of the funds to be provided could be used by the States to encourage the formation and expansion of voluntary nonprofit health insurance plans. Also, dental services are included in some of the proposed plans to be made available at the discretion of the State.

Some measures provide grants-in-aid to the States to permit periodic medical and dental examinations for school children, and follow-up treatment where the family cannot afford to pay the cost of such treatment; others authorize Federal grants-in-aid to the States to assist in establishing and maintaining adequately staffed and equipped local public health units; and Federal payments are also provided for accredited schools of medicine to encourage the enrollment of more medical students. Surely, from such a wide range of constructive suggestions, it should be possible to reach agreement.

I believe the voluntary nonprofit health insurance plans are the answer to the needs of the middle-income group. With the aid and assistance of the Nation's medical profession, these plans can be expanded to provide the participant with full protection against burdensome medical bills. On a voluntary basis, the program will encourage a healthier, more sound economy, and a more vigorous and progressive medical profession. With the help of Federal grants-in-aid, the States could enable the lower strata of the middle-income group to share in the program at reduced costs. We cannot close our eyes to the fact that there are thousands of good, conscientious, hard-working citizens whose incomes are sufficient to enable them to make their own way in life, but who cannot afford to pay the full price for comprehensive medical protection under Blue Cross and other voluntary nonprofit insurance plans.

This then is the medical need that confronts our country. It is a basic need. It concerns itself largely with inequitable distribution, mainly influenced by geographic and economic factors. We must recognize this to be true and turn our attention to a remedial program.

We are familiar with the suggestions advanced by the extremists. We must reject them, and find the solution within the framework of our own free-enterprise system. I call upon you, the doctors, and you, the people, to come forth and assert yourselves. You will find a substantial majority of your lawmakers eager to cooperate with you in the development of a sound and adequate program, one that will accomplish the purpose without extinguishing the light of freedom that has made America great.

Can Congress Cure Transportation Ills?

EXTENSION OF REMARKS
OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. JOHNSON of Colorado. Mr. President, today I had the honor of addressing a luncheon session of the Chamber of Commerce of the United States, where the general topic of transportation trends was being considered. The subject of my address was, Can Congress cure transportation ills? I ask unanimous consent to insert my address in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN CONGRESS CURE TRANSPORTATION ILLS?

With the end of World War II and the conversion of our economy from war to peacetime conditions practically finished American industry still faces serious and varied problems. The war is over but the impact of that war on our economy will never be over. World War II has given us a 50-cent dollar, a high standard of living habit, a burdensome debt load, and excessively heavy taxes. Shortage of labor during the war years drove industry to adopt labor-saving devices which brought about a heavy capital investment and a smaller pay roll. As a result unemployment is increasing and buying power is drying up.

Most products and most services have priced themselves out of the market. Usually following war prices tumble, but this time they cannot because costs of production have not and cannot come down. We may witness the first depression in history when, except for bankruptcy and forced sales, prices will remain relatively high.

These facts are directly related to the transportation industry since expenses and costs of transportation services cannot be materially reduced while demand for such services tapers off. There can be no forced or bankruptcy sales of transportation services. Its charges and its rates are fixed and transport industries must therefore bear the full impact of an economic slow-down.

If it were not for the Soviet-imposed cold war, the present economic situation in the United States really would be alarming. The $17,000,000,000 Marshall plan, plus the $20,000,000,000 rearmament program for western Europe, plus the annual current domestic $15,000,000,000 military expenditure is maintaining a current economic fool's paradise. Disaster is not being halted; it is only being delayed. If Russia suddenly decided to be a good neighbor there would be hell to pay.

The first to feel the pinch and bear the fruits of economic disturbance are the service industries and especially the transportation industry. That is why there is so much interest in this luncheon today. That is why, I suppose, shippers and the many segments of the transportation industry are watching with undisguised concern the current studies of the Senate Interstate and Foreign Commerce Committee.

We have made tremendous advancement in the productivity of our farms and have improved efficiency in our factories, but our distribution system has not kept pace. This has a primary effect on American cost of living for no matter what the product may be, or how reasonable its cost of production, it

must be delivered into the market place at a cost that will permit its sale price to be within the range that the consumer is willing and able to pay.

Nearly 70 years ago Congress created the Interstate Commerce Commission and gave to it vital regulatory powers over the railroads. The national importance of railroad transportation, which was about the only interstate transportation of those days, investment abuses, and unwholesome competitive conditions made Federal regulation necessary. It is important to note here that Congress did not step into this picture until its hand was forced.

As new forms of transportation have come into being regulatory bodies have been set up to exercise over them similar quasi-legislative and quasi-judicial powers. The object from the first has been to eliminate "dog-eat-dog competition" and to stabilize each transportation service in the interest of shippers and the public generally. All of these Federal regulatory agencies are under the supervision of the Commerce Committees of the Congress.

The successful operation of our vast transportation system—rail, water, highway, air, and pipe line—has a direct bearing on the daily life of all our citizens. The network they afford helps bring about the successful maintenance of a strong national economy. It has permitted us to tap our natural resources in the remotest parts of the Nation, and has made these materials and the products manufactured from them available to all our people throughout the country. It has given the farmer and the miner and the manufacturer a national market for his product. It has given us a uniform national culture from Maine to California. It has stripped Americans of their rugged individualism and spirit of self-reliance and made them dependent upon their fellows everywhere for the necessities of life and limb. But it has united this Nation into one big family with a common objective and a common goal.

In the Transportation Act of 1940, the Congress set forth a declaration of policy which I am certain is familiar to all of you. This declaration calls for fair and impartial regulation of all modes of transportation; for promotion of safe, adequate, economical, and efficient service and the fostering of sound economic conditions in transportation and among the several carriers. It requires the establishment and maintenance of reasonable charges for transportation services; promotes cooperation with the several States; and encourages fair wages and equitable working conditions. It is aimed at the development, coordination, and preservation of a strong national transportation system by rail, air, water, highway, and all other means adequate to meet the needs of the commerce of the Nation, of the postal service, and of the national defense.

As a member and chairman of the Senate Committee on Interstate and Foreign Commerce, I assure you that it is the constant aim of our committee to see that these objectives are carried out. Our committee is just now embarking on a complete study of all phases of our transportation system. Our various subcommittees engaged in this study welcome your cooperation and constructive suggestions. We are interested in all your problems, both large and small. Wherever necessary, we want to improve regulations and strengthen statutes to better carry out the declared policy of the Congress for a constantly improved system of transportation. We want to encourage and protect the investment of capital in these industries. We want to guard against ruthless competition that can destroy rather than improve the heavy investment in traffic facilities.

In the three major studies which we have undertaken respecting air-line, maritime, and surface transportation we are not seeking headlines nor do we expect to turn things upside down. We are determined not to indulge in witch hunts or to make a nuisance of ourselves. We are going about these vital investigations with the solid objective ever before us of being constructively helpful. But we are very serious and will not tolerate obstruction of any kind; if we find evil we will expose it.

According to the Bureau of the Budget, the out-of-pocket contribution American taxpayers are currently making annually to civil aviation is $300,000,000. A major portion goes to air-line operation. That seems a sizable sum for an industry whose total capitalization is but $700,000,000. Nevertheless, in spite of this substantial annual payment the air lines, industrywise, are operating in the red and are insisting upon more generous subsidies. Our committee is determined to find out what justification there may be for these urgent demands.

An executive of one of our western railroads asks: "Would it not seem fair to exclude from taxable income the excess costs of new units (of railroad equipment) above depreciation?" Can anyone tell me why not when we spend billions of tax dollars on airports, highways, and barge lines. The other day the Maritime Commission announced that it had granted $42,000,000 toward the construction costs of a $70,000,000 passenger superliner. Col. J. Monroe Johnson, on the other hand, has been bellowing to the four winds about the precarious shortage of freight cars from a national-defense standpoint.

After 13 years of regulation of the trucking industry by the ICC, the industry is still plagued by "gypsy" operations. The holder of an ICC certificate enters into a trip-lease contract at a cutthroat rate with some poor fellow who has managed to scrape enough together to make a down payment on a truck and who is under pressure to get his hands on a few dollars. To make both ends meet he must run excessive hours and carry excessive loads and forget about the proper care of his truck. Congress delegated supervision of the trucking industry to the ICC to foster sound dependable economic and safety conditions in transportation, but "gypsy" exploitation and truck-leasing turmoil in this regulated industry is growing by leaps and bounds.

Two world wars found the American merchant marine unprepared to face the worldwide transport and auxiliary demands of our armed forces. Fortunately in each instance we were given time to build ships. We should not gamble on a third period of grace.

During the last war this country built the world's largest fleet, a fabulous armada of 6,200 ships, totaling about 57,000,000 tons. Today about 2,000 are in moth balls. Our active fleet consists of about 1,500 vessels, some 1,200 of which are privately owned.

The big questions facing the Congress, the administration, and the people are: How much tonnage do we need in peacetime to carry our share of world commerce? What is the minimum tonnage required in the event of an emergency? What portion of this insurance should the taxpayers bear? How much of the load will private enterprise assume? How much cargo which should move in private bottoms is the Army Transport Service carrying on Government-owned ships? What is the effect of transfers to the Panamanian, Honduran, and other flags on our merchant marine? What is the impact of coastwise and intercoastal movement of cargoes upon our various forms of domestic land transportation?

It is easy to ask these questions. It is more difficult to find the answers. The Congress is well aware that a constructive solution to these pressing maritime problems is essential. It is part of our three-pronged investigation of transportation and, again, because every businessman in this country has a vital stake in the outcome, we invite your cooperation.

In 1936 the Congress established the Maritime Commission and gave it a mandate to foster a merchant marine second to none which would serve as a military auxiliary in time of war.

The Maritime Commission as visioned by Congress is not to be merely a regulatory body; it is given vital promotional and investigatory responsibilities. It charters, designs, builds, repairs, buys, sells, and operates ships. It subsidizes shipping and makes loans on ships on a huge scale. It is big business. It's over-all cost to the Federal Treasury runs well over $100,000,000 annually.

Let us turn now to the practical day-by-day problems which face our economy and therefore our transportation industry. Exclusive of our aid program in western Europe, including rearming, next year this Nation is spending $15,000,000,000 on the construction of our own war machines. This is three times as much as our annual expenditure on all private and public education from the kindergarten to the highest postgraduate college course. It is more than the total investment in our vast railroad system. I do not believe this stupendous expenditure is justified, nor do I believe we can continue its present pace without serious repercussions on our economy. This fiscal year will find us three billion in the red and the next fiscal year we are likely to have a $10,000,000,000 deficit. I need not remind you that deficit spending is alone responsible for whatever inflation we have. If the present military spending spree and the European-aid program are not drastically reduced by next year this Nation will be launched on the wildest inflationary binge of all history. Only Joseph Stalin and his Politburo can be the beneficiaries.

However, if only half of our defense program is warranted, how dare we neglect transportation? When Hitler decided to plunge the world in a catastrophic blood bath his first step was the construction of a superb integrated transportation system. Because of it his war machine was able to function smoothly and for 3 years the world was his apple. Then in 1943 the break came. His warships and submarines were driven off the seas; his railways and superhighways were relentlessly bombed; and his well-defended airways began to crack under the impact of our fleet.

Our own war machine functioned faultlessly only because of our domestic transportation network of rails, highways, inland waterways, ocean shipping facilities, and pipe lines. They turned in a magnificent job. Successful prosecution of modern war depends upon the united effort of a whole Nation. The Kansas wheat farmer, the Colorado miner, and the Pennsylvania factory worker are as much a part of modern war as the man in uniform. They are made effective by linking together through a transportation network the product of their labor.

At least 50 percent of the money we spend on our military machine should go for transportation. An atomic bomb is no good unless you can carry it to the target. The irresistible marine cannot whip his weight in wildcats unless you bring him face to face with the enemy. No army can win unless its supply lines keep pace with it. Food and ammunition and petroleum must be carried to the front lines. This question was put to Gen. Nathan B. Forrest on a Civil War battlefield: What is the sure way to win? Without batting an eye, this doughty military phenomenon snapped: "Git there fust with the mostest," and getting there first with the most is the only way we can hope to win world war III, or, for that matter, any war.

Military people call this science logistics. I call it transportation.

If these truths were not so evident, the Congress might be complacent about transportation. We could let the law of survival of the fittest determine who is to transport what. But in industries having vital defense aspects, the people's representatives cannot and must not sit idly by and permit them to disintegrate.

There are many problems that appear to be present in the operation and improvement of these great distribution channels. Some apply to all branches of the industry and some are peculiar to each separate branch. There is, however, a definite relationship or team play between Congress and all of our modes of transportation. The solution of any of their problems must be accomplished with constant thought as to the effect of such changes or restrictions on each segment of the whole.

The solution is a national obligation, and must be brought about with due regard for our entire public welfare and the benefits to be derived by all our people. But it is not the responsibility of Congress alone, and Congress must be wise enough to realize it. Private management and the proved, expert knowledge gained from long, bitter experience must be given a full opportunity to bring forth the answers to most of these problems. The effort must be made by each group with the objective of reaching the desired result which will prove to be for the best interests of the whole country, rather than the selfish interest of a particular group or branch of the industry. Congress and the regulatory agencies which it has created must guide and assist; not direct and hinder.

The potential to this country in the development of financially stable transportation services challenges the imagination. The advent of the Diesel engine for motive power, both on the rails and on the water; the jet turbine for aircraft; and the new engineering techniques in motortruck and watercraft construction challenge all of us to make use of these tremendous scientific advances for an even better system of transportation. We have not yet attained perfection and we must not stop until that goal has been reached.

The ever increasing complexity of common-carrier services and the destructive rivalry between the different types of transportation are disconcerting. However I hold to the view there will be a useful and necessary place for every kind of transportation now serving us.

Team play between the various modes of transportation is essential. If all are to function at their best, there must be that interrelationship which gives the public the highest degree of service. Rather than spending energy opposing each other, they should apply this same energy in cooperation and teamwork. In the game of baseball, very frequently the best hitter on the team is called upon to make a sacrifice hit to advance one of his teammates to scoring position. While this sacrifice hit may appear to be less glamorous and the immediate personal advantage to the hitter appears to be lost, yet in the over-all picture such a sacrifice may well win the ball game. Similarly, what may appear to be a temporary disadvantage to one mode of transportation may ultimately result in a distinct advantage to all modes of transportation.

This leads to the problem of Federal regulation. The report of your own transportation and communications department committee, headed by your able chairman of this session, has advanced several questions and suggestions. You question whether or not there is a current need to enlarge and clarify the present declared transportation policy of Congress. Should all interpretations of every phase of our national transportation policy, including the rate-making power for all the various transportation branches, be centralized in one Government agency? Is the present rule applied by the Interstate Commerce Commission in the determination of rates fair and equitable?

Finding answers to these puzzles is the subject of the three separate, yet correlated, inquiries our committee is making. For the sake of convenience, we have divided them into three inquiries, but they are to be kept together in one over-all pattern. Please do not jump to hasty conclusions. Remember that our objective is to help and not to hamstring or hinder progress. Congress cannot, of course, cure all transportation ills, but it can prescribe a little preventive medicine.

It is my considered judgment that the inquiries and studies our committee has undertaken will result in recommendations to the Congress and to the industries themselves, which, if adopted, would be of great material benefit to the further development of our transportation systems. It is my hope and sincere belief that with the cooperation of shippers, labor, and management, the Congress will evolve a way to make our transportation industries effective agencies in the public interest.

Address by Hon. Kenneth S. Wherry, of Nebraska, at Testimonial Dinner to Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the distinguished Senator from Nebraska [Mr. WHERRY] on the occasion of a testimonial dinner given to the distinguished Senator from Pennsylvania [Mr. MARTIN] at the George Washington Hotel, Washington, Pa., on April 30, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Senator MARTIN and Mrs. Martin, honored guests, and ladies and gentlemen, it is indeed an honor and privilege to join you in honoring your favorite son, ED MARTIN. Your presence and your tributes that have been paid him show the high regard in which he is held by his neighbors and friends. And it's what the people at home think of you that really counts.

Many fine things have been said about ED MARTIN, about his accomplishments for the local community, and the service he has given to his native State.

You know him as a neighbor and fellow townsman, but I know him as a colleague in the United States Senate. There he is held in the highest respect by the entire membership, both sides of the aisle. There his great talent for good government reaches beyond the local community and State of Pennsylvania. His actions now affect the whole country; in fact, all mankind.

In a sense, I am an outsider at this testimonial gathering, that is, geographically speaking, since my home is in Nebraska, out there in the wide-open spaces, in the breadbasket of America. But I feel right at home here, sharing your hospitality and good fellowship. And whether we be Pennsylvanians or Nebraskans, we are all Americans. We all dearly love our country.

As I see it, Senator MARTIN has dedicated his life to public service, as lawyer, soldier, State auditor general, treasurer, adjutant general, governor, and now, as the senior Senator of the Keystone State in the United States Senate.

But with all the honors that he so richly deserves, and the tributes that have been paid him, yet, he is just ED MARTIN, and ED MARTIN is a very modest man. He asks no bouquets or testimonials in return for service on the field of battle and the efforts he is making to save his country. If he were asked what he thinks about all these words of praise tonight, he would reply something like this:

"If I could contribute just a little for the good of my fellow man, I would be very happy, but there is much that needs to be done, so very much, if we are to keep our country on an even keel going forward in freedom."

Out of this meeting, out of these words of tribute, our hopes and aspirations are renewed, for we all gain inspiration to do all we can to see that these principles for which Senator MARTIN stands shall not be eclipsed by alien ideologies.

Purveyors of gaudy socialistic wares are doing their utmost to lead us into state socialism. They promise a life of ease and abundance without work, they promise the Government will take care of us from cradle to grave, they promise high wages, low prices, free education, free medicine, free hospitals, free everything.

We are witnessing the biggest give-away show on earth. Come one, come all. Something for nothing—absolutely free.

These "medicine men," with their quack remedies, remind me of something my father said years ago in the horse and buggy days. My dad was a merchant and a farmer. And in those days there were plenty of mule traders and they had stock phrases. They had a language of their own. Dad said: "When a man tells you he has the best mule in the county, watch out. It is probably windy, spavined, stringhaltered, or moon-eyed."

So it is with the "medicine men" of Washington. They are long on promises of billowy pillows of ease, but extremely shy on what the cost will be, the cost in taxes, the cost of living, yes, the cost in robbing the people of their freedoms.

The Baltimore Sun, a leading Democrat newspaper, estimates the monetary cost of the President's social-welfare programs, all wrapped into one package, over a period of 50 years, at $1,250,000,000,000. I repeat: $1,250,000,000,000.

That many silver dollars would make seven stacks, reaching to the moon, and there would be enough left over to pay the national debt of a quarter of a trillion dollars. I said trillion dollars, and also pay all your 1948 income taxes.

Confronted by those awesome figures, some of us are like the little boy who, when he saw an elephant for the first time, couldn't believe his eyes. He was so surprised he said: "It ain't real."

But, my fellow Americans, the threat to the financial stability of our country is real, very real. Not only is the financial stability of our country threatened, but our form of Government is challenged. These issues rise above partisanship and sectional interest. They must be met, head-on, by all Americans, who believe the Government should be the servant and not the master of the people.

Senator MARTIN is a leader in this crucial battle. For the life of me, I cannot see what these "medicine men" have to offer in exchange for our American way of life.

Here we have the best country on earth, with most of the good things of life: freedom of choice, freedom to take a job or quit a job, freedom for our workers to organize and bargain collectively, and freedom to come and go as we please. With only one-sixteenth of the world's population and only 6 percent of the world's area, we produce nearly half of the world's goods. We own 46 percent of the world's electric power, 48 percent of its radios, 54 percent of its life-insurance policies, 85 percent of its automobiles, 92 percent of its bathtubs.

We have the best health record, the most churches, the best schools, and the highest standard of living.

Incredible as it seems, I can't believe my own eyes, but there are among us those, some of them in high places in Government, who would take from us the freedoms that made these things possible and impose upon us socialism and police-state methods. Along that road is neither social security nor liberty. National socialism has never worked anywhere. It won't work here.

Our people don't want to be spoon-fed by a paternalistic government at Washington. No matter how they sugarcoat their pills, they are still socialistic. The socialistic planners have included everything in their blueprint. Many sincere, patriotic Americans are attracted to their glittering master design.

Through federalized education the radicals seek to capture control of the school systems. They hope to condition the minds of our youth for state socialism which is the doorway to communism and dictatorship. Oh, I know Congress is only asked to appropriate $300,000,000 this year for aid to education. But once they get their foot in the door it will lead to billions of dollars in appropriations in the coming years. It would grow and grow and grow, like those radio give-away jackpots, like the pyramid clubs of today.

Through socialized medicine the radical planners seek to break into our homes. They hope to disrupt the confidential relations between our people and their family doctors, and parade the ills and finances of our people through Government reports. It is a scheme that soon will cost $6,000,000,000 a year.

Through a socialized food program the radical planners would multiply controls upon the farmers, send bureaucrats snooping into every farm in the land, to check their acreages, their quotas, and their receipts. The self-annointed planners at Washington seek to break the will of the farmers for independence and freedom.

To the farmer they offer as a price for security, a subsidy for food to be paid out of the Federal Treasury; to the housewife they offer low prices in the name of security. But to the taxpayers, and that's all of us, directly or indirectly, they say nothing. They do not tell us they will hand us a bill and will collect it from us in the amount of $5,000,000,000 annually.

I am not talking about socializing England, or collectivizing the farmers of Russia. I am talking about what is happening in the United States. These plans, my friends, are being advanced seriously in Washington. They are offered in the name of security, abundance, all the catch phrases. All of them have strings attached. All of them whittle away our liberties. All of them are infected by squandermania.

The Federal Government does not receive its revenue from some remote place. Tax money does not grow on trees. It comes from the toil and sweat of the people in cities, towns, hamlets, and on farms. It is for them to decide how it shall be spent, not the "medicine men" in Washington. Dollars taken from the people by the bureaucrats in Washington do not return to the people worth 100 cents. Bureaucracy takes its toll.

Keep the money at home, in the local community, in the State, to be spent as you people see fit; where you have control and supervision of your local authorities. That is home rule. That is in line with the principles of the Constitution, under which Federal, State, and local governments are supposed to function in distinct orbits.

Yes, Pennsylvania, our whole country, faces critical situations. We must keep our Government financially strong, we must hew to the line of true Republican principles, if we are to keep our liberties.

What could the freedom-loving nations of the world expect of the United States in forthright foreign policy, if our Government pursues the road to socialism and dictatorship at home.

We can be of little help to freedom-loving peoples, if, by neglect, our own country becomes a bedlam of confusion, with alien-minded rascals running in and out of our Government like water through a sieve. America's resources are not inexhaustible. In our efforts to help other countries, let us be cautious against impoverishing ourselves.

We cherish freedom, freedom of choice, as a people. In war and in peace we have fought to win and keep freedom for the individual. That freedom must be preserved at all costs.

As ED MARTIN has so often said, our freedom could be smothered by big government, big business, and big labor. ED MARTIN has, in no uncertain manner, called that to the attention of the Members of the Senate many, many times. We must be vigilant in protecting small, independent business establishments against obliteration by monopolies. We must preserve their economic freedom, and keep open the door to opportunity. The great strength of America lies in the freedom of the individual to pioneer in new enterprises. That is the great field for youth.

Would we have had a Ford if it had not been for the opportunities and incentives open to small-business men? How about Edison and Firestone? We could not get a Ford, a Firestone, or an Edison under any system of cradle-to-grave, Government spoon-feeding. The right to acquire property is a human right and must be preserved. When the Government takes the bulk of what we earn, Government robs us of our incentive to acquire, it road-blocks progress. Today, some of our tax levies are confiscatory, and have reached the saturation point.

Real progress lies not in more and more Government paternalism, but rather in more and more freedom for the individual, and in constantly widening diffusion of the good things in life among the masses. History reveals that all true progress has been made only when the liberties of the people have been expanded.

The people, when given all the facts, will make the right decisions. I have an abiding faith in their wisdom. But many of them today are being misled by false promises of security, something for nothing.

The founders of our Nation did not promise a life of ease, with the Government managing the affairs of the people. They provided a government in which the individual has freedom of choice, and opportunity to improve himself in all ways.

The Declaration of Independence does not guarantee social security from cradle to grave, or even happiness. The Declaration of Independence declares it is the inalienable right of the people to life, liberty, and the pursuit of happiness.

Our forefathers asked only the guarantee of their right to life and liberty, and the right to pursue work for happiness. That is what made America strong, the bulwark of freedom.

It's worth fighting for. Let's join ED MARTIN in helping to keep it that way.

The Polish Constitution of 1791

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. HENDRICKSON. Mr. President, on behalf of my colleague, the senior Senator from New Jersey [Mr. SMITH], I ask leave to have printed in the Appendix of the RECORD the text of a message entitled "The Polish Constitution of 1791," which he sent to a commemorative meeting held on Sunday, May 1, at Rutherford, N. J., under the auspices of Fairleigh Dickinson College.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

THE POLISH CONSTITUTION OF 1791

The Polish Constitution of May 3, 1791, is a document of the deepest significance for every one of us who watches today, with mingled hope and anxiety, the trials of the civilized world.

This constitution was primarily the work of a Polish King, Stanislas Augustus II, who was a great patriot and a man of rare wisdom. When he first presented his ideas to the leaders of the great Diet, he apologized, saying that these were "only the dreams of a good citizen." But this was a time for dreams in Poland. It was the springtime of Polish nationalism and Polish democracy, apparently freed at last from the cold grasp of Russian and Prussian despotism. Small wonder that the patriot leaders hailed the ideas of Stanislas as their charter of independence and liberty. Small wonder that when the King offered this constitution to the Diet on the morning of May 3 the gathering adopted it by acclamation and the lights of Warsaw burned all night in triumph.

What was this constitution? It was a wiser document than was realized even by many of those who acclaimed it. Not only did it grant to both townsmen and peasants a measure of freedom such as they had never known before; it also sought to establish efficiency and order under law. It expressed the conviction of its authors that reform without order is a vain and tragic waste. In those turbulent times this was perhaps its greatest promise for unhappy Poland.

Indeed, one of the major results which Stanislas and the other good citizens hoped for from this constitution was the achievement of enough stability in Poland to discourage the aggressive plans of her great neighbors. We know now, of course, that this hope was soon to be tragically crushed by the second and third partitions of Poland in 1793 and 1795. Then, as always, Poland was a victim of geography—situated on fertile rolling plains, with few natural defensive barriers, between the two most ruthless and aggressive nations in the history of modern Europe. When the armies of Catherine the Great and Frederick William marched, Poland lost her freedom, her order, and her very existence at a single blow.

If there is one moral in this story that stands out for us today above all the rest, it is this: Peace, democracy, and orderly living cannot be sealed within the borders of a single nation. We cannot change geography; Poland will always be there on her rich, defenseless plain. All our efforts must be bent instead on the difficult but not impossible task of changing the character of her two

great neighbors, Germany and Russia, whose aggressive appetites in 1914 and 1939 were just as fearful as they were in 1793.

Here, indeed, is the meaning of America's foreign policy today: we are committed to the effort to change the hearts of aggressive dictatorships the world over and to restrain them if they persist in wrongdoing. That is the meaning of our role in the United Nations, where we look forward to the day when Poland will raise her independent voice. That is the meaning of the European recovery program, in which Poland was about to join when the Soviets rudely drew her back, but which still seeks to encourage the greatest possible amount of legitimate trade across the iron curtain. That effort at changing hearts is also the central meaning of the Voice of America broadcasts, which every day speak to Russia for 2 hours and to Poland for 1 hour, telling their peoples the story of the free world. And, finally, that is the meaning of the North Atlantic Pact, which is designed to ward off the possibility of another war until we are able to establish positive peace in the world.

Only when that peace is established can Poland's great people live again in freedom, order, and justice. Perhaps when that day comes another freely elected congress, secure from cynical foreign aggression, will meet in Warsaw to take up again the task of 1791—to ordain and establish a new constitution worthy of the good citizens of Poland.

Civil Rights and Social Customs

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. HOEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a well-reasoned editorial entitled "Civil Rights and Social Customs," from the Christian Science Monitor of Boston, Mass., of May 2, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CIVIL RIGHTS AND SOCIAL CUSTOMS

President Truman is sending his civil-rights program to the Senate in one four-bill package. Quite a lot could be written on the pros and cons of the move as political strategy. Suffice it to say for the moment that the bills have little if any chance for action this session; that it is consistent with Mr. Truman's now-familiar practice of dumping his platform and campaign pledges in the lap of Congress, if only for the record; that certainly, whatever else might be said, it puts the issue frankly and as a whole before the American people.

The civil-rights question is so overlaid with emotion and so buttressed with deep convictions on both sides that one cannot try too hard or too often to keep it in perspective. First, it should be seen that, applied to this package of legislation, "civil rights" is a too-narrow and hence a misleading term. For the forthcoming bills would deal with social customs and attitudes as well as with constitutional guaranties. And the "folkways and mores" of a people are rarely changed directly by passing a law. Even the attempt subjects the best of intentions to serious risks.

Into this category fall legislative proposals which could end up forcing employment of proportionate numbers of any and all groups in any and all establishments, and proposals to end segregation everywhere by Federal fiat. The injustices involved can be better attacked, we believe, by voluntary, extra-legal methods and on the local plane.

But effective guaranties of true civil rights can eventually, although indirectly, bring changes in attitudes and customs sufficient to dissolve at least their crueler accompaniments. And a good case can be made that such guaranties lie within the scope of Federal functions under the Constitution.

Certainly one of the rights of American citizenship is the right to vote on the same basis as others in the same State. The poll tax, which has often been used to bar Negroes from the ballot box, is being progressively abolished by the States themselves. And it is not the only method being used for preserving white supremacy at the polls. So the administration's anti-poll-tax bill seems a bit unrealistic from the practical standpoint. To put the record straight, however, and to cut that much ground from under Communist propaganda here and abroad, such a law on the Federal statute books might have its uses.

A civil-rights commission, to conduct continuing studies of the situation and make annual reports and recommendations to the President, could help greatly to keep public opinion aware of both progress and regressions.

As for lynching, that is the utter negation of all the guaranties of the fifth, sixth, and seventh amendments. No man or woman, guilty or innocent, strung up by a mob, has been allowed to claim his rights to a speedy and public trial by an impartial jury, to have the assistance of counsel, or to any of the other protections therein provided.

A Federal antilynching law touches questions of constitutionality. And we do not wish here to argue the relative merits of the administration versus the Ferguson bill (already introduced). But we hope earnestly that the South, if only for its own sake, will not oppose reasonable and soundly worded legislation directed against this peculiarly abhorrent and lawless tyranny wherever it may threaten, North or South.

To do so would be to repeat what Georgia Editor Ralph McGill terms (and applies specifically to the current controversy) "the tragic history of the South—the furious defense of a moral wrong which obscured whatever was right about the South's position. * * *"

The South has much right on its side. It would be a tragedy, indeed, to again becloud it.

Farm Problem in the Spotlight

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Josephine Ripley entitled "Farm Problem in the Spotlight," which was published in the Christian Science Monitor on May 2, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARM PROBLEM IN THE SPOTLIGHT

(By Josephine Ripley)

WASHINGTON.—If the Brannan farm program is radical and costly, so is present farm legislation.

Extension of high wartime price supports to 1950 by the Eightieth Congress has the Government involved in the most extravagant price-support operation in its history.

So far this fiscal year (through March 31), the Government has nearly $3,000,000,000 committed to price support in loans, purchases, and purchase agreements. That is far more than ever has been spent for this purpose in any previous peacetime year.

The magnanimous abandon with which the last Congress extended high-cost wartime controls to 1950 in its precampaign wind up is indicated in the fact that it pledged support at 90 percent of parity for the 1948 potato crop, too, even though the potato-support program had already cost the Government $170,169,000 at that time. As a result, the cost of the potato program to date has now risen to $400,000,000.

These rates do not terminate until the Aiken part of the Hope-Aiken Farm Act goes into effect in January with its provision for flexible supports, ranging from 60 to 90 percent of parity.

This legislation was passed in such a rush in the closing days of the final regular session of the Eightieth Congress that few persons realized its import.

Most people are amazed at the similarity between the Aiken law and the new Brannan farm program which has caused such a sensation since its presentation to Congress a few weeks ago.

As a matter of fact, the Aiken Act and the Brannan program differ in only three major respects, as follows:

1. The Brannan program would give 100 percent support to some 10 commodities, while the Aiken Act furnishes 60 to 90 percent support for some 8 commodities.

2. The Brannan plan proposes a new formula for working out a support standard—a standard based on farm income instead of prices.

3. The Brannan scheme sets a unit limit of production on which the farmer may enjoy price support. The Aiken Act sets no limitation.

The greatest difference, of course, is in the number of commodities selected for support, and the rate of support.

All of the various methods of support outlined in the Brannan plan are also provided in the Aiken Act, even to the much-debated production payments.

These permit the Government, instead of buying up surplus commodities, to leave them on the market to fall to their own level. Then it steps in to pay the farmer the difference between the market price and the higher support level.

Many have taken it for granted that this is a new and radical idea. Its purpose is to furnish the farmer price support while at the same time giving the consumer the benefit of lower prices.

It is true that these operations assume broader proportions and more definite outline in the Brannan plan, but they are all in the present law. The Aiken Act authorizes the Secretary of Agriculture to support prices of agricultural commodities to producers through loans, purchases, payments, and other operations.

It also makes clear that compliance by the producer with acreage allotments, production goals, and marketing practices prescribed by the Secretary may be required as a condition of eligibility for price support.

The Brannan plan would make price support conditional upon compliance with soil-conservation practices, acreage allotment, marketing quotas, and marketing agreements as these are found necessary to curtail wasteful production and disorderly marketing.

Under the Aiken Act any or all of these controls, with the exception of soil conservation, may be applied. Under the Brannan plan, they would be required, under certain conditions.

It is unfortunate that there is no way to estimate how much either of these programs will cost. This is so because grain and other nonperishable commodities acquired by the Government under the price-support program are sold eventually. So the actual cost is not known until those sales are made. If shortages develop in the meantime, grain will bring a good price, and the Government may come out ahead in the operation. This is often the case.

The Brannan plan is serving a real purpose in bringing the whole farm picture into sharp focus at this time so that the country will have an opportunity to know just what a farm program entails, and whether it wants the Brannan program, the Aiken Act—or a combination of both.

Excerpts From Remarks of Hon. Hugh Scott, of Pennsylvania, at Testimonial Dinner to Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from remarks made by Hon. HUGH SCOTT, chairman of the Republican national committee, at a testimonial dinner given to the distinguished Senator from Pennsylvania [Mr. MARTIN] at Washington, Pa., on April 30, 1949.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

To my mind, Senator EDWARD MARTIN is the embodiment of the kind of hard work and service which brings success to its political party and which results in the preservation of the kind of government which I am sure we all wish to see perpetuated.

Early in life he started out as a precinct worker right in Greene County. Then he became a member of the county committee and later served as its secretary and as its chairman. His ability as an organizer and his willingness to make sacrifices for the party's good soon brought him additional recognition. He was elected a member of the State central committee and in 1928 became State chairman, serving until 1934. It was during his service as State chairman that a solid congressional delegation of his party was elected under his leadership. He has been a delegate to several national conventions and has served as chairman of the Pennsylvania delegation.

After having held various other elective offices he was elected Governor of the Commonwealth of Pennsylvania in 1942 and after making a brilliant record in that office was elected Senator in 1946. I am stating but the widely accepted fact when I say that there is no more valuable public servant in Washington today than Senator MARTIN.

His abilities are recognized by men of all parties and those who have no formal affiliation with any party. It is important that we have men like Senator MARTIN in public office and that we keep them there. They are hard to find but we could use more of them.

I trust that I will not be going beyond the bounds of propriety when I mention here tonight that in Washington today we are engaged in a life and death struggle to preserve our representative Republic. It is a struggle that cuts across party lines. That is proved by the record. Back in 1945 the present administration presented a program to Congress which had a very strong resemblance to the Communist Party program in its substance, if not in its form. It was instantly recognized as a program which could not be adopted without doing serious damage to the entire fabric of our Government. It presented much more than a partisan issue. In 1945, if you will recall, the Democrats had majorities in both the Senate and House of Representatives. That was during the Seventy-ninth Congress. That Congress ignored the administration program in its entirety. Congress would have nothing to do with it and said so emphatically. Most of the same program was submitted again when the Eightieth Republican Congress came into office in January 1947. Again it was repudiated by the elected representatives of the people and I might add it was repudiated by Democrats and Republicans alike.

Now, today, we have the same old program with a few added trimmings presented to the Eighty-first Congress in which the Democrats have majorities in the Senate and House. All indications are that once more it will be turned down and I certainly hope it will be, because most of it simply doesn't make sense, or worse.

You hear a great deal of talk nowadays from spokesmen for the present administration who are loud in their complaints that the Republican minorities in Congress are blocking the administration's program of creeping socialism. That is just so much nonsense, because the Democrats have majorities which could pass any program regardless of how Republican Members might vote. That is, the Democrats could do so if they were united in support of a program. Fortunately for the Republic, they are not so united, and I want to express my gratitude to the patriotic Democrat Members of the Senate and House who are standing up for American principle of government despite ruthless pressure from many sources. Republicans, of course, are opposing many of the unsound items on the administration's agenda. We have no apologies to offer for such opposition. We are proud of it. We were not elected to preside over the burial of the constitutional system. But we are also grateful that a sufficient number of Democrats have chosen to support our position to prevent the program from being enacted.

I want to say in all seriousness, and this is not a partisan utterance in any sense, that if the present trend of administration thinking ever prevails in Washington it will mean the end of free government and free institutions in the United States. No one wants that, whether he is a Republican or Democrat, or a member of no party at all. The basic idea underlying most of the administration program is the appropriation of vast sums of money—your money—to be administered by irresponsible and arbitrary political appointees for any one of a hundred different purposes. Some of the purposes are good, some of them are bad, but the method itself is bad in all instances. It is a method which if allowed to develop unchecked will inevitably set up a tremendously powerful political machine, self-perpetuating in its nature and able to buy the people's votes with the people's own money.

Of course, I have my own ideas as to what should be done to put an end to this situation, but this is not the time to make that speech. We will have plenty of those next year and thereafter. Meanwhile, we can all be devoutly thankful that patriotism has risen above partisanship in the present Congress to call a halt on the ruinous proposals of those currently in charge of the executive branch of our Government. Most certainly I hope that we will be able to preserve this bipartisan defense of American freedom as long as may be necessary.

One of the most effective Members of either House of Congress in checkmating the excesses of the present administration is the man whom we are honoring here tonight. I am glad we have him in the United States Senate, and from the fact of your attendance at this dinner, I assume you share my sentiments in that respect.

No man is more worthy of your tribute, more deserving of your confidence. We wish him long life and continued fruitful service in the cause of his beloved country, which he has, in so many varied fields, served so well. Of such men it is truly said: "They deserve well of the Republic."

The North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a radio address on the subject, The North Atlantic Pact, delivered by me over the facilities of radio station KSL at Salt Lake City on Wednesday, April 27, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NORTH ATLANTIC PACT

The signing of the North Atlantic Pact represents the culmination of a series of efforts on the part of member nations to provide a substitute for war. The regional nature of the pact might imply a divided world, but continuous reference to the United Nations leaves the pact in a universal realm based upon the concept of one world.

No matter what the world is politically, even if nations divide up into economic blocks, the world still remains one economically. The ideal in accordance with American theory if not practice—a theory based upon the notion of American dollar democracy—leaves the ideal of the one world, economically speaking, the primary purpose of the pact. It recognizes, first, the vast community of interest among whom an aggressor shall not arise. The secondary aspect of the pact represents the theory that there may be aggression from without this community of interest and that the aggressor can be stopped and even put down if there is unity backed by force of the nations of the same community of interest.

The pact invites a continuous adhesion of other states. Therefore, the community of interest can become world-wide. Thus the pact represents the basic theory advanced during the First World War, that war anywhere is of concern to all everywhere.

As far as the pact goes, an aggressor in international law has now become defined and the theory that nations may unite to throw their preponderant force against an aggressor state is accepted as fundamental. The nations who have signed the pact believe in the possibility of an enforced peace, depending upon the use of strength in a united way against an erring state or an attacking aggressor. These theories mark definite strides in the onward march of nations in an attempt to stop war.

The pact also accepts the theory that government, in its final analysis, rests upon force. The force need not be expressed and the theory of the pact is that it will never be expressed. In our own constitutional development, we in America have learned that while all of our institutions are backed in theory by force, force is seldom called upon in our contests between our States or between a State and the whole Nation. Thus the peaceful process is substituted for force which has been proved a possibility in the federal experience of the United States. The hope for the pact is that that possibility will be proved in an international sphere. All that has been done is consistent with what has gone before because the theory of force cannot be removed from government without destroying government. Since the theory of force, therefore, cannot be removed from international control without destroying that control it is in the nonexercise of this theory that the world's hope, the real desire of nations, will be fulfilled.

Let's review what we have done in America to bring us to this position. First, World War I proved the fallacy of what was called the balance of power. Peace, depending on a balance, was destroyed the minute there was a preponderant weight on one side of the balance. Then came the development of World War II. The invention of the submarine and the use of the airplane dwarfed the world so that nations far removed from the center of the fight came to the aid of the Allies, to use their own expression, thinking desperately of their own self-interest. In rapid succession there developed movements for an enforced peace. The League of Nations to enforce the peace; the World Court to settle disputes; and the machinery of government to preserve peace as a common interest has a definite reference in the Atlantic Pact. To preserve the territorial integrity of a sovereign independent nation is reflected not only in the League of Nations Covenant but also in the United Nations Charter.

Americans, because of their early heritage, will take the stand that regional pacts, such as the Rio de Janeiro Pact, the North Atlantic Pact, and agreements for universal action are not alliances. They definitely are not alliances in the old way in which the nations accepted the theory of the offensive and defensive alliance technique. War for the purpose of advancing a national interest has been outlawed by an almost universal treaty. War as an instrument of a national accomplishment remains outlawed and, with the condemnation of the aggressor as we have it in the Atlantic Pact, war as an instrument for the advancement of a national interest remains outlawed. Therefore, if we call the pact an alliance, it is an alliance only in the sense of the new concept of international law which bans war as a proper process to be used by a nation in obtaining its objectives.

In this mere recital comes a condemnation of the acts of aggression carried on by Mussolini, Hitler, Tojo, and their allies. The world has legally condemned the action of aggression of the Second World War. It therefore infers a condemnation of the actions of any future aggressor and, in addition to that, the democratic nations of the world surely condemn any state which is controlled by a single will. In other words, it matters not how much we may point out that there is inconsistency in what the world is doing, the fact remains that those nations which act for and in behalf of the wills of their people have become the states which are recognized as forward-looking. Single-will action is despotism. It is an invitation to tyranny. Therefore, states thus organized receive justly the condemnation of the states where the people's will prevails.

In another way the Atlantic Pact represents an almost universal acceptance of the concept of popular sovereignty. How then could America stand in any other place than the place she stands today in not only supporting and furthering, if not actually leading the culmination of that pact and the universal acceptance of the theory behind it.

Why were the early American States so interested in each one having military rights and privileges? Was it entirely against foreign aggressors they were thinking? No, even we of the United States were suspicious of one another and we did fight a war between States. But such a recurrence, possible still in theory, seems utterly absurd in fact. Why? Because we have learned how to live in such a way that the preponderant will or the preponderant force of the United States is turned against an erring individual State. The will of a Supreme Court decision is not questioned. Neither do we resort to arms for its enforcement.

America rejected the League Covenant. She did not at first adhere to the World Court. We were late in becoming a member of the International Labor Organization. We took definite stands against world organizations which were organized to preserve peace in the world. We attempted other techniques in our aim to preserve the peace of the world. In 1935 we resorted to an enlarged concept of our former theory of neutrality in an attempt to preserve peace. But because of the mandatory nature of the Neutrality Act and the fact that neutrality was generally interpreted as meaning impartiality, when one of the nations of the world started to move against another nation the Neutrality Act was regarded as notice that we would pay no attention to what other nations were doing. This caused us to act equally either against or in behalf of the aggressor and the victim of the aggression. In April 1939 I offered an amendment to the Neutrality Act which provided that the President of the United States might lift the embargo provisions of the neutrality when he saw an act of aggression in favor of the victim of such aggression. This was defeated. In July 1939 President Roosevelt submitted a formal request to the Foreign Relations Committee that something be done so that the force of opinion of the nations and the actual force of the United States might be alined with those nations of the world wanting peace. The Foreign Relations Committee turned down this recommendation. In less than a month after the United States gave formal notice to the world that it would not interfere with an aggression Hitler started his onward march.

In view of the leadership our Nation has developed, the United States has an obligation to the rest of the world to see that such a thing does not happen again. The spirit of the pact is that such a thing as happened under Hitler, Mussolini, and Tojo shall not happen again. The North Atlantic Pact is in complete harmony with the theories of collective security and the action of all the nations of the world to that end.

School-Lunch Program

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith a letter from Hubert Wheeler, commissioner, Missouri State Department of Education, Jefferson City, Mo. Mr. Wheeler's letter shows the interest in the school-lunch program and the urgent need for further expansion of this service. I urge immediate consideration of a deficiency appropriation to finance this program until the end of the present school term and sincerely hope that the appropriation for the 1949–50 school year will be sufficient to meet the expanding needs of this very worthy service.

STATE OF MISSOURI,
DEPARTMENT OF EDUCATION,
DIVISION OF PUBLIC SCHOOLS,
Jefferson, April 30, 1949.

Hon. A. S. J. CARNAHAN,
House of Representatives,
Washington, D. C.

DEAR MR. CARNAHAN: Federal funds allotted to Missouri for the operation of the National school-lunch program are sufficient only to carry the program through April. It is estimated that an additional $35,000 will be needed to continue reimbursement to sponsors through the remainder of this school year.

Fourteen hundred participating schools, serving over 150,000 children daily, are being notified that Federal funds will be exhausted at the close of this month and assistance must be discontinued unless additional funds are forthcoming.

Reimbursement rates to the schools in Missouri were reduced this year in an effort to live within our apportionment of the national appropriation. It was necessary that we decline applications from approximately 75 schools after all available Federal funds had been committed. Participation in this year's program has expanded far beyond our expectations and it is conservatively estimated that 200 additional schools will request participation in next year's program.

In the interest of the health and welfare of the school children in Missouri, I respectfully urge your support of a deficiency appropriation for completing this year's program and your consideration of an adequate appropriation for the 1949–50 school year.

Yours very truly,

HUBERT WHEELER, *Commissioner.*

United Nations and World Government

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. BATES of Massachusetts. Mr. Speaker, at the annual town meeting of

Rowley, Mass., held March 16, 1949, the following resolution was adopted:

Whereas modern science has now produced means by which mankind can destroy itself; and

Whereas the United Nations was created as an instrument to preserve peace and its Charter is capable of amendment so as to make it effective for the maintenance of world order; and

Whereas disarmament and world peace can only be achieved by world order, world law, and some measure of world government: Be it

Resolved, by the people of Rowley, Mass., in town meeting assembled, That we call upon our representatives in Congress, in the executive department of the United States and in the United Nations, to take note of these truths and forthwith to take such steps as may be necessary to have our delegates to the United Nations present or support amendment of the Charter of the purpose of making the United Nations into a world govment capable of enacting, interpreting, and enforcing world law to prevent war; and be it further

Resolved, That a copy of this resolution be transmitted by the town clerk to both Senators from Massachusetts, the Congressman from this congressional district, the President of the United States, the Secretary of State, and the United States representatives in the United Nations.

Attest: A true copy.

GEORGE A. GOODWIN,
Town Clerk.

Economics A

EXTENSION OF REMARKS
OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of April 24, 1949:

ECONOMICS A

Sometimes we wish that a course in the rudiments of economics were part of the required instruction in all the high schools of the land. If more people were familiar with the facts of economic life and the history of previous attempts to alter the laws of economics, the hand-out philosophy which seems to permeate the Truman administration would arouse the indignation and scorn which it deserves.

The kind of instruction we have in mind would begin with a study of what constitutes wealth. It would establish the facts that wealth is created through the production of articles and commodities the people want and need and that the Government itself does not and cannot create any wealth.

From these premises several other facts would be adduced. One is that the only wealth the Government possesses or can acquire is that which it takes away in the form of taxes from the people who produce it.

Another is that the Government has no wealth to distribute among the people which it has not first taken away from the people. It cannot give any group additional purchasing power without first depriving other groups of at least the equivalent in purchasing power. And frequently those who receive from the Government must also give to the Government, sometimes, even more than they receive.

However, to continue the class in economics A, emphasis must be placed on the fact that when the Government undertakes to redistribute the wealth, it never gives back as much as it takes away. Just as a professional gambler takes a cut out of every pot in a poker game, the Government takes its percentage out of every deal.

The Government's cut is used to pay the costs of administration. It pays the salaries of the Government employees. It pays the cost of erecting and maintaining the marble palaces in which they work. It pays for the tons of paper they use for keeping the records of each transaction. It pays their telephone, telegraph, and transportation bills and the cost of the publicity campaigns they put on to sell their programs to the public.

Thus it follows that as the hand-out programs are expanded, the Government's cut becomes increasingly larger and the share of wealth that is left for distribution to the people becomes proportionately smaller. Moreover, the Government employees themselves become a pressure group who resist any reduction in the Government spending programs and constantly clamor for more spending and bigger rake-offs for administration costs.

Already the cost of government in the United States—Federal, State, and local—consumes 25 percent of the national income. Nobody knows how much the Federal Government's rake-off would be increased if the administration's give-away program were adopted and nobody in the Federal Government seems to care.

A study of what has happened in other nations and other civilizations in which governments tried to plan and regulate the economy would reveal that no government has ever been able to provide its pepole with both security and freedom at the same time. A government can insure its people freedom and the opportunity to work and to plan and earn their own security. But when a government attempts to plan for and provide security for its people, history has shown that eventually it must resort to police-state methods which curtail and finally abolish the people's liberties.

The United States has devised the best system the world has ever known to insure the liberties of the people and to give them the incentives to work and produce wealth and the opportunity to enjoy the fruits of their labors. But politicians seeking to perpetuate themselves in office are offering the people the deceptive lure of getting something for nothing. And neither the politicians nor their followers are aware of the danger in their panaceas to the American system of freedom and enterprise or, if they are aware, they are indifferent.

Perhaps a condensed course in economics should be a required study not only for high-school students, but also for Presidential candidates and members of the Cabinet.

The West Against Itself

EXTENSION OF REMARKS
OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. WELCH of California. Mr. Speaker, I make further statement concerning water and power in the State of California in order to keep the record straight.

On March 24, 1948, during my time as chairman of the Committee on Public Lands, legislation pertaining to the American River Basin development, near Folsom, Calif., was under consideration. Concerning this project, the President of the United States sent a message to the Speaker of the House of Representatives and subsequently sent a letter to the chairman of the Committee on Public Lands. The President stated very clearly in his message to the Speaker of the House and to the chairman of the Public Lands Committee his intention to have the dam built by the United States Army engineers and upon completion turned over to the Department of the Interior to become an integral part of the great Central Valley project; the dam to contain 1,000,000 acre-feet of water from which 120,000 kilowatts of hydroelectric power could be developed.

In carrying out the President's policy, the cost of water for the irrigationists and water users in the Central Valley would be lessened. As chairman of the committee I was and still am thoroughly in accord with this policy. As it is generally known, there is no interest charge on water developed in Central Valley projects. There is, however, a 3-percent interest charge on hydroelectric power. Hydroelectric power developed on the Central Valley project, which will include the American River Basin project, will continue to pay through the application of the interest component, in behalf of the irrigators, approximately twice what the irrigators are paying directly. This is made possible through present laws and the ruling of the solicitor for the Department of the Interior and in no other way could the irrigationists receive benefits from the sale of hydroelectric power.

Despite this fact LEROY JOHNSON, Representative in Congress from the Third California District, which district comprises a large part of the Central Valley, made the following astounding statement at a Public Lands Committee hearing. I quote from Representative JOHNSON'S statement:

I am not interested in any jurisdictional squabbles between Departments of the Government. I am interested in getting started in the building of this dam and the other works contemplated by this legislation. Since the Flood Control Act of 1944 is the one which made possible the present proposed appropriation of $1,000,000 I think we should not circumvent the very law which authorizes this appropriation. Under that act it expressly provides, by implication at least, that the dams built by the Army engineers are to be operated by the Secretary of War under the direction of the Chief of Engineers.

On page 100 of the hearings on H. R. 4152 and H. R. 4157, regarding the American River Basin project, Mr. JOHNSON appears to suggest that revenues from the sale of power developed by the Army engineers at Folsom, would be available to assist in paying irrigation costs. He says:

Under Interior Department operations any profits from the sale of power go into the reclamation fund.

And he intimates, though perhaps none too clearly, that if power at Folsom Dam were produced by the Army engineers and marketed by the Secretary of the Interior under section 5 of the Flood Control Act of 1944, then revenues from the power thus marketed would be covered

into the reclamation fund and would help pay off the irrigation costs of the Central Valley project. Nothing could be further from the truth. Mr. JOHNSON is wrong on the law. Revenues from power marketed under section 5 of the Flood Control Act of 1944 are required by law to be covered into miscellaneous receipts of the Treasury. They may not be covered into the reclamation fund. Hence, they must not be accounted for as returns on the capital costs of the irrigation features of the Central Valley project or any other reclamation project. The way for irrigation water users in the Central Valley area to get real benefit from power revenues at Folsom Dam is to make that dam and power plant an integral part of the Central Valley project. Once that is done, and not until that is done, revenues from power there produced will indeed flow into the reclamation fund and will indeed help pay irrigation costs.

Carrying out the positive recommendation of Representative JOHNSON to the committee to have the Folsom Dam built by the Army engineers and operated by the Secretary of the Army would mean that the revenues from the sale of power would be deposited in the Federal Treasury and could not be used, under the solicitor's ruling, for the relief of irrigationists and farmers with the result that they would pay at least twice the present cost per acre-foot of water in the Central Valley.

Just recently, in testifying before the subcommittee of the Senate Committee on Appropriations during the course of consideration of H. R. 3734, a bill making appropriations for civil functions administered by the Department of the Army for the fiscal year ending June 30, 1950, my colleague, Mr. JOHNSON, again revealed the extent to which he has once again completely misstated the situation in the case of Folsom Dam. In response to a question from Senator ELLENDER, Mr. JOHNSON said that he "would like to see the engineers operate" Folsom Dam. This, in spite of the fact, as has been demonstrated to the satisfaction of the Public Lands Committee of the House that, as a matter of plain physical fact, the Folsom Dam must be operated as a part—an integral part—of the Central Valley project, California. It has been demonstrated time after time that only through operation of the Folsom Reservoir by the Bureau of Reclamation and the control of releases therefrom in concord with control of releases from Shasta Reservoir now being operated by the Bureau of Reclamation can the Folsom Reservoir play the part it should physically, in conjunction with Shasta and Keswick, in supplying water for the over-all needs of the valleys and for the utmost economical production of hydroelectric power.

Again, in his appearance before the Senate Appropriations Subcommittee, Mr. JOHNSON failed to mention—and I cannot overcome the suspicion that his failure was deliberate—that the President had, on two occasions in this very year, recommended transfer upon substantial completion of Folsom Dam for operation by the Bureau of Reclamation. He failed likewise to mention that the Public Lands Committee of the House had reported out a bill to accomplish that transfer. He failed to mention, finally, that in addition to physical integration, one of the most important aspects involved in the transfer of the Folsom Dam to the Bureau of Reclamation will be its financial integration with the Central Valley project. He failed to inform the Senate committee of the fact that, unless such financial integration is accomplished, there will be lost for the benefit of irrigation water users assistance from power revenues in paying off irrigation costs. He suggested that the Folsom Dam is a flood-control structure. If he had but read the testimony before our Public Lands Committee he would have known that the Folsom Dam is not primarily a flood-control structure, although, of course, flood control is an important element there. If H. R. 165 is enacted, as recommended by the President, by the Department of the Interior, and by the Public Lands Committee of the House, the Folsom Dam project will serve the purpose of flood-control protection, of course, but it will also serve to store vast quantities of water for irrigation and other beneficial purposes and to produce quantities of hydroelectric power. If the Folsom Dam is transferred for operation by the Bureau of Reclamation as an integral part of the Central Valley project, it will be operated in concord with other vital parts of the Central Valley project, including Shasta and Keswick, and the revenues from power will be available to assist in paying off irrigation costs. Without these revenues the burden of irrigation costs on water users in the Central Valley will be great.

Edward Hyatt, State engineer and executive officer of the Water Projects Authority of California, appeared at the direction of C. H. Purcell, chairman of the authority, and Arvin B. Shaw, Jr., assistant attorney general of California, also appeared and advocated this policy. With the loss of power interest component the irrigators would have to carry that additional burden, which would mean that in their repayment of the capital investment allocated to irrigation, they would have to repay directly a total of two or three times as much as they do under the present allocation procedure and under the present law. This is the first time that a Representative in Congress from California and high California State officials have publicly recommended such an unjust increase to irrigationists and farmers in the Central Valley.

The American River-Folsom Dam and Reservoir project is in the Third California District, represented by Congressman LEROY JOHNSON. It was not, however, until after the forthright Presidential message to Congress, and it became self-evident that the Committee on Public Lands would report a bill giving further assurance of reasonable water rates to the irrigationists and farmers in the Central Valley, that Congressman JOHNSON finally sponsored a bill fashioned after the Engle and Welch bills. In the meantime, Congressman JOHNSON tried to persuade me that legislation was not necessary to build the American River-Folsom Dam and Reservoir project, claiming that the Secretary of War and the United States Army engineers had full authority to do the job. If Congressman JOHNSON's advice to the Committee on Public Lands and to me personally was carried to its logical conclusion, the irrigationists and farmers in the great Central Valley would be compelled to pay double, if not treble, their present water rates.

I have followed the history of the great Central Valley since I was a boy and lived on a farm near Freeport, close to the Sacramento River. I will continue to work as long as I am in public office for the completion of the great Central Valley project which, as I have stated in the past, is as large as the State of Massachusetts, the State of Connecticut, the State of Rhode Island, and one-half the State of New Jersey. When men in high public office in California make such statements as referred to by me and which are part of the CONGRESSIONAL RECORD, it prompts the question—Is the West against itself?

Medical Care and Social Security

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. YATES. Mr. Speaker, I have just received a letter from a group of physicians in the city of Chicago advising me that they are very much in favor of extending the principal of social security to medical care. They have taken the position that while there may be necessary changes in the detailed provisions of the bill which was recently filed in support of the President's program for national health insurance, they heartily endorse the extension of medical care to all of the people. It is becoming increasingly apparent that more and more physicians are rebelling against the arbitrary attitude of the leadership of the American Medical Association, which proposes nothing constructive to meet the national health problem—a problem admitted to be existent even by the AMA—and which seeks to prevent progressive measures by resorting to the charge of socialism.

As is stated in the following editorial of the Chicago Sun-Times, which appeared on Thursday, April 28, 1949:

The American Medical Association, along with everybody else, has a duty to offer constructive proposals for the attainment of the goals set by the Truman program.

DOCTORS AND SOCIALISM

The leaders of the medical profession are making a profound mistake in attacking President Truman's health-insurance program as an irrevocable step toward state socialism.

If any irrevocable step toward state socialism is going to be taken in the field of medicine, we believe it will be the failure to establish a system whereby adequate and

comprehensive medical care is made available to the people.

The American people know the benefits of good medical care. "They are demanding their right to it and, if they are barred much longer getting it under a democratic system of social insurance which guarantees the survival of free private medical practice, they will follow the lead of the British and demand it as a right from the Government."

These are the words of 10 Senators and Representatives who are sponsoring the Truman program in Congress. We urge the leaders of medical opinion to ponder them.

Facts cannot be gainsaid, even by so costly a propaganda campaign as the AMA is turning against the health-insurance plan.

It is a fact that the Truman plan does not contemplate Government medicine. It is a fact that the plan would preserve the right of patients to choose their own doctors, and of doctors to choose their patients. It is a fact that under this plan the medical profession would continue to control professional decisions on the prevention and treatment of illness.

We strongly advise the AMA to stop misrepresenting these facts. National health insurance is not socialization. It is the alternative to socialization. It is a means by which the people can combine their resources to provide adequate medical care for all without turning over the whole job to the Government.

At bottom, the argument is between a national system of compulsory health insurance, and some kind of aid or subsidy to voluntary health insurance.

There are several reasons why voluntary health insurance cannot do the job that is contemplated in the Truman plan.

For one thing, the costs are high and the benefits limited. Subscribers to the Blue Cross, for example, pay $3.50 a month, in return for which part of their hospital bills are paid if they go to a hospital. Blue Cross and similar plans provide no coverage at all for the cost of calling a doctor to your home, or of going to the doctor's office. Yet that is how medical expenses most frequently hit the average family.

Voluntary insurance which did provide comprehensive medical care, as well as hospital expense, would cost the average family between $10 and $18 a month. Most families can't afford it.

A national system which took in all employed persons would provide far more comprehensive benefits than is possible under voluntary insurance. Because the expenses would be shared among more people, the cost to each family would be less. And the individual cost would vary with family income, whereas voluntary plans today charge a flat rate regardless of income.

Under the Truman plan as it went to Congress, a person earning $50 a week would get complete medical care and hospital insurance for $3.50 a month, his employer contributing a like amount. A person earning $100 a week would pay $6 a month, that sum also being matched by the employer.

An essential part of the plan is Federal aid for the expansion of medical training—to overcome a shortage of doctors and nurses which has been apparent for years—along with expanded aid for hospital construction.

The goal, as the President said, is twofold: "To make available enough medical services to go around, and to see that everybody has a chance to obtain those services."

There may be a difference over methods or details, but this twofold objective has, we believe, the general support of the people.

Mr. Truman said: "Where there are differences remaining as to the details of the program, we should not permit these differences to stand in the way of our going forward. They should be threshed out with honesty and tolerance, as is our democratic fashion. We should enact the best possible program and then all of us should get behind it to make it work."

Chairman Elmer L. Henderson of the AMA board of trustees was hardly threshing out the issues with honesty and tolerance when he denounced the Truman plan as "a discredited system of decadent nations which are now living off the bounty of the American people."

The AMA, along with everybody else, has a duty to offer constructive proposals for the attainment of the goals set by the Truman program.

Fraternal Order of Eagles Honors Montana War Hero's Family

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. MANSFIELD. Mr. Speaker, as an American, a Montanan, and an Eagle, I am indeed happy to bring to the attention of the House of Representatives the honor which the Fraternal Order of Eagles has conferred on Henry George Gosselin's family of Butte, Mont.

Henry Gosselin served in the United States Marine Corps. As a former marine, I am proud of the record he made with that great organization, but at the same time I am deeply sorry that he did not survive the war and return to his family and his State.

Henry did not have to go to war, but his great patriotism was not to be denied. He made the supreme sacrifice and left a void in his family because of his passing.

Alice Gosselin, his wife, has carried on and raised successfully a fine family. In spite of difficulties which would seem insurmountable, she has never lost faith in herself and her family. Through adversity, she has persevered and today she is not only a proud and capable head of a family but she and her children have been selected as the typical American family by the Fraternal Order of Eagles.

The story of the Gosselin family is detailed in a story carried in the Butte (Mont.) Standard of April 17, 1949, and the reading of it will be well worth the time of the Members of Congress. I want to extend to Mrs. Gosselin and her family my best wishes and to congratulate the great humanitarian Fraternal Order of Eagles for its choice of this outstanding family. It marks another milestone in the progress of this body of great Americans.

FAMILY OF HENRY GOSSELIN, FALLEN BUTTE WAR HERO, CHOSEN MODELS FOR EAGLES' COMMEMORATIVE STAMP

(By William Clark)

A wife, a son, a daughter, and a home. A hero can die in stanch defense of his country and ask the protection of nothing else, beyond the security of the country itself.

Henry George Gosselin, a Butte boy who gave up his life on the blood-splashed approaches to Saipan so that his family at home need never fear a mainland invasion by swinging samurai, was that sort of fellow. Moreover, the family he left behind in Butte is so completely typical of families throughout the Nation now under the shelter of the Eagles' lodge that it has come in for special honor from the order.

Mrs. Alice Gosselin and her young son, Henry, Jr., and daughter, Lorraine Ann, of 1731 Oregon Avenue, have been chosen by the international Fraternal Order of Eagles as the living models for a new commemorative stamp issued by the organization.

More than 100,000,000 of the stamps produced by the Eagles memorial foundation are being purchased by the order's members throughout the United States and possession The proceeds from the stamp sale will be used to guard the welfare of such families as the Gosselins of Butte.

Through aid from the Eagles' fund, the widow and children of Henry Gosselin are secure in the knowledge that the youngsters' future health and education are assured. Already at the $3,000,000 mark, the fund will grow greater through the sale of the stamps among the 1,000,000 members to guarantee continuing assistance to more than 1,250 sons and daughters of Eagles who died in World War II.

Mrs. Gosselin and her children were selected from a number of such typical appearing families throughout the United States. Their situation was investigated and the family nominated through the efforts of Lester Loble, Helena attorney and past international president of the Fraternal Order of Eagles.

Theirs, of course, is the story of smiling young Henry George Gosselin, a pleasant 29-year-old Butte man who joined the Marine Corps when the Air Corps told him he was too old to fly. Gosselin received his orders from Uncle Sam on the very day his little girl was born.

But even more it is the story of a woman's fine courage. It could well be typical of many an American family which now may lean, in times of stress, on the strength of the Eagles' organization. Mrs. Gosselin as a war widow has had no easy time of things. The Gosselin story figured heavily in the choice of the family to symbolize the widow-son-daughter theme of the Eagles' plan for protection.

Henry Gosselin, son of Mrs. Arthur J. Kinne, was born in Butte. His name is of French origin. He attended the Emerson grade school on the south side and went on to Butte high school.

Among his schoolmates was pretty, honey-blond Alice Derrenger. When the pull of romance grew stronger than the urge to learn from books, the couple married in Butte April 16, 1935. Henry became associated with his stepfather, who operated a tavern, and life with the Gosselins spun along easily.

Henry joined the Butte aerie, No. 11, of the Eagles, just up the street a block from where he worked on West Granite. Henry, Jr., who celebrated his eighth birthday Saturday, was born in 1941. From the time of his birth little Henry was not well.

A nervous disorder manifested itself during babyhood, an ailment which left the ankles and hands partly lame. But the boy, mentally keen and responsive, underwent an operation at the Shodair Hospital for Crippled Children in Helena in late 1947 and convalesced there until April 15, 1948.

The operation helped immensely, and young Henry is showing continuous improvement now. He gets about well on junior-sized crutches, and even without their assistance walks well, if somewhat unsteadily, through the house. He has little or no sight in his right eye. The other eye is strong, however, and he reads well with glasses which he insists he doesn't need much if at all.

His mother says the Sisters at St. John the Evangelist parish school discovered quickly

that Henry could easily bypass the first grade. Accordingly, he began in the second, where he is doing excellent work.

Meanwhile, when Henry was 2, little Lorraine Ann was born.

His father had sought to enlist in the Air Force, but was turned down because of age reasons. He immediately enlisted in the Marine Corps and was told to await his assignment. The orders came on the day Lorraine was born. After a 3-week emergency deferment, Henry Gosselin went off to war as a private. His family never saw him again.

He trained at Camp Pendleton, Calif. A letter to his mother here told of his intention to surprise his wife and children, since a leave was coming up soon. The surprise, though, was of a different nature.

On February 1, 1944—3 months after he was sworn in—Private Gosselin was aboard a ship heading into the Pacific. He was a "BAR" man, a specialist with the Browning automatic rifle.

Roi Island was his first engagement, and he and his fellow marines made that one in stride. Promoted to private first class on Roi, Gosselin had some time at a rest camp, and then came Saipan.

"What do you know about the manner in which he lost his life?" his widow asked.

"Not too much. The Marine Corps was going to fill in the details later, but it never did. I suppose there were so many who went down it was hard to say just what did happen to each one. I understood the Government was to see that I received his personal belongings, but they never came." She smiled wanly at the recollection and added: "I got back 23 letters I had written him—we tried to write each other about every other day—and some of them had been mailed as early as April."

Her husband died on Saipan June 18, 1944.

What were the first days like, then?

"Well, it never seemed real, I guess. Many people, of course, were receiving the telegrams they feared the worst, and when mine came the bottom dropped out. But other people were going on just the same, if they could, and I had to, too."

Gosselin received posthumously the Purple Heart medal and the Presidential Unit Citation which went to the Fourth Marine Division, and had worn the American theater and Western Pacific theater service ribbons, and the Good Conduct ribbon.

The Butte aerie in November that year stepped forward with a check for $100. Since then the Eagles have paid a $55 medical expense bill for young Henry. Some of the boy's medical expense, his mother said, has been borne also by the Montana chapter of the American Society for Crippled Children and Adults.

Mrs. Gosselin hasn't applied to the Eagles for further help, at least not yet. She receives a monthly Government pension as a widow and also gets a modest amount each month from her husband's service insurance.

It's a tight squeeze, however. Because of her children and the unusual demands on her time for young Henry, Mrs. Gosselin up to now has had no chance to work. When repairs became necessary on the neat, white home at 1731 Oregon, the widow arranged for it herself with a loan on which she pays a regular amount every month. In addition, she keeps up the taxes and insurance, and feeds and clothes herself and children. It's a large order, a job that takes courage and resource.

In the background stand the Eagles and the great fund. When the time comes, a portion of the fund will help Henry and Lorraine Ann get an education which possibly otherwise would have been denied them.

The Atlantic Pact

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Christian Science Monitor, Tuesday, May 3, 1949:

THE PACT AND THE PEACE

The possibility of a Berlin settlement and the further prospect it opens up in dealing with Germany as a whole have been stealing the headlines from another project which is indeed basic to this new situation in East-West affairs. But Americans will not lose sight of that project or underestimate its influence.

It is the Atlantic Pact. Its importance can be judged from the fact that while Soviet spokesmen appear ready to forget old obstacles to agreement—the currency tangle at Berlin and even the development of a west German state—Soviet propaganda keeps right on with its attack on the Atlantic Pact.

More than any other single thing, the pact appears to have driven home to the Kremlin the cost of its policies of obstruction in Europe. This is not to ignore the airlift in Berlin, the western counterblockade of the Russian zone, the three-power agreement on Germany, and the speed-up of agreement among western Germans and between them and the western Allies. All these developments, to be sure, have contributed to the West's diplomatic victory in Europe.

But the getting together of the Western World under the pact is the most definitive factor in the global situation today, not excepting the Communist advance over so much of China.

All of which suggests that the West's experience in working together will keep it really working together in all details of future negotiations with the Soviet Union. Already there are encouraging signs that the United States is alertly on guard against Soviet tactics to divide western powers. This is the meaning of Philip C. Jessup's move to make even the preliminary conversations with Russia a four-power and not simply an American-Russian venture.

Russia's representative to the United Nations, Yacob A. Malik, showed a hope that the exploratory talks could be conducted between Dr. Jessup and himself. Such a course could have served no purpose at this time but to create new suspicions among weaker peoples that a "deal" might be in the making between the two strongest world powers which might not serve others' interest.

But Washington has evidently not forgotten the lesson of the Bedell Smith-Molotov exchange, or the more recent effort at Moscow to put the United States in the position of seeming to deal separately with Russia—an effort in which Mr. Stalin tried to exploit questions written to him by an American news correspondent.

When, as, and if East-West negotiations get under way, western powers will have more and more reason to take every move in concert, to weigh together every maneuver, not only of the Russians but of the Germans. For the wedges will be pointed at western unity from both these sources.

In such negotiations the Atlantic Pact will be an important new factor. For the pact stands as a symbol of western unity based on broader and deeper considerations than those which attach to Berlin or to all Germany. Most western peoples must know that the apparent improvement in the international outlook is no reason to relax interest in the pact. On the contrary, the improvement is an effect of the pact, and it justifies continued efforts to strengthen the western community. In doing this, as developments in the last week have indicated, we can strengthen the base for peace.

The Makings of Another China Tragedy

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. CLEMENTE. Mr. Speaker, I should like to bring to your attention an article concerning a very scholarly and distinguished gentleman, a member of the church hierarchy, whom I had the pleasure of meeting on January 12. This gentleman is a very sincere and devoted head of the Roman Catholic Church in China, whose only aim has always been to keep China free from the Communists.

I include this article by Bob Considine, which appeared in the Washington Times-Herald on May 4. In some measure it shows the degree of democracy in this distinguished gentleman.

I would entitle this article "The Makings of Another China Tragedy." It follows:

DEATH AWAITS THE ARCHBISHOP WHEN HE RETURNS TO CHINA

(By Bob Considine)

Death will come to Archbishop Paul Yupin, the huge, pleasant, learned Chinese prelate, if he returns to China, his anxious friends keep telling him. But he plans to go back later this month. The spiritual leader and educator of 5,000,000 Chinese Catholics is rated No. 2 on the most recent list of war criminals released by the Chinese Reds. His friend, Chiang Kai-shek, is No. 1.

He has thought a bit about the counsel of his friends, he told us the other night at a downtown restaurant as he tucked a napkin in his clerical collar and delicately went to work on a piece of duck. It is not a new threat in the life of the vigorous scholar who recently flew to Rome to give Pius XII a first-hand account of the collapse in China. The Japs had a $500,000 (American) price on his head during their occupation of his homeland.

"But not to return would be another way of telling the Chinese that they have lost this new war for survival," he said. "Their morale is low enough as it is. I must do my bit to show them that all is not lost. With a lifting of morale, a handful of American officers and, in time, the kind of supplies the United States will give to Atlantic-pact countries, China can still win. That's a fact that is being tragically overlooked here.

"We don't ask for American soldiers," he went on. "If there is one thing in which we are a bountiful country it is manpower. So many Chinese troops have lost faith in their commanders, but though the Communists have spread an enormous amount of propaganda against the Americans, the Chinese still feel that with American officers plotting their battles they could win."

I asked him about his personal danger again. He took off his napkin, revealing

a thin line of magenta vestment beneath his coat and thought before he replied.

"It won't be easy for them to find me," he said. "They have seized or destroyed several of the newspapers and schools and farms for displaced people that I formed, and, of course, my home in Peiping. But I am more nimble.

"I know one thing: if they do catch me, I won't be another Cardinal Mindszenty. I don't want to be that kind of a hero. I will go quickly, but not by suicide. That is against my belief. There are many good men to take my place if I go."

But the archbishop, who was the youngest Catholic bishop in the world at the time of his consecration, is not sure that his death—if it comes—will be the work of Communists.

"Those of us who have devoted much of our lives to strengthening Chinese-American relations are in danger of death at the hands of the good people to whom we appeal," he said with the trace of a smile. "The Generalissimo and Madam Chiang, who is a noble woman, and I—to name a few—have long told our people that their great friend is the United States. The United States, we assured the people, would not let this or that happen to China. But now—"

The archbishop shrugged, and a friend at the table added what he did not choose to add, that General Marshall's "truce" had enabled the beaten Reds to redeploy, that there never was a chance of achieving the American desire for a coalition government in China, that shipments of United States supplies to China were held up, that Communists have exploited ably the stories of graft in Chiang's government.

"America has been kind in many ways to China," the archbishop cut in, gently but firmly. But its present policy toward my country, if it is a policy, is shortsighted. It daily watches our people pushed back and presumes there is no fight left in them. There is. It watches a great land mass taken and hopes, perhaps, that General Mao will be another Tito.

"He won't be, but if he is he'll be killed and replaced by a party liner.

"It watches untold areas rich in natural resources fall into the hands of an enemy of all free peoples, including northern uranium deposits far richer than those of the Belgian Congo.

"And your big-business men are short-sighted, too, in assuming they can do business-as-usual with the Reds. In such a short time they will find it impossible. In such a short time, through force and propaganda, we could find China an enemy of its old friend America. A tragedy too terrible to visualize."

The archbishop worked with his napkin again for a bit. Then he smiled and said: "We have spoken of many unpleasant things. Will you have a beer? But please remember that there is still time. Still time."

The Handicapped—A National Problem

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. MANSFIELD. Mr. Speaker, because of the great interest and work being done in behalf of the handicapped, I am calling the attention of the Congress to a speech by Assistant Secretary of Labor John W. Gibson before the Second Annual Institute for the Employment of Handicapped sponsored by the Eagles in the Eagles Auditorium, Milwaukee, Wis., on April 9, 1949.

The Fraternal Order of Eagles is to be commended for once again taking the lead in this field of social progress and doing its very best to bring light into lives which otherwise would be dark.

The speech follows:

I am always happy to visit the Midwest and talk to people about some of our plans and programs. There is very little that we can do in Washington sometimes except to get people started thinking about problems and perhaps point a way toward solving them. For that reason I appreciate a chance to meet with you today and see what is being done about the employment of the handicapped at the only place where it really counts, where the worker is and where the job is.

What the public-spirited citizens of Milwaukee, inspired by the Fraternal Order of Eagles, have done in planning this meeting here today could be done in thousands of communities across the land. But it isn't being done and its takes leadership such as yours to point the way. This leadership which is being provided by the Eagles, the CIO, the AFL, and the industries of your city is a great help to those of us responsible for the success of the President's program for rehabilitation and employment of the handicapped.

And I wish to assure you that both the President and Secretary of Labor are personally vitally interested in this very human problem which requires a combination of a human and a business solution. The matter of employment for disabled veterans and handicapped civilians receives a great deal of thought and effort in Washington and we are very anxious to assure employers and the handicapped themselves that this is a most important program to the Nation, the State, the community and the citizens of America.

We know that the handicapped workers are only a portion of our labor force. Estimates place the figure at 10 percent. But whatever affects the entire labor force has a much more serious impact upon the handicapped worker. Therefore, I'd like to review briefly the current situation as it appears to me.

The job opportunities of all workers, whether organized or not, depend on current levels of business activity and upon expectations as to the future's economic outlook. For this reason, as I said above, workers have a vital concern with current economic trends and national economic policies as they affect the country's future economy.

Since the guns were silenced some 3 years ago we have experienced a postwar "boom" with all its varied effects. The "boom" has died down to a whisper in many areas and there are signs that it is coming to an end. This is only natural since it was merely a race between pent-up demands and wartime savings which ultimately had to catch up with the supply of goods and merchandise. Backlogs of demand have been worked off in more and more industries and as a result production and employment are being adjusted to what economists are pleased to call normal replacement levels of demands. This means that the old law of supply and demand is again in operaiton in many areas of our economy.

From last September to this February we saw a moderate decline in the general level of economic activity. Employment decreased for the first time in 3 years. Unemployment doubled from 1,600,000 in September to 3,200,000 in February and March. Prices tended to decline reflecting changes in demand and in availability of goods.

This brought out the calamity howlers and even caused delight in the Kremlin behind the grim iron curtain. The question of a serious depression in 1949 was and is of great concern to employers and workers, to the whole world for that matter. I am happy to say that today there is more general agreement than there was a month ago that the chance of any serious depression in 1949 is rather remote. However, the best consensus of the business analysts indicates that business activity and employment will be less than it was in 1948.

That doesn't mean we should reach for a crying towel or fear for the future. For 1948 was an extraordinarily good year from many points of view. It does mean that our relatively optimistic conclusions have serious implications for wage earners, especially those who do not have a great deal of seniority.

You have heard a lot about ours being a dynamic economy, one where the country has to run to stay in place. We must not stand still or we stop progress. We must constantly push forward to keep from sliding backward. This is true, because if we fail to maintain the levels of employment of 1948 we will slowly slip into more unemployment with all that this means to the worker and the Nation. Our total national employment must increase by about 600,000 workers every year if employment is going to keep pace with the increase in the labor force as a result of population growth.

We can't plow under people. We can set limits for entry to and can encourage exit from the labor market by our social security and our other social programs. But this is not enough. We must make plans to absorb a city of workers almost the size of Milwaukee each year into a continually expanding labor market. This we can and must do not only for the good of America and the future of our children but for the continued rebuilding of a war-torn world which will need our productive genius and industrial capacity for future peace and security.

This week in Washington as I was preparing these lines a great historic event took place within a few hundred feet of my office. The Atlantic Pact was signed into life by the representatives of the little people from many countries of Europe. This pact will depend in part on how we in America make future decisions with respect to our national economic policy. In my opinion it is not at all certain that there will be any substantial decline in the level of economic activity for 1949. Although prices are moderating in many parts of our economy I believe it is premature to conclude that we are no longer faced with continued inflationary pressures in certain areas.

I am one who neither points with pride nor views with alarm the moderate adjustments that are taking place in industry after industry. Despite the prophets of gloom in some places there have been no overall declines of any importance in current incomes. On the contrary, there are many signs that as prices are adjusted consumers come back into the market to buy. We may have reached a period of more selective buying but that is not in itself dangerous.

I don't bring you any inside information nor do I intend to offer any predictions. But evidence is certainly on hand that indicates that unemployment already is tapering off. I believe that we will see a healthy rise in business activity and employment this summer. This will result from the normal seasonal factors and from a resurgence of consumer demand as prices are adjusted to lower levels. I think the future looks good.

And that means that all workers, generally, and the handicapped in particular, will have continued employment opportunities in the months ahead.

However, since we are concerned with the handicapped and their employment security as it affects the Nation, I do believe that it is necessary to emphasize some economic facts as they concern the disabled worker.

As employment softens, there is a great tendency to return the handicapped to the n· man's land of insecurity and despair from whence they came. Being in many cases the last hired, they become the first fired. Having little or no seniority, they feel the effects of any economic readjustment quicker and with possibly less cushion than other workers.

This can happen here. My friend Paul Strachan, president of the American Federation of the Physically Handicapped, tells me that he has noticed an increase in his correspondence from handicapped men and women suddenly faced with the cold and impersonal sign "No Help Wanted" or let out due to these readjustments we mention so casually. In my judgment, such groups as The President's Committee on National Employ the Physically Handicapped Week may not be enough, despite their enviable record and fine work, voluntary help and considerable interest of business and industry in the employment of the disabled will not be sufficient if we slip, slide, or fall into soft spots in our employment picture. It may be that the Congress and the President may be forced to strengthen the hand of the Veterans' Administration, the Office of Vocational Rehabilitation, and the Bureau of Employment Security to guarantee economic opportunity for the handicapped.

Our friends in England have worked out a program which should be of interest to this audience. I recommended such a system several years ago to the Michigan Legislature and it barely failed of passage after passing one House. I consider the British program to have great potentialities and feel we in the United States could gain a lot by making a study of it in operation.

The British program of employment of handicapped is embodied in the Disabled Persons Act of 1944 which is the result of an interim wartime measure of 1941, aimed at using the remaining abilities of a people under constant physical danger from the sky in their own homes and factories. The original act also provided for returning to the stream of commerce and industry those wounded in the war and no longer able to fight and those whose disability was of long standing but who yearned to make their considerable contributions of skill and remaining ability.

The act defines a "disabled person" as being one "who, on account of injury, disease, or congenital deformity, is substantially handicapped in obtaining or keeping employment, or in undertaking work on his own account, of a kind which apart from that injury, disease, or deformity would be suited to his age, experience, and qualifications."

In many respects, the British program parallels our own program of rehabilitation. However, it has a number of unique features which are certainly pertinent to consider at such a meeting here today. The Minister of Labour and National Service administers the act which provides for vocational training and industrial rehabilitation courses. It also sets up a register of disabled persons wishing to obtain employment or undertake work on their own account. It gives employment preferences for ex-service men and women and establishes national and district advisory committees.

In addition to providing for this voluntary register system for the disabled, the act sets out the obligations for employers for certain quotas of disabled workers.

Now, I grant that much of this act sounds like our own program of the Employment Service, the Veterans' Administration, and the Office of Vocational Rehabilitation. But the distinguishing feature is the quota system whereby English employers of 20 or more workers must hire disabled people from established registers in their community. This generally amounts to about 3 percent of the workers in any given business or industry.

However, the employer is urged to participate in the spirit of the law and not the letter so that actually in many cases a higher percent is the rule rather than the exception. In our own country, for example, our civil-service figures indicate that about 7 percent of all federally employed workers are physically handicapped to a degree similar to the definition used by the British Ministry f Labour.

In the most recent report of Great Britain's Standing Committee on the Rehabilitation and Resettlement of Disabled Persons the total number of persons registered in a 3-year period since September 1945 was 905,000. These registrations, incidentally, may be from 1 to 5 years depending on the disability and the likelihood of its future permanance. So this figure includes some duplications, although the average increase monthly is seven to eight thousand.

Since September 1946 the standard percentage for determining an English employer's statutory obligation in respect to the registered disabled has been 3 percent. Of the 905,000 registered, about 887,000 were classified as capable of work under ordinary industrial conditions. Of this 887,000 figure, the number employed in ordinary work has been estimated at approximately 825,000, or 93 percent. However, all these people are not employed by firms under the quota system, for many are working on their own or for employers having fewer than 30 workers and hence not required to participate in the quota system. Estimates of those persons employed in the quota establishments indicate that the handicapped are 4 to 5 percent of the working population in these industries.

The British during the blitz realized that disablement was a problem of employment. They have raised their sights from the traditional basket-weaving and flower-making jobs which were usually forced upon the disabled. The pressure of war made it imperative that something be done and hence the British set up their five-point program under the Minister of Labour.

This program includes, as I have indicated in part, a register of disabled, establishment of a quota, industrial rehabilitation and vocational training when required, special sheltered workshop facilities and use of the best possible selection and placement methods in finding suitable work for the disabled.

In carrying out its responsibility for rehabilitation after the medical and hospital phase of treatment or care was completed, the Ministry of Labour established an industrial rehabilitation center at Egham with the announced purpose of helping disabled men back to work. We have similar rehabilitation centers here in this country, but none that I know of under Government auspices, although our various agencies use Federal funds for rehabilitation of veterans and civilians in these centers.

Because the Egham Center is rather unique I should like to discuss it briefly. Men are physically toned up during several weeks at the Egham Center in Surrey through games, exercises, and massages. Therapy is used under medical supervision where necessary. The men can restudy their English or math or otherwise improve themselves for future employment. They are advised what jobs they can follow most efficiently and receive job training under experts.

The center features considerable recreation and a cheerful atmosphere. Stress is placed upon normal living. The handicapped thus get back into the normal social and recreational channels they were accustomed to prior to their disablement. After weeks and months at the center they learn to live with the handicap, to accept it, and to make the necessary adjustments to work with it. The Egham Center is open to men between the ages of 16 and 50. In some cases older men are admitted.

While at this center the men receive free travel expenses coming and going and free board, room, and laundry. Allowances while at the center are over and above any pension or compensation due them. The very appropriate motto of the center is: "Help men face their future with new hope." This industrial rehabilitation center has placed thousands of English workers on the high road to employment security.

This British program isn't a one-way street, however, for the employer is not required to subsidize the disabled. They expect to receive good work in return for their wage payments to the handicapped, and experience gained in England and also in America proves that they do. Handicapped persons are dropped from the register who are of habitual bad character or who persistently and without reasonable cause refuse suitable employment or who without reasonable cause refuse to attend or complete a course of vocational training or rehabilitation. This is not an arbitrary method, but a man is dropped from the register only after due investigation of the disablement advisory committee, before which the applicant may appear and bring witnesses. The important thing is that the plan is working well, as indicated by the 1949 report.

Quoting from page 14 of this report, I found this statement: "The (handicapped) unemployed on August 16, 1948, numbering 62,079, represented under one-half of 1 percent of that field" (of total employment). Nevertheless, the continuance of a relatively high figure of unemployment among registered disabled persons has been a matter of considerable concern.

I think that bears reemphasis. That continued unemployment of qualified and registered disabled workers is a matter of considerable concern. It is of concern in the United States also and rightfully should be. Latest figures on disabled veterans registered in America with State offices of the Employment Service last month show that more than 90,000 disabled veterans alone are actively seeking employment. Today about half a million handicapped workers could be placed at work if there were jobs available and employers willing to hire these workers. Any way you look at it, that's a lot of people, a lot of productive power lost, a great deal of human ability sidetracked and a tremendous drain upon private charity and public funds.

As long as we mean what we say when we talk about the dignity of the individual—the freedom of the workers of our country—we cannot, we must not, remain disinterested in the face of substantial numbers of unemployed physically handicapped workers. It is particularly sad when we see almost 100,000 disabled veterans shunted to the sidelines in an age they helped make safe for all of us.

Since the employment of the physically handicapped is essentially and almost entirely a manpower function, the United States Department of Labor believes that the responsibility for the operation of this program should rest in the United States Labor Department as it does in England. The President of the United States and the Hoover Commission have recommended restoration to the Labor Department of the United States Employment Service and the Veterans Employment Service which were shanghaied from the Labor Department by the last Congress. We feel that this is both logical and necessary.

As we move into a consideration of legislation for handicapped workers we are confronted with the absolute necessity for more legislation than presently exists. The former special consultant to the Secretary of Labor, Mr. Paul Strachan, has persuaded several

distinguished Senators and Representatives to introduce a number of bills aimed at doing a better job for the physically handicapped. There can be no quarrel with the need for better statistics as to the numbers, kinds, and locations of the handicapped in our population. For that reason I sincerely hope that the pending bill to provide for a census of the handicapped will be passed and that we may have for the first time adequate and understandable statistics to serve as a basis for solving the problem of the handicapped.

The proposal for a Federal Commission on Services for the Handicapped appears to have a considerable amount of merit and to be the most inclusive approach to a solution of the problem ever presented in this country. This opinion is shared by many others, including the 12 sponsors in the House of Representatives and the 17 Senators who joined Senator JOHN SPARKMAN, your institute speaker last year, in sponsoring the Federal Commission. This bill, S. 1066, has the unqualified backing of the American Federation of Labor, the Congress of Industrial Organizations, the railroad brotherhoods, the miners, the machinists, and other large independent unions, as well as many national organizations interested in the welfare of handicapped citizens in this country.

Necessary as is legislation, it is still ineffective without the full cooperation and support of management and labor if our goal of equal opportunity of employment for handicapped workers is to be reached. As you know, the President's Committee on National Employ the Physically Handicapped Week has been operating in the Labor Department for more than a year and a half now. However, it has operated without sufficient funds and personnel to do the real job which it could do and should do in bringing all segments of our economy into a fuller cooperative partnership with the Federal, State, and local governments in behalf of the handicapped. I advocate sufficient appropriations to enable the President's committee to do the kind of job we all want it to do.

The President's committee now maintains the only liaison with the Governors of the States and the various State committees interested in employment of the handicapped. It is presently conducting an essay contest among the public and private schools of the country with $2,000 in prizes and five trips to Washington being donated by the Disabled American Veterans and the International Association of Machinists, both members of the President's committee. I am happy to say that Wisconsin schools are among those which have entered the contest. The President's committee also offers awards of merit to all employers having outstanding records for employment of disabled workers. I urge that your local committee consider participating in this program.

I believe that with sufficient funds the President's committee could do considerable necessary research and study work in this field. I believe that we should seriously consider pilot programs for Government employment practices.

In connection with the Federal Government's employment practices, we recently heard from the President of the United States Civil Service Commission, who said that placement of disabled veterans in the Federal service "has greatly increased" and that this trend "will continue for many years." He also stated he personally had examining procedures altered so that persons whose handicaps prevented them from adequately participating in written examinations would receive stenographic or secretarial assistance. He said—and I quote: "The Civil Service Commission takes keen pride in its leadership in the field of selective placement of those of our citizens who have physical impairments. We aim to retain that leadership. I have stated before and repeat again that our program concerning the physically handicapped is a definite part of our operations and will be expanded to the fullest extent possible." You can't get a better endorsement than that.

There have been many stirrings of interest and much good work done on the industrial front during the past 18 months, and in this picture you see the organizations of management and labor working together to solve a common problem for the betterment of all our citizens. However, the joint program of the chamber of commerce and the National Association of Manufacturers to promote more job opportunity for handicapped and older workers is but a start in the right direction.

Following this lead, individual management executives should develop programs within their own establishments, where they do not now exist, which provide for the continued employment of all workers injured in their employ. Such a program, if adopted generally throughout the country, would pay rich dividends, not only to employers and workers but to the communities of our country.

Two years ago a committee sponsored by the United States Department of Labor on services to the severely disabled recommended setting up rehabilitation centers for the handicapped in all fair-sized communities. One of the groups of the President's Committee is also concerned with community rehabilitation centers which render excellent services in the cities such as your own Milwaukee curative workshop. This job, not only of rehabilitating but also of employing the handicapped, is much too great for the Federal or even the State governments. It can only be attacked and solved in the communities of our country and it is only through the interest of such citizens as those of you in the audience today that any real and lasting solution will be reached.

If the cities and towns of America do not offer simple justice and equality of opportunity to the physically handicapped, then these cities and towns will fail in their responsibilities. All the country has an opportunity once a year to make public protestations of its interest in the economic security of the disabled during the October observance of the congressionally authorized National Employ the Physically Handicapped Week. But if we do nothing more than blow the whistle and beat the drums once a year, we actually render a disservice because we build up false hopes and offer empty deeds for fair promises. The progress in State and community organization has been very great in the last 18 months alone. But it must be multiplied so that each community of any size has a working year-round committee for the employment of the handicapped. Such a committee as Milwaukee has is one of the best investments in good citizenship and good economics that I can imagine.

I have discussed at some length the British plan for rehabilitation and employment of its impaired workers, my thoughts on the need for legislation here in America, and the responsibilities of management, the communities, and the States. I also believe that labor can do more than has been done for the handicapped. I say this advisedly, with the full knowledge that labor has rendered more group assistance to the President's Committee than any other of the many types of groups represented.

Labor has issued its credo in the little blue pamphlet, Labor Believes, which has been distributed here today. However, it takes action by the local unions to really make this program mean something. It takes collective bargaining, complete cooperation with management's job-placement plans for the handicapped, and a willingness to adopt some flexibility in seniority clauses in some industries. Here is an opportunity for unions to really pioneer, and the blue print is available for the asking. This in-plant plan for employing the impaired worker, which also has been distributed here today, is certainly simplicity itself. I urge you all to study it and put it into operation.

All that is necessary for success is the heart which I know from experience beats warmly in the breasts of the workers and employers of this land, a heart that expands to help less fortunate workers. There is nothing of charity in the program to employ the handicapped. But there is much of humanity. It is a truism of human nature that those who help others automatically help themselves.

I heard the other day of a case of an English worker who was born minus hands and feet, seemingly a hopeless rehabilitation case. The man today drives his own car to work. The challenge was so great in his case that every effort was expended to rehabilitate him into employment. Artificial limbs were fitted to him. He was taught to wear them and manipulate them. He was given a job although it required having a wheel chair at each end of the streetcar line to get him to and from work. When his employer heard this he bought the man a car. Today he is a respected and hardworking employee. His very presence in the shop has raised the output and the morale of other workers.

I think this little story sums up everything I have been saying. For it took the full cooperation of the Government, the community, the employer, and his fellow employees to make a useful citizen out of a man in a seemingly hopeless condition. And although I wasn't there I am willing to bet that everyone felt better for it.

In dealing with human beings with immortal souls we cannot estimate the good we do in providing suitable employment for the handicapped. But this thing is certain. We know today that an empty sleeve doesn't mean an empty head, a twisted limb doesn't signify a twisted mind, a blinded eye doesn't hide a darkened soul.

A handicap is not an outward manifestation of an inner deficiency. More often a visible handicap is a badge of courage which indicates triumph over obstacles which most of us have never faced. Let us hope that we are never called upon to live with a severe handicap. But if we are, let us hope that we receive the same consideration that we are today asking for others. Remember, in all your dealings with the handicapped, that in a split second you, too, could be in the same condition yourself. And then I know that you will act accordingly.

America's Achilles Heel

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. WHITE of Idaho. Mr. Speaker, the people of this country certainly fall for European propaganda. I use the word "fall" advisedly. If our country gets out of the foreign entanglements in which we are being gradually enmeshed without a terrible fall it will be a miracle. There is inserted herewith a letter received from a prominent citizen of Tennessee and the reply thereto expressing my views on present national trends:

NASHVILLE, TENN., *April 25, 1949.*
The Honorable COMPTON I. WHITE,
House Office Building,
Washington, D. C.

DEAR MR. WHITE: I agree with your note written across my letter, to the extent that

you say that this Nation ought to keep out of entangling European alliances. But, we cannot keep peace by building up a mammoth machine capable of carrying death and destruction instantly to all parts of the world. By engaging in the race of armament building, we only increase the tensions which produce wars. Peace is the relationship that exists where law prevails.

I think that you will be interested to learn that the Tennessee Legislature has passed a bill providing for the election of delegates to the World Constituent Assembly, Geneva, 1950. Enclosed is a copy of the bill and a copy of an editorial from the Nashville Tennessean. A similar bill is now pending befor the Pennsylvania Legislature. I am advised that very shortly a bill will be introduced before the Wisconsin Legislature.

I wish the Congress would postpone any action of the State Department scheme for the military alliance until after the 1950 elections. This would give the people of this country a chance to make an authentic proposal to the rest of the world for an establishment of a government for world affairs.

Sincerely yours,

FYKE FARMER.

MAY 4, 1949.

Mr. FYKE FARMER,
Bellevue Drive, Nashville, Tenn.

DEAR MR. FARMER: In answer to your letter of April 25, which was received during my absence in the West, it is reassuring to find that thoughtful people like yourself are giving their attention to the policies of national government and the legislative course being followed by the Congress. In viewing the existing situation in dealing with our international relations, it does not appear from our past experience that many of the policies being followed today in dealing with foreign countries are necessary.

The leaders of this country seem to have a strange mania to meddle with the political affairs of other countries. Looking back over the events beginning with the outbreak of the First World War, it seems to me that the European financiers found our "Achilles heel" in response to propaganda. We were propagandized into the First World War, we were propagandized into financing Europe after the First World War, we were propagandized into the Second World War, and now we are being propagandized into financing Europe and also into rearming Europe, and are thereby being enmeshed into entangling European alliances, the very thing that George Washington warned us against.

It is my feeling that the lives and well-being of the youth of America are too dear to us to be sacrificed on the altar of European greed and militarism.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

The Freedom of Science—Its Opportunities and Responsibilities

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Wednesday, May 4 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Freedom of Science—Its Opportunities and Responsibilities", written by Harry Aubrey Toulmin, Jr., of Dayton, Ohio, and published in the Chemical and Engineering News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FREEDOM OF SCIENCE—ITS OPPORTUNITIES AND RESPONSIBILITIES

(By Harry Aubrey Toulmin, Jr., senior member, Toulmin & Toulmin, Dayton, Ohio)

Our democratic form of government and education has presented chemists and chemical engineers with a challenging opportunity for public service and a golden opportunity for private gain.

History gives us fair warning to be vigilant of our scientific liberties. Germany was once an extraordinary nation of equally extraordinary scientists. Hitler reduced her sciences to a regimented pattern in a state that had murdered the profit motive. Let us not permit our so-called science bills, our Government's easy-money patronage of research, our Government-owned mass of patents, and attempts at political domination of scientists to delude us into making the same mistake.

TWO PHASES OF FREEDOM

In this consideration of the freedom of science we have two areas of adventure: freedom of the individual and responsibility of the individual. Without a proper balance of these two factors we do not get successful results in science, nor responsible leadership, nor adequate protection of the public interest.

Freedom of the scientist—as of any individual—means his right to hold his own social, political, and economic opinions. It does not mean, of course, that as a teacher or official of an educational institution, he is entitled to use his position to advocate those personal views. To permit this would be, in effect, to use the taxpayers' money to present only one side of a question.

Freedom of the scientist should also mean the right to select the things in which he wishes to do his research and the privilege, subject only to considerations of national security, to publish such scientific information as he wishes.

I do not go along with the present trend in some universities toward regimenting scientific and engineering personnel by preventing them from doing research work unless it is controlled by a government, a foundation, or by rigid corporate policies. I do not go along with arbitrary control of patent rights of university personnel as the result of their own work. I do not go along with the contention of some universities that their research foundations can properly participate in studies leading to Ph. D. degrees, accept compensation from commercial sponsors who seek this cheaper form of doing their research, and agree to suppress the publication of the resulting theses until the convenience of the commercial sponsor is served. That is not freedom of science—that is not a true university.

Let me illustrate what possibilities for profit and public progress can come from the minds of men inspired to look to the far horizons. Thirty years ago W. M. Burton discovered how to double the amount of gasoline obtained from crude oil. Thirty years ago Thomas Midgley demonstrated that engine knock was due to a form of excessively rapid burning or detonation of the air-fuel mixture when it is subjected to high pressure. Midgley also found that Burton's cracked gasoline had a greater tendency to knock than straight-run gasoline so he developed tetraethyl lead to reduce knocking. In the meantime, superior cracking processes improved the basic gasoline. Graham Edgar developed a knock-rating scale and we entered the era of octane numbers.

Then came 100-octane gasoline through the pioneering of American oil refinery chemists. That gasoline gave the Royal Air Force the essential speed and altitude advantage which won the battle of Britain in the air and saved civilization. Ten to thirteen octane numbers changed the history of civilization.

In the field of medicine we are just now entering with full force into the age of chemistry. The work of the Rockefeller Foundation and of countless other institutions in the chemistry of blood alone has been as revolutionary as the chemistry of antibiotics.

The vast studies now being made in the field of medicine and chemistry by our Government in Africa are the most essential military precaution that could be taken for the protection of this Nation.

The freedom of science depends upon the inspiration and reward of sciences. If owners and managers really believe in the profit motive, they will share profits. I commend to capital a continuing study of making men partners in results. Patented results can yield vast profits if competently administered and wisely shared. The great problem of industry today is to release through the freedom of science the forces of selfish interest, of initiative, and of creative ideas.

To do this, we must use the thing most talked about and the least shared—the profit motive. Communism melts in the warm sun of shared capitalism. I do not fear the Reds of Russia; I do fear for the selfishness and rigidity of mind of my own clan.

That this is not wholly altruistic, these figures may point out: The textile industry spent 1 percent of sales on research and had an operating profit of 5 percent and the chemical industry spent 3¾ percent on research and secured 18 percent profit on sales. These figures from the National Industrial Conference Board for these two industries and others show this to be a settled rule: Profits increase almost geometrically in proportion to the percentage of money spent on research. Therefore, it would seem good business to increase the compensation of the research workers who produced the maximum ratio of profits.

RESPONSIBILITIES OF PUBLIC SERVICE

When a scientist accepts the responsibilities of public work he dedicates his efforts to the public interest and forever thereafter information acquired in that employment is subject to the rules and regulations of government. To that there can be no exception.

In joining the public group he must weigh every word and every act in his conduct. He must refrain from casual speeches, from misplaced humor, and from idle gossip.

Rectitude of conduct and propriety of actions can only be second to his responsibility to his government. When you regard the service to the public under such circumstances as a privileged responsibility, it is not a restriction of freedom but an opportunity for service that should be welcomed by any normal man, loyal to the flag under which he serves and the government under which he lives and to which he owes the other freedoms of himself and his family.

But to secure such a sense of obligation the government must be wise and fair. The terms of the various science bills cause me grave concern. They smack of regulations instead of coordination of effort in the public cause by private and public institutions working as a team in the public interest.

I see the danger of control by politicians who are not scientists; the danger of power of the director to grant or withhold research funds to control university policies and scientific activities; the power to subject to strong pressure by the Federal agency making the grants on complacent university administrations which will yield to get business.

The best analysis of this situation is contained in the report of the second meeting of the Inter-Society Committee for a National Science Foundation, which recommendations were endorsed by the dean of engineering, Charles E. MacQuigg, of Ohio State University (Science, 107, 235–6 [1948]).

Where things must be done to prevent overlapping of scientific effort to organize our facilities and to finance projects beyond the purse of private industry or public institutions and where general coordination and planning of the scientific attack upon our problems such as given by a general staff in the Army are needed, I go along. When science bills tends to give dictatorial power, dogmatic control, and regimentation of scientists and scientific projects, I rebel. Every nation that has tried this control of science has committed suicide. Russia is doing it right now—and so long as she does it you need never worry about a Russian victory.

SCIENCE FOUNDATION BILLS

That aspect of our proposed science foundation bills which deals with the freedom of science falls logically into two divisions.

The first division has due regard to the rights and limitations upon the individual. No better statement of Government policy could be found, in my judgment, than in the Thomas bill, S. 525, which recites:

"In all research and development activities financed or otherwise supported by the Foundation, the Administrator, with due regard to the national security of the United States, shall make every effort to eliminate restraints upon the free expression of scientific views and to insure full freedom in the exercise of creative talents, in the development of new ideas, and in the methods of research. Any person engaged in such research and development activities shall not be precluded from independently discussing, writing, or publishing his own views and conclusions relating to such research and development; except in cases in which the President, or any person designated for that purpose by him, finds that such discussion, writing, or publication will endanger the national security of the United States" (Chemical Engineering News, 25, 601 [1947]).

OBLIGATIONS OF PUBLIC SERVICE

I hear restive scientists prattle about freedom of information, the rights of scientists, and the international exchange of information, as if they had some private property in the public interest and were free to dedicate it at their pleasure. Such is not a fact. Democracy is not individual license: it is maximum freedom of the individual consistent with protection of the common interest of the majority. That distinction has been ignored by most of those scientists who have gotten themselves into unpleasant difficulties.

Let me illustrate. The writer, as chief of staff of the Army Air Force in France in 1918, was entrusted officially with our operational plans in Europe with the American Expeditionary Force. In World War II that pattern was repeated when, as assistant chief of the Transportation Corps, as the staff officer supervising the Atlantic and Pacific commands of the Overseas Air Force, and as a member of the Army Pearl Harbor Board, the writer was entrusted with the operational plans of our forces throughout the world in many of our vital intelligence, top-secret matters.

A revelation of certain matters originally acquired in 1918 might have handicapped the United States by disclosing a pattern of thinking which later matured into military and naval plans useful in 1941 and today. I could speak only of those things which were officially released or published by others officially. All else of necessity remained a closed chapter in the public interest.

Yet in no sense did I cease to be a free and independent citizen, able in all other matters of my professions and businesses and political activities to write, speak, and assemble freely. That is democracy. That is the restriction that any man should be happy to accept for the privilege of working in the scientific field for the benefit of his Government, for the benefit of all of us.

DANGER OF GOVERNMENT-CONTROLLED RESEARCH

The second phase of Government interest in science raises another, but equally practical, consideration in this exploration of the freedom of science. Under these bills, we provide for a distribution of the funds, by contract, for research and development, not only in the Government agencies but among the tax-supported and land-grant educational institutions of the several States. And we provide for contracts with other organizations.

But at this point the critical question arises: What can be published as the result of this employment and what can be monopolized by patents? Let us keep in mind that these are public funds being utilized in the public interest, which is twofold—for national defense and for public health. As to the latter, the freest dissemination of information is provided except as the medical aspects of national defense may be concerned. These acts provide for patents in some cases, license-free but regulated; in other instances, under license; and in still other instances, the resultant patent rights go to the contracting party doing the work, subject to an irrevocable, nonexclusive, royalty-free license for governmental purposes.

Here again is an attempt to meet that neat balance in a democratic government of preserving to all the people, either for their protection or for their health or for their common enterprises, that common store of information developed from common funds. It can hardly be said that the freedom of the individual entitled him to violate these reasonable rules by publishing, public disclosure, and private patenting, because he must preserve his freedom as a scientist. To say so would also be to say that the unlocked automobile of another citizen is open to private appropriation and use because of the freedom of the individual. The Government has property rights in trust for all of us, and the science foundation bills simply provide for such considerations.

GOVERNMENT BUREAUCRACY AND RESEARCH

Neither of these restrictions or opportunities under the National Science Foundation bills touch upon the real heart of the matter which should cause you grave concern. It is this: When you lay the dead hand of Government bureaucracy upon any creative enterprise, you reduce the adventure to one of rules and regulations, of civil-service requirements, to preserve mediocrity in its perpetual vacation at Government expense. You furnish opportunities for so many small minds comfortably positioned, by reason of political affiliation or civil-service good fortune, in situations where jobs are made by keeping a host of rules and regulations to sterilize every thought, every independent action, and every interesting adventure into the field of science.

The thing we have to fear is any expansion of science control by Government agencies except for national defense and national health.

When any university or commercial organization undertakes contracts with such Government agencies, they are giving up precious rights of property, freedom of action, freedom to get results, and freedom of the individual which should not only be jealously guarded but only yielded when the necessity of preserving our democracy so dictates. All of these bills make it too attractive to university administrations and to commercial organizations to take the easy way to a life of unrefined intellectual leisure and easy money.

If such projects are directed by unwise administrations, both in universities and in the Government, as may well be the case in times to come, we will sacrifice scientific freedom, destroy our principal national defense projects and protection, and reduce our scientific brains to the drab level of civil-service employment. Such service was only designed for the routine operations of Government and to protect people whose talents are so common among all of us that they would be the first victims of a change in administration.

REDUCING SCIENTIFIC INSTITUTIONS TO CIVIL-SERVICE STATUS

After 30 years' experience in governmental operations and reorganization of many governmental departments, I can say unequivocally that no cancer in the democratic system is equal to that of the deadening effect of civil service where initiative, independent thinking, and adventuring in new fields is a fundamental requirement.

Where these bills seek to set up unofficial civil-service principles over scientists and engineers, I rebel. That they undoubtedly do. Only the pressure of national defense and the demands of public health can so stimulate action against this deadening disease where we reach a compromise of safety and an adequate modicum of research results.

Anything more will mean the death of the scientists' freedom, the destruction of academic freedom, and the opening to competitive governments of the glorious opportunity of being first. The necessity of to some degree abandoning civil service during the war was many-fold greater than would ever be the abandoning of such restrictions on Government research in time of peace.

Germany nearly won this war. She lost it because Hitler was the greatest exponent of the civil-service principle the world has ever known. He regimented individual scientists and defeated their best efforts by public direction of research into the wrong channels. The result was that the democracies with their independent action caught up with and defeated him.

These same German scientists to our certain knowledge were among the world's leaders. Left alone to work out their own salvation, simply using government funds and facilities for that purpose, they would have had more than a fair chance of again leading the world in critical developments. That they did come so close to doing it under Hitler's management is fair tribute to their exceptional talents in the scientific world.

I speak on this subject with bitter knowledge and experience, charged as I was with the administration of large miltary enterprises, dealing with billions of dollars and hundreds of thousands of people. The only real handicap in getting results was the insistence of the Government on imposing, even in time of war, civil-service restrictions, and the demands of unions, running their own civil service, that we should employ individuals irrespective of ability or fitness for the position and that we should adhere to other rules and regulations that were fantastic in their selfishness and a grave detriment to the public interest.

The Atomic Energy Commission is now fighting that great battle. On their success depends the future of this democracy in the challenging race of science and engineering to protect the national interest.

Frankly, I know of no better answer to the invasion of democratic scientific rights than General Eisenhower's inaugural address before Columbia University as its president when he said:

"The concentration of too much in centralized government need not be the result of violent revolution or great upheaval. A paternalistic government can gradually destroy, by suffocation in the immediate advantage of subsidy, the will of a people to

maintain a high degree of individual responsibility. And the abdication of individual responsibility is inevitably followed by further concentration of power in the state. Government ownership or control of property is not to be decried principally because of the historic inefficiency of governmental management of productive enterprises; its real threat rests in the fact that, if carried to the logical extreme, the final concentration of ownership in the hands of government gives to it, in all practical effects, absolute power over our lives."

The regimentation by science bills of science other than for limited national purposes, the Government control in increasing number of patents which are the fruits of Government control of science and scientists, the monopoly by Government of research facilities in universities and public foundations to the exclusion of industry or of fundamental scientific investigations initiated by the universities themselves in times of peace, will inevitably lead to two things:

(a) The nationalization of science and the end of your freedom and the freedom of the industrial enterprises.

(b) A repetition of the situation in Germany where independent scientists lost the race for survival when their research activities were regimented by political considerations directed by politicians and nonscientific laymen.

We won the greatest war in all history without a science foundation bill. Germany lost the greatest war in history with the equivalent of a science foundation bill.

Overtime On Overtime: Longshoremen's Case

EXTENSION OF REMARKS
OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. HART. Mr. Speaker, under consent granted to extend my remarks, I include herewith an article from the magazine America, edition of April 12, 1949, by the Reverend John M. Corridan, a member of the faculty of Xavier Labor School, New York City:

OVERTIME ON OVERTIME: LONGSHOREMEN'S CASE

(By John M. Corridan)

There isn't a dull moment on the New York docks any hour of the day, and often well into or through the night. Thousands of cases, bales, barrels, and cargo in bulk are swung out from hatches by ship's gear onto the docks. Trucks, lighters, and railway cars discharge cargo onto the piers or into the holds of ships. Fork trucks, four-wheelers, tractors, and trailers twist in and out, moving cargo to and from the dock's edge.

Why all the feverish activity? Because, for profitable operation, the ship's turnaround must be as short as possible. That's why ships are often worked through the night, even though longshoremen receive a night differential of 150 percent of their day rate.

The men breaking out or stowing away cargo in the iron bellies of ships, or moving it to and from the dock's edge, are the longshoremen. As workers, they differ from all other workers in one essential occupational condition: In practice there is no regularity in a longshoreman's working hours, either in clock-time hired or in the number of hours worked on each occasion.

In the early 1900's longshoremen "shaped" every hour. Men looking for dock work gathered in a semicircle at the pier entrance where work was available. The hiring boss in charge picked from this "shape" the men he wanted to work until he "knocked them" off." Picking a man from the "shape" carried with it no obligation to give him any specified hours of work. For the first time, under the present contract, the men receive a minimum of 4 hours' pay between 8 a. m. and 5 p. m., if picked in either of the two daily shapes at 7:55 a. m. or 12:55 p. m.

Working in all kinds of weather, in the narrow confines of hold and dock, surrounded by moving vehicles and spinning machinery, and handling tons of diversified cargo, the longshoreman has a hazardous occupation, particularly at night. It is these factors that account for the historically high differential between the day rate and the night and holiday rates as contrasted with other trades. In 1872, longshoremen were paid the following rates per hour: 40 cents day rate, 80 cents night rate, $1 for Sundays. Since 1872, whether there has been a union or not, whether unions in general were strong or not, long before there were differentials in other industries, longshoring had a day and a night rate, irrespective of the number of hours worked or not worked.

The night rate in New York has been around 150 percent or more of the day. This high night rate had to be paid to get men to work. The differential is not true overtime, since it is not determined by hours worked over and beyond the normal hours for a workday. Seven different courts, including the United States Supreme Court and three United States circuit courts of appeals, together with the Administrator of Wages and Hours, arrived at this definite conclusion based on solid evidence. Highly respected and conservative members of the Federal judiciary have so ruled—Chief Judge John Parker, of the Fourth Circuit Court of Appeals, Judge Augustus Hand and Judge Thomas Swan of the Second Circuit Court of Appeals, for example. At present, though, there is a bill in Congress (H. R. 858), which would exclude the longshoremen from the protection of the Wages and Hours Act. Moreover, for the past few weeks hearings have been held before the Labor and Public Welfare Committee of the Senate to determine whether or not H. R. 858 is to be made retroactive in its effects.

Ironically, in practice the vast majority of longshoremen have never been paid true overtime under the Wages and Hours Act. No sooner did the longshoremen win their case before the Supreme Court for unpaid overtime than the shipping industry not only petitioned Congress for a law to remove longshoremen from the scope of the Wages and Hours Act, but also asked it to make that new law retroactive, so as to wipe out the overtime benefits granted to the longshoremen by a previous Congress.

If any group of workers needs the Wages and Hours Act (1938), the longshoremen under the notorious shape-up system of hiring are that group. The purpose of the Wages and Hours Act was, in part, to spread employment reasonably by placing a ceiling over hours. The penalty rate of time and a half after 40 hours in the same workweek was calculated to have that desirable effect.

In an industry where work is irregular, and where there is an unregulated oversupply of men, as there is in New York, and where that work is extremely hazardous, it is absolutely necessary to retain economic penalties which will compel a more equitable distribution of the work available. As it is, the average longshoreman makes only about $2,000 a year.

According to the National Labor Relations Board in New York, no more than 14,000 of the 35,000 New York longshoremen averaged as much as 26 hours of work per week in 1947 and were still working in the port of New York in 1948. According to the central records bureau of the New York Shipping Association, only 22,000 men received 800 or more hours work in 1948. The figures indicate its poor distribution of work opportunities.

The present law requires that when men earn two rates of pay, any computation of overtime must be based on an average of the two rates as a base. An example will show what the law requires. A longshoreman works 40 hours between Monday and Thursday. He puts in 20 hours at the day rate of $1.25 an hour ($25) and 20 hours at the night rate of $1.875 ($37.50). He gets an additional 8 hours work on Friday from 8 a. m. to 5 p. m. Instead of being paid at the day rate of $1.25 an hour ($10), the law requires that he be paid time and a half, using the average rate as the base.

An employer would not be inclined to give a man 8 hours overtime at the rate of $2.265 an hour when he could hire other men at the rate of $1.25 an hour. Enforcement of the overtime provisions of the wages-and-hours law, which the bill (H. R. 858, passed by the House but not yet by the Senate) aims to prevent, would spread work opportunities more equitably among longshoremen. As it stands now, some men earn as much as $5,000 a year, while many more make less than $1,000.

Very little concern for the observance of the Wages and Hours Act has been shown by the shipping industry on the east coast. Despite the fact that since October 1940 the act has prescribed a maximum straight-time workweek of 40 hours, the industry's contracts with the International Longshoremen's Association (ILA) called for a 44-hour straight-time workweek all through 1945.

Prior to 1938 the shipping industry never considered the night differential overtime, as it now must. In 1934 Mr. E. P. Foisie, now president of the Waterfront Employees Association of the Pacific coast, declared: "There is practically no true overtime in longshoring—that is, true overtime as adopted by the factory industries. Time in excess of 8 hours is the conventional overtime. Nothing of the sort pertains to longshoremen."

Again, in 1941–42, Mr. Foisie called "overtime," when applied to the longshoreman, a "misnomer."

It is difficult to understand just why the shipping industry failed to comply with the various directives of the Wage-Hour Administrator, and subjected themselves to the risk of 100 percent damages—the penalty for noncompliance. The industry was careful enough to get special-indemnity agreements in their Government contracts which guaranteed reimbursement from the Government in case of future claims. If these claims were delayed, then, through a statute of limitations, reduced to 2 years in 1947, only the Government would be liable for past violations by reason of cost-plus contracts.

Equally difficult to understand is the position of the ILA leadership, which apparently failed to notice the violations, and subsequently, upon notification, opposed the claims of the men. It was a local of the ILA that established the validity of the longshoremen's claims to these overtime payments. In 1941, Local 814 of the ILA filed suit in the Federal district court in Milwaukee against the National Terminal Co. The ILA held that the company was in violation of wages and hours by failure to pay true overtime. The ILA won the suit on May 15, 1943, before Judge Duffy, a former United States Senator from Wisconsin at the time the Wages and Hours Act was passed. Judge Duffy's decision was unanimously upheld by the Seventh Circuit Court of Appeals on January 28, 1944.

It is difficut, too, to understand how Government agencies could ignore the directives of the Wage-Hour Administrator acting within his competency under the authority

of Congress. The Justice Department is in a strange position. In the name of the War Shipping Administration, the Attorney General is opposing suits brought against private shipping interests. In so doing, he has reversed the Justice Department's position in the Custom Inspectors' case (*U. S.* v. *Myers*, 1944).

Most fantastic of all is the contention of the shipping industry that payment of $500,000,000 in claims would bankrupt the industry (New York World-Telegram, March 11, 1949).

What are the real facts? First, the lawyers for the men give $15,000,000 as the top figure filed for all claims in the United States and its possessions. Second, 95 percent of the money claimed will have to be met, not by the industry, but by the Federal Government under cost-plus contracts.

Equally fantastic is the impression created that these suits are a Communist plot. Of the 26,000 claims filed, non-Communist lawyers represent almost 20,000 men. The case was handled in the courts by the firm of Goldwater & Flynn, of which Edward Flynn, former National Democratic Committee chairman, is a partner. The longshoremen themselves are overwhelmingly anti-Communist. It is just another case of giving credit to the Communist Party where little or no credit is due them—in the hope of smearing good men and their just cause.

The longshoremen are morally and legally entitled to payment for their unpaid overtime. As Senator THOMAS, present chairman of the Labor and Public Welfare Committee, said: "No windfalls are involved here, but merely the enforcement of a just debt knowingly assumed" (Washington Post, June 25, 1948). In the present hearings, Senator WAYNE MORSE, of Oregon, remarked: "It would be a serious thing if Congress should attempt to reverse the Supreme Court in a matter affecting property rights—the workman's ability to collect money that the Court says is due him" (New York World-Telegram, March 11, 1949). There is no telling how serious the longshoremen would consider it.

As to whether or not Congress should pass H. R. 858 (without retroactivity), that remains within the determination of Congress. It is certain, however, that this whole episode points up the reasons why there should be an investigation of the entire industrial-relations set-up of the port of New York by a responsible Government body with power to recommend remedial legislation. Until it is done, peace, decency, and justice will not come to the troubled New York water front. The time for that investigation is now.

Bill McCahill, Friend of the Handicapped

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting an article by the Honorable William P. McCahill, assistant to the chairman of the President's Committee on National Employ the Physically Handicapped Week.

This article sums up briefly what has been done in the field of aiding the handicapped. Bill McCahill has done outstanding work in behalf of the handicapped and he is to be commended for the efforts he has put forth and the interest he has shown in behalf of these people who need help so much.

REHABILITATION AND PLACEMENT OF HANDICAPPED WORKERS

(By William P. McCahill of the U. S. Department of Labor, Office of the Secretary, assistant to the Chairman of the President's Committee on National Employ the Physically Handicapped Week)

At least 6,000,000 handicapped are swelling the labor force of the United States to new peaks. An estimated million additional workers could be employed if certain rehabilitation or training facilities and processes were available to them. Handicapped persons have been estimated to total 28,000,000, including those too old or too young to be in the labor force and those who cannot or do not work. In addition, about a third of a million persons, it is estimated, are disabled every year through various causes. Toward this handicapped population, more and more attention is being given by the Federal and State Governments and by public and private groups and agencies.

Some concern exists today that not enough is being done to rehabilitate the handicapped, although all States and Hawaii, Puerto Rico, and the District of Columbia are offering a wide range of rehabilitation services under a plan in which the States are to match Federal funds for case services, including training. The Federal Government pays for all costs of administration, placement, and vocational guidance. This program comes under the vocational rehabilitation law (Public Law 113, 78th Cong., 1st sess.), which was passed to allow the States to rehabilitate disabled citizens who are considered to have possibilities for remunerative employment.

The expansion of services to the civilian handicapped has proceeded apace since enactment in 1943 of the Barden-LaFollette amendments which provided authority under the vocational rehabilitation law for virtually every service essential to the restoration, preservation, or development of the disabled civilian's work capacity.

Many Federal Government agencies expend considerable time, effort, and money in behalf of the handicapped. The major part of this work is being done in the Federal Security Agency, particularly since the transfer to that Agency in July 1948 of the United States Employment Service and the Veterans Employment Service. In addition, many private groups or organizations participate in the year-round program of the President's Committee on National Employ the Physically Handicapped Week, and devote considerable effort toward rehabilitating and placing handicapped persons.

Much still remains to be done, however, in educating the public and the communities of the Nation on this subject. A rehabilitated worker pays back $10 in Federal income taxes alone for each Federal dollar spent in his rehabilitation. In the fiscal year 1949, the cost of the vocational rehabilitation program will be approximately $25,000,000. Of this total, the States' share will be about $7,000,000. The average cost of rehabilitation per person is less than $500, and it costs more than that to keep a handicapped person on a Federal, State, or community dole.

FEDERAL SERVICES FOR PHYSICALLY HANDICAPPED

Civilian rehabilitation: The Office of Vocational Rehabilitation (OVR) of the Federal Security Agency has the primary responsibility for rehabilitating civilians. It has a Federal-State relationship with 86 State rehabilitation agencies and services for the blind. The United States Office of Education, also in the FSA, administers Federal aspects of the various acts pertaining to vocational education, an important method of preparing persons for suitable employment, which is one of the processes in vocational rehabilitation.

The services provided through the Federal-State program of the OVR include medical examination; individual counsel and guidance; medical, surgical, psychiatric, and hospital care; artificial appliances; any necessary training; maintenance and transportation of the disabled person while undergoing treatment or training; occupational tools; equipment and licenses necessary for a fair start on the job; placement on the right job; and follow-up after placement. These services have been made increasingly available to applicants. Several of them are free under all circumstances; public funds are used for the others to the extent of the client's inability to pay.

The keynote of the OVR program is cooperation with existing establishments which include hospitals, rehabilitation centers, clinics, workshops, and other facilities already in operation. Two States (Virginia and Pennsylvania) have established their own rehabilitation facilities. Agreements have been signed between the OVR and many public and private agencies and groups, including many of the Federal agencies, which establish a modus operandi toward maximum use of existing facilities. State-OVR agencies also do counseling, apply psychological tests of aptitude, and determine physical capacities under medical supervision.

The 1948 annual report of the OVR shows that 190,000 persons received some rehabilitation services and 62,000 completed rehabilitation into jobs. Approximately 120,000 were receiving rehabilitation services on June 30, 1948. A total of 348,000 had actually been on rehabilitation registers during the previous 12 months. During the month of March 1948, there were 27,629 persons engaged in training under OVR authority, although this figure is misleading, since training is only one of the rehabilitation processes.

Among other Government agencies contributing to the work being done in behalf of the handicapped is the Department of Agriculture. It has asked handicapped workers to investigate the possibilities of farm employment through county agents, and though no statistics are available, a considerable number of impaired workers are now employed or self-employed on farms. The Farmers Home Administration and the Office of Vocational Rehabilitation work closely together in rehabilitating disabled persons in the rural areas, and have had considerable success in restoring individuals and entire farm families to self-sufficiency after disease or injury have wrecked their economy.

In December 1946, the Business Advisory Council in the Department of Commerce drafted a five-point statement of policy on the employment of handicapped persons. This was particularly important because it was a statement of businessmen, emphasizing that it was sound economically and important socially to employ the handicapped, and calling upon employers to study the best placement practices and to make every effort to neutralize handicaps.

The Library of Congress has a special division for the purchase and distribution of embossed (braile) and talking (records) books for the blind.

Veteran rehabilitation: The Veterans' Administration has the main responsibility in rehabilitating disabled veterans, and through its system of hospitals exerts a profound influence on the Nation's disabled veterans. The service hospitals also have definite rehabilitation and training programs which make every possible effort to make patients ready to assume full-fledged civilian status.

The Veterans' Administration works closely with the Veterans' Employment Service; the VA Administrator is chairman of the Veterans' Placement Service Board. Through

its administration of Public Law 16 (78th Cong., 1st sess, March 24, 1943) (vocational rehabilitation law), the VA sees that a grateful Nation's debt to its disabled veterans is discharged insofar as is possible in rehabilitating and training them to the point where employment is not only desirable but possible. Although VA has placement responsibility, it generally uses the placement facilities of the VES and the USES.

In this program the disabled veteran obtains school training, both formal and vocational, and on-the-job and on-farm training. In June 1948 there were 224,993 veterans in training, as compared with 249,960 in May 1948 and 16,003 in July 1945, just before the end of hostilities. Of the June 1948 total, 96,787 were in school training, 31,545 in institutional on-farm training, and 96,661 on-job training. These are all vocational rehabilitation or Public Law 16 veterans, as compared with 1,666,518 Public Law 346 (78th Cong., 2d sess., June 22, 1944) (GI bill of rights) veterans in training during June and 2,333,766 in May when most colleges were still in regular session (Veterans' Administration, Statistical Summary, June 30, 1948).

During June 1948, 12,491 disabled veterans applied for vocational rehabilitation and 20,091 applications were pending advisement at the month's end. An additional 40,994 veterans who completed or discontinued their training during the month presumably will enter the labor market or continue further training or schooling. In all, 267,291 veterans were paid subsistence allowances during June under the provisions of the Vocational Rehabilitation Act.

The Department of the Army has a program for the enlistment of specially trained amputees or other disabled veterans for limited-duty service. The Surgeons General of both the Army and the Navy keep continually abreast of the latest programs for the rehabilitation of the physically and mentally handicapped. The Department of the Navy has recently completed an informal check on many of its large civilian establishments, and has found that the physically handicapped are not only employed in large numbers but are doing average and sometimes better-than-average work.

Placement: Certain overlapping of responsibility in actual placement of the handicapped led to a cooperative agreement between the United States Employment Service and the Office of Vocational Rehabilitation. Both have placement functions, which in the former case are general, and in the latter more specifically aimed at the handicapped. The USES and OVR take the lead in publicizing the employability of the handicapped. In the fiscal year 1947, local employment offices held counseling interviews with 1,368,000 handicapped men and women, and approximately 236,000 impaired workers were placed in jobs. The USES April 1948 summary of activities for the handicapped in the various States showed 38,077 nonagricultural referrals to jobs and 21,808 placements, of which 11,711 were disabled veterans—an increase over the previous month of 15.1 percent in total, and 14.4 percent in veteran placements. Handicapped placements fluctuate, however, reaching a peak in October and dropping sharply in the following months before gradually building up again. In 1946 and 1947 approximately 30,000 placements of impaired workers were recorded for October, the all-time high being 30,765 in 1947, of which 17,802 were veterans.

The USES has developed a technique in which a handicapped worker's remaining physical abilities are matched against the physical requirements of the particular job under consideration. Information on the latest developments in connection with the USES handicapped placement program is made available in the Employment Service Review.

Through the Veterans Employment Service, the USES exerts considerable effort to influence, employers to hire qualified disabled veterans. The major work of the VES is promotion and stimulation, coupled with placement. The VES cooperates quite extensively with private veterans' organizations and places its limited field personnel in areas of greatest veteran concentration so as to exert maximum influence and obtain maximum contracts and placements.

The Government has become the Nation's largest employer of the handicapped, including a great many disabled veterans. Civil Service Commission records of placements outside the District of Columbia show that from October 1942 to July 1948 more than 95,000 physically handicapped workers, including 31,400 veterans, were placed in Government employment. The ratio of disabled veterans hired during this period, about one to two nonveterans, is disproportionate, because the peak of hiring came during the war years, while veterans were in uniform. In June 1948, 403 veteran and 152 civilian handicapped were placed, a much higher ratio of veterans. A break-down of the placements in June 1948 and for the period 1942–48, by broad types of disabilities, shows that persons with orthopedic defects had the highest total employment, followed by those with defective vision, defective hearing, arrested tuberculosis, and coronary troubles, respectively.

	Placements	
	June 1948	Oct. 1, 1942, to June 30, 1948
Orthopedic defects	353	58,327
Upper extremities	128	19,059
Lower extremities	184	31,837
Spinal column	41	7,431
Blind	114	17,905
1 eye	110	16,412
Both eyes	0	831
Industrially blind	4	662
Hearing defects	53	10,186
Hard of hearing	51	8,308
Totally deaf	2	1,878
Tuberculosis arrested	23	4,112
Heart disease compensated	38	9,465
Total	[1] 581	[1] 99,996

[1] This figure exceeds the total number of placements because some handicapped persons have more than 1 disability.

The Commission has a medical director and staff, charged with the responsibility of giving the impaired worker every possible employment and advancement opportunity.

The Congress recently passed a law (Public 617, 80th Cong., 2d sess.) prohibiting discrimination in the Federal service against any worker or applicant merely because of a physical handicap, the second time that the Civil Service Act has been amended since 1883.

The Apprentice Training Service of the United States Department of Labor, while not directly responsible for placing apprentice applicants on the job, reports that many handicapped persons are serving apprenticeships satisfactorily.

Work performance study: Several surveys made by the United States Bureau of Labor Statistics for the Veterans' Administration compare the work performances of the handicapped and the nonhandicapped on similar jobs. The most recent of these studies has been released in the Bureau's Bulletin No. 923 which gives results of careful studies of 11,028 physically impaired workers and 18,258 unimpaired workers in 1,488 occupations in 109 plants. According to the report, workers with serious physical impairments, who are placed so as to stress what they can do rather than emphasize what they cannot do, are every bit as desirable as workers without such impairments. The study was based on industry's own records and shows that, as a group, impaired workers are as efficient, and as safe from injury, as the unimpaired workers. Absenteeism of impaired workers was only slightly higher—about one more day a year—than that of unimpaired workers. No injuries to the impaired were traced to the handicap, and not a single impaired worker suffered a work injury which rendered him permanently and totally disabled. Although the study states what has always been known, that there is discrimination against the handicapped, it also points out the need for rehabilitation and for the acquiring of definite skills of impaired workers.

THE NEPH WEEK

The Retraining and Reemployment Administration (terminated at the end of June 1947) did considerable work in this field in 1946–47 and initiated the Federal Interagency Committee on Employment of the Physically Handicapped. This Committee has coordinated the national program for the observance of National Employ the Physically Handicapped Week, observed annually the first week in October through Presidential proclamation.

The President's Committee on National Employ the Physically Handicapped Week, functioning since September 1947, operates a year-round program of public information and education on employment of the handicapped, working through some 150 national groups or organizations represented on the committee. Many of these groups have no connection whatever with the handicapped and others devote their entire efforts to such matters as rehabilitation.

WORK OF PRIVATE GROUPS

Private organizations working for and with the handicapped are numerous. (Some of the more prominent groups are listed in A Directory of Agencies and Organizations Concerned with Rehabilitation and Services to the Handicapped, compiled by Howard A. Rusk, M. D., and Eugene J. Taylor, New York Times, 1947, 133 pp.) Many of them work closely with Government programs, such as that of the President's Committee on the NEPH Week; others are strictly local or regional in character and have no connection with Government.

Among the outstanding organizations are the American Federation of the Physically Handicapped—which sponsored NEPH Week legislation and a recent bill (S. 2896) by Senator SPARKMAN and nine other Senators calling for a coordinating Federal Commission on Services for the Physically Handicapped—and the Institute for the Crippled and Disabled in New York—the first rehabilitation center in the United States under the modern concept. Both of these are on the President's Committee.

The Goodwill Industries of America has 93 local units throughout the country which offer handicapped people an opportunity for sheltered or noncompetitive employment and then sell their products to the public. Many communities have sheltered workshops which are private rehabilitation centers. The Curative Workshop of Milwaukee, Inc., is an outstanding example of private initiative in behalf of the handicapped that has lasted through three decades. Many groups help the blind, while others devote their energies to the correction of various ailments. Among the latter groups are the American Hearing Society of Washington, D. C.; and the National Tuberculosis Association, the National Association to Control Epilepsy, the American Occupational Therapy Association, and the American Physiotherapy Association, all of New York.

To recount the excellent work being done by private means would take volumes. Much is being and has been accomplished. Much

more will be and needs to be done in the future in this relatively new field. Working together, business and industry, Government and private groups, communities and citizens are making a concerted attack on the problem of rehabilitation and employment of the disabled.

Labor Power Declines

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the Dunn Survey has just issued an important summary of a survey conducted by it in connection with the so-called labor vote. We have heard a great deal about this subject, Mr. Speaker, in the last few days. Labor partisans are constantly tossing the threat of political extinction to those of us who refuse to be intimidated. Mr. Dunn says the CIO-PAC is the great American hoax.

Mr. Speaker, under leave to extend my remarks, I am including the survey:

CIO-PAC, THE GREAT AMERICAN HOAX

1. Labor vote for President declines.
2. Labor vote for Congress declines.
3. Labor vote propaganda.
4. The true size of CIO-PAC leaders.
5. A challenge to CIO-PAC.

The 1948 election established that any power of labor-union leaders to deliver the vote of union members has declined, and has been constantly declining since 1936.

1. LABOR VOTE FOR PRESIDENT DECLINES

In 1948 there were 15,600,000 labor-union members in the United States, and Mr. Truman won 51 percent of the Presidential vote in the 96 counties comprising the 33 largest industrial areas in the country (area defined by Census Bureau).

In contrast, in 1936 there were only 4,700,000 union members, and Roosevelt won 65 percent of the Presidential vote in the same 96 counties—immediately after passage of the Wagner Labor Act. By 1944 there were 13,500,000 union members, and Roosevelt's vote declined to 56 percent in the same industrial areas.

In over two-thirds of the 96 counties in the industrial areas the vote for Presidential candidates supported by CIO-PAC leaders has constantly declined since 1936. These include the counties containing most of the largest cities, such as New York, Chicago, San Francisco, Pittsburgh, and Detroit.

Detroit (Wayne County) is generally considered to be the citadel of power of CIO-PAC leaders. In 1936 Roosevelt won 68 percent of the vote in the county—before CIO-PAC existed. In 1944, with CIO-PAC's public support, Roosevelt won only 63 percent. And in 1948, with CIO-PAC's public support, Mr. Truman won only 58 percent of the vote.

2. LABOR VOTE FOR CONGRESS DECLINES

In spite of the great growth in union membership, in the counties comprising the principal industrial areas the Democratic majority for Congressmen was smaller in 1948 than in 1944, 1940, or in 1936, when there was no CIO-PAC.

Democratic vote for Congressmen in industrial areas

	Percent
1936	64
1940	53½
1944	55
1948	53

The total Democratic vote cast for Congressmen in the industrial areas evidences that there was not an uprising of American workers to defeat the Members of Congress who voted for a "slave labor" law (Taft-Hartley).

Total Democratic vote for Congressmen in industrial areas

1936	10,700,000
1940	9,800,000
1944	10,200,000
1948	10,100,000

3. LABOR VOTE PROPAGANDA

Defeated in the 1948 election were 34 Congressmen who voted for the Taft-Hartley law and whose districts included part or all of at least one county in the principal industrial areas. One year before the 1948 election this survey named 24 of these 34 Congressmen and stated that they would be defeated if Mr. Truman won.

At the same time we correctly named 44 of the 64 Republican Congressmen throughout the country who voted for the Taft-Hartley law and were defeated in the 1948 election.

We warned our readers then, November 20, 1947, that the defeat of these Congressmen, and consequent loss of a Republican majority in the House, could result regardless of whether there was CIO-PAC opposition. And we warned against accepting the false claims of CIO-PAC leaders that they spoke for, or delivered the vote of the rank and file union members.

Anticipating exactly what has happened, this survey reported on October 16, 1948, as follows:

"If the pay-roll vote (of Federal employees) is cast as it appears to us, Republicans would lose a conspicuous number of seats in the House of Representatives. The loss of Republican seats would be largely in industrial districts where the Federal pay-roll is centered.

"However, the New Deal-labor leader combine would hail labor's success in defeating the 'enemies of labor' who voted for the Taft-Hartley law, and Republicans would generally acknowledge the claim. Thus, the hoax of the New Deal's labor vote would be rekindled."

(All of the current polls on provisions of the Taft-Hartley law that we have seen show that the large part of union members hold views which are the opposite of the representations made by union leaders. The facts we present here evidence that such polls are correct.)

4. THE TRUE SIZE OF CIO-PAC LEADERS

With 49,000,000 voters, and national campaigns based on propaganda and emotions rather than principles, it is easy to hide the representations each voter makes when casting his or her vote.

However, primary elections are not as subject to such distortions, and they do afford the leaders of an organized minority their greatest opportunity to make effective the vote of those they claim to speak for.

In the 1948 primaries CIO-PAC leaders opposed 109 Members of Congress who voted for the Taft-Hartley law. Ninety-seven of these Members won their elections. Twelve Members were defeated, but only 3 came from industrial States (Michigan, Pennsylvania, and Wisconsin). Nine defeated Members came from southern and agricultural States, where the number of labor-union members is small (Alabama, Florida, Iowa, North Carolina, North Dakota, South Carolina, and Tennessee).

5. A CHALLENGE TO CIO-PAC

We believe that the facts establish that CIO-PAC leaders do not speak for, nor deliver, the vote of the substantial part of rank and file union members. These facts should prevail in formulating national policies until the time that CIO-PAC leaders establish facts contrary to and at least as substantial as those presented here.

Members of Congress and others to whom national leaders of CIO-PAC represent that they speak for the vote of union members should challenge such representations as false and not representing the voice of rank and file union members.

Members of Congress outside of the New Deal-labor leader combine, should make it known that they are seeking labor-union legislation as champions of the interests of rank and file union members and of the public.

Guided Missiles

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted, I wish to include in the RECORD the following article by David Lawrence, appearing in the Washington Star of May 3, 1949:

GUIDED MISSILE COULD PUT AIR FORCE PLANES IN OBSOLETE CLASS—ARMY REPORT ON PROGRESS ON 12,000-POUND BOMB SEEN SOOTHING TO NAVY

(By David Lawrence)

Now comes Gen. Joseph T. McNarney to reveal that the Air Force will have ready within a year a 12,000-pound bomb that can be guided all the way to the target. He says also that American research engineers have made great progress recently toward development of devices to guide missiles with speeds up to 700 miles an hour and with ranges of 5,000 miles.

This is soothing news for the Navy folks who may be feeling depressed about the cancellation of their supercarrier. For it could mean the cancellation of the superbomber of the Air Force as obsolete, too, within a short while.

It raises the question as to whether the Air Force should be permitted to spend billions of dollars for bombers that are not going to be used and, indeed, whether the airplane itself isn't on the way out.

If the Secretary of Defense, Louis Johnson, hasn't yet drafted consolidation directive No. 5, he might logically be writing it. For the passion to concentrate everything in one place here finds a ready outlet in the matter of guided missiles.

ISN'T THIS DUPLICATION?

Today guided missiles are being developed by the Army, by the Navy, and by the Air Force. Isn't this overlapping and duplication? Why shouldn't a new branch of the armed services be created with a status equal to the Army, the Navy, and the Air Force? Why shouldn't the guided missile force come into being with a general to represent it on the Joint Chiefs of Staff?

The thinking heretofore at the Pentagon Building has been that all weapons of one class belong in one service and that it is a mistake to allow the Navy to develop any airplanes to be launched from the decks of ships. The argument has been that all airplanes should be in one service.

Certainly the field artillery have a real claim now. Guided missiles are more like artillery than any other weapon. Logically, the guided missiles could form a new service that would include all guns that shoot into the air. President Truman, as an ex-artilleryman, can appreciate how long neglected the field artillery has been and what its claims now are for control of all guided

missiles. A good case can be made for the guided missile force as a separate entity detached from the Army.

FOUR SERVICES POSSIBLE

It is true that this would make four separate services but that's what unification has brought anyway. There used to be only two services and now there are three. Since the chief reason for a separate Air Force was that it had a new weapon, there seems to be logic in the idea of a separate force to handle guided missiles. There, of course, has been talk of a separate service to take care of submarines but this is in its incipient stages as yet. Some day when submarines are able to come to the surface and launch airplanes and guided missiles, there will be a debate as to which of the existing services shall have the honor of annexing the submarines. But that's in the future.

Meanwhile, the Congress is spending considerable sums on guided missiles. In a sense, this is a mistake. The new doctrine enunciated by the recent order canceling the Navy's research and development of a new carrier apparently is that there must be no new weapons introduced unless the Air Force agrees to it in advance. The guided missile appropriations amount to many hundreds of millions of dollars.

Plainly the whole guided missile program should be reviewed and reexamined because it may well be that it is unwise to spend so much on superbombers for long-range strategic bombing or anything else when—to follow the argument against the Navy's carrier—another 5 years may see the present weapons obsolete altogether.

A National Bulwark

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in a recent edition of the Stars and Stripes-National Tribune:

A NATIONAL BULWARK

Since early in the administration of President Woodrow Wilson, when he approved in 1914 a congressional resolution to honor the mothers of America, the second Sunday of each May has been termed Mother's Day. Harshly as some few will believe the world has treated them and far as many have drifted away from the homes of their birth and from the influences that in bygone days surrounded them, there will yet be seen next Sunday, attached to the breasts of a multitude, a fresh carnation. It may be in color to indicate that she who gave us birth is still spared to witness the honor bestowed, or it may be of white to signify that she has passed on to her heavenly reward, but there it will be, symbolizing that love and reverence in which we hold her, the one person who has done more than any other to shape our lives and our conduct, the one who has contributed most to the destiny of the Nation.

Perhaps there are those who have wondered why it is that we, as veterans, have attached so much importance to legislative efforts which point to the ultimate care by this country of the mothers of those who have gone to war that America might live and continue to contribute of its knowledge and its substance to the proper conduct of human relationships. We have received adverse comment from the thoughtless; they insist that, if men come home unmarred by conflict, there can be no later responsibility attached to them or theirs, and we know that our policy of assuring comfort and security to the widows and orphans of those of our honored dead who had the good fortune to live beyond their years in uniform is often questioned Because these men who fought survived and their loved ones sustained no immediate and personal hardship, we are told we owe them nothing. Such reasoning is a dishonor to motherhood, and it demonstrates a callous disregard for the very principles on which this country has thrived.

No mother, who has ever borne a son, has brought him life so that he could be fed into the maws of war. There has been no wife but has suffered crushing sorrow when her man left the home to offer his life in the country's defense, and no widow of a veteran who sought his mate after separation from military service has willed that he die for her benefit. The hope always has been for life and for happiness. The desire has envisioned success for sons and daughters in the arts, the sciences, or trade. From time immemorial all women of the world have uttered fervent prayers that a son might be born, and, once a part of society, they have shared gladly his disappointments as readily as they have cheered his accomplishments. As he grew up and left to brave the wilderness of his future, mother has smiled her farewell, and she has shown equally her courage when he was called upon to war for her protection. No selfishness was in her being, no sacrifice too great. From earliest recollection, that is the thought of her who was sent as a gift from above to cheer the hearts of men, to console in affliction and to sustain in success. That is why she deserves consideration beyond all others and why we wish to share her concern when she reaches a time of need for herself.

Two great wars have been fought by this Nation since Mother's Day was first inaugurated. Scores of thousands of sons and daughters of America have laid down their lives, and more have returned maimed to the womenfolk they cherish. One needs only to know the grief of parting and the proudness of sacrifice to understand what the Nation's mothers have given to its preservation. But they have an even more vital role in the world of today.

The toil and energy which American motherhood demonstrated in the days of the covered wagon was a mainstay in the building of this Nation. The same boundless courage and determination is needed in this hour to prevent the prostration of existing national institutions. Nobody better than the mothers of the land can direct a floundering ship of state away from dangerous shoals of uncertain domestic and foreign policy. They know that the triumphs of wars won are futile unless the rights for which they were fought shall be kept intact. We believe their resolutions to be that this country must yield a fuller and richer life for its people. They have an influence over our elected leaders that is beyond compare, and they are expected to bring it to bear upon those who need to be guided. Only a mother can teach well the lesson that there can be lost with ease all that has been won at awful cost, if some shirk while others toil.

Especially is this true of those women who have lost their sons in the country's service. Never to be forgotten are the little tots who clung to a mother's breast, or the tousle-haired fellows who played at her knee and who, on reaching manhood, went off to war and fought to the death for the right. The fundamental truths which caused that heart-breaking sacrifice have not changed, nor have there been altered the basic purposes for which all other young men have laid down their lives in the national cause. They who bred and loved such men can demand that the principles in which they believed shall be preserved.

President Wilson, in that first Mother's Day proclamation 35 years ago, said, "We honor ourselves and the mothers of America when we do anything to give emphasis to the home as the fountainhead of the State. The American mother is doing so much for the home, the moral uplift and religion, hence so much for good government and humanity." During the passing years events have given her a greater part in the national life. They have widened her prestige and her force for good. As we honor her on a day set apart for the esteem that is rightly hers, and as we credit her with the blessing she has been to humanity, we pledge a continued remembrance of our heritage and swear to guard it, but we call upon her to wield the power that is hers to help us. Neither God nor man will forgive us, should we neglect the mothers of this Nation. Our trust is that they will exercise the moral and physical force which makes of them the bulwark of our country's safety.

German Cartels—Revival in the Making—Truman Seen Facing Pledge To Break Giant German Industrial Cartels

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes that appeared in the Washington Evening Star of May 4, 1949:

REVIVAL IN THE MAKING—TRUMAN SEEN FACING PLEDGE TO BREAK GIANT GERMAN INDUSTRIAL CARTELS

(By Thomas L. Stokes)

President Truman now is faced with responsibility to redeem a war aim to which both he and Franklin D. Roosevelt pledged themselves, which was to break up the giant German industrial and financial monopolies, or cartels, that plunged that nation into aggressive war.

Only recently the President said he never would permit revival of the cartels as long as he was in the White House.

Yet such a revival is in the making. An official verdict that the decartelization program has not been carried out as directed by our Government is before the President in the report made by a special commission sent to Germany late last year by then Secretary of the Army Kenneth C. Royall at Mr. Truman's instruction. The commission consisted of Garland S. Ferguson, Federal Trade Commissioner, chairman; Samuel S. Isseks, New York lawyer, formerly in charge of the Justice Department's Antitrust Division New York office; and Arthur T. Kearney, Chicago business management expert.

PROGRAM ABANDONED

As revealed in detail in news dispatches, the commission found that the decartelization program had been virtually abandoned, and it pinned the blame on top officials in American military government.

How the President may proceed to remedy this situation is suggested by the commission.

Its criticism of top policy officials and its recommendation that the staff responsible

for carrying out the decartelization program be "strengthened" was carried a step further in a supplementary report by Mr. Isseks who urged that three American military government officials, Lawrence Wilkinson, economic adviser, Phillips Hawkins, his deputy, and Richardson Bronson, chief of the decartelization branch, be removed from any responsibility over the program.

Among many other things, the commission also recommended that the program be put under civilian control; that it be kept under American control and not turned over to the Germans; that it be pushed vigorously in a case-by-case method, and that the chief of the decartelization branch be familiar with our antitrust laws, which is basic.

EXCUSE GIVEN BY OFFICIALS

The excuse given by the top officials named who were responsible for changing the policy laid down by our Government was that the policy would interfere with production in Germany. The Commission held that this was not true.

The whole story boils down very simply to two things—our policy and its objectives, and an attitude of mind. Our policy had a double aim—first to break up the giant cartels so they would not be a potential for another war, as they have been for two wars in our generation; second, growing from the dissolution of these giant trusts, to make industry in Germany more democratic.

To carry out such a policy required an understanding of, and sympathy with, that objective. But predominant influence in the set-up in Germany was given to men whose background and experience in big business and finance were hardly conducive to that.

Under such direction it hardly could be expected that anything would happen but what has happened. It is late, but something still might be done to correct an error that may prove dangerous to our national safety.

Super de Luxe Lobbying Group Putting Terrific Heat on Congress To Pass Moratorium or Law To Help Steel and Cement Industries Continue Price-Fixing Schemes

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. PATMAN. Mr. Speaker, last fall one of the most powerful lobbying groups in the entire United States was quickly formed to help the steel and cement industries. It started off costing $11,000 a month in salaries, plus traveling, hotel, printing, entertaining, telephoning, and telegraphing expenses. The names of the persons backing the lobby are a closely guarded secret. The admitted lobbyist failed to register under the Lobbying Act at the proper time, as required by law. This super de luxe lobby admits writing statements to be submitted on the lobby's side. The chief lobbyist said his efforts are aimed at eliminating the Supreme Court bar to the uniform-delivered-price system of cement and steel companies because, he says, "They feel it would hurt their business." This information is disclosed in an article written by James M. Daniel, Rocky Mountain News Washington correspondent, December 17, 1948, and is as follows:

PITTSBURGH INDUSTRIALISTS PUSH CAMPAIGN FOR BASING POINT LOBBY

(By James M. Daniel)

WASHINGTON, December 17.—Twenty-five percent of the initial organizing expenses of the campaign to legalize basing point price-fixing were put up by Pittsburgh industrialists, a lobby official disclosed today.

MacLean Work, director of Ketchum, Inc., campaign directors, a subsidiary of the Pittsburgh advertising and public relations firm of Ketchum, MacLeod and Grove, said this grubstaking arrangement was to run through January 25.

The Ketchum drive began in September, he said. It is costing $11,000 a month in salaries to Ketchum agents, plus their traveling, hotel, printing, entertainment, telephoning and telegraphing expenses. This amounts to additional thousands, which Mr. Work did not specify.

Asked to name the Pittsburgh industrialists who floated the campaign, Mr. Work said he was "not at liberty" to do so.

WITHHOLDS NAMES

He also said he could not disclose the names of chapter chairmen situated in the cities where Ketchum, Inc., is establishing chapters of its so-called national competition committee. Previously, the associate director of Ketchum, Inc., Walter Megronigle, had told this reporter that his chief, Mr. Work, would give those names.

"I am not at liberty to give those names, either," said Mr. Work.

The chief of the promotional firm did disclose, however, some additional information about the target cities which Ketchum, Inc., has on its list to be visited by solicitors seeking $100 to $1,000 contributions from businessmen.

Chapters are tentatively functioning in Dallas, Houston, Tulsa, Cincinnati, Dayton, Cleveland, Philadelphia, and Pittsburgh, the home base, he said.

ONE SLATED FOR DENVER

Chapters are to be organized in Seattle, Portland, San Francisco, Los Angeles, Denver, Kansas City, St. Louis, Chicago, Milwaukee, St. Paul-Minneapolis, Toledo, Detroit, Buffalo, Boston, Atlanta, Louisville, and New Orleans.

Mr. Work revealed that there had been a division within Ketchum, Inc., as to the necessity of registering under the infant congressional Lobbying Act, since the organizing firm does not maintain a Washington headquarters. When in the Capital Mr. Work stays regularly at the Washington Hotel.

He said although the Ketchum outfit began functioning in September, he didn't recall when it registered under the Lobbying Act. According to the files of the House Clerk, Ketchum registered on November 26, somewhere between 60 and 90 days after it set out to do a job on the antitrust acts, if Mr. Work's recollection of September as the starting month is accurate.

Mr. Work said the reason that Ketchum didn't register immediately was, "I didn't think it was necessary."

He repeated Mr. Megronigle's denial that Ketchum, Inc., had prepared the statements which have been laid before the Capehart committee in Washington calling for amendments to the antitrust acts. A super deluxe lobbying job such as the Ketchum Co. is giving its Pittsburgh clients generally involves a full writing job for all the statements submitted on the lobby's side.

There was a slight difference, however, in the way they phrased their statements. Mr. Work said Ketchum hadn't written any of the statements demanding amendment of the antitrust acts. Earlier, Mr. Megronigle said they hadn't done so yet.

Asked why the Pittsburgh sponsors of the National Competition Committee aspired to such a huge lobbying effort aimed at eliminating the Supreme Court bar to the uniform-delivered price system of cement and steel companies, Mr. Work replied in these exact words:

"They feel it would hurt their business."

Address of Hon. William C. Bullitt at Austin, Tex.

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. THOMAS of Texas. Mr. Speaker, under unanimous consent to revise and extend my remarks, I include an editorial in the Houston Chronicle of April 28, 1949, commenting upon the address of the Honorable William C. Bullitt made to the legislators of Texas in a joint session on April 27. Mr. Bullitt's viewpoint is quite interesting. I hope the Members will read it. It follows:

BULLITT'S AUSTIN ADDRESS

It was a powerful address that William C. Bullitt made to the legislators of Texas in joint session Wednesday, combining a somber analysis of the international situation, severe criticism of our foreign policy, and a plea to the legislature to drive our leaders to take effective steps to thwart the Soviet campaign for world mastery.

We should face the situation with our eyes open. As Mr. Bullitt said, "Stalin, like Hitler, will not stop. He can only be stopped. * * *

"What, then, lies before us? War?"

Not necessarily, Mr. Bullitt implied. Not if we take strong action. But he did not merely imply that war will come if we fail to take strong action. He declared flatly that war will come—if Stalin gets possession of all China and Asia; or if we bring ourselves near bankruptcy in a vain effort to strengthen western Europe.

No war—hot or cold—was ever won by defensive action. Yet we are leaving the offensive to Stalin.

No man can dispute the truth of that statement. We are waging a defensive cold war in Europe. In the Far East, we have abdicated; we have turned our back on our historic policy that no great power shall gain control of vast and teeming China.

As Mr. Bullitt, former ambassador to France and Russia and one of the distinguished authorities on foreign policy of our time, pointed out to the Texas legislature, "The most conspicuous triumph of Soviet psychological warfare has been the gradual perversion of American policy toward China."

We entered World War II because Japanese control of China would be a threat to our security. We are letting Russia seize China today; "We are allowing a power which is hostile to us to conquer China, and thus we are making certain the coming of a third world war."

It was a black picture Mr. Bullitt painted. If China goes, he declared, so will the remainder of southeast Asia; India will be at Russia's mercy; so will Japan. "Our children will face assault by overwhelming masses of Communist-driven slaves."

Who can deny that this is the logical sequence of events?

We have been lulled by our confidence in the atomic bomb. Mr. Bullitt declared that our confidence in it may become as fatal to us as the French confidence in the Maginot Line was fatal to France. He cited the fact that our experts estimate Russia will be making atomic bombs by 1952 and will have quantities of them by 1956.

"At the other end of the expanding Communist empire, have we not seized the initiative?" the speaker asked, and then answered his own question, "We have not." We are pouring $16,000,000,000 into Marshall plan aid that is supposed to end in 1952 but which, the recipients say, must not end then.

And, they tell us, they cannot pay for their own rearmament—rearmament which is necessary, if they are to be an effective fighting force. That will cost another $12,000,000,000, Mr. Bullitt estimated, and who is going to pay it? The American taxpayer?

"The only solution, so far as Europe is concerned," he said, "is federation and economic integration. Otherwise," he declared, "this country in an effort to bolster Europe will suffer an inflation so severe that we shall begin to quarrel among ourselves * * * until we lose our national unity and our will to resist." Who can doubt that this is an accurate analysis?

What to do about this dismal situation? Mr. Bullitt urged bold action—aid to the Chinese nationalists in Asia; seizure of the initiative in Europe by sending a truck convoy into Berlin.

He believes that Stalin would not order his troops to shoot if we asserted our right to supply Berlin by surface transport. "For," he said, "time is running in favor of Russia and against us; Stalin will gain strength relative to us, rather than the other way around, as the months and years march on."

"This," he asserted, "is a moment when we can afford to be bold. Indeed, it is a moment when we cannot afford not to be bold.

"What can we do about it? We cannot lead our leaders, but we can drive our leaders by arousing public opinion."

He called upon the legislature to pass resolutions calling upon our national leaders to bring about European federation; demanding that the men who helped bring our country into its present peril be thrown out of the State Department and the Foreign Service; telling our leaders that they will be held responsible "if, by allowing Stalin to control China, they throw away all that was won for us by our men who fought and died in the Pacific"; and demanding that we furnish officers to train the Chinese Nationalist forces, also planes, arms, munitions, and silver for troop pay.

That is the challenge which Williar C. Bullitt threw down to the Legislature of Texas.

The Chronicle is deeply impressed by Mr. Bullitt's analysis of the dangerous situation in which we find ourselves and urges the legislature and all thinking people to give it serious consideration.

Power of Unions Over American Citizens

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I include the following article by Westbrook Pegler which appeared in the Washington Times-Herald of May 4, 1949:

FAIR ENOUGH

(By Westbrook Pegler)

I present two methods of raising money for foreign relief and some comment on the powers of unions over American citizens:

The Catholic bishops' fund for victims of war, of New York, appeals for $500,000 toward a national total of $5,000,000 to provide food, clothing and medicine for the sick, the aged, and the children in certain war-ravaged countries. A further objective is the resettlement of displaced persons.

This is an appeal, not a demand. There is not the slightest threat, coercion or compulsion. There is no penalty for failure to contribute and the total goal is only $5,000,000 for the entire country for the entire year.

Now I refer to a demand, somewhat sugared, which has been received by members of the International Ladies Garment Workers Union, whose president, David Dubinsky, is an old protege of the Roosevelt administration.

He operates a little nuisance party of his own in New York called the Liberal Party. Dubinsky is a Social Democrat. The Social Democratic splinter of the Socialist-Communist scourge is an alien political element in the United States.

Dubinsky's union has so much money that he cannot find legitimate use for it here and thus is forced to spend much of it on European projects.

The idea of reducing the collections would be regarded as a labor-baiting thought. During the war the ILGWU conducted secret, irresponsible espionage in Europe at the expense of American workers who were not informed of these activities.

The expenditures remain secret on the ground, or pretext, that to disclose them in detail would be to jeopardize persons who took part in the underground work. Thus this model among the paternal-socialistic unions cannot account for these expenses nor even submit a report of its secret activities overseas.

On March 18, workers belonging to locals 10, 22, 60, and 89 embraced in the joint board of the Dress and Waistmakers union received a printed letter from their union bosses which was not an appeal for money but a demand and a threat.

It calls on the "members in your shop to do your share in a great and noble cause * * * to carry out this noble responsibility that our membership has taken upon itself, we need greater funds than ever before.

"Thousands of displaced persons are at last on their way from D. P. camps in Germany * * * and looking with hope toward establishing a new, free, and secure life in their newly acquired homeland—Israel.

"Many others are finding new homes in democratic countries of the world. All of them need not only means of transportation, food, clothing and care but also means to find new homes, learn new trades, reestablish themselves and begin life anew—be it in Israel, the United States, or anywhere else * * * the people of Italy are erecting a better life * * * all these brave peoples cannot be let down by us. Their call for help * * * cannot remain unanswered.

"By decision of the general executive board and approval of our union we have pledged contributions to the United Jewish Appeal, the Italian-American Labor council, the Jewish labor committee, Histadrut, and many other organizations * * * to facilitate collection of these funds we ask you to immediately begin collection in your shop: From operators, sample-makers, cutters, and pressers, $7; finishers, drapers, and special machine operators, $5; from cleaners, pinkers, and pressers, $2.50.

"We sincerely hope you will give this prompt attention because registration for vacation benefits will commence immediately after April 1. This collection is to be completed by that date so that all members may be in good standing."

In plainer words, American citizens are required to accept a noble responsibility imposed on them by a small group of all-powerful union politicians, failing which they will cease to be in good standing and thus will become ineligible for vacation funds already earned by them and paid to their individual accounts in the union treasury by their employers.

The union contracts forbid the employers to pay the vacation money straight to the individuals. It must go through the union and the union almost never pays to the individual as much as the employer has paid in his name.

These workers get small pay and every dollar counts.

Dubinsky has been president of the ILGWU unopposed since 1932 and is as strong in his union as Lewis is in the Mine Workers. He publishes semiweekly a paper called Justice at the expense of the members, with his name on the masthead and his picture liberally scattered through the pages always in the most favorable poses and situations.

It is actually a personal organ of propaganda and praise rather than a members' paper.

Israel, the chief beneficiary of the fund to which these American citizens were forced to give money under threat of reprisals, is a sovereign foreign nation with an army, ambassadors, a treasury, and other services.

It would be equally outrageous to force American citizens to give money to the Peron government of Argentina, the Soviet Government, or the British Government. Citizens of Israel are in no greater need of homes and a secure life than millions of Americans.

In Tucson, Ariz., thousands of American citizens live in trailers for lack of money to rent or buy homes. Millions of our own also need transportation, food, clothing, and care. Few Americans have a secure life.

The March 1 issue of Dubinsky's Justice carried five photographs of Dubinsky. In the March 15 issue he led the paper with the announcement, accompanied by a picture, that Dubinsky turned over $250,000 on behalf of the ILGWU to Henry Morgenthau.

It said that last year the union gave $150,000 to the fund. On page four there was a small picture showing a presentation of $7,000 to Luigi Antonini, a vice president and padrone of the Italian-American element of the union, for Italian relief. We are not told whether this is the total allotted for Italian relief.

The organization, called "Histadrut," mentioned in the letter of the joint board as a beneficiary, was identified flatly in this issue of Justice as the Israel federation of labor. It is a member of the Communist-controlled world federation of trade unions.

American citizens in this one labor union, the ILGWU, have been compelled to contribute $400,000 in 2 years to the cause of a sovereign foreign nation.

The Royal Egyptian embassy in Washington reports that 800,000 Palestine Arabs are now refugees from their own homeland. There seems to be no such concern for them in this union.

Without regard for the merits of the rival claims to this homeland it is obviously wrong to use the power of boss unionism to compel American citizens to give of their scanty earnings for the benefits of a sovereign foreign nation or its citizens.

Postal Salaries

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

RAILWAY MAIL ASSOCIATION,
PHILADELPHIA PA., BRANCH,
Philadelphia, Pa., May 2, 1949.

HON. WILLIAM J. GREEN, Jr.
House Office Building,
Washington, D. C.

DEAR MR. GREEN: Postmaster General Donaldson has said postal unions should seek no higher increase in pay than one to which they can clearly show themselves to be entitled. Mr. Donaldson has also said that if last year's increase had been $150 higher, there would not now be any salary increase problem.

We are in complete accord with the Postmaster General in regard to asking only an amount which is justified. Respectfully, we differ from him when he says a $600 increase by the Eightieth Congress would have answered our needs.

Permit me to explain the financial situation of railway postal clerks. Please remember that, although the highest distributor grade will be used as an example, the economic handicap of those in the lower grades is proportionately more severe.

This is the position of the highest distributor grade of railway postal clerk assigned to road duty: Public Law 134 (79th Cong.) set the salary at $2,900 per annum. We were given a $400 increase on January 1, 1946, and last year we received an additional $450. The present salary for the highest nonsupervisory grade is thus $3,750. The New York Times reported on February 26 of this year that for the month ended January 15 the consumer price index stood at 73.3 percent of the August 1939 level. Our comparable salary in 1939 was $2,450. If the index figure is applied to both our 1939 and current salaries, our present income is shown to be deficient by $495.85. This figure ignores tax deductions from which we were completely exempt in 1939. It also ignores other hidden increases in living costs which are not reflected by the Bureau of Labor Statistics, and which raise the total to well over $650.

The foregoing paragraph illustrates, I believe, that the $650 increase would merely provide for the higher cost of living, and would in no way constitute an advance. Nothing has been said about restoring to us the hundreds of dollars we have lost annually since mid-1946. The same paragraph effectively demonstrates that our requests are reasonable. It demonstrates, too, that anything less than $650 would be completely inadequate.

Respectfully yours,
PAUL A. NAGLE,
Legislative Chairman.

Communism in Harlem

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. MOULDER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an address by Mr. Neil Scott, 400 Manhattan Avenue, New York City, on the subject of communism in Harlem. Mr. Scott is a distinguished author and journalist. His speech was broadcast over radio station WMCA on the weekly program, Harlem—U. S. A., which is sponsored by Harlem's unofficial mayor, Sherman Hibbitt.

Mr. Scott denies that Harlem is a Communist community and severely criticizes the few Negroes in Harlem who affiliate with the Communist Party, and his speech on communism in Harlem is as follows:

Thank you, Mr. Weaver. Friends, I am delighted to be presented to you by Mr. Weaver, the grandson of the unrivaled fighter for the freedom of the Negro, our own, Frederick Douglass. I know that it will surprise the Harlem Communists, about whom I will speak tonight, to know of this relationship between Mr. Weaver and the late, great abolitionist, since the Harlem edition of the Daily Worker very cunningly carried the picture of Frederick Douglass on its front page masthead.

Friends, at the beginning, let me point out that the number of Negroes who are members of the Communist Party is very negligible. Negroes in America as a rule are American in their customs, their ideology and their innate faith in the democratic form of government under which we Americans live.

Communists among Negroes breed where there is desperation; and in Harlem many Negroes are desperate for food, for shelter, for clothing and, in general for a better share of America. City officials and the uptown politicians do little, if anything, concerning the plight of the Negroes, and the Communists, always on the alert for desperate individuals and desperate situations, promise that, if elected to office, they will bring relief. The intelligent people of Harlem know that they are lying; they know that their salvation rests in attempting to solve their problems in an American and constitutional way; they know that the Communist way is not the constitutional way. But, like drowning men grasping at straws, the weak are quick to grasp at anything that seems to them to offer hope. The Negroes of Harlem are very often too hungry, too cold, or too destitute to reason things out clearly for themselves. The Communists are quick to prey upon such a situation.

The blame for the condition of the Negroes in Harlem, I think, rests as heavily on the backs of our spineless leadership who, instead of fighting for the rights of their constituency, straddle the fence whenever the issues are placed squarely before them.

In campaigns where corrupt political machines are victorious, the jobs are given to district leaders, who in Harlem, for a few dollars allow their mouths to be sealed where the fights and the rights of the people are involved. Those who would really speak out for the people of Harlem are shunted away by the powers that be, and we are victimized by a spineless, arrogant, and treacherous so-called leader, who prefers his job, to job hunting for those who elected him.

The Communists on East Twelfth Street are fully aware of this situation, and make capital of it. During each election campaign they send hundreds of volunteer workers from other communities into the Harlem area to exploit these conditions. They know that the majority of the residents in Harlem are hungry, cold, and destitute and they tell them that their salvation is in the election to city council of a member of the Communist Party who will fight their battles. The final result of this reasoning of this corrupt leadership in Harlem is that a Communist now sits in the city council of the greatest and largest city in the world, claiming to represent the greatest concentration of Negro brains and wealth in the world. And what is the spectacle which the Negroes of Harlem are facing? We face the damaging actuality of a Negro, representing himself to the world as a leader of his people, being tried by the Federal Government for conspiring with others to violently overthrow our Government by force. And the Amsterdam News, the paper published in Harlem, carries this humiliating streamer in its issue of April 2: "Witness links Councilman Davis with Communist plot against United States."

Negroes the world over have their eyes on Harlem. They thought the day would never come when a member of the Negro race, whose loyalty to America is told on the battlefields of every war in which our country has been engaged, would ever be called upon by his Government to defend himself against charges which, if true, amount to treason.

The Communists are now working day and night in Harlem in an effort to convince the residents there that the charges against its councilman are only persecution, and that his only crime is that he has fought and has spoken out for the rights of the Negro people. But, we of Harlem answer back. When? The fight of the American Negro is for justice, equal opportunity, and for complete civil and human rights. Our battles are being fought successfully through the American courts and other constitutional channels by organizations like the NAACP, the National Urban League, the Community of Harlem Civic Association, and hosts of other patriotic organizations and their white friends. The fight is not and cannot be waged from the dingy quarters on East Twelfth Street, on orders from any foreign power, and we in Harlem are awake to that fact.

Harlem seeks a representative in the city council whose time can be spent in the behalf of the people of Harlem; a representative who will not have to spend his time defending himself from seditious, treasonable charges that he seeks to overthrow the Government of the United States while the rats of Harlem gnaw on the brown bodies of our babies. Who is responsible?

You will be surprised to know that in a recent poll taken by my public-relations firm to determine where each of the city officials and Harlem's elected political leaders stood on this subject of Communism in Harlem, not a single Harlem political leader would take a stand, because they couldn't afford to. They know that they are responsible for the Harlem Communist councilman being elected, therefore they lacked the courage to confess their sins to the misled, exploited 500,000 people of my community.

Ah, but my friends, the future is bright with hope. The day is not far distant when the people of Harlem, like the rest of the people of our great city, will be called upon to stand up as men and be counted. And when that count is complete I can predict that the votes will have been cast for a new leadership in Harlem, an American leadership; a leadership not only dedicated to, but one which will see that we get that public market, which the city fathers have promised us for 4 years, and which they are now using for political bait, to be reelected again. We are going to get a new leadership that will secure for us those brighter lights, cleaner streets, decent and ample housing; apartments with heat and hot water; playgrounds, better schools and school facilities, adequate hospitals and health facilities, a leadership not dominated by the uptown chamber of commerce, which is run by nonresidents, not dominated by the spoils system of a corrupt political machine, but a leadership run by the people of Harlem themselves, who fighting side by side, will build and elect a new leadership which will make our Harlem the showplace of New

York City—a virtual paradise of peace, prosperity, and a beauty spot of the world. I thank you.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an article from the Telegraph published in Sidney, Nebr., entitled "The Lowe Down."

Mr. Speaker, Jack Lowe, one of the editors of the Telegraph, has written a satire on socialized medicine. It is written in the typical Jack Lowe trenchant wit and sardonic manner. The article will no doubt delight the proponents of socialized medicine and displease its opponents. It does hold up to ridicule and scorn and discredit the fantastic idea of socialized medicine.

The article follows:

THE LOWE DOWN

(By Jack H. Lowe)

Now that Mr. Truman has decided to put the Government in the medical business my worries are over. No longer must I tip my hat to the doctor. No longer must I duck into the alley when I see him coming down the street. Uncle Sam is going to send him a check every month, just like you pay the grocer or the butcher. The new day is dawning. The era of the doctor bill is no more.

Harry has decided that doctors shall change their names for numbers. You won't ask for Dr. Jones when you call for medical advice. You'll ask for "No. 13", and if he doesn't show up within a reasonable time you can call the Federal militia and have him thrown in the clink for contempt of court.

It'll be a cinch to rout out a doctor in the middle of the night. Simply dial the number for the community medical center, start in with "No. 1" and keep counting until you find a doctor on duty. Sooner or later you're bound to hit the jackpot, although it may not be the fellow you want.

Socialized medicine is going to solve all of our worries. No monthly statements from the doctor, no frowns when you ignore your diet or fall off the wagon. Everything will be on a robot basis. You're a machine, the doctor's a machine, and Uncle Sam is a machine. You call him, he treats you and the check comes from Washington. What a sucker Pasteur was, wasting all those years trying to learn something.

It's like this. You'll go into the doctor's office and they'll hand you a ticket with a number on it. It means that you will be treated in turn. If you're dying of ulcers or merely wanting a wart touched up, it's all the same. You're paying the same amount of money as the fellow ahead of you and you either stand in line or die. Pretty soon, a nurse tells you to come this way and you walk into a small room where you fill out some papers (eight copies of course, this being a Government operation) and you swear allegiance to the flag and vow that you aren't a Communist.

These preliminaries out of the way, you step into another room where they have a number of graphs and charts. The Government is great for graphs and charts and you have to prove your aptitude before they can decide which doctor is to treat you. The results are run through a calculating machine, then a long-distance call is placed to Washington for a conference with the Surgeon General (no one working for the Government ever writes or wires—it's strictly long distance).

If it is found that you can qualify for consideration, you then step into the next room where you take off your shirt to prove that the Democratic donkey is tattooed on your chest. This is the final and greatest test. If you voted for Dewey, they send you to the basement where the internes and orderlies use you for a guinea pig. But if you have irrefutable proof of a straight Democratic ticket, you step into the plush-lined office where the head butcher gives you his personal attention.

The nice thing is that it won't cost anyone a cent. It's utopia with the fringe on top. Harry knows how to keep you well for free. They simply take a small portion out of each pay check, after they have nicked you for withholding tax, social security, old-age pension, State aid, and various other items, and you get to take all the rest of your dough home to the little woman, provided, of course, that you can get by the corner saloon without stubbing your toe.

What a wonderful age this is. Chicken every Sunday, frosting on every cake, ruddy health in every cheek, and it's free.

What a fool I was to vote against Harry. When I have my next operation the Government surgeons will use a can opener, and it will serve me right. Socialized medicine, it's wonderful. I'll have my nurses blond, blue-eyed, 114 pounds, and shapely. As a citizen of the United States, I demand my rights.

Maryland Solves Health Problem

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the third in a series of articles entitled "Maryland Solves Health Problem," by Agnes E. Meyer, and which appears daily in the Washington Post:

MARYLAND SOLVES HEALTH PROBLEM

(By Agnes E. Meyer)

(Third of a series)

Dr. Roberts, State medical director, says that 90 percent of the indigent are now receiving good treatment under the Maryland health plan, whereas the medically indigent for lack of funds, are getting only emergency care. Varying economic conditions play a decisive role. In some of the impoverished counties the budget is not sufficient for the care of the heavy relief rolls.

In Montgomery County, one of the richest counties in the whole country, where the relief load is as low as 728 in a population of 140,000, the number of medically indigent that are reached is at least three times that of the relief clients, or about 1,200 out of a monthly total of 1,500 clients.

In determining medical indigency, great leeway has been given the county health officers. They interpret the regulations wisely and as generously as their budgets permit. In general, the top salary for eligibility is $1,000 per year, per individual. In some of the poor counties, the great number of low incomes sets a limit of $750; $200 additional income is allowed for every additional member of the family.

Thus, big families with higher incomes are eligible, whereas the small family with the same income is not eligible. This is just but it is hard to interpret to the smaller families. The casual worker who refuses to work more days of the week than will just keep his family in food, clothing, and shelter—a common type in our country—is another problem. On a per diem basis, such families are ineligible but they can't be refused medical care without punishing the children. In spite of these complications, most of the health officers do an excellent job of selecting the neediest cases among the border-line income groups. Because medical problems are always involved in these decisions, it is considered advantageous to leave them to the health department.

NO SENSE OF DISGRACE

As the means test is usually condemned as somehow degrading to individual dignity, I listened to some of the interviews to gage the attitude of the clients. Feeling they might resent a witness, I asked their permission to be present. Most of them said "Why sure, why not?" And the conversation with the examining clerk was in this same matter-of-fact tone.

In other words, there was no more sense of disgrace involved than the wealthier clients of the Mayo Clinic feel when they give similiar information as to their incomes. We forget that most hospital patients receive charges graded to income. There is no reason why the lower-income groups should object to it more than the others. In fact, they don't object when it is done in the friendly manner used in these county health departments.

The problem as to who is medically indigent has not yet been solved in general terms. Perhaps it never can be rigidly defined even on a State-wide, much less a Nation-wide, basis, because economic, social, and geographical conditions are so varied in our country.

But Dr. Perry Prather, Washington County health officer, who practiced medicine 40 years in his county before accepting this office, is convinced that if poverty creates bad health, bad health also creates poverty. "Therefore, we preserve the independence and productivity of our marginal income groups," he maintains, "if we protect their health by a tax-supported program. It is more humane and more economical to keep them from sinking into indigency and total dependence upon relief funds."

IN THEIR STRIDE

The county health officers have, so to speak, taken the new medical-care program in their stride. At first they were afraid of the abuses and red tape involved in public medical-care programs. But the administrative procedures and the paper work have been reduced to a minimum. None of the health officers find the program burdensome. But they foresee that an assistant executive will be necessary as the program expands and outweighs in importance the routine responsibilities of a health department.

These health officers are the focal point of the medical program much the way that great American institution, the agricultural county agent, is the link between the farmers and the Federal-State agricultural program. Just as the county agent keeps the farmers in touch with the latest agricultural discoveries, so also the county health officer has become in Maryland the link between the medical practitioners and the great world of medical research centered in Baltimore.

A program of Federal aid to the care of the lowest income groups could, therefore, be readily added to Maryland's existing medical-care programs, if the same policies of administrative decentralization are used which have made the county agent's office one of

the best examples we possess of our American genius for Federal-State-local cooperative endeavor. Before such a program is feasible on a Nation-wide basis, every area in the country would have to have what we need in any case, a full-time physician health officer, experienced in the distribution of medical care.

NO COMPULSION

Although there is no compulsion upon doctors, dentists, or pharmacists to join the program, practically all of them have done so. At the end of each month they send their bills to the county health officer, who forwards them to the State health department, from which payment is issued. Comparison of the reports enables the health officers to detect any accounts that greatly exceed the average. If it is indicated that some doctor is making too many visits to the same client, or has too high a drug bill, he is asked to explain why he is so far out of line with his fellow practitioners.

If the clients become too exacting or are caught shopping around from one doctor's office to the next, the doctors can readily check this abuse of their time and energies. Moreover, the doctors feel that they should themselves handle the occasional chiseling fellow-practitioner and not throw this re-responsibility on the health officers.

"The health officer should be empowered to report any chiseling doctor to his medical society," said Dr. Edward J. Edelin, of Charles County. "It is time that our medical societies took more responsibility for the standards and integrity of the profession. There is no other way for us to clean house." On the whole, the abuse of the program is small, either by patients or doctors, as a result of these decentralized controls.

What hampers the program is the fact that it is uneconomic greatly to expand hospital, diagnostic, and other facilities for a program that serves 3 percent of the population. If health centers or diagnostic clinics are to be developed on a wide scale, the plan must be extended to a larger segment of the population. This in turn depends upon the willingness of the legislature to vote a more adequate budget for medical care of the lowest income groups.

For 1948 the total budget is $543,424.

Hospitalization costs which are paid separately are probably about an equal amount. As the medical-care program reached 19,467 people, the cost per patient per year was about $28. This gives us a fair idea of the minimum cost of such a program if it were extended throughout the Nation. The Maryland budget moreover includes at present only limited dental care and does not meet the incredibly high demand for dentures and eyeglasses.

WELL-OFFICERED

Maryland has an unusual advantage in the high caliber of its local health officers. This is due partly to the fact that the local people are interested in their health programs and give them voluntary support, and partly to the leadership given by the Johns Hopkins School of Hygiene and Public Health. But the health officers will tell you that the superior quality of the State's health and medical programs depends principally upon the amount of citizen participation.

In every county it differs. Most highly organized is large and wealthy Montgomery County. Its nationally known health officer, Dr. V. L. Ellicott, gives credit for the development of the county's well-distributed public health services to the constant support he has had from the lay county council, the county health fund and other voluntary groups, most of whom are represented on the Medical Care Advisory Committee.

On the other hand, in less populated and less prosperous areas like Charles County, where voluntary organizations have limited financial resources, it is the health officer himself, Dr. William Harris, who is obliged to take the lead in coordinating the efforts of the County Medical Association with those of the public and private agencies. But throughout the State, the people of Maryland are becoming ever more conscious of the fact that their health and medical problems must be solved where they arise, in the ever-varying nature of local conditions, and that their solution depends upon widespread community interest and cooperation.

THE FIRST STEPS

As the United States Public Health Service estimates that only 5 percent of the American population have health departments whose basic staffs are complete, the first step in extending Maryland's health plan throughout the Nation would be Federal and State aid for those areas that cannot afford to pay an adequate salary for a full-time public-health officer. For a decentralized medical program such as Maryland's can never be better than the quality of the local health officer.

But a health program, so organized, will not only serve the lowest income groups with a minimum of administrative costs and red tape. It will result in educational benefits to the local practitioners which will be reflected in better health services to the whole population.

As Dr. Maurice C. Pincoffs, professor of medicine at the Maryland University School of Medicine, has pointed out to the Maryland county medical societies: "If we succeed in improving the medical care of our dependent groups, we shall raise the standards of private practice and improve the care of the people as a whole."

"We are very conscious that this is so," said Dr. Ernest Poole, secretary of the Washington County Medical Society. "Perhaps that is the main reason why the doctors have become steadily more enthusiastic about the program. We are all working harder, seeing more patients, and widening our horizons.

"We are not satisfied with the program because it doesn't reach all of the medically indigent who are entitled to it. But it is so close to the people that no politician can use compulsory health insurance to get himself elected in our State. We know we've got something better. In learning how to give the best medical care to the lowest income groups, we are laying the soundest foundation for an effective program of voluntary health insurance."

Dr. Carpenter's Interfaith Honor

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. MULTER. Mr. Speaker, I am happy to call the attention of my colleagues to the following editorial which appeared in the Brooklyn Eagle of May 3. I hope that Dr. Carpenter's activity in our community will continue for many years to inspire all of us.

DR. CARPENTER'S INTERFAITH HONOR

For 25 years Dr. J. Henry Carpenter, president of the Brooklyn division of the Protestant council, has been active in interfaith work in Brooklyn. Cooperation is a by-word of his and proof of his belief in its efficacy is the fact that he is the author of Peace Through Cooperation. Such has been his work and such his convictions that the Kings County Council of Jewish Veterans could not have made a happier choice in singling him out as the recipient of its plaque for Brooklyn's most outstanding interfaith leader for 1949.

Nor could there be in these times more important work than that in which he has been engaged. He spoke, in accepting the award, of the need for true freedom, justice, and brotherhood in the interests of peace. And in making the award Past National Commander Abraham Kraditor spoke of Dr. Carpenter's endless efforts to promote good relations among the different Brooklyn groups, relations essential to a healthy community. We can hardly hope for peace among nations until we learn the value of peace among ourselves.

Those Intrepid Little Heroes of the Air

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. CROOK. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD a letter from the Honorable George V. Cavanaugh, city judge, city of Mishawaka, Ind., disclosing how we can pay respect to the homing pigeon that rendered inestimable services during our World Wars:

DEPARTMENT OF LAW,
Mishawaka, Ind., April 25, 1949.

Hon. THURMAN C. CROOK,
Indiana Third District,
Washington, D. C.

DEAR FRIEND: I first advocated the issuance of a postage stamp nearly 30 years ago. The story is a long one. Mishawaka is a center of pigeon fanciers because of the large percentage of Belgians (all naturalized, good American citizens) and a great many men and women natural born citizens in Mishawaka in the past 50 years, of Belgian descent. Many people do not realize that we gave our best birds to the Government for a nominal sum of $4 a pair in 1917 and 1918, the time of the First World War; that the homing pigeon is protected by Federal and State statute. I, personally, worded the Indiana statute and presented it to the State conservation department; that the Government ever since has maintained a small number of lofts where birds, i. e., pigeons, are reared and trained for the Army and Navy; that they are indispensable.

It seems to me that there never was a time when there was a better time for the obtaining of such a postage stamp. Any denomination would serve our purpose. In the American Racing Pigeon Union there are over 11,000 members. The Mishawaka Liberty (South Bend) and the South Bend club are affiliated with the national organization.

WHY A PIGEON POSTAGE STAMP

Nearly 30 years ago I advocated a United States postage stamp to recognize and commemorate those intrepid little heroes of the air for their work in World War I. Quoting from page 58, "History and Rhymes of the Lost Battalion," by Buds Private McCollum, I find it says, "A great many word pictures, at the time and since, have been painted of the Gethsemane through which the heroic battalion was passing during those 5 days". In this connection it is interesting to read what the chief actor in the drama was writing himself, and sending back to headquarters by his carrier pigeons the only line

of communication left open. Those messages are in the official files of the United States War Department and as as follows:

First message carried from Major Whittlesey: Pigeon No. 1, "We are being shelled by German artillery. Can we not have artillery support?"

The second message: Pigeon No. 2, "Our posts are broken, one runner captured. Germans in small numbers in our left rear. Have located German mortar and sent platoon to get it. E Company met heavy resistance, at least 20 casualties."

Pigeon No. 3, "Germans are on cliff north of us and have had to evacuate both flanks. Situation very serious. Broke through two of our runner posts today. Casualties yesterday 6 killed, 80 wounded. In the same companies today 1 killed, 60 wounded. Present effective strength of companies here 245." (Whittlesey went in with 679 effectives), and so the story ran until his last pigeon was released. After that he went militarily dumb.

His last message read "Men are suffering from hunger and exposure and the wounded are in very bad condition. Cannot support be sent at once?" Whittlesey wrote that message and he gave due credit to his pigeons.

The above are the facts on which I base my case. Not that it is a fine hobby, not that it is followed by thousands of good sports, not that it is fostered in Mishawaka by our good Belgian citizenry, but on their real war record, on the acts of Cher Ami in the Smithsonian in Washington, the bird decorated on the recommendation of Gen. "Black Jack" Pershing himself.

GEO. V. CAVANAUGH,
Judge of Mishawaka, Ind., City Court, and a Pigeon Fancier for a Lifetime.

Servitude for the Farmers

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 26, 1949

Mr. REED of New York. Mr. Speaker, a great Democratic President, Woodrow Wilson, once said:

The history of liberty is the history of the limitation of governmental power, not the increase of it. When we resist the concentration of power, we are resisting the processes of death, because concentration of power is what always precedes the destruction of human liberties.

I live among and represent American farmers who love liberty, and not servitude. Their forefathers fought for liberty, and passed it down as a heritage to them. Neither they nor their sons nor their daughters propose to sacrifice this great heritage to those who would, if they could, deprive them of it through bribes, doles, subventions, and even worse.

Under leave to extend my remarks, I am inserting in the RECORD a statement by Mr. Fred Brenckman, formerly Washington representative of the National Grange:

THE PROPOSED NEW FARM PLAN

(By Fred Brenckman)

After several months of intensive study and investigation on the part of the top-flight officials of his department, Secretary of Agriculture Charles F. Brannan on April 7 submitted the outlines of a new farm plan at a joint hearing before the House Committee on Agriculture and the Senate Committee on Agriculture and Forestry. At subsequent hearings before the House committee, Mr. Brannan was questioned at length regarding many angles in connection with the workings of the plan he advanced.

Basically, it may be said that the new plan is in harmony with the pledges given by President Truman during the last campaign, when he proposed high prices for farmers, coupled with lower costs of living for consumers.

NEW SUPPORT FORMULA

The plan advanced by Mr. Brannan would abandon the price parity system established in the early days of the Agricultural Adjustment Act. It would provide as a substitute a formula to set a total cash income goal every year. Then the Government would use loans and direct payments or subsidies to attain this income goal for farmers.

Mr. Brannan calculated that the income goal for farm cash receipts in 1950 should be $26,234,000,000, based on March 15 costs. That would be somewhat less than the $27,500,000,000 estimated cash income of farmers in 1949, and it would be well under the 1948 level of $31,000,000,000.

In discussing his plan, Secretary Brannan said:

"The standard of support has been established with reference to income criteria rather than price criteria. A recent 10-year period has been selected as the base. Simplicity of computation and application has been a constant aim.

"The recommended price-support standard for any specific commodity does not represent a parity price nor does the composite average represent parity income as those terms are statutorily defined and commonly understood. This income standard simply represents a realistic minimum below which it is not in the interest of farmers or consumers to allow farm prices to fall, and above which I hope to find most farm prices most of the time. It is the minimum level from which we would be working toward narrowing, and eventually closing, the historical gap between farm and nonfarm income."

Taking as a moving base the average annual purchasing power of cash receipts from farm marketings for the years 1939 through 1948, the plan would set up an income-support standard, together with a specific price-support standard for individual commodities.

SOME ATTACHED CONDITIONS

Mr. Brannan emphasized the point that under his plan price supports for farm products could not be separated from the acceptance by farmers of reasonable undertakings to advance or accomplish the over-all objectives of the plan. Among the conditions he enumerated were the following:

1. The observance of minimum and sound soil-conservation practices.

2. Compliance with or adoption of whatever programs are found necessary to curtail wasteful production or disorderly marketing. Included in this would be such measures as acreage allotments, marketing quotas, and marketing agreements which might be adopted from time to time through referendums or by the authority of the Secretary of Agriculture under terms of specific legislation such as is now on the staute books.

3. The limitation of eligibility for price support to a stated volume of production on each farm. This limit would be set at a point that would not encourage the development of extremely large, industrialized farming.

Under the plan advocated by Mr. Brannan, for perishable commodities, such as milk, eggs, and meat, a new system of direct payments would be used. Under this scheme, the Government would allow the market prices for these perishables to vary with supply and demand. The difference between the market price and the sum calculated to be the support level would be given to the farmer in cash.

That it would call for a degree of regimentation far greater than anything that the farmers of America have heretofore known appears to be a safe assertion to make.

The plan is adroitly put together to appeal at one and the same time to both producers and consumers of farm products. Farmers are to get a high income, while consumers are encouraged to expect lower prices.

However, it must not be overlooked that both farmers and consumers would be taxed to raise the money necessary for payment of subsidies. They would also have to pay the administrative costs. There are those who declare that the CIO and the Farmers Union exercised a potent influence in the formulation of the plan, which is supposed to have the sanction of President Truman.

LONG-RANGE THINKING NEEDED

In the development of a long-range farm program it would be well for the farmers to do some long-range thinking. In the early days of the Republic, about 90 percent of the people lived on farms, and they molded the policies of the country. But from decade to decade the farm population has shown a relative decline as compared with the population as a whole. In 1940 only about 22 percent of the population was directly engaged in agriculture. According to estimates of the Census Bureau, only 19 percent of the people of the United States live on farms today. The other 81 percent are consumers.

In the long run, what the majority of the people want in a democracy, they are likely to get, if it is in the power of the Government to give it to them.

It is a fundamental trait in human nature that we try to satisfy our wants in the line of least resistance. While wishing the farmer well in a general way, what consumers want is cheap food. If prices of farm commodities are to be determined at congressional and presidential elections, where majority rules, then the farmers of the country will some day find themselves in a predicament from which it will be difficult if not impossible for them to extricate themselves.

Patriotic Service

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Daily Evening Item, Lynn, Mass., Monday, May 2, 1949:

UNSUNG FBI HEROES

It is about time that a song of praise was raised for two unsung American heroes. They shot no enemies and won no medals during the war. But there must be plenty of veterans who would not have traded combat duty for the assignment that these two had.

We refer to Herbert A. Philbrick and Angela Colomiris, the FBI informants who recently testified at the trial of the Communist leaders in New York. Mr. Philbrick spent 9 years in the Communist movement. Miss Colomiris was a party member for 7. The former said he received only his expenses from the Government during that time. Miss Colomiris made no mention of being recompensed at all.

Theirs was not only a patriotic service. It must have been of the most nerve-wracking dramatic performances ever given. And without meaning to take any credit from the young woman volunteer, we would guess that what Mr. Philbrick went through was enough to tax his sanity.

He maintained his job and a normal home life. He deceived his family completely. But what is more important, he deceived the Communists. Both he and Miss Colomiris held important positions in the party which gave them, among other things, an accurate line on party membership in their respective groups in Boston and New York.

It is trying enough to most of us whoever went through the experience to spend any length of time with native Communists. They are desperately earnest, tiresomely argumentative, maddeningly illogical and, so far as we have been able to observe, totally devoid of a sense of humor.

But if the obvious non-Communist finds them trying, what must it be like to be a non-Communist who pretends to be a believer? Never once should he lower his guard. Never once when his exasperation approached the breaking point, as surely it must have, could he rise up in meeting, shout "Oh, nuts!" and stalk out. He had to stay and take it and pretend to like it.

Further, the masquerading non-Communist had to take insults from his loyal fellow-Americans in public appearances as a Communist demonstrator. And more than that, he must have been conscious of the ever-present risk of being found out.

When at last Miss Colomiris and Mr. Philbrick were allowed to drop their disguises and appear as themselves their relief must have been worth all the compensation that they deserved and did not receive. But the disclosure of their past activity makes one wondow how many other patriots are performing similar duties, and when they will be relieved of the arduous role of a double life.

Undoubtedly the American Communists are wondering the same thing, and wondering it very seriously. It may be expected that, because of these trial revelations, their vigilance will be redoubled in every cell throughout the country. They will be alert for any suspicious move by other volunteers. And this can scarcely help but make the tension and risk even greater for the invaluable informants who still remain in the Communist ranks.

We don't know exactly what this Nation or its Government can do by way of thanks to these brave young people. But we hope that they will somehow realize that a great many of their countrymen, who have neither the chance nor skill nor courage to do what they have done, appreciate their services deeply. Amid all the emotionalism and publicity that surrounds the campaign against the menace of communism, they are doing a quiet, secret work that really counts.

Yosemite Pays Its Way

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. ENGLE of California. Mr. Speaker, some Members of the House, and particularly those on Appropriations, may be interested in the fact that one park pays its way. I wish to place in the RECORD a letter from Mr. John C. Kingman, the chairman of the Mariposa County Democratic Control Committee in my State, in which he shows the revenue collected in Yosemite is $537,090 and the amount of Federal taxes paid is $525,455 for a total of over a million dollars, whereas the appropriation for that park was $543,450 for 1948:

MARIPOSA COUNTY DEMOCRATIC
CENTRAL COMMITTEE,
April 20, 1949.

The Honorable CLAIR ENGLE,
House Office Building,
Washington, D. C.

DEAR MR. ENGLE: At a recent meeting of the Democratic Central Committee of Mariposa County, the chairman of the committee was instructed to write this letter to you, sending copies to other California Congressmen and Senators, advising you of the grave concern with which the committee views the present policies of the Department of the Interior regarding appropriations for national parks.

We are sure that you are familiar with the fact that Mariposa County is normally Democratic in the proportion of 2 to 1. We, as the Democratic central committee, were considerably alarmed when our Democratic registration in the election last fall voted for a Republican President, a Republican State senator, and a Republican State assemblyman. You, yourself, were the only Democrat to carry our county. Even more significant were the returns in Yosemite National Park where both precincts, one covering employees of the National Park Service and the other employees of the Yosemite Park & Curry Co., returned Republican majorities. Our analysis of the situation is that this vote was a protest vote against the fiscal policies presently affecting the national parks.

Mariposa County is a sparsely settled county with few natural resources. The tourist trade resulting from visitors to Yosemite National Park is the largest single item in our economy. Since something over half of the land within the county is under the control of the Federal Government, our prosperity depends upon the wisdom with which these areas are administered.

During 1948 the appropriation for the National Park Service in Yosemite was $543,450. Against that amount $537,090 was collected in Yosemite from the sale of automobile permits and public utility services. The actual out-of-pocket outlay made by the United States Government during 1948 in Yosemite National Park was consequently only $6,360.

In addition, from the Yosemite Park and Curry Co. alone, including the payments made by its employees and guests, the United States Government collected in taxes $525,455. We have made no attempt to determine the taxes paid by other corporations and individuals within the boundaries of the Park. On the basis of just these few figures, it is obvious that the operation of Yosemite National Park during 1948 produced a net profit for the Government of something considerably more than $1,500,000.

In a county with a population of about 6,000 persons, $1,500,000 withdrawn from circulation within the county each year is an overwhelming economic handicap. On a national scale, $500,000 is, to use the vernacular, "peanuts." It is less than 1 percent of the amount being appropriated right now for the Central Valley project. That project, more or less, encircles our county and we receive little benefit. Our share of the hundreds of millions of dollars being spent for the conservation of natural resources is $6,360.

We understand that the United States Government has an investment in Yosemite National Park of some $12,000,000. To maintain that investment we believe we can say categorically that no appropriations are made. It is a policy of expediency and short-sightedness which even the smallest private businessman would understand as an extreme in incompetency.

The roads and trails in Yosemite National Park are falling to pieces, the sewage plant is outmoded, the electric system falls so short of meeting present-day requirements that the residents of the park are threatened with power failures each time the weather turns cold. If persisted in, this present policy will cost the Government millions of dollars to replace facilities which could be protected for a relatively small allotment.

Unfortunately, we know that the situation in Yosemite is duplicated in every park, monument, and historical site administrated by the National Park Service. Bernard DeVoto in his column in the March 1949 issue of Harper's Magazine, has presented in capsule form the situation as it applies nationally. It should not be necessary for laymen to bring these things to the attention of the Congress. The local administrators in all of the areas under the supervision of the National Park Service raise these points every year. Because of the restrictions placed upon the office of the Secretary of the Interior, this information is slighted, and it never becomes a part of budgetary requests.

We feel sure that if the situation we are describing were made known to the Congress and to the people at large, policies of the present would be reversed and the National Park Service would be enabled adequately to maintain and preserve these great areas which the people of the United States have set aside for the enjoyment of future generations.

There is no lack of information regarding the specific needs in Yosemite National Park. That the funds required to meet them are regularly screened out of the budget for the Interior Department is scarcely attributable to motives of economy, since that same Department indulges freely in "bull roaring," as DeVoto puts it, in its clamor for ever-increasing sums for reclamation, public power, and other more politically sensitive causes. Nor, in appraising the Department's current efforts to acquire the concession facilities in the national parks, can we escape some misgivings at the prospect of entrusting additional properties to officials who evince so little apparent concern for those already in their hands.

We fully recognize the stupendous financial burden under which the country's economy is staggering. We are aware also of the Democratic Party's pledge to improve the lot of our citizens. Vast sums are being expended toward the redemption of that pledge. But the amounts required for the national parks are so insignificant by comparison that they can scarcely weigh in the total administrative budget. Even if this were not so, there is no consistency in a program which purports to benefit our country while leaving unattended those very areas which an earlier wisdom set aside as America's finest.

Very truly yours,

MARIPOSA COUNTY DEMOCRATIC
CENTRAL COMMITTEE,
JOHN C. KINGMAN, *Chairman.*

The Basing-Point System in West Virginia—Cement Trust Deprives Small Business in West Virginia of Natural Advantages—West Virginia Cement Mills Were All Nonbase Mills—Small Business in West Virginia Aggressive, but Needs Protection of Antitrust Laws—Moratorium Would Have the Effect of Nullifying Supreme Court Decision in Cement Case

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. PATMAN. Mr. Speaker, the State of West Virginia has had for many years portland cement mills within its borders. West Virginia abounds in natural resources, and materials for the manufacture of cement are found in abundance. But West Virginia cement mills, prior to the Supreme Court decision in the Cement case, April 26, 1948, were non-basing-point mills. That is to say, every time a West Virginian bought a barrel of cement he was paying a price based on a cement mill somewhere else than within the State of West Virginia. The basing-point mills in other States set the pattern of cement prices in West Virginia, and West Virginians paid the bill.

CEMENT TRUST HAD GOOD REASONS FOR OMITTING WEST VIRGINIA BASING POINTS

There were very good reasons why West Virginia has had no basing-point mills—good reasons, at least, in the little black book the Cement Trust used prior to the Supreme Court decision. One mill in southern West Virginia is owned by the Basic Products Co. This company operates another non-basing-point mill in southwestern Pennsylvania; the basing-point mill was its neighbor, Universal-Atlas Portland Cement Co. A second mill in northern West Virginia, near Manheim, is owned by the Alpha Portland Cement Co., which also has a mill at Ironton, Ohio. The Ironton mill was a basing-point mill. The third West Virginia mill, near Martinsville, was owned by the Standard Lime & Stone Co. and apparently was based on two Lehigh portland cement mills, one at Union Bridge, Md., and the other at Fordwick, Va.

Thus, West Virginia was not only bounded geographically by her neighboring States but was also bounded by the Cement Trust, which ringed her with basing points and thereby exacted phantom freight from her citizens and her State government for many, many years.

The West Virginia situation before the Supreme Court decision in the Cement case on April 26, 1948, is just one illustration of a multitude of the inequities which existed under the basing-point system of pricing. In the case of West Virginia a whole State was involved. In other instances parts of States were affected by the system which had for its keystone the addition of arbitrary charges for freight from distant points instead of actual freight charges from the point of origin. This is the system—the basing-point system—that the cement, the steel, and other monopolies would now have legalized by legislative procedure. That is the real intent and purpose of the industrialists who so warmly support a moratorium.

MORATORIUM ONLY USEFUL TO BIG BUSINESS

A moratorium on what? Not a moratorium for a meritorious or a deserving cause. But, a moratorium on unfair trade practices, price discrimination, combination in the restraint of trade, and all of the categories of illegal and unfair business operations. I do not say for a moment that these results are intended by the sponsors of the pending moratorium bills, S. 1008 and H. R. 2222. To the contrary, I know these bill spring from the very best of motives. However, big-business attorneys will read into any moratorium act intentions which the Congress never had and will argue authoritatively through the courts on points already decided. These learned gentlemen will take a word, a comma, or a semicolon and use it like a divining rod to locate the precious metal in the moratorium bill. It is not clarity they seek, for that they have, but confusion with which to unsettle issues previously resolved.

SUPREME COURT DECISION MADE ALL MILLS IN WEST VIRGINIA BASING POINTS

The Supreme Court in its opinion in the Cement case, April 26, 1948, stated in part:

> The core of the charge was that the respondents had restrained and hindered competition in the sale and distribution of cement by means of a combination among themselves made effective through mutual understanding or agreement to employ a multiple-basing-point system of pricing.

The decision of the Supreme Court upheld the charges of the Federal Trade Commission by a 6 to 1 vote. This is the decision which big business immediately attacked on all fronts. This is the decision which prompted the plea to Congress for a moratorium.

Had there been no basing-point system, West Virginia and West Virginians would not have been forced to purchase cement based on points in Virginia, Tennessee, Maryland, Pennsylvania, and Ohio. West Virginia was entirely surrounded by basing points but despite three cement mills within her borders she had none of her own. So it was that West Virginia paid phantom freight of many millions of dollars, for West Virginia is a highly industrialized State, a good-roads State, and a progressive State as witnessed by her tremendous public improvements.

SMALL BUSINESS IN WEST VIRGINIA ACTIVE AND AGGRESSIVE

West Virginia is blessed with hundreds of small-business enterprises, burrowing deep into natural resources, too numerous to mention, and utilizing the power of coal and water to a high degree. Beautiful glass in all colors of the spectrum is manufactured from West Virginia's fine silicates to grace the windows in our cathedrals and churches. Fine pottery, woodworking plants, steel-fabricating plants, chemicals, coal mining, and the whole gamut of industrial activity is the handiwork of small-business enterprise in West Virginia. To which may be added by way of comment the additional hundreds of mercantile establishments, service units, hotels, garages, and so on, which add to the business structure of the Mountain State. The motto of West Virginia is Montani Semper Liberi—Mountaineers are always freemen. How true this is, and how much truer it will be if our fight to curb monopolies is not thwarted by unwise and unsound legislation—legislation which will restore to big business unnatural advantages that far outweigh any natural advantages that may accrue to small business by reason of availability of raw materials and natural aggressiveness.

The Entire Country Needs a Columbia Valley Administration

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD I insert herewith a statement by Assistant Secretary of Commerce Girard Davidson regarding the Columbia Valley Administration:

THE ENTIRE COUNTRY NEEDS A COLUMBIA VALLEY ADMINISTRATION

The entire country needs a Columbia Valley Administration—not merely the States of the Pacific Northwest. And the decision to establish this Administration should be made on the grounds of national interest—not on grounds of local or regional interest.

When the TVA was established, it met the needs of the entire country. The whole Nation had paid for years for the cost of floods on the Tennessee; had paid the consequences of the lower incomes of people of the valley; had felt the impact of smaller crop output because of depleted soils in the valley. The lower incomes of the valley meant less business for the rest of the country in selling to the people of the valley electric appliances, housing, food, clothing, and other products. The lower incomes meant more malnutrition and disease, and a smaller number of men able to pass the Army and Navy physical tests.

Today the valley is much richer, thanks to the TVA, and so is the entire country. The country saves about $1,000,000 annually because of the flood-control benefits of TVA, which means that much less call for Red Cross contributions or for special appropriations for flood relief by Congress. And while everybody saves this money, farmers on 6,000,000 acres of the lower Ohio and Mississippi Basins have their crops protected. The power output since TVA was established has increased 10 times, and the rest of the Nation is selling to the people in the valley more electric appliances, and is taking from

the new industries of the valley chemicals, aluminum and other products and employing on these products more additional workers than the new industries employ in the valley itself. The rapid growth of river navigation in the valley has saved the rest of the country millions of dollars in transportation costs on the products it sells to the valley and those it buys from the valley. Farmers all over the country produced more crops than otherwise, thanks to TVA demonstration and developmental work with phosphate fertilizers on thousands of farms both in and outside of the valley. With incomes higher, the health of the valley is much better, malaria has decreased. The rest of the country found the valley better able to provide men for the armed services in World War II.

In the Columbia River area the Nation needs a CVA. Although some problems are different from those of the Tennesee Valley there are undeveloped opportunities that will be fulfilled sooner and at less cost than if there is no CVA. Floods have to be controlled like that of 1948, but there should be one agency at work, not a mixture of State and Federal agencies. There are nearly 29,000,000 kilowatts of water power yet to be converted into electric power, now wasting annually to the sea. This is the equivalent of almost 400,000,000 barrels of oil annually, or one-fifth of what the country now produces. A CVA can develop and sell this power sooner and at less cost than can the three Federal agencies that now separately handle parts of the power problem. The security of the Nation will improve the sooner this power is developed, because very important industries are holding back their expansion until they can get the power. These industries, which have been turned down for expansion in the past 2 years in the Northwest, include aluminum, phosphates, ferro-alloys, and abrasives. All of these products are important in war. The population of the Northwest has increased 35 percent in the past 8 years—three times faster than the increase in the rest of the country. Unemployment, although small, has been three times the rate in the rest of the country. A CVA will mean more job opportunities and relatively less unemployment than if there is no CVA. For the whole country this means more income for people in the Northwest with which to buy goods from other regions.

A CVA will pay off to the Nation the way TVA has. Today, the valley supports the TVA and would vote for it if a referendum were held. But back in 1933, the people of the valley would have been confused by the kind of talk now made against a CVA. The people of the TVA area would have been told they were going socialistic, that they would be giving up their local rights to govern themselves. They probably would have voted against a TVA. But fortunately for them and the country, the decision for a TVA was made by the Congress and the President on grounds of national interest.

A CVA should be decided on the same ground of national need. The arguments against CVA from some selfish people in the Northwest are the old arguments of business groups who mask their opposition to social progress with catcalls of socialism.

Eric Johnston, former president of the United States Chamber of Commerce, wisely advises his fellow businessmen in a recent article in Fortune to become more social-minded. He points out that they opposed workmen's compensation, minimum-wage legislation, insurance of bank deposits, social security, parity prices, and legalized collective bargaining. They said these measures would lead to socialism. But Mr. Johnston calls on businessmen for more social thinking in order to prevent socialism. A CVA represents just that kind of thinking. The TVA helped private competitive enterprise throughout the country. A CVA will do likewise.

There are no valid arguments against a CVA. For the good of the entire country, a CVA must be established.

The Current Trend in the Capital Market

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. LYNCH. On last Friday night, April 29, at the Mayflower Hotel, here in Washington, Mr. Emil Schram delivered at a general membership meeting of the Washington Board of Trade, an address which I believe is of great interest to the Members of this House. Mr. Schram to my mind is one of the greatest and soundest financial experts in the country. You will recall he was for many years Chairman of the Reconstruction Finance Corporation. When he resigned that office in 1941 he was elected president of the New York Stock Exchange and has since continued in that office.

Mr. Schram, in his address, sounds a warning when he points out the danger in the growing trend to permit life-insurance companies to buy common stocks. That danger, in my opinion, is real and unless we face it squarely and stop the trend we shall be enmeshed in it. We shall in that event have the greatest concentration of wealth and power in the life-insurance companies which eventually will bring disaster to the companies themselves.

Mr. Schram's address follows:

For 16 years my chief concern has been the problem of capital. It just happens that during the first eight of the period I had an opportunity to observe capital problems through the eyes of a great Government lending agency, the Reconstruction Finance Corporation. When I resigned as Chairman of the RFC in May 1941 to become president of the New York Stock Exchange, I merely shifted the focus of my attention to a great capital market. Although affairs have brought me to the Nation's Capital often in recent years, this is the first time since leaving the Reconstruction Finance Corporation that I have had the good fortune to address so distinguished an audience as this in Washington, and I propose to take advantage of it to speak bluntly, hewing close to the line, let the chips fall where they may.

In investment practice, it is often said that to go against the trend is a cardinal mistake. As I have many other problems in addition to convincing people that I have no special claim to being an investment adviser, I shall not pause to wonder what one does when there is no trend in the markets. Very definitely there is a trend in national affairs which it is the duty of every responsible citizen to buck—I refer to the trend to take the line of least resistance and move along blithely with the most widespread current opinion in dealing with our economic and financial problems.

The late Justice Holmes once said that no generalization is worth a damn, adding, with his usual wit, "not even this one." To get away from generalizations, I must appear in a very distasteful role and I resort to the I-told-you-so pattern only to underscore the need for thinking against the trend. Last May, I testified before the United States Senate Joint Committee on the Economic Report. You will recall the background. Commodity prices were soaring, construction activity and department store sales were making new peaks, and the monetary authorities were clamoring for new controls to stem inflation. Dire warnings were voiced as to the prospects for, and effects of continued spiralizing of inflationary factors.

At that time I stated that the area of shortages has shrunk. It is my conviction that it will shrink further in coming months as the remaining pipe lines are filled and production and consumption come into greater balance. * * * My thinking is along lines of stability. Provided we keep our heads, I do not fear runaway inflation, nor do I look for the great depression whose failure to appear has so chagrined the Marxian economists and statesmen. * * * We have emerged from the period of shortages and unless the Congress permits the budget to become unbalanced again, I firmly believe we have already entered the postwar period of stabilization."

For a few months, the facts making the headlines seemed to contradict these views, but the underlying forces, as subsequent developments have evidenced, unquestionably were moving in this direction.

My views were rooted in deep faith in the immense productive capacity of American industry and in equal faith that the American people would refuse to be stampeded into a flight from savings.

Without further comment on the past, I now turn to the areas where constructive thinking is most essential, which is merely another way of saying that these are the subjects where moving with the trend is most damaging to the national well-being. In short, among these tendencies are:

1. The trend toward centralization of authority in the Federal Government.

2. The trend toward concentrated financial power and influence of our life-insurance industry, due in part to altered saving habits of the public and the underlying quest for security.

3. The trend toward too much debt both corporate and individual; and

4. The trend toward punitive rates of taxes, in the name of an ill-conceived notion of what liberalism means, and without regard to the economic consequences of such taxation.

1. The centralization of government is in the realm of political science. I shall not pretend any special competence in this field. The eminent Members of the Congress, by whose presence I feel complimented may be relied upon to express in the fullest measure the idea that, after all, ours is still a Federal Government, making all allowance for changing economic and social conditions.

2. The blessings of life insurance need no elaboration and I unreservedly endorse insurance as one of the most tremendous forces for good in our national life and a remarkable illustration of cooperative voluntary achievement. There is no privately owned and managed business which is more affected with public interest than life insurance. Its size alone inspires awe. Life-insurance assets aggregate an amount approximately equal to 35 percent of the combined principal assets of some 14,000 banks comprising our commercial banking system. They are two and one-half times the assets of 533 mutual savings banks, and four and one-quarter times the assets of 3,733 savings and loan associations which are members of the Federal Home Loan Bank System.

The size of life-insurance companies is not the most significant fact. Their amazing rate of growth is even more striking. Fifty years ago, life-insurance-company assets amounted to approximately $1,300,000,000. By the end of the following decade, they exceeded $3,000,000,000, and in the next 10 years to 1917 practically doubled again to $6,000,000,000. Between 1917 and 1927, the increase was accelerated and in the latter year their assets had expanded to $14,400,000,000. By the end of 1937 they had grown to $26,000,000,000, and in the subsequent 10 years the increase again approached 100 percent so that at the end of 1947 the assets of life-insurance companies stood at approximately $52,000,000,000 and are now estimated to be in the neighborhood of $57,000,000,000.

In a recent article, Mr. Frank A. Schmitt, of the financial staff of the New York Herald Tribune, made a projection of life-insurance assets in 1957, by applying the smallest 10-year gain in the past half century. The projection brings the figure to $94,000,000,000. It is difficult to comprehend figures running to astronomical proportions. Just one added comparison—currently the market value of the 2,000,000,000 shares of stock listed on the New York Stock Exchange, representing 1,400 different issues, amounts to less than $70,000,000,000.

The sheer size and rapid growth of life-insurance companies inevitably bring them into close contact with the problem of capital and the capital markets. Beginning in the thirties, private placements have become more and more important. The registration requirements under the Securities Acts need not be complied with, for there is no public offering. It has been estimated that during the past 10 years approximately 30 percent of all security offerings by corporations have been placed privately. It may be true that in this matter we are dealing with a logical evolution, but the fact remains that life companies dominate the investment banking industry, and I wonder if the implications have been fully canvassed or whether the facts themselves are generally recognized.

For a time last year life-insurance companies were large sellers of Government securities, mainly long-term issues. Only unprecedentedly large purchases by the Federal Reserve banks at pegged prices prevented possible demoralization of the Government bond market. Unlike member banks, life-insurance companies are not subject to regulation by the Federal Reserve authorities.

Finally, the whole equity-debt problem is illuminated by what has happened in life insurance. Private insurance has been increasing at the rate of approximately $3,500,000,000 annually. In 1948, according to data of the Securities and Exchange Commission, it is estimated that all liquid savings aggregated $4,900,000,000, and private insurance alone absorbed $3,500,000,000, or 70 percent of the total. By reason of the large sums which flow to them, including amortization of mortgage debt and loans, life-insurance companies have necessarily come to play an increasingly significant part in the capital markets.

Since they are in the main restricted to the purchase of bonds and mortgages, and the making of loans, the question has arisen as to whether it would not be wise for life-insurance companies generally to be authorized to buy common stocks or purchase equity interests in real property more broadly. Extensive departures from previous investment practice have already been made. This has come about in two ways: Through the purchase of real property from business interests and the leasing back of these properties to their former owners, and through construction for their own account for similar purposes. They are in the residential construction field for their own account. The latter, in some instances, has been embarked upon pursuant to special legislation granting long-term tax concessions.

This problem, which received some attention in the prewar period, is being turned over intensively in the minds of economists and thoughtful insurance-company executives. It is only fair for me to add that executives of some of the largest life companies remain firm in their opposition to expanding the authority of life-insurance companies to buy equities, whether they be preferred or common stocks.

Simply to avoid misunderstanding, may I emphasize that the very thought of regulation by the Federal Government of the life-insurance industry is abhorrent to me. But if I were a responsible official of a life-insurance company, I would, on my own initiative, want to see a most searching analysis of every phase of the functions and operations of insurance companies. The flow and function of savings as they affect the capital markets generally urgently require reexamination, in my opinion.

3. There is too much debt and too much complacency about the rate at which private debt is expanding. All forms of net private debt (individual and corporate) amounted to $145,000,000,000 at the end of 1945, and at the end of last year it is estimated the aggregate of private debt had risen to approximately $190,000,000,000, probably the most rapid expansion in economic history. In 1948, corporations supplied $10,400,000,000 of their needed funds externally, i. e., aside from funds retained from operations. Out of this sum only about $1,000,000,000 or 10 percent was derived from the sale of stocks, both preferred and common. Our complacency derives from the unparalleled internal source of funds, principally retained earnings, which have been at a rate—partly because of fictitious inventory profits—that obviously cannot be maintained.

When profits turn down, it is the debt-burdened company that is the first to cut production, lay off employees and undercut prices to gain cash. Economists have long recognized that debt accentuates the downward spiral. Let us not forget one of the lessons of the thirties, and at least prove we can learn from the past. Debt adds to the inflexibility of the economic structure. Debt has a habit of becoming due when companies are least able to meet their obligations. Sinking-fund payments that seem light enough in prosperous times can be very troublesome when earnings contract and cash is depleted, and the very existence of old debt makes it difficult to obtain funds. Through a policy of low interest rates, through the practice of permitting interest on debt to be charged as an expense of operation before arriving at net income, and heavy taxes on earnings, we have encouraged getting into debt, and all of this comes on top of the institutional developments which have already created tendencies promoting the increase of debt and sheltered funds. I support the policy of retirement of Federal Government debt in a period of prosperity and high revenues but not at the price of large-scale increase in private debt.

4. The difficulty of raising equity capital today, reflected in the high price that must be paid for it, results from a number of developments of the past two decades. The growing desire of the average individual for security rather than risk and the seemingly more difficult task of entering into competition have been important. I believe, however, that tax impediments strewn in the path of risk takers have been the most significant reason for the failure of capital to perform its traditional function effectively.

It would be pleasant if we were in a position to make substantial reductions in all Federal taxes and thus have a ready solution to the problem. However, our heavy national debt, the continuing drain of pensions and other payments resulting from the recent wars, and our responsibilities in the world today make large tax cuts impossible at present. That is not to say we cannot correct certain features of our tax system that bear most heavily on equity financing, and, in fact, the prospect of a continued high level of taxation makes it imperative that we do correct them if we are to avoid economic stagnation.

Two features of the present tax structure that do most to discourage venture capital are the double taxation of distributed corporate earnings and the treatment of capital gains and losses.

When earnings generated by corporate enterprise are taxed twice at high rates, even large profits made by the business are so whittled down that the income ultimately retained by stockholders is little more than they could have realized by investing an equivalent amount of money in, let us say, a risk-free, tax-exempt bond. Since the corporation is the only device adequate for raising the vast amounts of capital needed in many lines of enterprise today, these taxes discriminate against the owners of corporations and stifle growth and progress in whole sectors of industry. In order to alleviate the situation as soon and as simply as possible, some tax credit for dividend income should be given at the personal level. A credit of this sort would cost less in revenue than is frequently assumed and the cost would be more than justified by the benefit to the economy. If a tax credit stimulated dividend distributions, it might even result in increased revenue to the Government.

Our present capital-gains tax acts as a deterrent to risk taking. A prospective risk taker is acutely conscious of the fact that if his venture succeeds a sizable share of any appreciation in the value of his investment will be taken in taxes when he sells his holdings; on the other side, if he suffers a loss he is allowed only a limited offset against other income. No system could be better devised to discourage risk taking at a time when confiscatory personal income taxes are a real burden. In order to correct the situation, the Government's "take" out of potential profits should be decreased. A move in this direction would stimulate the flow of venture capital by making all investment opportunities more attractive than they are under present capital-gains tax rates. Furthermore, there is a need to increase the amount by which losses can be offset against ordinary income. Existing provisions, written into the law in 1942, welcome as they then were, are insufficient in view of the present inflated price level to give much protection to even the relatively small investor. These suggested revisions in capital-gains taxes would contribute to the stability and orderliness of markets and would probably result in increased Federal revenues. Capital gains are not like ordinary income since they are realized only at the option of the taxpayer. A tax rate so high that it discourages realization of capital gains robs the Treasury of potential revenue.

The tax structure is geared so that, in the words of Prof. David McCord Wright, in his stimulating book Democracy and Progress, "The result is frequently a policy of those 'already there'—a policy which helps monopoly and increases social stratification.

"Most people, when they think at all about the reasoning behind progressive income taxes, suppose that if a man is making a large income he has a large fortune."

And again: "Profits must be, at the least, proportional to risks, and risk is subjective rather than objective. Furthermore, the off-chance, the one-in-a-hundred possibility, of

supernormal profit is among the great impelling forces of investment. History shows that the extraordinary returns on investment rarely survive longer than a generation, and that labor's average real wages have persistently risen with the rise of the national income. The share of 'capital,' in the long run, has been remarkable constant."

I have spoken in behalf of the little fellow in and out of business more than in behalf of established wealth and bigness. I have spoken in the interest of ownership and risk capital—on which debt must rest—and which is the mainspring of the activities which generate taxes.

Tremendous national and international issues hang in the balance. How to rate them in order of importance no two persons would agree, and as time goes on they seem to become more and more intertwined. I have watched with interest exploration of point 4, the bold new plan outlined in very general terms in the President's inaugural address. Under certain conditions its possibilities challenge the imagination. Venture capital admittedly is the crying need of undeveloped and so-called backward areas. Will these areas forget the harsh terms they only recently have used in speaking of foreign investors? Surely, the history of international investment shows the investor is more often sinned against than he has sinned. Investors as well as others are entitled to a fair deal. And that applies to investors at home as well as abroad. I suggest point 5—a fair deal for the investor, not the widow and orphan alone, but for all who risk their savings. This, I submit, is not just a figure of speech. If participations in sound domestic enterprise go begging, on what terms can foreign countries entice American capital, the most desirable form, according to all the experts, being ownership or equity interests?

The responsibility of legislators who are called upon to levy taxes on the order of $40,000,000,000 or more annually is grave. Leadership summoned forth by these responsibilities is not the sole possession of any one party.

The Congress met the challenge of the war in the area of fiscal policy when it enacted the Revenue Act of 1942—a highly constructive measure.

Again, with the close of the war, and faced with the transition to peacetime pursuits, the Congress passed the Revenue Act of 1945—repealing the excess-profits tax. This measure was largely responsible for the ensuing period of prosperity.

More recently, despite stubborn opposition, the Congress again anticipated the need for increased consumer purchasing power and increased savings, and enacted the Revenue Act of 1948. An injustice to the middle class was partially corrected in the adoption of the community property principle.

This is another year of changing economic conditions. The challenge is equally strong. Must we unbalance the budget in the interest of revoluntary social progress, or will leadership demand individual sacrifice to meet the Nation's defense and foreign needs? Does business have to decline and unemployment increase because of a lack of confidence in business quarters, and among those able and willing to save?

The next revenue act, and I bow to the will of the Congress, must revitalize venture capital for the job that is ahead, both at home and abroad. I am firmly convinced that equal courage to face the facts and act accordingly could assure a prolonged period of economic stability. To repeat: Venture capital is the mainspring of a dynamic economy. In the interest of production and jobs, we must have a resurgence of venture capital and restore its effective functioning.

Geological History of Western Colorado

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following articles which are written in an interesting manner and set forth a little of the geological history of western Colorado. They call attention to the presence and diversity of unlimited natural resources of my district and its great possibility for future development as a part of the integrated economy of our Nation. Inasmuch as there are four articles, which necessitates more space in the RECORD than is usually allowed for a single issue, I shall have the last two articles inserted at a later date.

STOREHOUSE OF GEOLOGICAL RICHES IN COUNTY OFFERS BRIGHT PROMISE

(By Harry Chrisman)

Colorado is widely publicized as the scenic State. It is not strange that visitors go away deeply impressed with the magnitude and beauty of the mountain scenes. For a mountain towering up twelve or fourteen thousand feet with its sides of granite sticking out is an impressive sight. Likewise, the aspen on a mountainside in October clothed in their beautiful golden yellow that bathes the valley below in reflected splendor is an artistic delight.

SEEN THROUGH DIFFERENT EYES

But things appear different to different eyes. The tourist sees the beauties of nature, the fine paved highways and the wayside inns and cottages that offer him accommodations for the night. The artist finds in the rugged mountain beauty or the stream or lake something to transfer to canvas. Another person finds still something else to admire and applaud. Few of us, unfortunately, have the trained eye of the geologist who finds both beauty and wealth in the Colorado rocks. And the grandest scene of all of the State's wonders is that vast store of riches and beauty beyond the scope of the human eye.

GEOLOGY CAN BE FUN

The geological history of this region is to most of us an unfathomable puzzle. We glance inside a book on geology and are sent reeling by such terms as Cenozoic, Mesozoic, and the whole nomenclatory of the rocks, structures, and periods of geological time. It drives most of us away from geological study, never to return.

It shouldn't really be that difficult. It is possible to gain an elementary understanding of the geological puzzle with a few basic facts at hand and the normal amount of human curiosity. And it is deeply rewarding to do so.

We live in a region, here on the western slope, where nature, in her most capricious and lavish mood, has laid down billions in wealth at our very feet. To appreciate such generosity, in terms of what it can mean to building our community in the future, requires that we make some effort toward a better understanding of the mineral formations of our community and nearby areas that affect us. So let's begin.

EARTH IS TWO TO THREE BILLION YEARS OLD

Geology is simply a history of the earth we walk on. Geologists are men who study this earth. They have reconstructed the early history of our earth by studying the rock structures, how and when they were formed and the effect of water, heat and earth movements on them. They have determined the approximate age of the earth—two to three billion years—and the approximate time that life appeared on it—a long, long time ago.

Certain facts have been established: First, the earth is of an appalling age; second, it has cooled from its first gaseous stage after having been thrown off from our sun, as is generally believed, to a ball with a molten core having a very thin crust which we call "ground." This crust is wrinkled somewhat, as in the mountainous areas of Colorado. Beneath this crust for many thousands of feet is solid basaltic rock. Third, great oceans and seas are known to have made visitations over the Colorado area not once in the past but many times.

It is because of these marine visitations that our geologists are able to give meaning to the rock formations and their fossil contents.

THE CHEMISTRY OF THE ROCKS

The fossils are "petrified" skeletons of former plant and animal inhabitants of the earth. The huge seas provided a developing area for the very low types of early life. Over 1,000 species of insects and 250 species of plant fossils have been discovered in one small lake bottom in Colorado. As millions and millions of the sea-dwelling inhabitants died their bodies drifted down into the bottom of the seas, making a veritable rain of death from above, as it were. These layers upon layers of sedimentation became, as the seas withdrew, thick rock formations that covered the earth. Where today one fossil is found, hundreds of millions of the earth's creatures and plants died and were obliterated and now make up the chemistry of the earth's rocks.

The great eons of time that have expired since the earth was young have been calculated by geologists. A calendar, not unlike our calendar of days, months, and years, has been made. Eras, periods and subperiods have been used—a vernacular common only to the scientist. The geological calendar is somewhat dissimilar in that geological time is reckoned by events rather than by time alone.

GEOLOGICAL CALENDAR SIMPLIFIED

The geologist knows five eras. (We will forego the many subdivisions of geological time in the interest of simplicity.) These eras are called Archeozoic, Proterozoic, Paleozoic, Mesozoic, and Cenozoic. The names sound formidable but stripped down from their Latin roots to good Americanese they simply stand for Ancient Life, Dawning Life, Old Life, Middle Life, and New Life, in that order.

Ancient Life and Dawning Life is the remote period of which even geologists do not pretend to know too much. It extended from the earth's creation down to approximately 500,000,000 of years ago—roughly five-eighths or more of the entire history of the earth. Old Life (Paleozoic) ran from 500,000,000 years ago down to about 175,000,000 years ago. Quite a bit is known of this period and the two that follow. Middle Life (Mesozoic) extended from the previous period down to about 50,000,000 years ago. The "latest" period—New Life—extended down from 50,000,000 years ago to about the end of the last Ice Age—18,000 B. C.

One must remember that in dealing with such tremendous lapses of time figures can only be approximate. The main thing is to establish in the mind the five eras of time, or clip this article for future use. We will then be able to ascertain the approximate

age of, for example, Delta County coal or tell when the oil-shale beds of this region were formed.

As the earth's surface cooled to form the crust, successive mountain-building periods have come and gone. The seas have aided greatly in developing the life forms and in distributing the chemical elements throughout the land surface. The creatures of the earth have left their remains to further add to the chemistry of the rocks.

FOSSILS FOUND AT CEDAREDGE

For example, an expedition in 1937 of Dr. Barnum Brown, curator of the American Museum of Natural History of New York, unearthed near Cedaredge nearly a trainload of rare fossil specimens containing dinosaur's and other reptile's bones. Included in the shipment was a specimen 20 feet long by about 5 feet thick resembling a mammoth horned toad; also a specimen of a "duck-billed" dinosaur. A footprint of a dinosaur in a Cedaredge coal mine gives evidence that the creature, in life, stood nearly 35 feet high and must have weighed many tons.

A fine dinosaur fossil unearthed in Colorado stands in the Colorado Museum of Natural History at Denver. This fellow, as the writer recalls him, was at least 20 to 25 feet high and with a whip-lash tail measuring perhaps 60 feet or more.

It was from such creatures' remains, and from the remains of ancient plant life, when this region was a subtropical jungle lying at the edge of one of the great seas, that the extensive coal fields hereabouts and the oil reservoirs were formed. Over 600,000 acres of coal reserves lay in this State, though but a little over 4,000 acres are presently producing coal. Mineral-resource maps show Delta County almost three-fourths underlaid by vast coal fields. The Colorado deposits of bituminous coal reserves are the greatest of any State in the Nation—over 212,000,000,000 tons.

So the coal that you burn in your stove on a cold winter night was once the vegetation of a massive subtropical forest. This vegetation was at one, or several times, submerged into the waters of the sea. Protected from the open air a selective decay began, with the chemicals in the plant and animal life causing decomposition and chemical change.

HEAT AND PRESSURE MAKE COAL

Covered by sedimentation of the seas this mass was pressed and squeezed by volcanic action and earth movements producing great heat and pressure. Depending on the length of time, the intensity of pressure, speed of decay, and many involved chemical processes, it became either lignite, subbituminous, bituminous, or anthracite coal.

Generally speaking, the older the coal the higher the grade. Delta County coal, for example, is about 50,000,000 years old. Some Colorado coals are older, for coal is mined in Colorado both from the Mesozoic (Middle Life) formations and from the Cenozoic (New Life).

Oil, like coal, is formed from plant and animal decay. Oil and natural gas are almost universally found where the rock strata are rich in organic remains.

THREE CONDITIONS NEEDED TO MAKE OIL

A combination of certain geological conditions are necessary, however, to guarantee the presence of oil in quantity. At least some of these conditions are known to exist in Delta County.

First, there must be a "source" rock. This rock must be rich in the remains of organic matter. Shales are the commonest varieties of such rocks and we find the oil shales in the northern part of the county extending almost halfway down to the center of it, possibly underlying the greater part of the county. Near Olathe the Peterson well has passed into, or through the Mancos shale. The Rangely field has been pumping oil from the Mancos shale for over 20 years with 18 wells now pumping more than 800 barrels daily, so this formation is to be considered tempting to the oil adventurer. At the Moffat and Iles Dome fields oil was reached in the Dakota sands and later the wells were sunk into the Morrison and Sundance formations with good success. These sands are being reached presently by the American Petroleum Co., drilling on Ash Mesa. The Morrison-Sundance formation is the heaviest oil-producing formation in the State, as will be shown later. A show of oil has been made in the Dakota sands at this well in addition to a later show in the Morrison sands.

The so-called Dakota sands on the western slope consist usually of two sandstone members separated by a body of shale. Lower sandstone and shale are old marine beds of the early Mesozoic era, whereas the upper sandstone is of fresh water origin of a later period of that era. This means that the organic life that has given oil content to these sandstones and shales lived somewhere in the neighborhood of 150 to 175 million years ago.

We thus see that this country has the source rock from which oil is taken. A second condition, however, to get oil in paying quantities is that there exist a reservoir rock in which the oil is stored. This rock may be any porous rock, such as sandstone or limestone, closely jointed shales, and even, in some instances, igneous rock formations—that is, where rock has been burned and heated to molten stage.

DELTA COUNTY AT SEA'S BOTTOM

Here we find that in the latter part of the fourth era, mentioned above, an invading sea extended northward through Colorado over what is now our mountain zone, joined itself with a southward leg of a great Arctic Ocean and sprawled itself from what is now the Bering Sea to the Panama Canal and from central Utah to central Nebraska. This great sea laid down a thick deposit of sedimentation in some places 10,000 or more feet in thickness. The deposit was mainly shale—what is now called the successive deposits of Dakota, Benton, Niobrara, Pierre, and Fox Hills shales—a likely bed for the oil reservoirs for which oil men search.

At Florence and at Boulder the wells are pumping from the Pierre shale. The Mancos shale in western Colorado is said to be roughly equivalent to the Pierre shale on the eastern slope. At Wellington and Fort Collins the wells are sunk into the so-called muddy or first Dakota.

Generally speaking, the Colorado oil comes from the cretaceous deposits—that is, from the rock strata of the latter part of the Mesozoic era.

The third condition for oil storage under the earth's surface is that there be a seal or retaining cover over the oil deposit to prevent the escape of the oil in the reservoir. The combination of a source rock, a reservoir, and a sealing rock over the oil deposit so traps the oil that it is held available to the discoverer of the pool.

OIL RESTS IN SAND AND SHALE POCKETS

This sealing rock is usually a dense shale that is impervious to oil but not necessarily impervious to water. Ground waters that have seeped through the rocks beneath the surface all through geological history rise and fall with a forward movement pushing the oil ahead of it into these oil traps or reservoirs. The great earth pressures and mountain-making movements at the close of the Mesozoic era, which caused great heat beneath the surface, have been the agencies that have distilled the oil from the organic remains of plant-animal life of bygone eras.

DELTA COUNTY OIL WELLS PROBABLE

With this background of knowledge of how oil is created and where it may be found, it becomes possible to note with satisfaction that an oil or natural-gas strike in Delta County is not only within the realm of possibility but probability. Nature, in that astonishing middle-life era of geological history gave us such incredible creatures as 40-ton reptiles and tropical swamps and forests as far north as Montana. She also laid down in the earth's breast lavish deposits of mineral ores and oil.

The three conditions for oil making were fulfilled during this era. First, the remains of billions of plant and animal life were deposited in thick layers. This is now our source rock. Second, the subsequent titanic earth movements during the mountain-making periods created the heat which distilled this oil from those bodies. Third, the underground waters have flushed the oil into the traps where we now find—or try to find—it.

WESTERN SLOPE BIG OIL PRODUCER

The first Colorado oil was found at Florence in 1862. This field has since produced more than 14,000,000 barrels of oil. Until the discovery of oil at Boulder in 1901, the Florence wells were our only producers. Since that time 17 pools have been opened up in Colorado—most of them on the western slope. Rangely was opened in 1901, though production was slow and facilities and transportation difficulties caused development to lag until about 1927.

The Moffat and Iles Dome were opened in 1924; the Tow Creek field in 1927, though oil seepages had attracted attention as early as 1900; Wellington and Fort Collins came in in 1908; and the gas fields of Mesa and Yuma Counties somewhat later. Dove Creek, Montezuma County, in December 1948.

The Colorado formation that has been most favorable to oil production appears to be the Morrison-Sundance, in Rio Blanco and Moffat Counties, its 40 wells (December 1943 statistics) having a daily production of 3,906 barrels. The Dakota-Sundance formation boasts 43 wells with a daily production of 1,168 barrels. The balance of the State's wells, 82 in number, show a production of 1,538 barrels daily. The western Colorado wells, judging from these statistics, are producing the great bulk of all Colorado oil.

Undeveloped as are the potential oil resources of the State, still, oil means over $2,500,000 of wealth annually, most of it to the western slope. What may develop later, in oil wealth, no one knows. It is enough to say that the geological history of the region gives most hopeful signs.

Germany's Giant Monopolies

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John B. Owen, from the Washington Post of April 30, 1949:

GERMAN CARTEL BUSTING HELD 100 PERCENT FAILURE—CLAY ADVISERS BLAMED FOR NULLIFYING PROGRAM

(By John B. Owen)

American occupation officials have failed to smash a single one of Germany's giant monopolies under a crackdown law now 2 years old, investigators said yesterday.

A three-man committee, flown to the scene by the Army last December, found that only one such case was filed, but it was never completed.

It recorded testimony that high decartelization officials were out of step with Presidential policy, fearing it would impede German recovery.

Flatly disagreeing with the view, the committee declared that a democratic economy requires the anticartel policy and will prosper under it. The committee contended that the great trusts greatly facilitated Hitler's war career, and that their elimination will help safeguard peace.

The committee demanded energetic enforcement of antitrust policy—under civilian control. The law itself was enacted by the American military government for the United States zone.

The three men were appointed last December by Kenneth C. Royall, then Secretary of the Army, to study progress of the decartelization program. The monopoly-busting drive was ordered by President Roosevelt and supported by President Truman.

Committee members were Chairman Garland S. Ferguson, Jr., member of the Federal Trade Commission; Samuel S. Isseks, appointed at the suggestion of Attorney General Tom Clark, and A. T. Kearney, recommended by Paul Hoffman, administrator of the European Recovery Program.

The program came under the decartelization branch of the American Military Government. The branch was set up to "deconcentrate" monopolies and eliminate cartel practices.

The sharpest criticism came from Isseks in a supplementary report after his indorsement of the main report. Isseks blamed statements of "the two economic advisers to the military governor" for failure of the anti-monopoly program.

The military governor, Gen. Lucius D. Clay, has had as his economic advisers, first, Maj. Gen. William H. Draper, Jr., until recently Under Secretary of the Army, and, at present, Lawrence Wilkinson.

The two, Isseks said, had repeatedly contended that any deconcentration would delay German's economic advance. The committee report itself said that "it appears" that Clay's economic advisers generally took such a position.

Isseks said the deconcentration program was "completely nullified" when Wilkinson and his deputy, Phillips Hawkins, "pigeonholed," a principal case. Turning to Richardson Bronson, chief of the branch, Isseks said he had never indicated support for the deconcentration plan and any action he took generally was obstructive. Employees of the branch itself, Isseks said, have vigorously supported the program.

Health Insurance Program

EXTENSION OF REMARKS
OF
HON. THOMAS H. BURKE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. BURKE. Mr. Speaker, one of the most worth-while comments on President Truman's health insurance message to Congress was contained in a column by Thomas L. Stokes, the highly respected Washington columnist, in the Evening Star of April 25. Under unanimous consent, I include it in the CONGRESSIONAL RECORD.

TRUMAN PUSHES HEALTH BILL—PRESIDENT SEEN EARNEST IN ATTEMPT TO BRING MEDICAL ASSISTANCE TO ALL

(By Thomas L. Stokes)

As has been forecast, President Truman's health-insurance proposal to Congress was met with the pessimistic response that it would be among the items missing when the legislative record of this session is closed.

As a matter of fact, the President himself anticipated such a chilly reception by the conciliatory tone of his message. He recognized the controversial nature of health insurance, conceding there are differences about details of the program, but said these differences should be threshed out with honesty and tolerance in the democratic fashion and that "we should enact the best possible program and then all of us should get behind it to make it work."

His conciliatory approach should mislead no one, however, about the President's absolute sincerity and determination on this issue. Those who know the man in the White House, who has such a close understanding of the day-by-day problems of our people, know that to him this is one of the achievements he hopes confidently to leave on his record for history, along with the civil rights program. He is very much in earnest and he will be found fighting for it in his characteristic, straightforward way, buoyed by the conviction that a majority of the people in the country support him on health insurance despite the expensive and deceptive propaganda that has been going on at high pitch for months.

PUBLIC SUPPORT AWAITED

He can afford to wait until the public reacts behind his program as it reacted behind him in the last election. It surely will eventually because of some very plain facts that the President recited to Congress, among them:

"As medical education and practice have become better, they have become more specialized and at the same time more expensive. As treatment has become more expensive, families have found it more and more difficult to meet the extraordinary costs of accident, serious illness, or major surgery. Thus, at the same time that our knowledge of how to provide medical care is at its highest point, more and more people are unable to afford it.

"It is no longer just the poor who are unable to pay for all the medical care they need—such care is now beyond the means of all but the upper income groups."

That last sentence should be underlined. The truth of it is known to any one who sits about with his friends talking about the President's health insurance proposal, and that is going on all over the country today. There the personal experience stories of families gradually come out, and there always is the fear expressed in such words as these:

"I don't know what we'd do if there were a major illness or operation in our family today."

And this is not from so-called poor people but from people in what we call the middle class, the bulwark of the Nation. What they have done, of course, in the event of major health catastrophes, and what they will do unless some such method as health insurance is adopted will be to go heavily in debt, with all the frustration that causes, to pay for it and do without other essentials. That is the pride of our great middle class, and it is not to be discouraged, for it indicates self-reliance.

This very commendable attitude of itself is a refutation of substitute proposals now offered in Congress, such as bills that would make grants to the States to take care of those who cannot afford medical care. This would require a sort of pauper's oath. Our people don't like to take help on that basis, and most who really need it will refuse it on account of pride. This includes good, self-reliant citizens who work hard and take care of their families.

Under the President's program they can meet this problem in the honest, self-respected American way by paying for it through insurance, just as they pay for security against unemployment and for old age in the social-security program—and as a right, not charity, or as the President, himself, put it so well:

"Health insurance will mean that the proper medical care will be economically accessible to every one covered by it, in the country as well as in the city, as a right, and not as a medical dole."

Going, Going, Gone

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks, I include a recent editorial from Collier's magazine entitled "Going, Going, Gone."

While I do not agree with every single statement in the editorial—for example, I disagree with the greater part of the last paragraph, to cite just one example—I feel that the major points of the editorial should be brought home to all the people in the country:

GOING, GOING, GONE

Colonel Ellis, who owned the famous island that is New York's immigration center today, used to give shore dinners for his friends. They were popular dinners, because everything was caught fresh on the spot. There were ducks and geese and plover, shot in the Colonel's own marshes. There were wild pigeons. There were oysters and clams, dug along Ellis Island's clean, white shores, and lobsters and crabs netted off the rocks. There were salmon taken on their way up the Hudson to spawn.

That was over a century ago, of course. There are no oysters and clams along the clean, white shores now; there are no clean, white shores. The wild pigeon is extinct, the plover threatened with oblivion. If any duck or goose set foot on Ellis Island, he would be deported as an enemy alien. There hasn't been a salmon swimming up the Hudson—or virtually any other major river in the Eastern United States—for 50 years.

Colonel Ellis' island, multiplied by a million, is the sorry story of game and fish in this country today. And our disappearing wildlife is only part of the whole story: a story of heedlessness, and wanton waste, and destruction of the balance of nature, almost to a point beyond repair.

Our forests are going. According to William Vogt's stunning book Road to Survival, which every American should read out loud to his Congressman, the saw-timber requirement for the Nation is 53,900 million board feet, and the annual growth is 35,300 million board feet—a deficit of almost 40 percent, at a time when countless Americans are still looking for places to live. Our cut-over timberlands are littered with slash, where no tree grows. Careless forest fires take a yearly toll of lumber sufficient to build an entire modern city.

Our soil is going. "In the short life of our country," Dr. Hugh Bennett, chief of the United States Soil Conservation Service, testified before a congressional committee, "we have destroyed 282,000,000 acres of land which we cannot replace. Erosion is actively destroying 775,000,000 additional acres." If a newspaper reporter stood on the banks of the Mississippi River and saw a herd of a hundred cattle, a flock of sheep and goats, a barnyard full of chickens, a carload of fruit and vegetables, and a silo filled with

grain go drifting past him, it would make all the front pages. But, unnoticed, the equivalent of a 1,000-acre farm floats down the Mississippi every 24 hours—lost to us forever. It takes nature up to 1,000 years to restore 1 inch of topsoil, yet more than half a billon tons of irreplaceable soil are swept down the Potomac River—past the halls of Congress—each and every year.

Our waters are going, ruined by criminal pollution. We laugh at the Chinese who spread their human waste on the fields. We are more civilized; we dump it in our drinking water. Chicago, Detroit, and other cities pour their offal directly into the Great Lakes or the Mississippi.

Our wild life is going, going, and—in the foreseeable future—will be gone. Darwin said in his On the Origin of Species in 1859: "The plenitude of life in any place is dependent on the terrain and food and cover." These are the very things that the hand of man has destroyed. Ever since the first human crept out of the first cave and knocked over the first animal with his spear, we have been upsetting nature's balance more and more. Industrial plants have leveled forest areas, used up the space that once provided food for birds and animals, poisoned through their refuse the surrounding waters where fish and waterfowl once lived. We have taken, but we have not put back. Our controls have been haphazard, too often dictated by politics or selfish interests.

Collier's believes that we should try to restore the balance of nature before our country becomes a true biologic desert. We should battle pollution by State and Federal laws requiring proper disposal of waste. The city of Milwaukee has been doing this for years, and has found that sewage, properly treated, can be sold for profit as fertilizer. We should control wanton deforestation. In Sweden a man who cuts a tree must replace it by planting another. That is a law we could copy here.

We should provide better conditions for what remains of our wildlife. We do not agree with the sentimentalists who would ban all hunting and fishing—unless they go all the way and ban power dams and industry as well. Rather the sportsmen, being the most interested, should be enlisted as the most ardent crusaders. Man, a predator, can help restore nature's balance by fighting other predators who are in competition with man, such as the voracious crow—one crow destroys 20 songbird eggs and fledglings per year—the great horned owl, the goshawk, and sharp-shinned and Cooper's hawk, such predatory fish as the carp and gar, and wildlife's public enemy No. 1—the prowling, uncontrolled house cat. He can work to restore the former habitat of fish and game by building wing dams on streams, by reclaiming barren land, by planting such excellent food and cover providers as grasses, bittersweet, lespedeza, the multiflora rose.

More important, man can and should pay to replace the game that he detroys, just as the factory owner should pay for adequate waste disposal, or the timber owner should plant another tree for each one he cuts. A pay-as-you-hunt plan might be a solution. A hunting or fishing license represents the right to hunt or fish. In addition, the sportsman should pay proportionately for the game he removes—the price to be based on the abundance or scarcity of that variety, its market value, and its replacement cost. The money would be spent to reclaim breeding areas, plant-food supplies, propagate and liberate more animals and birds and fish, to restore nature's balance that we have destroyed.

C. F.

National Correct Posture Week

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. HUBER. Mr. Speaker, all over the United States this is being observed as National Correct Posture Week. Many of the mayors of our great cities have issued special proclamations, and in nearly all schools special attention will be given during the week to the posture of school children by the country's teachers.

National Correct Posture Week is sponsored by the National Chiropractic Association, and has been observed for many years past.

Chiropractors, of course, are particularly and acutely aware of the damage done to the human body by bad posture habits. Chiropractors, who are a special kind of physician who base their treatment on the observed relationship between the bones of the back and the nervous system in the human body, are often called upon to undo, or at least to mitigate, conditions which were directly created by poor posture.

They have long preached to the American people that millions of dollars in expenditures for health could be saved by better posture—better posture taught to children in their formative years, and better posture held by adults.

Under leave, I am inserting at this point a statement prepared by Dr. Emmett J. Murphy, the Washington representative of the National Chiropractic Association. The text follows:

No greater contribution can be made by the chiropractors of America to the Nation than by improving posture and thus increasing the efficiency of all our workers. Poor posture is expensive, and poor posture habits are responsible not only for many days of lost time, but for poor response to job needs, and eventually for a shortened life of top efficiency.

The problem of poor posture and the low efficiency of workers which it brings on can be approached in two ways.

The first is a long, careful, and well-planned program to teach Americans how to walk and stand and sit in ways which will promote health and efficiency. We have such an educational program under way, and it is having its effect.

However, that takes time. Meanwhile, many postural faults can be helped by direct treatment, or the bad effects can be modified or eliminated.

In both programs individual chiropractors can play a decisive and important role.

They can continue to carry out the program of education. They can explain to their patients how to walk, stand, sit, and lie for the best effect on health. They can give their patients the publications of the National Chiropractic Association on the subject and win the patient's cooperation.

They can also continue to relieve the bad results of poor posture by correcting the misalinements of the spine. Every chiropractor knows that the most minor displacement in the spinal column can bring on sharp pains, often far removed from the spine itself, which disappear under chiropractic treatment.

In the high tension of business and industry workers have to assume strained and unnatural positions for long periods.

These strains pull vertebrae out of line and squeeze the delicate nerves that pass between them. For years the human body will put up with this abuse, then suddenly give out.

Workers who have to work in strained positions should go regularly to chiropractors for adjustment to ward off serious bad effects.

It is well to remember that we are as old as our backs.

Studies conducted by the Chiropractic Research Foundation show that 35 out of every 100 children have faulty posture, while 35 percent of men and women past 20 have spinal defects that are likely to lead to organic diseases unless corrected.

Faulty posture is due frequently to displacements in the spinal column. If displacements in children are not corrected, organic troubles invariably result later in life.

It is the duty of chiropractors to make this Nation posture conscious.

Good posture has long been a thing to be admired—something to delight the eye. From ancient times to the present an erect bearing has been regarded among all races as a thing of beauty. Soldiers marching; a man sitting in the saddle; an athlete publicly displaying his physique; bathing beauties on parade—none of these would have grace and charm without good posture.

It has remained for modern times to discover that erect posture involves much more than something pleasing to look at. Now we know that it is a foundation of good health. Good posture contributes to good health; poor posture to poor health. If some people of bad posture seem to live in a state of moderately good health, it is not imaginary to say that these same people, with good posture, would enjoy better health. In other words, they would live longer, more energetically, more efficiently, and more happily.

The White House Conference on Child Health, held in 1930, recognized the importance of body mechanics in relation to health, as noted by the following quotations from its report:

"The part played by body mechanics, or 'posture' as it is generally termed, in the health and well-being of the child, is another subject receiving more and more attention."

"While the majority of medical schools give instruction on this subject, it is usually scanty or incidental and very inadequate. Yet body mechanics has a part to play in the child-health program, and lack of training facilities for those who must do a large part of the educational work in this field is a serious matter. Definite information on the prevalence of bad body mechanics, its recognition as a causal factor in disturbances of health, and the methods of satisfactory treatment are needed."

Since good posture and health go together on one hand and poor posture and disease on the other it is highly important that every reasonable effort be made to correct postural defects in the formative years of childhood. The early correction of such faulty body mechanics as spinal curvature and inequalities in the length of the legs, will assure not only a healthier and happier childhood but likewise a healthier and more efficient adult life.

Bad posture means that the framework of the body is distorted, and this means that important organs cannot do their normal work. Stooped shoulders, for example, cause a cramping of the organs in the chest—heart, lungs, liver—thereby reducing their vitality and making them more liable to disease. Spinal curvature results in the cramping of important nerves and blood vessels that regulate the activities of vital organs. This means that the nerve and blood supply to those organs is defective and the organs become weak and susceptible to disease.

Good posture, on the other hand, means that the organs have the greatest possible chance to remain in their normal position. And good posture means that nerves and blood vessels are in the best condition to keep the organs strong and healthy.

The idea that good posture contributes to good health is based on the mechanics of the human body and is as sound as any principle that operates anywhere in the field of mechanics. The idea is gaining ground more rapidly now than ever before. And when it finally is accepted for its true worth by the whole populace, there will be a vast improvement in the health and vitality of men, women, and children, everywhere.

Mr. Speaker, we are told that one-half of all adults suffer from poor posture with resulting bad effects on health efficiency.

Dr. L. J. Steinbach, of Pittsburgh, made exhaustive studies which showed that 53 percent of adults suffer from the results of poor posture.

Improper posture, the chiropractors warn us, can result in headaches, backaches, and other complaints frequently blamed by the sufferer on unrelated causes.

These are the recommendations made by the National Chiropractic Association:

First. Learn to stand tall, sit tall, walk tall, sleep tall.

Second. Follow a few simple exercises daiy to preserve the strength and tone of the ligaments and muscles which support the spinal column.

Third. Learn to relax completely.

These admonitions, I note, are not at all out of line with the recommendations made by the attending physician of the Congress of the United States.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. GARMATZ. Mr. Speaker, as we join with the Polish people all over the world in commemorating the anniversary of the adoption of the Polish Constitution, which set a new mark in liberalism in Europe, we pay tribute to the love of freedom which inspired the writing of that constitution and which was the basis of its enactment to safeguard that freedom.

No people in history have demonstrated a greater appreciation of freedom than the Polish people. No people have sacrificed more for freedom than the Polish people.

But this love of freedom and willingness to fight to maintain it, has not succeeded in keeping the enemy from the Polish soil. Strong foes have subdued and conquered her, but her love of liberty has been the means of helping her to rise from one conquest after another, to take her place among the nations of the world, free and independent. No amount of tyranny could quench that love of freedom, and the ideals of liberty have been passed on from generation to generation.

There has always been a strong bond of friendship between the American and the Polish people. The present Government of Poland, in its criticism of the United States and its democratic government and institutions, is endeavoring to turn the Polish people against the United States. But these statements do not represent the true opinions of the Polish people, because the present government consists of Communists who speak as directed by Russia, and not by the Polish people themselves. Therefore, they must fail in their efforts to sever the bond of friendship which has always existed between the two nations.

But this friendship also carries with it obligations. As a party to the agreements made at Tehran, Yalta, and Potsdam, we are equally responsible, with the other nations, for the recognition of the present Polish Communist Government, a government which has transformed Poland into a totalitarian police state, policed by Soviet-trained secret police; its economy fast being ruined by nationalization of private property and robbed of its industries through removal of machinery to Russia. Religious and political persecution is being increased. This government, the Polish people were forced to accept without being able to raise their voices in opposition.

This is a denial of the rights granted in the Atlantic Charter, which promised freedom to each nation to choose its own form of government.

As a party to the agreement which resulted in the present Polish Government, we can begin to right the wrong by withdrawing our recognition of the present government in Poland, and with the other free nations, join in a united effort to restore freedom and independence to Poland and the other enslaved nations of Europe. Such action on our part would give them new hope and courage and be to them a sign of our continued friendship.

May the day soon come when the freedom, envisioned by the writers of the Polish Constitution and for which the people of that nation have so valiantly fought and died, may be an established fact. God speed that day.

Honor Roll of National Safety Council

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. FURCOLO. Mr. Speaker, I am very glad to call attention of Members of the Congress to the fact that five towns in Hampden County, Mass., have been placed on the honor roll of the National Safety Council for 1948. The five towns are Agawam, Longmeadow, Ludlow, Monson, and Palmer.

The citizens of those five towns are entitled to congratulations for their cooperation that has resulted in the towns being on the 1948 honor roll. Those townspeople have saved lives and they can well serve as an example for the rest of the country.

Why Defeat Ourselves?

EXTENSION OF REMARKS
OF
HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Bergen Evening Record, Tuesday, April 19, 1949:

WHY DEFEAT OURSELVES?

It takes some fortitude to read the news these days. Our line of defense, General Bradley tells a nation which had taken rather a fancy to those coast-defense rifles at Sandy Hook, is on the Rhine; we must garrison Germany till hell freezes over or Russia cools off, whichever happens first. A Congressman thinks we'd better atom-bomb Russia. Taxes are going up, and business is going spongy, and from April on the Treasury will write its accounts in red ink. By the end of 1950 it will have cost us $24,000,000,000 to field a team against Russia, and in Washington the Social Security Administrator acknowledges that Mr. Truman's cradle-to-grave insecurity program—that's what it is—will cost us $7,000,000,000 the first year and $20,000,000,00 a year when it really gets going. There goes China; there goes east Germany; there goes another $45,000,000,000—and all we want are peace, 35-cent sirloin, $50 housing, free medicine, and a convertible for Junior.

But to read the news right it takes more than fortitude?

By the year 192 A. D. it was pretty clear what was going to happen to the Roman Empire. Although it took a few more centuries for that confused civilization to learn the mistake it had made, by the end of Lucius Aelius Aurelius' reign the pattern was fixed. The republic was dead, and the state was a Stoic kingship under which good men cooperated for the common weal; an equestrian civil service, personifying the will of the emperor, had displaced the old magistracies; home rule and local pride and personal responsibility had broken down, and the imperial government had eagerly stepped in to do for people (at a price bankrupting the old municipalities) what their fathers had done for themselves; and, to the north and east, the Germans and Persians were steadily increasing the pressure on the borders. Little by little the empire was crumbling, although no Roman had yet noticed it—crumbling in body and mind and spirit. It was still great. But its people, crying in the streets for bread and circus, had abandoned greatness.

Maybe history is bunk. Let's look at 1949. Let's—because we'd better—see where we're going.

What do we have in mind? We can fight Russia hot or cold and beat the pants off it. We can garrison the world and make the world like it. We can guarantee every farmer in the United States a fixed annual income, guarantee every worker a raise whether he has it coming to him or not,

guarantee everyone a doctor of his own (and a maid for his wife). We can do any of these things. But we can't do them all. We cannot have both the guns and the butter.

It's time we make up our mind which must come first. It's time we decide what's indispensable—and then buy that. If our national security is first (there aren't any nays, are there?), then we'd better forget the other $20,000,000,000-a-year business for a while. Because if we go into self-induced bankruptcy, then neither our social security nor our national security will be worth a Confederate dollar; we shall have purchased both at the price of getting neither.

Which shall it be? Bonuses and pensions and socialized medicine and fixed prices and subsidies and the enforced annual wage raise? Or a garrison in Europe, a front line in Formosa, and 200 more atomic bombs? Bread and circus, fellow Romans, or a legion that will stand against the Goths and Persians? Guns or butter?

We need not be Hitlerian about it. There's a patch of middle ground. We want and can have a nation deeply and skillfully concerned with life, liberty, and the pursuit of happiness. We can and must afford money for good schools, good hospitals, good roads. We can and must maintain a country of which we're proud and for which we want to lay down our lives if we have to. But we can't go on like this. That's what Russia wants. Self-induced American collapse is Russia's secret weapon. She can wait.

We're pretty close to the hour of decision. It'll take fortitude.

DONALD G. BORG, *Publisher.*

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. RODINO. Mr. Speaker, May 3, 1949, was the one hundred and fifty-eighth anniversary of the adoption of the Polish Constitution. We are again privileged to be granted another opportunity to mark and commemorate Polish Constitution Day, the anniversary of the date on which Poland was first converted into a hereditary limited monarchy. On May 3, 1791, the Polish people discarded class distinction, and the personal privileges were made available to all the people; absolute religious tolerance was established on that memorable day, and provision was made for further reforms from time to time.

This day is Poland's Fourth of July, and it is with a feeling of personal pride that I again raise my voice in behalf of one of the enslaved Christian, democratic, and liberty-loving nations, now deprived of its liberty, its independence, and national sovereignty. For centuries the Polish people were denied liberty. Through almost superhuman effort they overcame all obstacles and established themselves as leaders in fields of art, culture, and science, contributing their share to the progress and betterment of our universe.

Poland, a full-fledged ally of the United States in World War II, and one of the original signatories of the Declaration of the United Nations of January 2, 1942, has been deprived of her independence and national freedom. The history of the last three centuries testifies to the friendship existing between the American and Polish people, and it is our solemn and patriotic duty to employ all rightful means at our disposal to maintain that friendship, to work together with the freedom-loving people of Poland, to help reestablish their independence, and assist in dispossessing the present alien rulers of Poland who have manifested their hostility toward the American people and to our Government. To me it is imperative that the same aggressive forces which seek to destroy free America, and which have already succeeded in destroying the liberty of Poland, be made to retreat and return that which they have acquired through force and aggression.

I have every confidence that the true freedom-loving Pole will succeed in this fight for right. Our unqualified help and support is needed. We must not fail them in their hour of need. We must give them encouragement, and let them know that their friends and allies have not deserted them.

The recognition of the present Soviet dominated Government of Poland which stems from secret agreements which are invalid, is also invalid under the United States Constitution and therefore should be withdrawn. Such withdrawal of recognition of the present puppet Government of Poland would convince the Polish people that the United States does not condone nor approve of the terrorist regime and thus take a stand on the side of the Polish people in their present struggle with enemy forces occupying their homeland and country. We cannot overlook or pardon such transgression and aggression. We must assume the responsibility which is ours, and help to right the wrong which has been done.

I have complete faith in the future of Poland, and know that she will once again proudly stand erect, side by side with us, free and independent, as a testimonial to an indomitable courage and unconquerable spirit which has always marked the history and background of that land of liberty-loving people.

Forestry's Part in Red River Basin Development

EXTENSION OF REMARKS
OF
HON. A. LEONARD ALLEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. ALLEN of Louisiana. Mr. Speaker, I have been intensely interested in the subject of forestry a good many years and have given the subject considerable thought and study. Recently I heard an address by Mr. Charles A. Connaughton, director, Southern Forest Experiment Station, which I consider interesting and informative on this subject and under leave granted, I am placing this address in the Appendix of the RECORD.

FORESTRY'S PART IN RED RIVER BASIN DEVELOPMENT

(By Charles A. Connaughton, director, Southern Forest Experiment Station)

I welcome the opportunity to discuss forestry and the part it represents in the development of the Red River Basin. I welcome it not only because it is a subject embracing one of the major interests of the Red River Valley Association, but also because forestry, after many years of being either taken for granted or ignored, is finally moving "into place in the sun," with individuals and public-spirited groups such as this ready, willing, and eager to consider its problems and opportunities.

THE FOREST RESOURCE AND ITS USE

Let's go back some years to start this discussion. When the settlers first visited the lower Red River Basin, they found an almost unbroken body of timber. To them this was a friendly forest providing food, shelter, and fuel. It was a home they enjoyed. They made no particular drain on the resource, but if they did there was ample room to move along to well-stocked virgin ground. But gradually the population increased and began to stabilize. With this came the need for carving land from the forest for agriculture and industry. At this stage the forest was somewhat of a mixed blessing—land had to be cleared but at the same time a portion of the timber cut provided the materials needed for building the facilities of civilization.

In the face of this pressure, the forest yielded. On truly agricultural land as we know it now, it yielded to a higher, more intensive use. Similarly, for urban development it yielded a higher use. However, because of soil limitations or other reasons this clearing of the forest pretty well stopped, with more than half of the area in the basin below Denison Dam still in woods—that's where we are today and have been for some years in the past. To be sure, some land is still being cleared, but basin-wide there are probably about as many acres reverting to forest as being lost at present.

Now with about one acre in every two on forest land, the welfare and economic progress of the Red River Basin are obviously closely associated with the present forest condition, the trend of this condition, and its possible effect on the future. I am going to touch on each of these points. In so doing, I shall use figures which were not collected by watershed boundaries but do in every case include the Red River Basin and can be regarded as precise indicators even though not absolutely applicable to the drainage basin proper.

The first survey of the forest resources and their use in the South, including those of the Red River Basin, was made in the mid-thirties. Following this, a sample reinventory and analysis was made in 1946. This later survey showed that the sawlog timber stand of the Red River Basin is about 60 percent pine and 40 percent hardwood (33,583 M board feet total). In 1947, it was estimated that the total lumber produced in the basin and tributary territory was 1,750,000,000 board feet, of which 70 percent was pine and 30 percent hardwood. The same area in 1947 produced about 1,200,000 cords of pulpwood, of which 96 percent was pine. Forty-seven percent of the drain on the forest was used for lumber, 15 percent for pulpwood, 14 percent for fuelwood, and 24 percent for all other.

It is impossible to obtain a thoroughly confirmed figure on the annual value of the forest products produced in the basin, but

we have estimated that in 1947 wood products at the mill or other point of delivery were worth $99,000,000. Manufacturing added $135,000,000 to this value, making a total of $234,000,000 worth of manufactured wood products produced in a single year. Furthermore, we have estimated that the production of these wood products in 1947 required approximately 42,000 man-years of labor. I have not attempted to compare this information with that from other enterprises in the basin, because the figures are large enough in their own right to show the major importance of wood production and wood-using industries to the economic welfare.

Our surveys show, however, that the production being obtained is making serious inroads into the forest capital. In slightly more than 10 years, the interval between the original forest survey and the reinventory, the pine sawlog volume declined about 25 percent while the hardwood volume dropped 20 percent, or an average of 23 percent. The largest decline was in northeast Texas, the least in southwest Arkansas. This means that cutting, fire, insects, and disease are reducing the sawlog growing stock nearly 2 percent per year.

Considering all trees, which means including those below sawlog size, the picture is somewhat different, but the trend is the same. For pine, the decline over the past 10 years was 14 percent, and for hardwoods 1 percent. The combined total was 8 percent. This means somewhat less than a 1-percent drop per year in trees of all sizes, both above and below sawlog size.

Decline in the Red River Basin is greater than the average for the rest of the South west of the Mississippi River. In contrast to total decline of 23 percent in sawlog volume in the general territory of the Red River, there was only an 11-percent decline for the west Gulf area as a whole. Compared with a decline of 8 percent in the Red River Basin for all trees, there was an actual increase of 2 percent for the west Gulf area. This means the forest resource in the Red River Basin and territory immediately tributary thereto is being depleted more rapidly than in other portions of the west Gulf. I do not have the explanation for this, but it is evident that continuing reduction of the forest-growing stock will undermine at least some of the dependent industries and gradually diminish the importance of this resource in its economic contribution to the region's welfare. Certainly, this situation poses a challenge to this association and others with a common interest.

Thus far I have emphasized the more or less obvious fact that the forest resource has always played a significant part in the basin's development. In so doing, the forests have paid a price. Part of the price, such as clearing of productive agricultural lands, is defensible and sound. However, other things, such as the continuing decline of the sawlog volume on permanent forest land, deserve a critical look and some thought and plans as to the future.

Basing a judgment on the present estimated average volume per acre basin-wide, the forests of the basin probably are not growing more than one-third to one-half as much as they are capable of doing. This means that this resource, important as it is, is working only part time. This being the case, what are some of the things that will reverse the trend and point our timberlands toward full production? Let's start with the most obvious and certainly the prerequisite to all forestry practice—protection from forest fires.

FOREST FIRES

Forest lands of this basin, or anywhere else for that matter, cannot be fully productive if there is careless, promiscuous burning of the woods. In the past this fact has been ignored all too often, but real progress has been made in recent years. In each of the four States in the territory served by your association, effective forest-fire protection organizations are maintained under the supervision of the State foresters, and supported in part by the Federal Government. These organizations have been growing steadily in size and effectiveness. I do not know in detail what each organization feels is still needed, but I recommend consultation with the State foresters by your association as a positive step in building a constructive program for the basin.

One thing, though, that I do know is needed in every State is a fuller appreciation by the public of the damaging consequences of forest fires. This must be obtained by education—education that begins with the children in the school and is carried on in the man-to-man conversations on the street corner or at the forks of the road. This process of education, which is moving in the right direction now, must ultimately proceed to the point where a wildfire in the woods is regarded by the landowner and the general public just as a fire in a man's house. When this time comes, and eventually it will, we shall be on top of our fire problem, and our forest-fire organizations can and will be handled pretty much as a city fire department is at present—ready to attack and control any fire which may start, with the full cooperation of the public in spirit and in action. The prediction that we'll ever reach this point may seem to be an idealistic dream. Perhaps it is, but some dreams come true. I feel confident that this one will, because ultimately the full place and value of our forests will be recognized and when this comes we shall know that we have something that is just too valuable to burn.

CUTTING PRACTICES

Next to fire, the main concern should be with cutting practices. There are right ways and wrong ways to cut timber so as to keep the land fully productive. Oftentimes the right way is not too difficult, although it requires a certain skill and knowledge of forestry fundamentals. At the present, most of our large forest landowners, both lumber and pulp companies, do a very creditable job on their own lands. They are in the business of growing and producing timber, and they know that forestry pays. The bulk of our forest land, however, is held in small ownerships on the farm and otherwise, and generally these owners are not protecting or cutting their woods according to sound forestry practices. The reasons why they do not practice forestry, even of the simplest kind, are as many and varied almost as the number of owners themselves. There are two general reasons, though—one, the lack of forestry knowledge and, second, the failure to appreciate that sound forest practices pay.

To extend forestry knowledge and impart a desire for it, all possible mechanisms must be used. Publicity, demonstrations, and on-the-ground technical assistance are needed. As for publicity, the usual channels, such as the press, radio, speeches, and personal contacts, are available to and are being used by public agencies and private agencies and individuals. This makes a start. Then we need public demonstrations and illustrations of what to do and how to do it. This job is primarily a function of the State agricultural extension services, supplemented by other public agencies and private industry.

Along with these, it is recognized that forest owners who want to do a good job must get some on-the-ground technical assistance. Some of this on-the-ground assistance will come from industry, but in the main it is a public responsibility. The public has already done some of this with convincing results, and at the present there is a bill before the Congress which authorizes expansion of this work to be handled through the State forester in each State. Passage of this bill, which, incidentally, also authorizes expanded extension work, is essential to meeting this problem of getting forestry into practice on small landownerships.

As to showing how forestry pays, each man will want proof on his own land. We do have some information, though, that should start anyone thinking along these lines. Several years ago on our Crossett Experimental Forest near Crossett, Ark., we placed two 40-acre tracts under intensive forestry management. These farm forestry forties are on an area that is quite typical of much of the mixed pine-hardwood forests of the Red River Basin. One forty was a well-stocked area selected to show what could be done with land approaching full production; the other was poorly stocked and not unlike many farm woodlands. Both were managed to produce an annual return, that is, some cutting each year on both areas. The results are convincing evidence that forestry can and does pay.

On the good forty, 11 annual cuts have been made thus far. Approximately 136,000 board feet of sawlogs, 287 cords of pulpwood, 194 cords of fuel wood, and 344 fence posts have been cut in these 11 years. On the stump, these products had a value of $2,116. Delivered at the mill as any other agricultural crop would have been, they were worth $6,897. In 1948, the timber cut was worth $9.36 per acre on the stump, or $22.57 per acre delivered at the mill. Yet today there is not only as much timber standing as when cutting started, but the quality of the remaining trees is much better than originally because the poorer individuals were removed as cutting progressed.

During the 11 years, the average annual return per acre has been $4.81 for stumpage, or $15.87 for the products delivered at the market. If a farmer had harvested and marketed the timber crop as he does his other crops, he would have realized at the rate of $1.50 per hour for the time spent over and above the expenses for taxes, fire protection, interest, and incidental out-of-pocket expenses. We all agree, I am sure, that for timbered hill land this is a good return.

As I mentioned, a poorly stocked stand was placed under management at the same time the well-stocked stand was. This poorly stocked stand of 34 acres started with slightly less than 2,000 board feet and about 8 cords of pulpwood per acre. The objective of management was not only to secure an annual return but to build up the growing stock so that greater and greater cuts could be made in future years. In 10 annual cuts thus far, 32,000 board feet of sawlogs, 142 cords of pulpwood, 158 cords of fuel wood, and 121 fence posts have been cut. At the same time, the volume of standing timber has been increased from 2,000 board feet to 3,350 board feet per acre, while the volume of pulpwood has remained practically constant.

In the 10 cuts products were harvested worth $2.20 per acre annually for stumpage and $8.90 per acre annually delivered at the mill. And bear in mind that standing timber for a future harvest was accumulating all this while at a rate of about 150 board feet per acre per year. In 1948 the return was $5.80 per acre for stumpage, or $10.97 per acre for the products delivered.

These are two illustrations of what forestry means to the pocketbook. Many other illustrations could be cited to show that applying some knowledge, skill, and work will make forestry pay. Furthermore, these illustrations show that forests need not yield intermittent income only, although this may be the best practice in some cases, and that a rather small volume of standing timber can be managed to increase the growing capital constantly at the same time a current income is maintained.

Of course, if we start with bare land there is a somewhat different story, and it is an interesting one to trace briefly. Assume there is bare land to be planted. Usually about 1,000 trees per acre are used. These trees must not only be planted with care, but protected from various sources of damage for several years before any income is possible. In about 15 or 20 years, thinnings for pulpwood and posts can begin, and periodically thereafter thinnings can be made for different products, including sawlogs, as the trees grow larger. Finally, at say 60 to 80 years, the last 80 to 100 trees, which is about what one acre can support in mature timber, can be cut for sawlogs, providing, of course, for natural regeneration of the stand prior to or during the last cut. This is a rather long-time view, but it illustrates rather simply the rudiments of forest management and the general technic which will be followed.

Although we can go a long way toward our goal of fully productive forest land by providing education, demonstration, technical assistance, and evidence that forestry pays, these will not do the whole job. As a supplement, therefore, the United States Forest Service has proposed along with others that each State enact legislation which will require good forest practices. At the Federal level, legislation has been proposed which would make assistance possible to the States in working this out and providing for Federal action if the States fail to act in a reasonable time. Regulatory legislation of this kind is controversial and may not be enacted very soon; however, the need for it in relation to the national welfare is becoming increasingly evident.

PLANTING

Special mention should be made of tree planting. At the present, there is a strong interest throughout the South in tree planting. I presume the same interest exists in the Red River Basin. If so, it should be nurtured, fostered, and constructively directed. I am doubtful, however, that there is nursery capacity to supply the needs for trees. This is a subject, however, with which each State forester is thoroughly familiar. He can advise with you in reference to any special local situation. The bill pending before Congress to aid the States in providing technical assistance in forest management also authorizes expansion of Federal aid to States in nursery production for forest trees, and its enactment will be a step forward in fulfilling the planting needs of the basin.

RESEARCH

Along with an action program in forestry, there is an ever-present need for more basic knowledge. Much research and study is required to meet this need. In the main, forestry research is rather a long-time undertaking and has broad application to many areas and owners. As such it is primarily a public responsibility. The States are doing some work in this regard and the United States Forest Service maintains branches of the southern forest experiment station at three locations in or near the Red River Basin. These branches are at Alexandria, La., Nacogdoches, Tex., and Crossett, Ark. Studies on forest management, forest economics, forest grazing, planting, utilization, and related subjects are in progress. In view of the size of the job, the effort is relatively small and should be expanded, but appreciable progress is being made within the limits of the facilities available. Of extreme value also, as large-scale demonstration and testing areas, are the public forest lands such as the Kisatchie National Forest, the Woodward State Forest in Louisiana, and several well-managed private holdings.

WATERSHED VALUES

Thus far I have discussed forestry mainly from the standpoint of wood production. However, this is only part of the picture. Forestry involves the use of woodlands for other uses as grazing, hunting, and as watersheds. I am not going to dwell on these related values and services of the forest, because in the main when the forest is managed properly these related uses find their place properly also. However, in view of your long-standing interest in flood control, I want to call attention especially to the relation of the forest to the watershed.

We know from research and observation that a depleted plant cover, whether it's trees or grasses, sets the stage for accelerated soil erosion and rapid run-off. With about one-half of the drainage area of the lower Red River Basin in woodland, this is a very important fact to be considered. In the main, if the woods are handled to produce the maximum in forest crops on a sustained basis they will also provide a highly satisfactory watershed cover. This means, of course, that the incentive for forest management lies not only in increasing the wood supply available for industry, but also that better management will have a marked favorable influence on the watershed by stabilizing soil and aiding in regulation of streamflow, particularly of minor tributary streams.

In closing, I'd like to point out that never before has the interest in forestry throughout the Nation been as great as it is today. This interest has been slow in generating, but now it is accelerating and being manifest in many ways. It is no fad, either. It is solid and sincere. The interest of your own association is concrete evidence. This interest must be translated in action, however, and every opportunity seized to take a constructive step forward. By so doing, you as individuals and as a group can strengthen the economy of the Red River Basin and make forestry play an even greater part than before.

Poland's Lost Heritage

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. SHAFER. Mr. Speaker, those of us who try to keep the accounts straight on the books of life could not help but pause Tuesday, May 3, the official Polish Constitution Day, and recall how that great nation of middle Europe was sold down the river into totalitarian slavery.

It is well that we think for a moment about Poland, for the same aggressive Communist forces that have succeeded in destroying the heritage of the Poles are working to destroy the freedoms of our own country.

Poland, as we all know, was a full-fledged ally of the United States in World War II. It was the first nation actually to feel the weight of the German panzer divisions, for, as is well-known, the attack on Poland in 1939 led to the conflagration that swept the earth in the ensuing years.

Despite the clear fact that the Democratic leadership of the United States had mouthed slogans about "Four Freedoms," and such, this same Democratic leadership sold Poland down the river to totalitarian slavery without reason or excuse. This was done at Yalta, where an ailing President, surrounded by a cabal of suspected American Communists allowed Soviet Russia to include Poland in its economic orbit. It was done in spite of the fact that free Poland had been an ally of the American people in a great war, allegedly a war for freedom, and it was done without consulting the Polish people or their legal, constitutional representatives. On the strength of agreements our Presidents signed at Yalta, Tehran, and Potsdam, Poland has been deprived of 46 percent of its territory and saddled with a "government" hand-picked by Soviet Russia.

On this real Polish Constitutional Day—commemorating the day in May 1791, when the Polish people won their freedom after centuries of oppression. That heritage of freedom was lost a short time later when Russian and Prussian soldiers united on Polish soil and destroyed the country. But Poland later lived again, as we know, when the new nation was born after World War I. But now Poland again has lost its heritage.

There is still hope that some day our American leaders will awaken and that pressure will be brought to bear against the Soviets—enough pressure to make them withdraw from hapless Poland and allow freedom once more to become a hallmark of that Nation. As we know, none of the secret agreements by means of which Poland was delivered into the hands of the Soviet terror by our leaders ever has been fully made public. The United States Senate never has ratified any treaty accepting the present status of Poland, bound, gagged, and blinded to the free world as that nation is. None of the deals made by the executive branch are really valid, although they are effective for a time. These are the deals in which the notorious traitor, Alger Hiss, played a leading part, as is well-known.

I am proud, Mr. Speaker, to be numbered among the friends of Polish freedom today, and to take my stand with the real lovers of freedom in every country and in every clime. It is tragic that we still have men in our executive branch who talk of freedom, but do nothing to spread it into all parts of the world. Let us hope that we can have a new birth of freedom—in Poland and in America—but most of all in Poland, where our double-talking diplomats and two-timing politicians can view the ruins of their own fumblings and bumblings and chicanery. Let us all dedicate ourselves to helping the Polish people regain their lost heritage.

The American Press in the Cold War

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. MYERS. Mr. President, I recently had the pleasure of attending the annual Front Page dinner sponsored by the Lehigh Valley chapter of the American Newspaper Guild, held at Allentown,

Pa. At their dinner, the working newspapermen and newspaperwomen of the Lehigh Valley area had as their guests many of the leaders of the industrial, business, and civic activities of the community, and it was, indeed, a most pleasant affair.

I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a press release on the remarks I made that night on the strategic place of the American newspaper reporter in the world-wide battle for the minds of men—the so-called cold war.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

SENATOR MYERS CITES PRESS AS KEY WEAPON IN COLD WAR

ALLENTOWN, PA., April 30.—United States Senator FRANCIS J. MYERS, of Pennsylvania, tonight credited the free American press with a key role on behalf of freedom "in the battle for men's minds."

"There are no better arguments we can advance for our way of life than the facts about us—the unvarnished facts on our faults as well as our virtues—as mirrored in our daily news," the acting majority leader of the Senate declared.

MYERS addressed the annual Front Page dinner of the Lehigh Valley Chapter, American Newspaper Guild, in Allentown's Americus Hotel.

He told the newsmen and their guests that by digging up the facts about day-to-day America the press "not only keeps us acutely conscious of our duties—and our failures—as citizens, challenging us to make this a better Nation, but it helps to build world-wide understanding of the real aspirations of the United States." He added:

"Anyone who follows the news here even casually, and who reads about the full and free debates in the Congress and the legislatures, who watches the variety of editorial comment, the columns and the opinion advertisements, readily recognizes that American policy generally conforms to public opinion—sometimes leading it, sometimes following it, but always close to it.

"It is the job of the State Department through the Voice of America and similar projects, to get these facts to the people abroad. And it is doing a real job, an effective job. Many who sought to deny the program funds just two short years ago are now among the foremost advocates of the whole idea, because they have seen how effective it has been.

"From it—from the full and complete range of news it seeks to send abroad, foreigners have come to recognize our real purposes in creating the Marshall plan and the North Atlantic Pact—the purpose of achieving a peace based on justice and freedom for mankind.

"Russian efforts to depict our programs in other lights suffer grievously from the factual accounts we send overseas. And the constant desertions of prominent officials from once-free nations behind the iron curtain to the freedom and safety of America, point up the issue dramatically. On even terms totalitarianism in any form cannot compete with freedom, and our international policies are designed to provide such even terms."

MYERS said it was unfortunate that two of America's leading press services have so far declined to make their daily reports available to the Voice of America and he praised America's editors for their recent declaration in favor of an expanded Government informational program abroad.

"When the Department is denied access to some of the main sources of our domestic news, however, getting the facts about America to publicize abroad is made unnecessarily difficult," he declared.

"I am familiar with the reasoning of the Associated Press and the United Press in declining to supply their daily reports to the State Department for Voice of America use," he continued. "They maintain that if an official Government agency engaging in admitted propaganda activities were to have the use of these services, foreign subscribers to them and foreign readers might begin to question the integrity of the news they send, on the theory that it is the Government telling AP and UP what to write rather than AP and UP telling the Government what the news is and the facts are.

"This position implies a rather alarming condition: That in a nation where the free press is guaranteed by constitutional amendment, the main channels of domestic news could be tainted or even subverted merely by a buyer-seller relationship with our own Government. I am sure AP and UP officials have no fear that such a thing would actually happen; they appear fearful mostly that foreigners might think it was happening.

"On the other hand, if the Voice of America uses its news properly—and I believe it does—the high volume of daily news it undoubtedly carries which is critical in its content of Government policies would be proof to all but fools that this is not 'doctored' news, and we can't waste our time and resources trying to win over the world's fools.

"At the same time, while admitting our infrequent lynchings, we must tell the story of developing racial understanding in America; while conceding spotty unemployment in places while industrial profits are at record levels, we must show—as the Bureau of Labor Statistics is showing in a really magnificently factual and objective new publication for international use entitled 'The Gift of Freedom'—how the average American worker really lives; while admitting to our slums, which are shameful to us, we must also tell about our dramatic housing programs. In other words, we must tell the whole story.

"The rank-and-file newspaperman is the best selling agent America has because he insists on digging up those facts and telling them straight; let the chips fall where they may; let the paper's own editorial policy like it or not; and most of our newspaper editors want the facts told that way, feeling confident that distortion of the news to suit editorial policy is fatal to the newspaper's best asset—reader confidence."

MYERS said he has been tremendously impressed by the fairness of most of Washington's press corps, declaring:

"Our national correspondents, by and large, want whatever story the facts dictate, and they get the facts, too, because they have earned our confidence by demonstrating fairness to all sides.

Basing-Point System Being Outlawed by Supreme Court Causes Strong Effort Being Made To Change the Law So Steel and Cement Companies Can Continue To Violate Price-Fixing Laws

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. PATMAN. Mr. Speaker, James Daniel, Rocky Mountain News Washington correspondent, in his article of December 22, 1948, disclosed how the steel and cement $11,000-a-month lobby was working. A secret meeting was held in Pittsburgh, according to this article, which is discussed in a very interesting way. The director of the lobby said that "the national competition committee is a one-shot operation. Its purpose is to legalize the uniform-delivered-price system. When that is done it will be through." Of course that means that the lobby wants Congress to perpetuate the price-fixing schemes of the cement and steel industries, which has worked at such a great disadvantage to the consumers in this country during the past 25 years. The Supreme Court rendered a decision that will protect the people by outlawing the basing point. Now this group is trying to induce Congress to reinstate it and make it legal. The lobby is working in a very effective way by going to the "grass roots" and getting people who are not acquainted with the facts to write or wire their Congressman to support the lobby's efforts in getting price fixing legalized for the steel and cement companies.

The article is as follows:

BASING-POINT LOBBYISTS FORMING DENVER CHAPTER

(By James Daniel)

WASHINGTON, December 22.—A meeting was held in Pittsburgh a few days ago (Dec. 7, to be precise) for the purpose of deciding the future of Colorado.

The future of all States, not Colorado alone, is at stake. The States standing on the threshold of tremendous expansion are especially endangered, rightly or wrongly, and perhaps stupidly, by the envy and fear of States that already have had some expansion.

At the Pittsburgh meeting you would expect a widespread attendance of businessmen, merchants, taxpayers, housewives, working people. You would think there would be bright lights and amplifying systems, reporters, photographers, and television men.

But you would be making a great mistake.

This was not a public meeting. It was not held in an auditorium. It was held in the Duquesne Club and if you ever have been to Pittsburgh you probably have had it pointed out to you and heard of the legendary figures who go there, the heavy carpeting, and the snowy napery.

PUBLIC NOT INVITED

The public most definitely was not invited to this meeting.

However, reporters and photographers had been notified that something important was to happen. Their city editors told them to go down and wait outside of the Duquesne Club and take a picture and get a story about the new chairman of the National Competition Committee, when he was elected and put on view.

The minutes and the hours dragged by. No new chairman showed his face. Instead one Walter Megronigle, an advertising man, came out. He said there had been no decision about a new chairman. Maybe, he said, cagily, one would be elected December 29 when the committee met in Cincinnati.

EXPLANATION SIMPLE

Today I called Mr. Megronigle to the telephone. I asked him to please explain to the businessmen of Denver how the services of an advertising firm could be worth $11,000 a month plus expenses. That was the sum which Mr. Megronigle's firm, Ketchum, Inc., reported to Congress it was getting paid to persuade Congress to legalize a pricing system which the Supreme Court outlawed in the cement conspiracy cases.

Mr. Megronigle said it was simple.

"We have six men and two girls going out around the country organizing local chapters of the National Competition Committee," he said. "Businessmen give us $100 to $1,000. In return we give them a complete organization, down to local chapters.

ORGANIZING DENVER

"We don't have a Washington office. We have chapters in Dallas, Houston, Tulsa, Cincinnati, Dayton, Cleveland, Philadelphia, and Pittsburgh. Harold Huycke is in Denver for us now organizing a chapter there. Eventually we will have 25 chapters.

"The National Competition Committee is a one-shot operation. Its purpose is to legalize the uniform-delivered-price system. When that is done it will be through."

I asked Mr. Megronigle what was the connection between Ketchum, Inc. and Ketchum, MacLeod and Grove, an old-line Pittsburgh advertising firm specializing in institutional accounts. Megronigle said the corporations were "in the same family," that Ketchum, Inc., was organized to perform such jobs as delivering a client a ready-made Nation-wide grass-roots organization.

DOESN'T KNOW CHAIRMAN

I asked him who the chapter chairmen were. He said he didn't know.

I asked him who put up the money originally to found the National Competition Committee. He said he could not say.

I asked him if it wasn't true that the new fashion in lobbying was to avoid anything so conspicuous as a Washington office and contact Members of Congress through local figures in their communities. He said it was.

More on Federal Health

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. SCRIVNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my weekly news letter of May 4, 1949, giving more facts on Federal health expenditures:

The President's compulsory socialized-health program will cost somewhere from six to sixteen billion dollars. That means increased pay-roll taxes on workers and employers. That increased tax on employers means higher prices the workers must pay for goods they buy. The only way the workers could ever start to get even would be to get sick. If they do not get sick they pay the other fellow's doctor bill and thus deprive their own families of necessities. It just is not free.

We have a pretty big chunk of federalized medicine and health right now. Between 30 and 40 Government agencies spend money—many, many millions—on various programs relating to health.

Look at one proposed 1950 appropriation bill—in round figures. This one covers the Federal Security Agency under which are the United States Public Health and related programs:

Grants to States for general health	$17,000,000
Mental health	11,600,000
Cancer Institute Research	17,000,000
National Heart Institute	8,725,000
Tuberculosis	9,500,000
Dental health	2,000,000
Venereal diseases	16,000,000
Communicable disease control	7,500,000
Public health hospitals and medical cases	$25,000,000
Hospital construction grants	15,000,000
Federal employees' health	250,000
National Health Institute	12,000,000
Vocational rehabilitation	20,500,000
Water pollution control	1,200,000
Total	163,275,000

Not included in this total is pay for public health personnel, doctors, nurse training, and many other items of administration running into millions of dollars. We must also consider under existing federalized programs, the hospital services to prisons, veterans, the armed forces (and their families), merchant marine, and Federal employees.

Operations of other Government agencies touch on health, too. The Indian Service, Pure Food and Drug Agency, Atomic Energy Commission, Agriculture, Immigration, and the Children's Bureau to mention only a few.

Our remarkable medical and dental services need gradual growth through the constantly expanding voluntary programs. The mushroom growth of an already over-swollen bureaucracy would undoubtedly result in nothing better than mass mediocre medicine.

Can We Afford Our Freedom?

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. MYERS. Mr. President, the size of our national budget and the size of our national debt are such as to be a cause of concern to every thinking American. At the same time, however, we are faced with a world-wide situation which is potentially as serious as any we have ever known short of actual war—and this situation is not very much short of war.

Last night, in Atlantic City, N. J., I addressed the thirty-seventh annual convention of the Linen Supply Association of American on the subject Can We Afford Our Freedom? In that address I sought to explain not merely that we are shouldering tremendous burdens in our national and international programs, but, more importantly, why we have to do so.

I ask unanimous consent that the text of that address be printed in the Appendix of the RECORD. I think it is appropriate today when we are acting on a Federal-aid-to-education bill, since this is one of the subjects I discuss in this speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAN WE AFFORD OUR FREEDOM?

In the first 4 months of the Eighty-first Congress nearly 4,500 bills have been introduced in the House of Representatives and about 1,800 in the Senate. Obviously most of those are not going to be passed. But a sizable number of them will come out of committee this year and next year, and will be accorded consideration. Practically every one of them which provides for the expenditure of any Federal funds is weighed by most of the Members of the Congress in terms of this standard: "Can we afford it?"

This standard is applied not only to the appropriation bills providing billions of dollars, as in the case of the military appropriation bill, but also to those authorizing expenditures of $10,000 or $10,000,000. If Federal expenditures are involved, the bill must be justified in those terms or it won't pass. Contrary to what a lot of people think about the Congress, blank checks are just not voted. Our judgment may be faulty once in a while as to whether or not a particular expenditure is fully justified, but I can assure you that in such cases they are errors of judgment and not deliberate attempts to throw away the taxpayers' money.

Forty-two billions of dollars, the budget for the coming fiscal year, is such a simply incredible figure that claims that there is economy represented in such a budget may sound strange, but it is true.

There are no doubt many places in this budget where cuts can readily be made. Cuts are being made all the time. But a cut of $10,000—or even $10,000,000—out of a $42,000,000,000 budget is almost inconsequential in relative terms. Nevertheless, I repeat, reductions in Federal expenditures from Budget recommendations are being made all the time, are supported in many cases by Republicans and Democrats alike, and will continue to be made.

They are made because, although we cannot comprehend the figure of $42,000,000,000, we can appreciate its colossal scope. We are all worried about this national debt which exceeds a quarter of a trillion dollars—if you can visualize such an astronomical figure. We all realize that, if we cannot scale down this debt now at a time of high-level business activity and employment, then we are, in effect, admitting that the debt can never be reduced—and that is an admission that America dare not make.

On the other hand, if you want to send shivers up and down the spine of practically every Member of Congress who must run for reelection in the near future, just talk about raising taxes. The prospect of voting for a tax increase is never a pleasant one to an elected official.

All of these factors taken together reflect the anxiety among the Members of Congress over the justification of each and every expenditure of Federal funds. Do we cut down on Federal expenditures, and resist all new appropriation proposals and hope that our reductions will be sufficient to keep our budget in balance, and perhaps provide a litle extra to apply to the national debt? That seems to be the solution proposed most frequently by many influential Members of Congress, particularly on the Appropriations Committees.

But even if we follow their suggestions, none of these experts is prepared to guarantee that we still achieve a sufficient surplus in terms of this amazing economic level we now enjoy, to make an adequate payment on the national debt—adequate meaning sufficient in terms of such record national income.

The truth of the matter is that we are so extended in our Government activities—yes, even overextended—that any sizable cutback—and by sizable I mean sufficient to make a dent in a $42,000,000,000 budget, sufficient to mean anything when applied to a $250,000,000,000 public debt—is virtually impossible to achieve.

I say virtually impossible because, of course, the budget could be cut by really tremendous amounts, by nearly 40 percent, just by doing away with the Military Establishment. It can be cut by billions of dollars merely by repudiating the interest on the national debt, or by our pledges to our veterans. It can be cut by perhaps ten billions, although that may be a little bit on the high side, by dumping overboard all our foreign commitments.

We aren't going to do any of those things, of course, and that is why I say it is virtually

impossible to cut Government spending by a sufficient amount in this coming fiscal year, and in the next few fiscal years, to enable us to reduce the national debt by any sizable amount.

When we ask ourselves whether we can afford to spend all this money, we reach the reluctant conclusion in most instances that we can hardly afford not to. It isn't a matter of providing some jobs for people. It isn't a matter of getting some good pork for our districts, or our States. It isn't a matter of doing special favors for special interests. It is, unfortunately—and I mean unfortunately—a war chest for the survival of American freedom.

During the war, almost everything we did, almost every dollar we spent, was in connection with the war effort. In that direction few expenditures were considered excessive.

As far as the Federal Government's budget is concerned, that situation is still largely true. And it's too bad. But it's one of those unhappy facts of life which we have to face. World War II has not quite ended for the simple reason that the goals of World War II have not yet been achieved. Our fear is that in seeking to achieve the goals of World War II we might find ourselves in a world war III. On the other hand, we know well that unless those goals are achieved, we face a certain world war III. And with or without a world war III, we constantly face serious dangers to the thing we regard here as most precious of all—and that is our freedom.

Nearly all we do abroad, and most of what we do at home, are essentially activities in defense of the freedom of the American people collectively as a nation, and individually as citizens.

You are justified in wondering whether we have to do quite so much of it, whether it takes quite such a big Government, spending quite such a colossal sum of the taxpayers' money in order to achieve our goals of a free world, and particularly in order to achieve security for our own way of life.

For there is no doubt about it, our Government is simply enormous. Just the other day, a Senator, speaking from the floor of the Senate, said the Federal Government, among other things, is the biggest banker, security holder, life insurer, farm-mortgage holder, landlord, tenant, employer, and spender in the Nation. And he was probably correct.

There is nothing in America more colossal than this Government, and the more we learn about it, and how it operates, the more amazed we become at the multiplicity of the things it has its finger in. President Truman said the other day, that even by spending 16 or 18 hours a day at the job, as we know he does, he cannot keep up with all of the phases of this Government which he personally is supposed to direct.

The Senator who described our Government as the biggest of everything in the country mentioned banking, and said the Government was the biggest banker in the Nation. No doubt it is. The Federal Deposit Insurance Corporation, in effect, underwrites the American banking system, guaranteeing the integrity of the vast majority of all banking accounts in the land. The Reconstruction Finance Corporation has, at one time or another, bailed out practically every railroad in the country, and was a major factor in financing the expansion of America's war industry. The Export-Import Bank, the Commodity Credit Corporation, and numerous other agencies are in the banking business, not just casually, but in a big way.

Millions of veterans hold national service life-insurance policies, and so the Government becomes the biggest life insurer. Millions of Americans, home owners and farmers, depend upon the Government for mortgages—not direct Government loans, but loans the Government is prepared to guarantee. And so, we are, in effect, the biggest mortgage holders. We could go down the list, including landlord, tenant, employer, and all the things that the Government is the biggest of, and always we come up with the same conclusion:

Our Government is gigantic because the people insist that it do certain things. The Government as such does nothing on its own. It is put into things, and it is put there by the people.

That does not necessarily mean that all the things it is injected into are good things for it to do. Most of them are. Most of them are vitally necessary activities. Most of them are activities which you support wholeheartedly, and those you don't support are, no doubt, just as wholeheartedly supported by others. There are pressures at work on us all the time—and I for one think that is perfectly proper, for there is no better way of guaranteeing Government in the public interest than by allowing, or even encouraging, all phases of the public interest to have their say, and to say it as vigorously as they can.

Granting that there are undoubtedly instances of duplication in Government functions, many of these duplications do get weeded out. This happens in a number of ways. The Hoover Commission has made many sound recommendations for reorganization of Government agencies. Secretary of Defense Johnson, for instance, has initiated sweeping changes in the national defense organization. And Congress itself, as I said, certainly doesn't write out any blank checks for Government agency spending. Anyone who has read over the annual hearings of the House and Senate Appropriations Committees realizes that Congress tries to go over every aspect of the Federal budget with a fine-tooth comb, demanding an explanation for the expenditure of every dollar. This double checking by Congress comes up at least once each year and no agency of Government escapes scrutiny. Yet the growth of Government continues, despite the fact that Congress has no intention whatsoever of enlarging Government or maintaining it as a colossus just for the sake of Government. We in Congress want to do everything we can to encourage private enterprise and individual initiative to do just as many of these jobs as possible.

The growth of Government has occurred usually in areas where private enterprise simply could not undertake a necessary job with any conceivable hope of operating at a profit. Every one of us would much prefer seeing these jobs done by private capital, by local governments, and State governments. But when, after a long enough time, the people become convinced that a particular job isn't being done, and can't be done, in any other way, they turned to the Government. They have turned to the Federal Government because it is the only organization with a broad enough jurisdiction, a great enough flexibility, and the necessary resources to undertake the problem.

No, their growth of Government hasn't come about through dictation from the top or because of some wily scheme on the part of a few to socialize the country. The Government has grown in response to the increasing complexity of modern national and international life.

Now and then I hear someone express the wistful hope that we should return to the relatively simple kind of Government we had, say, in 1890. But that simply isn't realistic in terms of our complicated, post World War II, twentieth century world. No one has any desire to turn back the clock to our 1890 kind of simplicity. We cannot resist the technological facts of the past 60 years—of man's conquest of the air by radio and television, by airplane and rocket, and by heaven-knows what tomorrow—and we can't resist the other thousands of technological advances man has made in that time which have raised our living standard to the highest level ever. And unless we do resist these facts—and we do return in every respect to 1890—the Government can't return to 1890, either.

This Government spending—on the domestic side, at least—accomplishes, I think, essentially two things. In the first place, it provides the wherewithal for needed effort in essential undertakings which private persons or local and State governments have been completely incapable of, or hesitant about, performing. The second point which I am about to make is one which I feel is very frequently misconstrued or just plain misunderstood. It is this: The whole purpose underlying increased Government activity is to make our system of free enterprise stronger and more secure in its present fields of operation—and to encourage its extension and growth in new fields which it has not yet entered. Through Government research numerous new industries have risen in America, numerous old ones have been rescued from technological obsolescence.

But the biggest single aspect of Government spending today involves our commitments and relations with other nations. All of us I think, will agree that peace is the central problem of our time. And I believe we can all agree that this nervous half-peace we now have is in fact no peace at all. The very best kind of government, the healthiest national economy in the world, can ill afford the terrifying cost of a third world war.

Yet, while we are in agreement as to the urgency of achieving real peace, few of our people seem aware that today the largest part of our Federal budget is devoted to that purpose alone. The proposed military budget for 1950 is only slightly under $16,000,000,000, that figure alone being substantially more than one-third of the total Federal budget requested. The European recovery program for 1950 has been authorized for nearly five and one-half billions, the estimates for furnishing arms to the cosigners of the North Atlantic Pact are around one and one-third billions. These are the direct expenditures, the big ones that have received most of the attention.

In a much larger respect, however, our whole national budget is a cold war budget. Billions of dollars more are devoted to benefits, disability payments, and pensions to our veterans of other wars, and to the payment of interest on war debts. Smaller, but nonetheless important, are the sums we pay in the administration of the reciprocal trade program, the subsidies to our merchant marine and overseas air lines, the contributions to the United Nations, the Voice of America, the operation of our diplomatic service, and the other functions carried out by the Department of State, and a great many others. We are indeed paying a tremendous price for peace.

Can we do away with any of these programs? Hardly; they must be considered together as a part of an integrated whole.

How does the Marshall plan fit into the picture of peace? All of us are aware of Europe's condition as it emerged from the Second World War—its economy wrecked, millions of its people driven from their homes because of war's destruction, or because they had been driven from their native lands by political oppression or military might. The people of Europe were weak from starvation, filled with fear, and almost devoid of hope for the future. Europe's fields were largely untilled and full of mines, many of its factories devastated, and its trade close to a standstill. There were shortages of everything—not just of luxuries—but of the bare necessities to sustain life. A kind of paralysis lay heavy over the land.

Yet beneath that paralysis many things fermented. People who had lived in squalor and misery cried for security. Confusion and uncertainty dominated the scene.

It was under such conditions that communism had won its foothold and usurped its power over the Russian people almost 30 years before. The Communists knew this. The Communists knew their greatest opportunities for furthering their power were at that very moment, and under those very conditions. They knew that the worse conditions became, the easier it would be to find new adherents gathered from the ranks of the desperate, the hungry, the forlorn, and the hopeless. Knowing all this, the Communists did everything in their power to keep Europe in turmoil and in misery to complete the wreckage of Europe's economy, and to tumble the remnants of free government still to be found. Their battle strategy misfired. We beat them to the punch.

We will probably never know how close the Communists came to achieving their aims. There was a time when the Communists must have felt dead certain that they would control the Continent of Europe. They banked on two things in their calculations—first, that America would once more turn its back on Europe, as it had done after World War I—and secondly, that Europe could not get back on its feet in time to stem the rising tide of economic unrest which breeds communism.

But the Communists were wrong—wrong, as they have been, and are, so often. America did not turn its back. And with its own prodigious efforts and help of the interim-aid program and the Marshall plan, European recovery is well under way. Already, there is a new spirit and a new vigor among the people of Europe. Its industries are beginning to hum, and new industries are being built. Its agricultural production is moving up.

Communism is being stopped dead in its tracks at the border of the iron curtain, and the curtain hides turmoil and fear. We can foresee the day that a self-sustaining Europe is once more an active partner among the free nations of the world in a thriving and prosperous world trade. Truly, the Marshall plan has been an invaluable investment in the business of world peace.

But important as economic recovery is to the achievement of security and freedom from fear it is not the sole cornerstone for the building of peace. The Communists, thwarted in their efforts to achieve the domination of Europe through economic destruction, have other cards which they might seek to play in order to win their desperate game.

Russia today has more men under arms than any other nation in the world. Her own force, plus the forces of the satellites she has acquired by threats of aggression since the end of the war, represent, collectively, a gigantic bloc of armed might—a bloc which casts a long shadow of fear over the free nations of Europe and the rest of the world. There is an answer to this constant threat—and that answer is the North Atlantic Pact.

The Atlantic Pact simply reiterates that we, and the free nations of western Europe who sign it with us, have a common stake in the peace of the world. The North Atlantic Pact does not declare war on anyone. And it does not threaten war on anyone. No peace-loving nation has any reason to fear the Atlantic Pact. The only kind of nation which might fear it is a nation which is bent on aggression. The North Atlantic Pact is an insurance policy, and not an act of war. It tells any aggressor that—in the eyes of free people of the world—the business of peace is everybody's business.

But the North Atlantic Pact is a piece of paper. It is the evidence of an agreement among a number of nations upon a common purpose. A piece of paper, backed by nothing more, will not ward off aggression—and a piece of paper by itself is not a counterbalance for millions of men bearing arms. Before the Atlantic Pact really means what it is intended to mean, there must be developed a common plan of military security, and the necessary force to guarantee that security. That takes arms—and money.

These things—the Marshall plan, the North Atlantic agreement, the military support to back them—are immediate, paramount necessities if we are to begin building a permanent peace and a real peace, secured by an effective UN. But even these are short of all that will be required if lasting and genuine peace is to be obtained.

Our best argument for a decent world, a free world, of free peoples, is the argument of the good example. All our efforts are bent toward achieving a decent world, and we think a good world would be one in which peoples in all nations can shape their own destinies as we in this country shape ours, can influence their own government as we, individually, influence ours, can follow the dictates of their conscience, and give full play to their inherent abilities.

In our so-called propaganda activities abroad, we try to show the people in nations threatened by communism, and in those overrun by communism, just how we in America do things, what we stand for, what our hopes and aspirations are. We like to think that freedom, free enterprise, democracy, all do well in America. We are proud of this Nation. We are proud of our opportunities here. We like to think that the weak spots in our economy, the discriminations, the occasional denials of opportunity, are gradually being overcome. But we've got a long way to go.

We have got to demonstrate, not only to our own satisfaction, but to the satisfaction of the whole civilized world, that freedom can mean decent living standards not merely for most of our people, but for all of our people. We can't do nearly so much bragging about free enterprise when we have areas in this country where free enterprise has been synonymous with inhuman and cruel exploitation. We cannot be very smug about American living standards as long as so many of our children grow to maturity with no personal experience with the good things of America, nutritional foods, decent houses, minimum health standards. There's a lot to be done in America to make this the kind of a country which justifies the things we claim for it. Some of our Federal expenditures go into this aim; school lunches, for instance, maternal and child-health-care activities, hospital construction, school aid, and a variety of other programs, all of which, collectively, however, take up only a fraction of this colossal Federal budget. And, unfortunately, they are the activities whose funds are easiest curtailed. The reductions are based on the theory that we can't afford to do everything we like to do.

But look for a moment what happens: An American family, composed of American citizens, living in the squalor of slums, subsisting on an improper diet, denied, perhaps, any of the feeling of dignity that comes from decent living conditions, sees us pouring billions of dollars into the rehabilitation of Europe, sees us pouring other billions into expenditures for arms in order to, as we put it, defend our way of life against communism, and then finds perhaps that we have decided we can't afford Federal housing activities, we can't afford school lunches, we can't afford decent schools. Such Americans may well wonder what this way of life is that we are defending with so many billions of dollars spread abroad and into armaments; some Americans, such as these, may wonder whether the specter of communism is really such a terrible thing.

In the ideological war in which we are engaged, cold war though it may be, we need the enthusiastic support of every American, the enthusiastic participation of every American in behalf of freedom.

Just as we can't afford not to fight for a free world with every resource at our command, so we can't afford not to see to it that each American shares in the opportunities of this great country.

A thriving, prosperous, and healthy America is therefore imperative if we are to maintain freedom. A thriving, prosperous and healthy America means maintaining a continuing growth and development of our free-enterprise system * * * and means maintaining a flexible, friendly government in America—a government not bent on substituting itself for private enterprise, but a government which supports and encourages individual initiative and enterprise all along the line. What I mean here by government encouragement and support are the many, many functions of government which have arisen because of private business needs and which are carried on in the public interest for the protection of business. And by encouragement and support I also mean those functions of government which are designed to eliminate the trouble spots which private enterprise hasn't been able to combat profitably, trouble spots which by their very existence threaten the health of our democratic free-enterprise system.

Yes; the price of freedom is great. The real question, I repeat, is whether we can afford not to pay the price of freedom. We are paying that price now in our fight to win the cold war—or should I say the cold peace, as someone has more appropriately referred to it of late. But whatever we call it—the cold war or the cold peace—our aim and our intentions are to bring this frightened world of ours safely through to lasting peace and freedom for all men. And high as the price of freedom may be, I am confident that we shall be able to meet the bill and make our freedom forever secure.

Seminar for Congress

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Seminar for Congress," published in the Washington Post of April 30, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEMINAR FOR CONGRESS

Senators WATKINS and DONNELL have dramatized a difficulty that faces most other Senators in trying to arrive at sound and well-informed decisions on questions of foreign policy. These two Republicans happen to be deeply suspicious of the North Atlantic treaty. Not being members of the Foreign Relations Committee, however, they are not entitled to question administration officials in executive session. Of course, they could get their knowledge of the treaty either from prejudice or hearsay, or from columnists or commentators, or from ploughing through the printed records of public hearings. But this was unsatisfactory to them. So they finally took one other course that was open to them: Of asking permission to question witnesses at public hearings of the Foreign Relations Committee.

It was not quite fair of Senator CONNALLY, in grudgingly granting their request, to accuse the two Senators of wanting to impede, delay, and filibuster. Clearly the committee's hearings would become a farce and a bore if every one of the 96 Senators were allowed to attend the hearings and ask questions. But just as clearly, every Senator who is not a member of the committee is entitled in some better method than he now has of informing himself before debating and voting on an issue of such importance as the North Atlantic treaty. So, for that matter, is the noncommittee membership of the House. There the 418 members not on the Foreign Affairs Committee often have to vote on foreign questions, such as the extension of ECA, with little first-hand knowledge.

It seems to us that it is up to Congress itself, and not to the executive branch, to find a new way of enlightening the entire membership. Congress itself has ample resources for organizing informal seminars on these subjects. The nonpartisan professional staffs of the foreign policy committees of the two Houses are well fitted to serve as organizers and moderators. Some of the lecturers at the National War College and the Foreign Service Institute might be invited to speak, as well as ambassadors recently returned from abroad. If all Senators and Representatives did not have the time to attend these sessions, the Senators could at least send their administrative assistants who, in turn, could help to brief their superiors and answer the questions that pour in insistently from constituents.

As it is today, too many Members of Congress feel they are in the dark. And, in consequence, they are apt to develop a sense of grievance which shows itself in irresponsible speeches and votes in the floor debates. We hope the issue will be faced for the sake of the scores of serious and earnest legislators who are groping for greater knowledge of international issues.

District Doctors Wage War Against Pets

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. MUNDT. Mr. President, many Members of Congress share with me, I know, a keen sense of disappointment and disapproval over current efforts by the medical fraternity of Washington to secure passage of legislation by the House and Senate which would give them authority to appropriate without compensation the homeless dogs and cats of the District of Columbia for the practice of vivisection. I urge my colleagues and the country generally to protest this blatant attempt by the doctors of Washington to wage war against the pets of the people living in our National Capital.

H. R. 4238 and S. 1703 should be defeated decisively and the members of the American Medical fraternity should be advised that an effort to seize for their use the unclaimed animals of the Washington pound so that they can be tortured and maimed in cruel experiments is not the best way to win freinds and influence people at a time when the whole science of the private practice of medicine is under attack. The greedy desire of these medicos to get pets upon which to practice vivisection is demonstrated by the fact that one of these bills actually provides that any pet which has been unclaimed for as short a time as 48 hours shall be made available—without charge of course—to medical schools and laboratories.

Mr. President, it is to be hoped that there will be doctors in the District who will speak up openly against the passage of these proposed bills. It is inconceivable that the doctors are all of one mind in this attempted raid upon the peoples' pets and the small boys' greatest friend. Let the fight go on against socialized medicine in a program of education and resistance which I shall be happy to join but those who oppose the idea of having the State control their science and dictate their policies should be the last rather than the first to suggest that this same State should exercise its power to deprive others of their pets or to supply animals upon which they can practice the same barbaric tortures that their associates in Nazi Germany practiced upon human beings. Cruelty, sir, is a deadly poison which America should deplore and which the Congress of the United States—and our medical profession—should consistently discourage.

Mr. President, in this connection I ask unanimous consent to have printed in the RECORD a recent editorial from the Washington Times-Herald, which provides food for thought and which I hope will stimulate protective action.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIVISECTION

We rise today in opposition to H. R. 4238, a bill introduced in Congress by Dr. ARTHUR L. MILLER, Representative from the fourth district of Nebraska.

H. R. 4238 proposes that all animals at the District of Columbia dog pound which have gone unclaimed for 5 days shall be turned over to the medical schools of this community for the purposes of vivisection.

WE ARE AGAINST IT

Under present law animals which go unclaimed are destroyed by gas. Instead, so the argument runs, let them be turned to good use in the interest of advancing medical science and the health of man.

We think nothing of killing sheep, hogs, and cattle, not to mention an untold variety of fish, fowl and other animals, in order to satisfy our appetites. What harm, then, if a few unclaimed and unwanted dogs and cats are turned over to medicine?

What is a dog's life, anyhow, when measured against that of a human being? Wouldn't you sacrifice a dog to save your child?

So never mind the crackpots, silly women, vegetarians, racketeers, and feeble-minded ignoramuses who don't know what's what. Hand over the dogs. Simple, eh?

THE VANITY OF SCIENCE

But it turns out not to be so simple, after all. The issue here involved is basic. It is whether the word "science" is a magic device that can wipe out every other consideration in matters of public policy just by its mere mention.

Plenty of people seem to think so. Some speak and act as if a man should be allowed to do anything he pleases, in or out of the laboratory—even consort with enemies of the Republic or slip them secrets of our national defense—if he is a scientist.

This vanity has so inflated the scientists that now in New York State there is a scientific campaign on to give doctors the right to kill people intentionally.

The slippery word for such practice is euthanasia, from two Greek words for "well" and "death" and it is used to describe the act of putting somebody away if he asks for relief from a supposedly incurable condition.

The next logical step obviously is to ignore the patient's opinion in the matter and save time, expense, and trouble for all, as Hitler did, by knocking him off on a mere one-way medical say-so.

Indeed, Hitler was completely logical about his "science." He not only was an enthusiastic supporter of euthanasia, but was also a strong man for vivisection. And his scientitsts didn't bother with mere dogs and cats. They used human beings.

VIVISECTION NAZI STYLE

The Nazi prison camps furnished human beings to Hitler's scientists by the thousands, and the scientists tried every conceivable kind of experiment in freezing, burning, breaking, cutting, poisoning, starving, and gorging the human body.

That is just the sort of "absolutely essential" thing done in the United States of America today in our medical vivisection ritualism as practiced on dogs and cats.

Yet what do these same vivisection defenders say about the Nazi experiments on human beings? "Worthless to science."

Now, how can that be? Experiments on dogs and cats prove facts of value to the practice of medicine on human beings, yet experiments on human beings do not. We leave an explanation of that contradiction for the doctors.

For our own part we oppose vivisection because we believe it leads science into ways that are dark and because we further believe science will be more effective when it leaves off whittling dogs and cats, to concentrate on more reliable keys of knowledge.

An example of what can be done if science will only lift its head and look around, is that reported by E. R. Squibb & Co. in its tests of a new drug used in treatment of heart cases.

BETTER WAYS TO FIND FACTS

For years Squibb used what it calls "animal units" in this work, each animal different in its reaction to the "standard dosage." Somebody finally got the smart notion to try something more accurate. Now Squibb uses an electric current. Result: Absolute precision, speed, economy, and reliability.

There is no more real reason for poisoning dogs to test drugs than there was for the scientist Pavlov to kill thousands of them to find out that a dog's mouth waters when he expects food.

The last, the experiments to test "behaviorism," is one of the bloodiest and most ghastly chapters in the whole dictionary of medical voodoo.

It was not science, for it proved nothing that man had not already known and recorded thousands of years before, concerning habit, taste, and conduct. Some time we will take a day off and show up Pavlov and his "experiments" in all their cruel futility.

In the meantime stop H. R. 4238. It is a step back toward barbarism.

Federal "Aid" to Schools

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Ap-

pendix of the RECORD an editorial entitled "Federal 'Aid' to Schools," from the Richmond News-Leader.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL "AID" TO SCHOOLS

The power to tax is the power to atrophy. John Marshall did not say that. He said that the power to tax was the power to destroy, and even if the word "atrophy" had been in use as a verb in the great Chief Justice's time, he would have hesitated perhaps to use it in the sense of the power to sap and to weaken to such a degree that self-control is lost. Despite that, the truth of the statement is demonstrated, we think, in such legislation as the bill to appropriate $300,000,000 in aid of public education in the States. If we disregard in America the stern and close limits of what may be done effectively and economically by the Federal Government, we shall be guilty of more than the waste of billions of money drawn from the very sweat and blood of taxpayers. We shall do worse than build up a bureaucracy that will be perhaps as arrogant as it is expensive. Once we shift responsibility for public-school education to the Federal Government, we shall weaken every muscle now exercised by the men and women of American communities in the cause of better instruction. Interest is lost when responsibility is. Few things could be worse for public education than to take from the community the direction of the local school and the obligation of self-taxation for that school. When we formalize, we are apt to demoralize.

Danger Signs in the Economy

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. MYERS. Mr. President, the Joint Committee on the Economic Report, headed by the able Senator from Wyoming [Mr. O'MAHONEY], and of which I have the honor to be a member, intends shortly to make a series of significant investigations into the status of our economic situation, which I am sure will be of great value. One of the subjects for investigation is the matter of unemployment.

Yesterday in Atlantic City, N. J., I discussed with ice cream manufacturers of Pennsylvania, New Jersey, and Delaware some of the economic problems facing us in this transition period from inflation into what we sincerely hope will be a more normal, more stable, and much more sane economy. They are, of course, acutely concerned about economic trends, as are most businessmen.

I ask unanimous consent that a press release on my remarks be printed in the Appendix of the RECORD. In my talk, I expressed the opinion that we must redevelop what I called "full employment thinking" if we are to avoid serious economic distortions.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

SENATOR MYERS DEMANDS FULL EMPLOYMENT THINKING

ATLANTIC CITY, May 4.—United States Senator FRANCIS J. MYERS, of Pennsylvania, called today for "full employment thinking" in America as the best insurance against a serious business decline.

The Pennsylvania senior Senator, deputy Democratic leader of the Senate and a ranking member of the Joint House-Senate Committee on the Economic Report, said at a convention of Pennsylvania, New Jersey, and Delaware ice cream manufacturers in Atlantic City's Hotel Traymore:

"Spotty unemployment, softening in some markets, particularly in consumer goods, and resultant industrial cut-backs are dangerous not for what they mean but for what we might be panicked into thinking they mean. They can mean trouble, unless we adjust ourselves to 'full employment thinking.'

"Instead of skimming off top dollars any longer, we must have pricing policies designed to maintain consumer purchasing power at a steadily high rate. And to do that, we must have a renewed sense of employment security.

"Business will, of course, reply that in order to maintain high employment it must have confidence in Government. I can say now flatly that this administration is intent on helping business to prosper. It is an administration which believes wholeheartedly in free enterprise capitalism—but it insists on free enterprise fairness. The fewer crutches we must provide this economy, the better we'll like it.

"It is up to business to demonstrate now, in what is gradually emerging as a normal economy, that the crutches aren't necessary."

Citing recent lay-offs in such industries as electrical appliances, specialty steels, textiles, and other goods, MYERS declared:

"No one can convince me that the American market for these goods is saturated. I don't believe we have nearly enough of any of these goods to satisfy potential demand here at home, let alone abroad.

"It's not that people aren't anxious to buy; in millions of instances, they just can't buy the so-called luxuries which are now regarded as essentials to our standard of living. They can't buy because their savings and their cash went into shelter, food, clothing, during the past 2 years of inflation.

"Yet, with good jobs at good pay, as most of our people have, and with some sense of employment security, which not all of them have, we can maintain for the indefinite future the remarkably high level economy we now enjoy.

"We can do it if prices are geared to mass purchasing power, rather than to top dollar in a scarcity market; we can do it if the purchasing power, in turn, is maintained by full employment."

MYERS said that until prices drop to levels consistent with average income, many needed and wanted goods will move slowly or gather dust on the shelves and racks, and the competition will become strong for the nickels and dimes which should go into "the good things of life, like ice cream."

"But higher carfares, higher gasoline prices, higher rents, continued high prices for homes, and no significant drop in many important cost-of-living items spell real danger. They squeeze all but the essentials out of the average family budget," he continued.

"America's economy was not designed to maintain itself on 'necessity' spending."

MYERS declared that during and immediately after the war, business and labor in America had begun developing a healthy type of "full employment thinking" for the postwar world, out of fear that unless the economy was geared to this kind of thinking, we faced a severe postwar jolt.

"The jolt came," he added, "but it was not the kind we had been preparing for. Rather than a collapse in a war-geared economy, we found ourselves suddenly faced with a dizzy inflation.

"We stopped worrying—most people did—about buying power and solid foundations for our economy to withstand the pressures of eventual deflation and instead the emphasis was on cashing in on the seller's market, skimming off the cream. The cream which was skimmed off in these past 2 years represents literally billions and billions of dollars of purchasing power which isn't there any more—it went for living expenses rather than for living improvements.

"If business will get out and sell—at buyers' prices—and if the mass of consumers can feel reasonably secure in their jobs—and that, too, is largely up to foresighted businessmen, then Government is not going to upset anyone's applecart.

"The only time business need fear 'Government interference' of the kind it doesn't like is when business can't sell its goods and can't provide jobs."

Position of Federal Council of Churches of Christ in America Respecting the North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter, dated April 22, 1949, written by William Scarlett, chairman, department of international justice and good will of the Federal Council of Churches. I think it is a very interesting letter on the subject.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 22, 1949.

No position for or against ratification of the North Atlantic Pact has been taken by the Federal Council of the Churches of Christ in America since when its executive committee last met the text of the pact had not been made public. It is desirable, however, that such past actions of the federal council as may have a bearing upon the forthcoming debate in the Senate be brought to your attention.

I am writing to you in my capacity as chairman of the department of international justice and good will. We believe the considerations here set forth are warranted in the light of pronouncements previously subscribed to by the federal council.

I

The Federal Council of Churches is convinced that war with the Soviet Union is not inevitable. We recognize, and have said, that Marxist communism in its orthodox philosophy, stands clearly opposed to Christianity. But a war with the Soviet Union is believed by us to be improbable, given proper use by the United States of its powerful influence. Accordingly, we hold steadfastly to the view that the avenues of diplomatic conversation between the Soviet Union and the United States should be kept open and used. Such action as may be taken by the Senate on the pact should not be

allowed to close the doors of direct negotiation with the Soviet Union.

II

The churches related to the federal council supported Senate ratification of the Charter of the United Nations in the conviction that the security of our Nation was to be derived from a system of collective security embracing all nations. They still hold to this view.

If, as a result of such action as may be taken by the Senate on the pact, the interest of the American people in supporting and strengthening the United Nations were to be diminished, the consequences might well be inimical to the peace of the world.

III

In the event the pact is ratified by the Senate, many people of our churches would desire that it be so implemented as to give impetus to those acts of government by which the conditions of peace with justice can be established. The federal council believe that if our Nation's leadership is to be worthy, it must develop constructive and creative programs that will capture the imagination and enlist the support of the multitudes whose interest in battling political, economic, and racial injustice is greater than their interest in defending such injustice merely because communism attacks it.

The North Atlantic Pact may conceivably act as a deterrent to the more violent acts of Communist aggression by the Soviet state. However, the ideological thrust of communism cannot effectively be countered by defensive measures. What is required is the transcending of communism by enlarging the areas of political and spiritual freedom and economic well-being throughout the world.

Accordingly, we believe the implementation of the pact, if ratified, should be of such a kind as not to imperil the success of those recovery and reconstructive programs to which our Government is or may hereafter be committed. Senate support of authorization of the funds required to assure the continuous success of the European recovery program is very heartening in this respect.

IV

In the event the pact is ratified by the Senate, the people of our churches would desire that this regional arrangement be not used as a pretext for unduly expanding the influence of the military in the formulation of foreign policy.

The Federal Council's Executive Committee has expressed the view that "if * * * our national power is to serve the ends of peace, our basic national strategy should be made by persons who have faith in the achievability of peace and who are qualified by experience and training to use and to evaluate the great possibilities for peace that reside in moral and economic force in organizations like the United Nations and the World Court and in the resources of diplomacy and conciliation."

We recognize that under pacts of the kind now being discussed our military leaders have their necessary place. Foreign policy, however, far from being accommodated to the views of the military should remain, as heretofore, the prerogative of the President and the Congress.

V

In viewing of the foregoing, we venture to raise the question as to whether it would be appropriate for the Senate, in the event that body votes to ratify the pact, to accompany the instrument of ratification with a clarifying resolution in which the sense of the Senate would be expressed along such lines as the following:

(a) Ratification of the pact is not construed by the Senate as closing the avenues of diplomatic conversation with the Soviet Union;

(b) Ratification of the pact is not construed by the Senate as the equivalent of or as a substitute for a universal system of collective security;

(c) Ratification of the pact is not construed by the Senate as the equivalent of or as a substitute for those curative and creative efforts of government through which it is sought to promote economic recovery, to strengthen the institutions of democracy, and to advance the political and social well-being of subject and dependent peoples;

(d) Ratification of the pact is not construed by the Senate as compromising in any way the prior responsibility of the President and the Congress in the shaping of American foreign policy.

Faithfully yours,

WILLIAM SCARLETT, *Chairman.*

Labor Law of Virginia

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. BYRD. Mr. President I ask unanimous consent to insert in the Appendix of the RECORD an article written by Mr. John Kilpatrick, of the editorial staff of the Richmond News-Leader, and published in the Saturday Evening Post.

This article is descriptive of the manner in which the State labor laws, advocated by Governor Tuck, have worked satisfactorily in Virginia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VIRGINIA HAS A LABOR LAW FOR PUBLIC UTILITIES; IT WORKS

(By John Kilpatrick)

When the fight over Taft-Hartley was just working its way into a rassle royal, transit workers of three Virginia cities with a population of more than 600,000 went on strike. In this same period, as Philadelphians recall with a groan, the Quaker City's transit operators also went on strike. There all similarity between the two situations ended.

Philadelphians thumbed it while futile appeals were made to the State legislature. In New York, customers of Consolidated Edison waited apprehensively for gas-and-electric workers to walk out. But the folks in Virginia were tootling along just fine. Their vital public-transit service was being administered under a 2-year-old law that is gaining national attention. In its short life, the Old Dominion's Public Utility Labor Relations Act has come to be regarded as a model.

The Virginia statute is the outgrowth of a touch-and-go situation which developed in the spring of 1946, when the International Brotherhood of Electrical Workers teetered toward a strike that would have blacked out 67 Virginia counties. Gov. William M. Tuck invoked a colonial militia law to avert the stoppage, but he saw the need for a more modern weapon. The following January, the General Assembly passed a new, effective labor-relations act.

The law has three key points. One is that labor's right to strike is not denied. A second is that parties to a labor dispute are not required to submit to compulsory arbitration. The third is that the uninterrupted operation of utilities furnishing water, light, heat, gas, electric power, transportation, and communication is declared essential to public welfare. The act's aim is to prevent such interruptions.

Parties to a labor dispute involving a public utility must conduct two bargaining conferences, each of which may extend over a number of days. If these discussions prove fruitless, the Governor must request arbitration. If either side refuses, the union becomes free to strike 5 weeks after filing a strike notice.

More than a dozen such notices have been dropped on Governor Tuck's desk in the course of 80 separate negotiations, but in only three instances have strikes materialized. In those cases, further provisions of the law were invoked to permit seizure by the Commonwealth. A pattern for handling these critical disputes was established in the spring of 1947, when telephone workers went on strike over much of the Nation. They prepared to strike in Virginia too. But during the 5-week period between notice and strike date, Governor Tuck's office wrote the 7,000 telephone employees to ask if they would remain at their positions as employees of the Commonwealth in the event of a strike. Nearly 5,800 replied, of whom 87.9 percent indicated a willingness to work for the State. As it turned out, the major telephone dispute in Virginia was settled a few hours before the strike dead line. The Commonwealth wound up by seizing—for 48 hours only—a 2-county operation on the Eastern Shore.

In the summer of 1948, the Commonwealth had to seize and operate transit lines in Newport News. This past February it seized facilities of the Virginia Transit Co. in Richmond, Norfolk, and Portsmouth, and ran them for an uneventful month. In each case, the operators voted unanimously to remain at their regular jobs as State employees. During a period of State seizure, a Virginia utility must pay 15 percent of its net revenue to the Commonwealth as a service fee. This provision was put in the law as an inducement to management to keep negotiating.

It is quite possible, of course, that some day utility employees may vote not to work for the State at the time of a strike. In that event, provisions of the law would be invoked to permit the Commonwealth to hire and train temporary replacements.

In the meantime, Virginians are in love with their labor law. Spokesmen for organized labor endorse it privately, though publicly they give it their standard long-form denunciation.

Dutch Policy in Indonesia

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to the New York Herald Tribune and printed in that newspaper on April 20, 1949, under the caption "Dutch policy challenged." The letter was written by Mr. J. J. Singh, president, India League of America.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DUTCH POLICY CHALLENGED—MR. J. J. SINGH DISAGREES WITH MR. WEHLE'S VIEWS ON INDONESIAN CONTROVERSY

To the NEW YORK HERALD TRIBUNE:

I was most surprised at Mr. Louis B. Wehle's contention that the United Nations had no right to intervene in the Indonesian situation, and by the allegations he hurled at the leaders of the Republic of Indonesia.

Let us first take Mr. Wehle's allegation that the Republic of Indonesia was Japanese-inspired and is now in the hands of a group of Communists. The former Dutch lieutenant governor general of the Indies, Dr. Hubertus J. Van Mook, has on several occasions officially repudiated and denied the suggestions that the leaders of the Republic were Japanese puppets. He has admitted, as have other officials of the Netherlands Government, that the Republic grew out of the freedom movement which started in Indonesia at the turn of the century, and that the period of Japanese occupation was used by the Indonesian Nationalists to further their own cause of independence, which had been their goal long before the Japanese threat ever menaced Indonesia.

No responsible observer on the Indonesian scene credits the story that the Indonesian Republic is a time bomb left behind by the Japanese.

As for the question of Communist influence in the Republic, once again, the former Governor General Van Mook himself has stated on more than one occasion, that the Republic is not Communist-dominated. The most striking example of the Republic's real attitude toward the Communists was demonstrated in September 1948, when the Republic's army put down an abortive Communist revolt at Madium, in a matter of 3 weeks, despite the fact that the Republic had been hampered for the last 3 years by a Dutch total land, sea, and air blockade.

Mr. Wehle's allegation that Prime Minister Hatta is a Communist takes on an even stranger note if one picks up newspapers, such as the Daily Worker in New York, or the Worker of London, or any other Communist Party publication in Europe or America, in which not only Prime Minister Hatta, but President Soekarno and the entire Republic of Indonesia are excoriated time and time again as Fascists, anti-Communists, and tools of American capitalism.

The United States State Department, itself, has clearly recognized the anti-Communist attitude of the Republican leaders. Mr. Wehle makes much of the fact that the disorders in Indonesia have prevented the United States of Indonesia from being founded; he alleges that no elections have been held because the Government of the Republic could not control its own guerrilla forces. Maj. Fred Crockett, who went in as a military observer with the Dutch and British forces in the fall of 1945, pointed out in an article he wrote for Harper's some months later that the Dutch troops who went into Indonesia at that time were "trigger happy." There was no fighting in Indonesia at the beginning, but the Dutch, by their irresponsible attacks on unarmed Indonesian civilians, including women and children, provoked some clashes. And finally, when the Dutch Government tried to reinstate the Japanese in cities like Surabaya, full-scale fighting broke out.

Mr. Wehle, himself, claims that the Indonesian people are anti-Japanese and anti-Communist. What he does not seem to understand is that after two sneak attacks by the Dutch, after numerous Dutch violations of existing agreements with the Republic, and after 3½ years of living under all the exigencies of a Dutch land, sea, and air blockade, the Indonesian people are not only anti-Japanese and anti-Communist, but are also and very understandably anti-Dutch.

As for the right of the United Nations to intervene in the Indonesian case, the Security Council of the United Nations has decided, by a majority vote, to permit the Republic of Indonesia to participate in the discussions of its case, as a de facto authority, and the Security Council has taken up this question because it considers the Dutch military action in Indonesia a threat to the peace of the world. The 19 nations which gathered at New Delhi last January also regard the Dutch attack as a threat to international peace. It is certainly the responsibility of the United Nations and not that of one member nation numbering less than 10,000,000 people, to determine what is and what is not a threat to the peace of the world.

Mr. Wehle's contention that the Federalists are anxious to dissociate themselves from the Republic, looks most peculiar in view of the fact that the governments of the three largest states outside of the Republic resigned in protest against the Dutch military attack on the Republic last December. The Dutch, by preventing any political negotiations from being carried on after the agreements were signed aboard the *Renville*, also prevented the setting up of the United States of Indonesia, although the Republic was anxious to have that government established through the holding of a plebiscite in the disputed areas, as provided for in the *Renville* agreements.

Mr. Wehle has quoted from the articles of the United Nations Charter, I quote from its preamble

(a) to practice tolerance and live together in peace with one another as good neighbors, and

(b) to unite our strength to maintain international peace and security, and

(c) to insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

(d) to employ international machinery for the promotion of the economic and social advancement of all peoples.

The Dutch have failed singularly to live up to these noble principles of the United Nations Charter.

J. J. SINGH,
President, India League of America.
NEW YORK, *April 20, 1949.*

Labor Legislation

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram directed to the President of the United States by A. F. Whitney, president of the Brotherhood of Railroad Trainmen, regarding the labor legislation pending in the House of Representatives.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

The PRESIDENT,
The White House, Washington, D. C.:

The morning press announces reported compromise labor bill drafted by some Democratic leaders of the House. The administration's labor bill has the endorsement of the committees in the Senate and House as well as of labor and liberals, and the proposed compromise is definitely a surrender to the demands of the Republicans and big business. No doubt the proposed surrender was actuated by fear, and I predict that if some of the Democratic leaders disregard the mandate of the people of November 2, 1948, by compromising with reactionaries on the labor bill it will definitely weaken the party and will thrust upon labor an obnoxious law under which it may chafe for years to come. It appears that the lines in Congress are closely drawn between Representatives who are fighting for democracy and on the other hand Representatives who are fighting in the interests of big business. We command the firm position that you have taken throughout in upholding the voice of the people and demanding that the Taft-Hartley law be repealed. The leaders of the Democratic Party must carry out their pledges to the people by standing steadfastly by the administration's bill with no compromise with the interests that would destroy us.

A. F. WHITNEY,
President of the Brotherhood of Railroad Trainmen.

The Marshall Plan

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. REED of New York. Mr. Speaker, the effect of the Marshall plan has now struck at the heart of many of our industries, and the ultimate devastating effect on the employees of our industries no man can foretell. The preliminary effect in some parts of my congressional district is already ghastly. I plead not guilty of casting my vote to throw the people, I have the honor to represent, out of employment. If I had yielded to the propaganda of the internationalists and the interventionists in their raid upon our Treasury there would be little that I could say at the present time to justify my opposition to the Marshall plan.

There has recently been introduced in Congress an ITO—International Trade Organization—which if adopted either as legislation or as a treaty will make the approaching disaster complete. The effect is bound to head this country for a deficit and thus there will be a return to deficit financing. It is time that every person interested in the preservation of our economic system and the retention of our liberties give heed to the trend of the times and in his or her capacity forget emotionalism and use their objective faculties in promoting sound fundamental principles in all phases of our governmental affairs.

An editorial has just appeared in the Jamestown (N. Y.) Shopping Guide under date of May 5, 1949, which I am inserting in the RECORD as worthy of the careful reading of those who realize the importance of protecting the employer, the employees, and the public from the

foreign raids upon our markets and resources.

THE MARSHALL PLAN PAYS OFF IN DEPRESSION AND UNEMPLOYMENT

Two thousand jobless Jamestown textile workers now know that the Marshall plan works. Washed out of jobs by a flood of cheap foreign-made textiles, these workers are a part of the great parade of America's unemployed who lost their jobs because their employers could not compete with the sweatshops financed in Europe by our taxpayers' money, and imported into the United States to create dollars abroad.

Thousands of watchmakers have lost their jobs, along with motorcar workmen, because the cheaply made, inferior foreign product flooded our markets to snuff out the superior product made here. By doling out bigger and bigger give-aways to foreign producers, what is today taking place in unemployment is but a mere shadow of what we may expect in the next year.

A year ago, many businessmen and manufacturers were asking Congress to quickly pass the multibillion dollar give-away plan. Any person who questioned the wisdom of this was quickly branded as Communist. Americans were not supposed to think, but follow like sheep.

Along with certain farmers, they thought this a fine place to dump their surplus at a nice profit, even overlooking the fact that they were also taxpayers, and obliged to pay $125 a head to put over this jack pot.

Today, with factories closed, warehouses brimful of unsold goods, and taxes mounting for bigger and bigger world give-aways, a few labor leaders and manufacturers have caught onto the idea behind this plan to create world socialism.

Unfortunately, there is not sufficient demand in Europe for the goods which are being produced in excessive quantities and the chances are that they will have to be sold in the United States. Thereby they will have the unexpected effect of increasing unemployment in this country.

These facts come out of a document which French Foreign Minister Schuman presented to Secretary of State Acheson. Because of its explosive content the document still is being kept top secret.

French perfume, Belgian lace, and Italian, French, and Belgian textile industries, which had a place of their own in the world's prewar economy, now are back to what they used to be before 1939.

Lyons and Milan are producing fine fabrics, used principally for luxury purposes, and Bruges and Brussels are in full swing turning out lace and similar commodities. French vineyards can provide the world with excellent wines, champagnes, and brandies.

Before the war a large part of the production of these goods was consumed in Europe, but now financial and currency crises in those countries prevent former consumers from purchasing them.

French and Italian economists went to London to discuss their problems of overproduction, which within a few months will cause a scale of unemployment which will play into the hands of Communist agitators.

Unfortunately, they found little sympathetic response from the British Government and particularly from Cripps, the British economic dictator.

They urged the British to relax their austerity program and accept some of their luxury goods. They expressed willingness to accept in exchange some of the heavier goods including whisky, which normally has only a limited market in continental Europe.

Not only was Cripps unwilling to accept luxury products from the Continent, the French say, but the British Government even placed obstacles in the way of exports of butter and fresh vegetables, of which there is a superabundance in France today.

It appears that the harshness and predatory policies of the Nazi occupation forces did not seriously deplete Normandy's stock of cattle, and today their number exceeds that of 1938. But even now much of the dairy production is wasted, because the quantities available exceed the demand by far and Britain keeps only a crack of its import door open.

The French argument that the ERP agreements provided specifically for the absorption of overproduction had no effect on the stubborn British economic dictator. When the British accepted the American dole, they promised with such honor as they possess, to accept the surplus goods of any other ERP country. But going back on this, along with repayment of debts to United States, jarred not a man of the Cripps stripe.

Add to these facts the recent tax reductions in beggar countries we keep on the dole, whose politicians tell their people that their socialism is superior to our free enterprise, the fact that half our foreign gifts go to Russia, to further build up that menace to world peace, and you have a picture of what these fantastic deals are doing and will continue to do in the days ahead.

A few days ago, the Reds took over China, equipped with American guns. The $5,000,000,000 of our wealth doled out to that unfortunate land is now safe in the hands of Stalin's barbarians.

Our military experts advise the Reds could sweep across Europe to the Atlantic in 30 days. And we do not even recognize the only country in Europe which has booted out the Communists. Isn't time running out on the promising planners, whose bungling brought about the present crisis?

European countries are preparing to dump their surplus production on the United States. Britain is expected to offer the American people whisky and leather goods at far lower prices.

The reason this program has not yet been adopted is that American tariffs are still high. By summer we must expect an avalanche of luxury goods in this country, manufactured by the Europeans. Prices may be cut sharply.

From the point of view of the American purchaser who is accustomed to luxury goods this may be good news. But American economists frown at the idea of an influx of cheap foreign goods into the United States at this time.

They know what has been done to the American watch industry by cheap foreign labor.

In New England and some Southern States mills are slowing down considerably. Distillers are disturbed by competition of Scotch whisky and French brandies at a price lower than the cheapest American product. Growers in California, New York, and Ohio will worry when they hear that French and Italian wines and champagnes will be offered in the American market at prices with which American producers will have difficulty competing.

The legislators who approved ERP were assured at that time that there was no serious risk of European dumping in the American market, since it was provided in the agreement that the signatories would absorb the overproduction of each other.

Only a limited market is provided in Europe itself. South America is able to use only a small part of Europe's output and Asia provides no outlet at all. In the days before the war luxury goods had a fair market in some parts of China, Singapore, and India. These now are completely closed.

The only present outlet for Europe's goods is the United States, which will have to absorb more than it did before the war if it is to avert an economic crisis in Europe. This comes at a time when we are confronted with an industrial and economic recession and heavier taxes than before.

After we have provided Europe with the means to stage a limited economic comeback, we shall have to consume the goods which we have helped Europe produce, at the expense of American labor.

The suggestion is made in Washington that planners talk frankly to the British and warn them that they must live up to the agreement which provides for unhampered exchange of goods among the nations which benefit from ERP.

The British Socialist Party worried about its latest set-backs and is intent on proceeding with even greater nationalization of some industries within the next 2 years. They have made an utter failure of every private industry they have taken over, so why now be discouraged about using American money to take over a few more industries?

Economic Dictator Cripps is determined to put through industrial nationalization, even if he realizes that the policies he must adopt toward that end might be hurtful to Britain's present allies. Meanwhile, the economy survey is being kept secret lest it influence adversely the American people and the policy of cooperation with western Europe.

BLOWING THE WHISTLE

The House passed the deficiency bill without challenging the deletion by the Appropriations Committee of funds to keep the Freedom Train running around the country another year. The train is a traveling museum of documents bearing on the origins and growth of American liberty, with some extraneous material relating to frauds put over on the unsuspecting public in the name of peace and security.

Consciously or not, the House has done the right thing in bringing the Freedom Train to a stop. In voting $25,500,000,000 within the week and $32,500,000,000 to carry out the crazy plans of the spenders, the House has made a terrific effort to bring American freedom itself to a stop. It is silly to talk about running propaganda caravans around the country to tell Americans they have freedom when Congress is taking the freedom away from them.

No citizen has freedom any longer to do as he will with his earnings. When he collects his pay check, he finds the politicians got there before him. If he saves anything, the administration takes it away from him in quarterly installments. It has mortgaged the future of his children for generations with an enormous debt.

Total taxes—local, State, and Federal—already amount to 37 percent of the total spendable income of all Americans. The impending increase of the spending policy will hoist the tax take to over 40 percent.

Freedom? What freedom is there for provident citizens to celebrate when the politicians pass out price-supported bread and send around its traveling circuses?

WORSHIPPING BAAL

When Alger Hiss (now under indictment by a Federal grand jury for perjury in the notorious spy case) was writing UN Charter in keeping with the mentality and morality of the men he represented, as an appeasement to the barbaric Russians, he kept God out of the Charter. Since then, no prayer has been uttered in its Council.

Now, four long years later UN, conscious of criticism that its charter, the declaration of human rights, and all other of its warrants or prounciamentos never mention or appeal to God, has decided to pay its first official act of deference to the Supreme Being.

In a remote upper room in the $65,000,000 headquarters, now being erected at our expense, in New York, there will be a little prayer room into which the bold politicians hope to crowd God.

Not to give offense to such godless as the Russians or to non-Christians, it is decreed that the prayer chamber be built in a sequestered area of the six-block project.

Originally the plan was secret from the Russians, if not Providence. The design calls for a bare room of Spartan simplicity which will do violence to no man's faith.

People of many faiths were disappointed when no mention was made of God in the United Nations Charter, and many were

shocked to think that the formal exclusion of God from the councils of the UN was a concession to atheism which compounded deference to man with offense to divinity. They protested a situation in which minority membership, representing disbelief in God or espousal of strange gods, was permitted to prevail over majority membership representing traditional belief in a Being Supreme over the affairs of men.

Many persons may consider that the plan, by its very evasiveness and restraint, still carries a certain element of irreverence to Divine Providence.

On the record of the UN in defense of colonial exploitation and in pursuit of international profit-grabbing, the appropriate image would be either Mammon or the brass god Baal. They would be recognizable to most of the representatives, should they ever happen to wander into the chamber of meditation.

COST OF WAR

Now while planners, to cover up past blunders, prepare for the next war—which somebody else will fight and pay for—it is wise to attempt to assess the cost of the last conflict. Nothing resembling an exact accounting can be made—there are too many imponderables and intangibles, which permit of only an informed guess. One of the most thoughtful efforts appears in Harper's magazine in an article by C. Hartley Grattan.

About 10,000,000 members of armed forces lost their lives. The last war was unique in that civilians suffered a heavier mortality than did men in uniform. The casualties from bombing; the planned extermination of whole categories of civilians; the terrible death rate among slave laborers; the losses in underground movements—these and other causes probably were responsible for 30,000,000 deaths. Thus, the total human cost of the war was 40,000,000.

The most obvious and easily unearthed cost is the money actually spent for military purposes by victor and vanquished. This is recorded in national budgets. It came to more than a trillion dollars, $1,117,000,000,000.

Factories, power plants, transportation systems and whole industrial regions were razed on a wholesale scale. Both sides concentrated on attacking dwelling areas—people who have no place to live especially in severe weather are of small value as workers. This loss is estimated at $2,234,000,000,000 (over two trillion).

The depletion of natural resources, the disorganization of economic systems, the value of labor and material seized and carted off by invaders and so on adds up to $650,000,000,000. Adding all the costs up, we have a final, incredible figure of $4,000,000,000,000. And this leaves out the moral cost of war, which is beyond statistics.

We lost 396,637 in dead in the last Global War, plus unknown thousands of permanently disabled, mentally ill, spiritually wounded. To think we can still tolerate in office men who prepare for the next war!

The Plight of Finland

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a very interesting article from the Washington Star regarding the plight of the Republic of Finland. Finland, the only World War I country who has never defaulted on her debt, is making a gallant fight to rebuild itself, and deserves the complete sympathy and assistance of all of us. I hope that you will all take the opportunity to read this article in full.

FINLAND, STIFLED BY YALTA CURBS, LOOKING TO UNITED STATES FOR RELIEF

(By Jessie Fant Evans)

The plight of the brave, freedom-loving peoples of northern Finland, particularly among scientific and professional groups, is more desperate than elsewhere in western Europe. This is vouched for by Mrs. K. Hilding Beij of 3428 Porter Street NW., a leader in District Red Cross circles.

Fay Pierce Beij, daughter of the late Dr. Ulysses Grant Baker Pierce, pastor for 42 years of All Souls' Church, Unitarian, accompanied her husband to the recent International Union of Geodesy and Geophysics in Oslo, Norway. They traveled extensively and because her husband speaks Swedish fluently, had exceptional opportunities to learn first-hand the condition of Finland's white-collar classes. (Finland once belonged to Sweden and most of the older Finns speak Swedish as well as Russian.)

"It is difficult for us to realize that by the terms of the Yalta Conference a sixth of Finland was transferred to Russia, and what remains has little good farming land," Mrs. Beij said. "All of the present Finland is artificially drained to conserve water, and it is incredible the amount of back-breaking labor required for agriculture. Even so, the people are making a desperate effort to keep abreast of scientific progress in their farming.

"With practically all of their modern farming machinery surrendered to the Russians, the Finns are reduced in many instances to primitive-farming methods."

Forty percent of all the money they make goes to the Russians for reparations, so does the same percentage of their milk production, which is accurately measured. All furs go to Russia.

One-fourth of their income is collected in taxes and they cannot make purchases out of the country, not even to subscribe to a scientific magazine or any other educational type of publication.

ONE IN TWENTY-FIVE CHILDREN ORPHANED

One child out of every 25 is a war orphan and one person out of every nine is a displaced person. Since Finland's principal power plants were in the portion conceded to Russia by the Yalta Conference, the use of both water and electricity is drastically curtailed. Even the bathtub fixtures had been removed in the Kalus-Kirki, principal hotel in Helsinki, which was their headquarters. Spoilage of food in the cities is a problem because of insufficient refrigeration. Telephoning is distinctly limited and regulated, in some places to the morning hours, in others to specified afternoon schedules.

"Yet with all of the regimentation to which the Finnish people must submit, it seems impossible to bend or to break their spirit of independence, or their grim, courageous spirit of humor," Mrs. Beij said. One of their small coins is an exemplification of this. It shows a naked fisherman drawing in a seine by a rope. Its popular meaning is that, even if he has nothing to wear after paying his reparations, there is still a rope to which he can cling.

The admiration of the Finnish people for Americans is genuine. The slogan which they believe applies to all of us is, "Late to bed, early to rise, work like blazes, and advertise."

GIFT PACKAGES GETTING THROUGH

Bright spots in their drab, poverty-stricken existence are the arrival of packages of food and clothing from friends in the United States.

"They are getting through," Mrs. Beij stressed. "Not one of ours has failed to be acknowledged by a grateful recipient with sometimes almost heart-breaking comments upon the utilization of every scrap, even the paper and cord around the boxes. The halter on a milk-giving goat outside the home of a Finnish scientist near one of the agricultural experiment stations last summer was fashioned of bits of twine saved from the United States of America parcels."

Shoes in both city and country districts either have wooden soles or are fashioned of birch bark after the fashion of moccasins. Since few people have had new clothes since 1939, the garments of many are threadbare and an overlay of patch upon patch. Coffee is $10 a pound. Soap is all of the ersatz variety. Ironing is done without heat by means of mangles with heavy, smooth birch rollers filled with stones and so heavy it takes two persons to manipulate them. Yet with all the need, Dr. and Mrs. Beij did not see a beggar in all Finland.

AN EXTRACT FROM A LETTER

This extract from a letter dated April 2 is, they believe, its own plea from a generous response to the drive to be made this month for packages to the Finns:

"It is comforting to think that in some parts of the world it is possible to live in security and without fear or wavering as to the long, safe perspectives ahead."

Fay Pierce Beij's interest in humanitarian service goes back to her student days at the George Washington University in 1917. (She is an A. B. and M. A. from George Washington.)

With World War I under way, Admiral Stockton, president of the university, asked her as a member of its staff in nursing and first aid in the medical school, to represent the institution on Mrs. Larz Anderson's refreshment corps at Union Station, which inaugurated Red Cross canteen work here.

Active in recruitment for the regional blood center here, she and her husband were among the first blood donors. Chairman of the Red Cross First Aid Corps here, she is the leader of one of its four training squads, in addition to her service as vice president for safety services for the Red Cross, which include first aid, accident prevention, and water safety.

Her telephone number is Emerson 5120 and she will be glad to answer inquiries as to how help may be extended to the Finnish people.

Mr. Beij is director of the hydraulic laboratory in the United States Bureau of Standards.

KFI Frost Warnings

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by radio station KFI of Los Angeles indicating the high value of its frost-warning service to the public and showing clearly how this great service to the people of the Southwest is performed at a considerable sacrifice of revenues to the station itself. The statement is as follows:

KFI FROST WARNINGS

A new chapter in the story of KFI, Los Angeles' continuing service to the Pacific Southwest agricultural industry: The frost warnings.

For many years KFI, Los Angeles' 50,000 watts on a clear channel, has been serving the $600,000,000 southern California agricultural industry, plus the multimillion-dollar agricultural industry in 70 counties in 6 other States.

One of KFI's unique services has been the nightly frost warnings—for 8 years a fixture in the middle of KFI's evening schedule.

KFI is the only station that can perform this vital service to the fruit and vegetable growers of the Pacific Southwest because KFI is the only station with sufficient power on a clear channel to serve all the growers and ranchers. No other single station—or combination of existing stations—could reach as much of the agricultural industry as KFI's 50,000 watts on 640 kilocycles. It is perhaps not modest—but, nevertheless, true—that KFI is the only southern California station willing to make the sacrifices year after year that this vital public service entails:

(1) Paying the cost of the line charges and other extra costs resulting from this service.

(2) Rebating to advertisers for the time taken by the frost warnings.

In 1948 the most vital chapter in the 8-year history of the frost warnings was unfolded.

KFI's frost warnings became a cause celebre among the radio listeners of the Pacific Southwest. This is the story:

On November 13, KFI was advised by the National Broadcasting Co. that Liggett & Myers Tobacco Co., sponsors of the Chesterfield Supper Club, would not permit the interruption of its program by the frost warnings this year.

KFI was asked to move the frost warnings out of the 9 p. m. California daylight-time period into some other time.

This KFI knew was impossible because:

1. Floyd Young's nightly frost warnings are timed to permit maximum accuracy by the forecaster and maximum activity by the growers (who must arrange for firing huge groves in a few hours).

2. After 8 years the growers had learned to expect the frost warnings at a given time—8 p. m. standard time or 9 p. m. daylight time. Many growers would miss this vital service if it were scheduled at another time.

Liggett & Myers would accept none of the alternatives proposed by KFI. KFI made every effort to reconcile the difference with Liggett & Myers, but eventually the choice was reduced to public service versus the advertiser. KFI chose public service and instructed the network to accept immediate cancellation from the sponsor. The cancellation became effective with the broadcast of November 22.

To explain to its listeners who would be tuning in to hear the Chesterfield Supper Club, KFI made the following statement immediately before the frost warning broadcast of November 22:

"Ladies and gentlemen, we earnestly request your careful attention to the following vitally important message from the management of KFI.

"This is the eighth consecutive year in which KFI has broadcast during the winter months the nightly frost warnings, an invaluable public service to the Pacific Southwest's $200,000,000-a-year citrus and agricultural industry.

"In all this time KFI has not asked for listener reaction to this service. We do so now. We should like all of you who hear these nightly frost warnings to write to KFI. A penny post card will do. We have, of course, received much evidence from many sources that these frost warnings help save millions of dollars annually in southern California and far western agricultural crops. But to bring them to ranchers and growers, we have perhaps inconvenienced metropolitan listeners by forcing them to forego from 1 to 5 minutes of radio entertainment.

"We now ask these metropolitan residents, and other listeners with no direct interest in agriculture, are you willing to have us continue to break into your radio entertainment in order to provide this brief but highly valuable service to the richest agricultural area in the entire Nation? KFI, by virtue of its clear channel and 50,000 watts of power, is the only station which can reach all the ranchers and growers in the area. And this hour—9 o'clock California daylight time, which is 8 o'clock standard time—has been determined over a period of years by the grower as the most desirable time to broadcast the warnings. But even if this were not so, and the frost warnings were broadcast at some other hour, they would still cut into the entertainment of some listeners.

"Circumstances have forced us to make a decision—either we discontinue the frost warnings, or we retain them at the expense of dropping from our schedule the Chesterfield Supper Club which has been heard for many years in this segment of time. We ask that you consider carefully these factors: On the one hand, a high-caliber 15-minute musical feature; on the other, immeasurable assistance in the successful fruition and assured harvesting of $200,000,000 worth of the Nation's food products.

"In the opinion of KFI, there is but one choice—the sacrifice of entertainment for service. However, we feel that it is only fair that our listeners be given the chance to either sustain or veto this choice. In the meantime the Chesterfield Supper Club will not be heard.

"Please let us have your opinion, in a letter or on a penny postcard. Please do not telephone. This is our question to both rural listeners and metropolitan listeners: Are you for, or against, the continuation of the nightly citrus industry frost warnings? A penny postcard will do. Address KFI, Los Angeles 54. Thank you."

This single announcement brought one of the greatest floods of mail in the 26-year history of KFI: More than 22,000 letters and wires.

Though more than 50 percent of the letters came from cities, less than one-half of 1 percent recommended dropping the frost warnings. Following is a tabulation of the origin of the mail:

Tabulation of origin of frost-warning mail, totaling 19,796; 2,340 additional affirmative letters were received after following chart was made, bringing the grand total to 22,126:

County classification shows:

Los Angeles	11,611
San Bernardino	2,432
Riverside	2,181
Orange	1,685
San Diego	936
Ventura	572
Tulare	137
Santa Barbara	94
Kern	21
Imperial	20
San Luis Obispo	15
Inyo	9
Placer	8
Sonoma	7
Butte	6
Contra Costa	6
Santa Clara	5
Solano	4
Monterey	4
Tehama	4
Sacramento	4
Alameda	3
San Joaquin, Siskiyou, Lake, and Santa Cruz (each)	2
Del Norte, Kings, Mendocino, Marin, Mono, Nevada, Eldorado, Shasta, San Francisco, Stanislaus, Trinity, Tuolumne, and Yuba (each)	1
Total	19,796

Cities responding in greatest number were:

Los Angeles	3,671
Riverside	1,176
Pomona	708
Long Beach	667
Pasadena	626
Redlands	590
Santa Ana	422
San Bernardino	411
Ontario	383
Covina	352
La Verne	332
Anaheim	320
Burbank	296
Whittier	286
Glendale	281

Only 115 letters were received expressing a preference for Chesterfield Supper Club.

(Press comment was unanimous in favor of KFI's decision to continue the frost warnings. Some of it follows:)

[From the Billboard of November 27, 1948]

FROST WARNING ON KFI CHILLS "SUPPER CLUB"

HOLLYWOOD, November 20.—Chesterfield's Supper Club was canceled over KFI, local National Broadcasting Co. (NBC) affiliate, effective Monday (22), following station's refusal to shift its nightly frost warning broadcasts out of Chesterfield's current 9 p. m., p. d. s. t. slot. Bankroller insisted that KFI discontinue practice of cutting into the first several minutes of Chesterfield's airer to carry weather data, and canceled only after combined negotiations of NBC and KFI failed to settle the matter.

KFI's stand was based on the importance of nightly frost warnings to the $600,000,000 California agricultural industry, contending that surveys have shown the 9 p. m. slot to be the best airing time (8 p. s. t.) for the long established public service feature. Station offered to record Supper Club for later airing with no charge to sponsor, while continuing to carry show in present slot as well. Bankroller nixed the offer, contending that with revised gimmicks now used on club loss of opening minutes would kill show's value entirely.

KFI will continue frost airing as usual and peddle the remaining portion of the 15-minute seg to local bankrollers. Chesterfield, meanwhile, was searching for a new local outlet to take the airer. It was believed a deal would be made either with a rival net or possibly a local indie.

[From the Beverly Post of December 2, 1948]

MOVING IN—SERVICE BEFORE PROFIT

Radio station KFI of Los Angeles deserves a vote of confidence and the loyal support of every citizen of California for the big, broad stand they have taken in the recent controversy between the makers of Chesterfield cigarettes and the station's insistence that it continue to broadcast the nightly frost warnings to the citrus growers in this State.

This all comes about in a very funny manner: Each night during that season of the year when frost is liable to attack the huge orchard areas of this State, not just locally here in southern California but as far north as Fresno, KFI in cooperation with the fruit frost warning service has been broadcasting the possible weather conditions and the chances of frost hitting the many sections interested. This service gives the growers advance notice that it might be necessary for them to smudge to protect this greatest of State industries, the orange groves, against the possible loss of the entire crop due to frost.

Now, it also seems that exactly at that same hour each night the makers of Chesterfield cigarettes have a coast-to-coast broadcast known as the Chesterfield Supper Club, in which several well-known stars are fea-

tured. Comes a demand from the agency representing the makers of Chesterfield cigarettes demanding that this minute or two break into the first part of their program be discontinued and, in a very positive manner advising KFI that unless this service to the people of California is discontinued they would have to cancel this paid program.

KFI believing that service to the people of California, particularly the orange growers, is of more importance than the profit they made from their paid radio program, advised the agency that that was about all they could do because the fruit frost warnings were going to be continued.

So, no more Perry Como and the Chesterfield Supper Club but the service to the people continues.

Upon receipt of notice that the supper club would be canceled, KFI went on the air to the people asking their reaction on this broadcast; they asked that letters be written the station expressing their reaction to the action they had taken. As of this writing, the station has made three appeals for letters and have received 12,000 answers of which they have opened and read 4,000. Over half of the letters opened came from people who are not in the fruit-growing business and live in the cities. Out of that 4,000 there were only 10 letters decrying the action and stating a preference for music as against frost warnings.

During the discussion which prefaced this cancelation of the program a representative of the agency is reported to have stated that they were not interested in selling cigarettes to the country folks but were slanting all of their program advertising toward the folks. who live in the city. That's a silly statement on the face of it because if this person who seemingly had the authority to make such statements really knew California, he would have known that prosperity and success for the orange growers of this State means good business and success for almost every business in the metropolitan section of the State. When the farmers are broke, so are the city folks, who might go back to rolling their own at a lot less cost.

Californians should resent the attitude of the makers of Chesterfield cigarettes and their advertising agency against the better interests of the prosperity of one of the principal industries of this State; they should show their resentment in their cigarette purchases, or the lack of purchase, of their brand.

Again I say, congratulations to radio station KFI, its management, and its policy makers for placing the prosperity of California over and above the profit from a single paid program. Service before profit will win in the long run or I don't know Californians.

Hindsight strongly underscored the importance of KFI's decision because southern California's 1948–49 winter is already established as the coldest in more than 50 years.

Citrus and vegetable losses—despite heavy firing by growers—are already many millions of dollars.

What they would have been without KFI's nightly frost warnings no one can even guess.

Our Country Is Being Taken Over by Aliens

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. WHITE of Idaho. Mr. Speaker, there is submitted herewith for consideration of my colleagues a condensation of a recent article on the way aliens are being admitted to this country. This article is by the Senator from Mississippi [Mr. EASTLAND].

At present, the port of New York has records of 28,000 visitors who failed to depart and have not been located; 17,000 transits (persons supposed to be merely passing through the United States on their way to another country) who are still here; and 1,200 students who apparently have decided to invite themselves for permanent residence. That is 47,000 persons on record in the New York district alone. The total number in the country is estimated at 100,000. This is more than usually come in lawfully as quota immigrants in a year.

This alarming situation can be explained only by an incredible lack of interest in halting the traffic on the part of our Government. It cannot be charged to lower-level officials who, all things considered, do an excellent job. The responsibility must be sought at the top political level, which, for some reason, has been willing to close its eyes and stretch the immigration laws. At one time during the war, when our consuls in Europe were working their arms off night and day stamping visas for everybody, our Immigration Commissioner was hurried to Europe with 200 extra clerks in order to speed up the parade. An Assistant Secretary of State says that perhaps 300,000 aliens got visas in this way. As the problem grew worse and while we were rushing hundreds of clerks to Europe to speed up the flood, over 500 men were let out of the force here.

A special priority was given to "professors" and their families. From 1941 to 1945—4 years—we admitted 130 professors and their families from Europe. But in the last 6 months of 1947 alone we admitted 612 professors, wives and children. And 128 of these came from Poland, 17 from Rumania, and 10 from the Soviet Union.

Congressmen have charged that "anyone can get into the United States." So-called experts of all sorts come in as attachés, secretaries, clerks, or servants of innumerable missions and special foreign committees. The country swarms with unscreened, uninvited, and loosely admitted aliens. The danger lurking in the situation is obvious.

Codification of United States Statutes

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. BRYSON. Mr. Speaker, the chairman of the Judiciary Committee, Congressman EMANUEL CELLER, of New York, designated me as chairman of a subcommittee consisting of ROBERT L. RAMSAY, West Virginia; BOYD TACKETT, Arkansas; EDWIN E. WILLIS, Louisiana; J. CALEB BOGGS, Delaware; and ANGIER L. GOODWIN, Massachusetts, to deal with the difficult problem of revising and recodifying the law. These gentlemen, with the aid of a small but efficient staff, have entered upon the work. Already progress has been made but there is much more to be done.

In the New York Herald Tribune, Sunday, May 1, 1949, an article appeared with reference to our work which I believe will be of public interest. Under unanimous consent I include in my remarks the said article.

UNITED STATUTES BEING CODIFIED FOR THE FIRST TIME SINCE 1873

WASHINGTON.—United States statutes are in a mess, and it's going to take years to straighten them out.

A congressional committee has been working intensively on the job since 1943. When it is done there will be a revised body of laws which a citizen can understand.

The laws were last revised in 1873, when the Forty-second Congress passed and President Grant signed a gigantic piece of legislation which at once repealed every previous general and permanent law and gave the country the so-called revised statutes.

The task took 5 years, but law scholars say it would have been worth doing had it taken twice that long. The result was an indexed, 1-volume, 70-title publication in which all laws were arranged by subject matter, with superseded and repealed laws left out.

Up to that time there was only one way for lawyers, Congressmen and the courts to track down the exact law on any given topic. That was to start at the end of the immense, 17-volume Statutes-at-Large and work back, law by law, to Public Law No. 1, First Congress.

Statutes-at-Large are a chronological compilation of all laws and concurrent resolutions of Congress. A law passes Congress, goes to the enrolling room, thence to the President, thence to the end of the Statutes-at-Large.

Publication of the revised statutes in 1873 made it easy to determine the existing status of any given law by locating the right title, checking the index and looking it up. But since 1873 the Government has been passing new laws at the rate of several hundred every Congress. They can all be found in the Statutes-at-Large, one after the other—in 44 volumes averaging well over 1,000 pages each.

By 1926 the job of law-locating had become so tough again that Congress authorized a complete codification by subject matter. This was not a revision. The law establishing the code stated plainly it was only "prima facie evidence" of the law (not the law itself). The law itself was and is the Statutes-at-Large. Although law offices, Congress, the courts, and all other constant users of the law do their work with the United States Code, not the Statutes-at-Large, the latter takes precedence in case of a discrepancy.

In the latest job of revision eight titles have been perfected by a subcommittee headed by Representative JOSEPH R. BRYSON, Democrat, of South Carolina, of the House Judiciary Committee, and passed into law. All previous law, on which those eight titles are based, have been repealed. Included in the eight are crimes, copyrights, and judicial procedure.

A Mother's Day Message

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. PHILLIPS of California. Mr. Speaker, Sunday will be Mother's Day—a day of national recognition and affection. I have had the pleasure of knowing Rev. C. E. B. Ward for many years, and I have admired and respected his steady, patient, self-sacrificing work to

preserve the American home. I know his family and I recognize the way in which they, too, have given their time and efforts to support this work. Under leave to extend my remarks in the Appendix, I have asked permission to include a Mother's Day message which Dr. Ward wrote recently and sent me from the New York headquarters of the League for the American Home in Carnegie Hall. The message follows:

MOTHERS, FATHERS

Thank God for your children. Thank God that the first responsibility for their manners, sound character, good citizenship, and spiritual welfare is yours. The influences you throw around them in early childhood, when they are wholly or chiefly under your care, determine their future. Their destiny is in your hands. No influences outside your home can afterward permanently change what you have done for them, whether it be for good or ill.

It is therefore up to you to be equipped to lay a good foundation—one of which you can be proud, and on which other persons and agencies can build.

In addition to assuring healthy bodies and keen minds you are obligated to place around them a positive spiritual atmosphere with definite religious instruction. "These words shalt thou teach diligently unto thy children." They have the same capacity for the spiritual as for the physical. Religion taught and practiced in the home guarantees faith and sound character in the child—and successful churches for the future.

A Chicago church tripled its Sabbath morning attendance when 90 percent of its members began observing brief exercises of Bible reading and prayer daily in their homes. All members of the family—baby in mother's arms, the little tots toddling around the room, the older boys and girls trying to sit still in their chairs—all gathered together around the table or in the living room while father opened the big book and read. Then father prayed for every member of the family by name. What happened? Instead of going only to the movies, parks, and ball games on Sundays they were conditioned toward "the church" so that the pastor preached not to an occasionally well filled house Sunday morning but to a second church full and then a third—to three packed houses every Sunday. He denies having become three times as eloquent, but for this growth in church attendance he commends the 90 percent of the parents of his 3,300 membership who have assumed the spiritual responsibility for their own children in their homes.

A Washington politican said, "I'm not surprised that my son wishes to join the church. Ever since he was 6 weeks old I have knelt by his bed and prayed for him. I have been late to political meetings and absent from others, but not 1 day in 18 years have I failed to pray for my son." Thousands of American boys and girls would not be in jails or drifting into crime if parents spent more time praying for them. A Los Angeles mother-grandmother told me she prays 4 hours daily for her four children and four grandchildren. You would look far before finding as splendid a group of eight young people as I met after that Sunday morning service.

But children are also the material from which democracies are built. Home, the first and smallest democracy, is therefore the place to teach and begin building for democracy. "I don't understand why I must be directed" said a 17-year-old lad to his mother. His mother replied, "Unless you learn obedience in the home you are not likely to learn it in school, community, or state." Home laws broken usually lead to broken laws elsewhere. Teaching children in the home to be honest, to tell the truth, to keep clean thoughts, honor parents, respect elders and those in authority, and to serve God lays the foundation for good citizens. Good citizens do not break laws of home, school, State, or Nation.

Godly homes assure sound character, successful churches, and stable governments. Godly homes grow out of God's Word and prayer. Godly homes are the Nation's first line of defense.

Mothers and fathers, think it over.

Federal Old-Age Insurance

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a letter to the editor of the New York Times by George Buchan Robinson on Federal old-age insurance which appeared in the New York Times, May 2, 1949.

I believe the letter effectively disposes of an economic fallacy which unfortunately has had wide dissemination.

FEDERAL OLD-AGE INSURANCE—CLASSIFICATION AS TAX OF PAY-ROLL CONTRIBUTION DISPUTED

To the EDITOR OF THE NEW YORK TIMES:

Reporting, April 27, that ex-President Hoover had written to Chairman DOUGHTON of the Committee on Ways and Means on the subject of old-age and survivors insurance, the Times said:

"When benefits begin to exceed the payroll tax receipts, Mr. Hoover contended, the Government would have to redeem its I O U's from the trust fund and the money must come from the general taxpayer. He added:

" 'As those who have already paid the payroll deductions are also taxpayers, they will, to some extent be paying for their insurance twice over."

Mr. Hoover is mistaken. Those who have already paid the pay-roll deductions have been paying once for their insurance. When those same persons shall be taxed to pay Government bonds owned by the social-security fund, principal and interest, they will not be paying a second time for their insurance, as Mr. Hoover argues, but will be paying for debt service.

Mr. Hoover accordingly seems to be the victim of a certain accounting error: The treating of a debt service cost produced by the Government having borrowed, whether from the social-security fund or from others, as if it were instead a cost of old-age insurance produced by the fund's having lent to the Government (i. e., by old-age insurance reserve accumulation of Government bonds). This accounting error has plagued the debate on social security since 1935, although the record of the debate abounds with identifications of it.

Would Mr. Hoover contend, when banks, insurance companies, and Mr. Hoover himself receive interest on Government bonds, or receive the principal thereof when the bonds have matured, that the Government had taxed for the banks, the insurance companies, and Mr. Hoover? He would be incorrect if he should so contend.

TAX FOR DEBT SERVICE

When the owners of Government bonds receive the principal or the interest thereof from the Government they receive as creditors of the Government, and not as the payees of appropriations. When the Government pays bonds or interest it taxes for that purpose, i. e., for debt service, and not for any bond owners, be they banks, insurance companies, private investors, or old-age insurance. The Government will not tax to redeem its I O U's from the trust fund, but, if it redeems its bonds, will tax to redeem its bonds, whoever may own them. That tax, which will be a tax for debt service, should not be described as a tax for old-age insurance any more than another part of the same tax, which should pay bonds owned by Mr. Hoover, should be described as a tax for Mr. Hoover.

The Government is not supporting those who own Government bonds, including the banks and insurance companies, when it pays Government bonds. The Government, in those circumstances, is merely paying to its bond owners what it owes to them, for value paid; and the payments the Government makes are not costs of supporting the bond owners.

Mr. Hoover treated the cost of paying old-age insurance Government bonds, incorrectly, as a cost of old-age insurance. That cost is a cost of the debt service. Mr. Hoover, obviously, assumed that additional money must come from the general taxpayer if old-age insurance owns Government bonds, and that assumption is not acceptable.

The social-security fund—old-age insurance—costs and their origins must be understood if the plan is to have an enduring success.

GEORGE BUCHAN ROBINSON.
IRVINGTON-ON-HUDSON, N. Y., *April 28, 1949.*

The Gift of Freedom

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address which I shall deliver on Thursday, May 5, 1949, on WMEX, Boston, Mass.:

Ladies and gentlemen of the radio audience, the time has come for us to affirm our belief in the faith that is America.

We have problems in this country, small as compared with the problems of other countries, but problems none-the-less.

It is our way to face problems in the open rather than hide them under a rigid censorship.

Because of the freedom of debate in this country our difficulties are sometimes magnified beyond their true proportions.

The overwhelming good in our society is sometimes taken for granted and we fail to count our blessings.

This can be dangerous.

While all honest Americans, anxious to correct certain deficiencies, frankly attack these problems with the intent of correcting them, there are others who prefer to dwell on them and thereby create the false impression that our form of government and our free way of life are outdated and inefficient.

In certain parts of the world, people have been misled by this propaganda.

Even here in our own country there are a few who ignore our real accomplishments, and simply because we cannot build a utopia overnight, they are taken in by the false promises of communism, mere promises which conceal a deadly tyranny.

That is why I say that we must acknowledge the positive values in the United States, so that from these truths and these facts we shall be strengthened to tackle our problems constructively.

In line with this, the United States Department of Labor has issued a booklet titled "The Gift of Freedom," which I recommend to those who are of faint heart.

It is a well-documented report which dispels the myths of propaganda with hardheaded facts.

It is a study of the economic and social status of wage earners in the United States, and is living proof of how fortunate we really are.

I want to give you a few high lights of this report.

During the war we succeeded in raising our total economic production in spite of the fact that 13,000,000 men and women were diverted to the armed forces.

There were many prophets of gloom who said that the United States would suffer widespread unemployment at the end of the war as the country resumed a more normal way of life.

But in 1947 total civilian employment averaged over 58,000,000, as against the wartime peak of 54,500,000 in 1943 and the prewar volume of 47,500,000 in 1940.

Even today, with sharp unemployment in textiles and a few other industries, the national total of unemployment is but slightly above the normal percentage.

The increase in the labor force is more than the number which would have been expected on the basis of normal growth in population.

This is despite the fact that hundreds of thousands of war veterans are full-time students under a Government-aid program and are not now in the labor force.

Then there is the increasing number of women who are employed.

This has been brought about by changes in social customs, increased employment opportunites in urban communities and in modern economic life, elimination of many of the burdens of household activities, but probably most of all by the desire of women for an active life and for social, economic, as well as legal, independence.

In April 1948 there were 17,200,000 women in the American labor force, or about 31 percent of all women over 14 years of age.

The large and varied production in the United States has had its material basis in our natural resources.

These are extraordinary and extensive, but the existence of resources gives no assurance of their efficient use.

Other resources have been the resourcefulness and initiative of individuals and the spirit of group cooperation.

These trails arose from a mingling of peoples who came from nearly every country of the world to fashion in the United States a fresh beginning.

That experiment, far from perfect or ideal, has nevertheless been flexible and progressive.

It has embodied individual liberties, incentives, and initiative, but it has combined these with a great variety of group activities, public and private, for purposes discussed freely, adopted by agreement, and achieved with a minimum of compulsion.

Technological progress in various forms has resulted in substantial advances in productivity, as measured in terms of output per man-hour in recent decades.

In transportation, for instance, railroad workers in 1946 handled two and one-half times as much revenue traffic per hour of work as in 1916.

This increase in productivity has benefited workers to a remarkable extent.

For example, the average factory worker can now buy about twice as much as could a worker 30 years ago with his weekly wage at that time.

Thus, the gains of workers have been twofold—an increase in the amount of goods and services their wages will buy, representing a direct sharing of the fruits of rising productivity, and a reduction in hours of work, affording more leisure and a better opportunity to take part in community life.

In the year 1947 the average weekly earnings in all factory industries was $49.25, and is now somewhat higher.

In Seattle, Wash., the weekly pay of an office boy was $32.98. There is no comprehensive sickness insurance plan in the United States. Voluntary group action, however, has provided a substitute for an increasing proportion of the population.

On January 1, 1947, about 40,000,000 persons, or considerably more than 1 out of every 4 in population, were enrolled in organizations providing hospital service on a prepayment basis or were covered by insurance protection against the cost of that service, not only in hospitals but also in their homes and places of work.

The growth of voluntary group action is now extremely rapid.

The number of persons enrolled in approved hospital-service plans increased from 18,881,000 on January 1, 1946, to 24,250,000 on January 1, 1947.

Between 1909 and 1945, the capacity of hospitals which conformed to American Medical Association standards rose 313 percent as compared with an increase of 54 percent in population.

Since 1945, general hospital facilities and especially those for veterans have expanded rapidly.

The life expectancy at birth, for white males, rose from 48.2 years in 1900–02, to 59.1 years in 1929–31, with a further rise to 64.4 years in 1945.

Corresponding figures for white females show an increase in the same period from 51.1 to 69.5.

In the field of education we find that in the year 1947, those in the white age group 25–29 had completed on the average, 12.1 years of school.

Nonwhites in the same age category, had completed an average of 8.4.

More than 180,000,000 books and almost 300,000,000 pamphlets were published in 1939.

The reading of a daily newspaper is almost universal, and the home without a radio is a rarity.

In recent years the people of the United States have modified their traditional individualism by the adoption of a great variety of measures designed to safeguard the security of individuals and to give greater stability to the national economy.

These measures were adopted gradually, in accord with our custom of subjecting new changes in policies to the tests of Nationwide discussion and popular acceptance.

This program is still in the growing stage, consistent with democratic procedures.

Our efforts to reconcile security and stability with innovation and growth seem slow both to those who want full freedom for initiative and those who emphasize the need for protection and security.

The most important immediate cause of the adoption of programs for social security and economic stability was the depression of the early thirties which threw over 7,000,000 people out of work as well as many who were coming to working age by the increase of population.

The Social Security Act of 1935 was designed to prevent the recurrence of such a disaster.

By 1945, about 42,500,000 workers in private industry had wage credits under the unemployment insurance provisions of the Social Security Act.

About 45,700,000 had wage credits under the old-age and survivors insurance provisions.

These figures do not include railroad workers covered by special legislation, or Federal, State, and local public employees, most of whom are also protected, especially as to old-age and survivors insurance.

Since the war we have also witnessed an increase in private pension systems, negotiated between unions and employers.

Pending an extension of coverage and an increase of benefits under the old-age and survivors insurance program, public assistance measures are still required for aiding persons who are not as yet covered or sufficiently protected and who do not have additional savings or income.

Expenditures of this general nature in 1945 by Federal, State, and local Governments totaled about $2,364,000,000.

Advances in prices resulted in an increase in payments to needy persons.

Extensive additional assistance was available through such unofficial agencies as community welfare organizations supported by voluntary contributions.

But apart from these material safeguards and opportunities to which I have briefly referred there are the precious values of freedom whose worth we take for granted because we do not realize what it is to be without them.

I venture to say that if we could set down a group of Russians at a busy intersection in a city or on an American farm they would first be impressed by the bountiful stores, the dress, the motorcars, and the many other features of the high standard of living enjoyed by the average citizen of our country.

But eventually, the Russians would understand that basic freedoms alone make this possible.

The basic liberties of the American heritage were summarized in 1947 by the President's Committee on Civil Rights.

They are based on recognition of the importance of the individual; they include (1) the right to safety and security of the person; (2) the right to citizenship and its privileges; (3) the right to freedom of conscience and expression; and (4) the right to equality of opportunity.

The Committee's purpose was the strengthening of civil rights, and its emphasis was therefore on failures or shortcomings; but these, it was stated and I quote "should not be permitted to obscure the real measure of success."

The report pointed out that the rights of the individual must not interfere with the equal rights of others or with the welfare of the whole group.

Following closely upon these religious and political rights and equality before the law are liberty of choice of occupation and place of residence and freedom from compulsory labor.

If, to reverse the picture, some of our leftwingers could be given the opportunity of living in Russia for a year, their foggy ideas would come to grief under the harsh facts of Soviet slavery.

As Winston Churchill suggests, the purpose of the iron curtain is to keep the Russian people from learning the facts of life in the free world because Communist propaganda would fall apart when confronted by actualities.

In the United States as elsewhere, the selection of one's occupation, the picking of a job, and the choosing of a place of residence are necessarily influenced by family and community background, personal qualifications and ambitions, training, types of economic opportunity, and in wartime by national emergency.

There is this one great difference, however, which the Communists fear that their people may someday learn.

In the United States there are no laws that impair these rights and there are no administrative or police restrictions imposed either on occupational or job changes or on shifts in place of residence.

There is no compulsory labor, and anyone can shift from one occupation or industry to

another and from hired labor to self-employment or can combine self-employment and hired labor. Individuals are at liberty to move anywhere within the United States without a pass, or to leave the country or renounce their citizenship if they so desire.

As Americans we reserve the right to disagree while respecting that same right in others.

To meet the difficult problems of our times we know that the other fellow has ideas which sometimes clear up our own blind spots. We know that a free hearing on any question is the only way to get at all of the facts.

And by mutual concessions we arrive at those areas of understanding which eliminate the extremes of master and of slave.

The fatal flaw in the Communist system is that it will not give new ideas a chance. Everyone must follow the party line set forth by a few men who claim to be all-knowing.

This will lead as surely as night follows day, to sterility and death.

In the meantime we must not be caught napping by this evil as it runs its course or we might become engulfed by it and share its inevitable fate.

As responsible men and women—because there is no freedom without courageous thought and voluntary cooperation—it is necessary for us to measure each day by the new understanding we have gained from it.

Democracy is dynamic! By its faith and its works—coming from each one of the many individuals who make up our Nation—it is the life-spirit that is beholden to God.

In our own hands, as friends and neighbors and fellows in humanity, are these tools for progress if we but use them.

We have roots, yes, which are growing into the future.

Energized by this confident belief that there is no problem without a solution, our future, and that of the submerged millions who look to us for hopeful example, is squarely up to us.

United States Can Well Afford Health Plan

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Trainman News of April 30, 1949:

SOULE REPORT ANALYZES MEDICAL INSURANCE COSTS—UNITED STATES CAN WELL AFFORD HEALTH PLAN

How much will President Truman's national health insurance program cost the people and can the Nation afford such an ambitious undertaking?

Those are the questions Americans are asking as they weigh the pros and cons of the controversial measure introduced in Congress during the week. The issue, already widely discussed, will increasingly dominate radio and newspaper forums, street-corner and parlor debates as it progresses toward a decision by the lawmakers.

Although most Americans are for this vital part of the Fair Deal program, they are being bombarded with an abundance of American Medical Association propaganda against health insurance, which if permitted to go unchallenged, might seriously jeopardize the measure's chances for enactment.

AMA is spending millions of dollars to defeat compulsory health insurance and is peddling half-truths and smears as fast as its high-powered, highly paid publicists can grind it out.

A report out this week by the Committee on Research in Medical Economics and the Public Affairs Institute shows that the Nation can well afford the small additional cost of national health insurance.

The report, prepared by George Soule, widely known student and writer on economic matters, placed the gross cost of health insurance at $5,500,000,000 and net cost at $1,100,000,000.

Mr. Soule analyzed various estimates of the cost of national health insurance and concluded that the most reliable was one made by the Social Security Administration in 1945 which, revised for increased prices since that time, puts the cost at the $5,000,000,000 figure.

This estimate was based upon the premise that the present corps of doctors would provide about 25 percent more medical care under national health insurance than at present, by using full time the doctors, chiefly younger ones, whose time is not now fully occupied.

AMA FIGURES DISCOUNTED

Mr. Soule gave no serious study to recent AMA estimates that the plan might cost up to $18,000,000,000 a year. He dismissed such estimates with the brief statement that any such cost would mean an average income for doctors of about $80,000 a year.

"Since the number of doctors cannot be increased on short notice," he reported, "the cost of their services during the first year or two after application of the plan cannot be larger than that estimated by the Social Security Administration unless they are to be paid at higher rates than at present."

He also pointed out that hospital benefits are limited by the number of hospital beds available in each locality.

Revising the Social Security 1945 estimates to 1948 prices, Mr. Soule estimated the health insurance costs as follows: physicians' services, $2,459,000,000; hospital care, $1,804,000,000; dental care, $531,000,000; home nursing, $86,000,000; laboratory, medicines, appliances, $560,000,000, and research and education, $19,000,000.

Total cost would be $5,459,000,000 or a per capita annual cost of $37.39.

The actual cost of health insurance, Mr. Soule says, would not be that much, but only the difference between those figures and what we are now paying for such medical care.

"Just as the automobile buyer turns in his old car as part payment for his new one, the American people would thus 'exchange' medical service now received for a somewhat larger amount of service," the report says.

"The cost of the larger amount is estimated at $5,500,000,000. Since this is approximately 25 percent greater than the cost of services now paid for by the insured, the net money cost would be the difference. This would be 20 percent of $5,500,000,000 or $1,100,000,000 for 1 year.

"This cost arises, solely on account of the additional services which the insurance might immediately provide because it would enable people to pay who now cannot afford to do so."

WHAT FIGURE TO CONSIDER

This net cost of $1,100,000,000 amounts to less than one-half of 1 percent of the $257,800,000,000 a year Americans were spending in late 1948. This is the cost Americans must consider, the report emphasized, in deciding whether or not they want the benefits of national health insurance.

Mr. Soule estimated that in future years the cost of national health insurance might increase by about 35 percent as the number of doctors and hospitals was increased. But by the time this increase in personnel and facilities was accomplished national production would have increased even more, on the basis of past experience and estimates of the President's Economic Council, so that we would be devoting to additional medical care only one-tenth to one-twentieth of our increased production.

"This means," it was pointed out, "that, on the average, the people of the United States can probably have after 5 years (a) as high standard of living as they now enjoy, plus (b) more adequate medical service, plus (c) a gain of more than 9 percent in other goods and services."

Studying the economic costs of national health insurance, as contrasted with the dollar costs, Mr. Soule found:

"Health insurance would not take much manpower from any other pursuit at the outset because the additional service would be provided by the same personnel now employed. Therefore, any immediate available extra service would be provided without much extra manpower. It would constitute mainly a gain in the productivity of the working force in medicine. We could easily afford to divert the number of workers needed to give us adequate medical service later. In times of depression there would be no real cost because the increased medical expenditures would increase employment and production.

"The number of additional workers in the medical field probably will be 'more than counterbalanced by the numbers released from the production, transportation, and distribution of material goods.'

"Health insurance would tend toward stabilizing purchasing power among the mass of the people, and thus would contribute to stabilizing the economy."

DISEASE REDUCTION NOT INCLUDED

He pointed out that his analysis took no account of the possibility that national health insurance might reduce the total of disease and disability and thus pay for itself many times over. He said "Many millions of dollars are spent every year in paying the costs of disease which might have been prevented or lessened by diagnosis and treatment in early stages," and added that "an enormous number of man-hours of labor are lost to the Nation because of needless disability."

The Soule report was submitted to Congress by the Committee for the Nation's Health, which is leading the fight for President Truman's health program.

The Panama Railroad: A Historic and Epoch-Making Institution

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. THOMPSON. Mr. Speaker, for many months illuminating articles on various phases of the Panama Canal discussions have been published, but nothing, I believe, on one of the most vital factors in the construction and operation of the great Isthmian waterway, namely the Panama Railroad.

As that unique and greatly important rail system must, inevitably, be seriously affected by any canal modernization project, it is a matter of current interest

that the April 1949 issue of Railway Progress should carry a well-written and instructive story of the Panama Railroad enterprise, written by Arthur Stanley Riggs. A biographical note, as to the author, appended by the editor, is as follows:

Arthur Stanley Riggs (commander U. S. Naval Reserve, retired) has been a journalist, editor, historian, critic, sailor, naval officer, and the author of many books and magazine articles. He made his most recent trip to Panama in January.

Under leave accorded I am extending my remarks, with inclusion of this recent product of Commander Riggs' facile pen.

ADJUNCT TO THE CANAL—PANAMA RAILROAD

(By Arthur Stanley Riggs)

PRR doesn't always mean Pennsylvania Railroad, or anything like it. In this case it means Panama Railroad, shortest, quickest route from Atlantic to Pacific.

Three centuries ago, ships in the Pacific anchored in the open roadstead of Panama. Other ships in the Atlantic used the open bay at Chagres, where the Chagres River for ages has poured its floods into the ocean, with grim Fort San Lorenzo standing guard on a cliff half a mile or so away to the southeast. Nearly 50 miles of jungle, swamp, and mountain lay between the two seaports, with the mighty Chagres cutting the Isthmus in half. By leading the gold and emeralds of New Granada (now Colombia) and Peru on the back of slaves and donkeys, and marching them in long strings through swamp and jungle to the river town of Cruces, the Spaniards delivered their precious freight to the small vessels and boats that had made their tedious way from the Atlantic at Chagres up to Cruces with the products of Europe to exchange for the treasures of the Americas. From 7 to 10 days were required for the trip.

This natural route was no accident. Columbus had dreamed of finding a route to the east by sailing west. On his fourth voyage, in 1502, he almost found it through the Isthmus of Panama. Explored in 1527, it developed into a highway known as the river route. For centuries it served Spain as a golden artery. Incredible and indescribable events occurred on it, including the Welsh pirate Henry Morgan's capture of Fort San Lorenzo. With no enemy behind him, Morgan boldly led his field army of 1,500 cutthroats along the same water and land trails, to capture and sack the rich city of Panama on the Pacific in January of 1671.

A little more than a century ago, while railroads were still a novelty, one Mateo Klein organized a French company to span the Isthmus and reduce the time of transit from days to hours, the difficulties to relative comfort. In July 1847 the French promoters, having failed to do any work, also failed to pay 600,000 gold francs to the New Granadan Government, as provided in the agreement. Immediately three enterprising Americans, John Lloyd Stephens, William H. Aspinwall, and Henry Chauncey, paid the debt and took over the exclusive concession. They recognized not only the commercial importance of their move, but the historic significance of linking Atlantic and Pacific, and its profound effect upon politics, strategy, and diplomacy as well as business.

COMBINATION RIGHTS

In one important respect the new American company was freer than the original French one, for the concession gave the Americans the privilege of constructing an all-rail line, a combination of canalized river and rail, or a hard-surfaced highroad. That contract was the modest beginning of the Panama Railroad, the first and only American transcontinental line with one stockholder, operating entirely outside the United States, on ground of which we do not own one square inch.

No one in the United States Government apparently had much faith in the undertaking. The Aspinwall syndicate presented a petition for help to Congress, but nothing was done. Undaunted, the three men incorporated the road in New York State in 1848 and began construction on May 2, 1850. By the time the rails reached Gatun, and the first work train went through on October 1, 1851, the $1,000,000 capital was practically spent in building those 8 miles from sea to river. At this crisis, the gold discovery in California that had startled the world in 1849, suddenly brought a horde of wild, impatient adventurers to the Isthmus en route to the gold fields. By December 1851 the prospectors were eager to pay a dollar-a-mile fare for themselves and 50 cents per cubic foot on their belongings for the privilege of riding on open flat cars over those 8 miles of the uncompleted line.

SAVED BY GOLD RUSH

The gold rush thus saved the financially exhausted company. Immediately the embryo road began to make money. As cash came in the rails lengthened and the passenger and freight traffic extended with them, but at a price. The gold fever brought by the prospectors drew heavily upon the road's labor and operating forces, and the Chagres fever—the term loosely applied to malaria, yellow-jack, typhoid, typhus, bubonic plague, and other tropical diseases—was a constant menace with serious fatalities. There was no truth, however, in the widely circulated fable that every tie laid cost a life. Only 853 men died; 140,000 ties were laid. Progress could not be stayed; men were always found to replace the dead.

FIVE-HOUR TRIP

On January 28, 1855, the first transcontinental railroad in the world was opened to through traffic, and ran its first train over the nearly 50 miles between Atlantic and Pacific in 5 hours. Two years later all the details had been cleared up, and the line was operating smoothly. It had cost $8,000,000. This was 14 years before the first domestic transcontinental line in the United States was completed in Utah.

Like everything else on the Isthmus, the story of the railroad is fantastic. Spurned by the Government that today is its sole stockholder and operator, the line earned $12,000,000 in its first 10 years of operation, 50 percent more than its entire cost. It was regarded by Wall Street as the safest of all investments. Then in 1869, 14 years after it began running, it almost went out of business, maintenance was neglected because of lack of funds, and the rolling stock and right-of-way deteriorated rapidly under the corrosive influence of the Tropics.

The cause of the decline is interesting. William H. Aspinwall, one of the three founders of the railroad, was a man of broad vision. He foresaw the importance of a steamship line between Panama and the budding ports of California, Oregon, and Washington, as a key to the vast Pacific trade area, and in 1848 founded the Pacific Steam Navigation Co., which obtained a monopoly of the traffic between Panama and the north. Twenty years later, in 1868, to force lower rail rates across the Isthmus, he routed his ships clear around South America. Travelers immediately preferred the continuous journey by sea to the combination of steamer to Chagres, and later Cristobal, rail to Panama, and the usual wait there in uncomfortable and none too safe surroundings, for another steamer. Rail traffic dropped sharply. In 1869 the completion of the new Union Pacific system, the first domestic transcontinental line, almost killed the Panama Railroad, and the Trans-Isthmian Canal that had been talked about for centuries again emerged as a live issue.

FRENCH CONTROL

When Ferdinand de Lesseps formed a French company to dig the Panama Canal, one of his first acts was to secure control of the railroad, without which the excavation could not be carried on. The French failed, the United States took over the Canal project, bought the railroad's outstanding stock at $141 a share (par was $100), rebuilt it in wiser locations, constructed port facilities, established a tributary steamship line between New York and Cristobal, the Atlantic terminus of the railroad, set up a vast commissary, and finally opened the Canal to traffic in 1914. At last the dream of the ages had come doubly true. The Isthmus was spanned by both a canal and a railroad, with the Canal the major and controlling enterprise.

Discussing the character and operation of the railroad with me in his headquarters at Balboa Heights, C. Z., general manager A. L. Prather enthused about his road. "As a prototype for a model 'pike' the Panama Railroad is ideal," he said. "It is a complete single-track transcontinental railroad less than 50 miles long, serving two busy ports. Communities along its route comprise the towns of Panama Canal employees and the Army and Navy stations. Industrial yards and sidings serve the installations of the Panama Canal, and the Army, Navy, and Air Force bases and depots. United States type railroad equipment is used, and United States operating procedure is followed. The track gage is 5 feet. The main line is block-signalled throughout, with conventional three-indication semaphores.

"Electric power from Gatun and Madden Dam is transmitted on towers, spaced 18 to the mile, which straddle the right-of-way at a width to permit double track, and so constructed that a catenary transmission may be suspended from them. Electric motive power has not been used, however, and is not now contemplated. The principal motive power of the railroad is supplied by trim modern Mogul oil-burners which operate in both passenger and freight service. For switching, short local runs and occasional trans-Isthmian hauls, there are also several Diesel-electric locomotives built especially for the service. Completing the motive power are three gasoline-motor cars or 'Scooters' headed by a streamlined two-unit special used for tourist parties and on official occasions by the Governor of the Panama Canal, who is also president of the railroad."

Although Uncle Sam is the sole owner of the road, it is not a Government enterprise but a private corporation—just another of the many curious contradictions that affect it. Soon after the United States bought control, the road considered giving up its corporate entity and operating as a routine Government enterprise. However, some of the treaties and concessions under which the line exists had a direct bearing on the decision to maintain it as a separate entity, in addition to which it had other distinct advantages as a corporation, among them an operating flexibility of the utmost advantage as an adjunct of the Canal.

The Government Corporation Control Act of 1945 dissolved all completely Government-owned corporations as of June 30, 1948. H. R. 5104, amending the Canal Zone Code to permit reincorporation of the railroad, is now before Congress. The ultimate result will merely be the transference to the railroad of certain business now carried on by the Canal. Otherwise, the character of the Company will not change. The earnings of the line, because of its corporate structure, have been largely plowed back into maintenance and modernization. They have also paid no less than $20,000,000 in dividends into the Treasury, built up a respectable surplus, defrayed the cost of reconditioning the three vessels of the steamship subsidiary after their use during the war, and maintained the two large terminal hotels, the Tivoli at Ancon and the Washington at Cristobal. Not one penny has the road ever asked from Congress.

EARNINGS

A long and elaborate tabulation would be required to show where these astonishing dividends were earned. Partial break-down of the tabulated operating report of 1947, the latest available, shows a total freight-car mileage (including caboose) of 1,276,025, with an average of 12.53 loaded cars per train. Total revenue-producing freight carried amounted to 380,164 tons, which produced a revenue per tone-mile of 11.4 cents, which works out to $35,196.96 per mile of road. In addition to the commercial and company freight, the line handled 41,309 tons for the Army and Navy. Gross freight revenue in 1947 was $2,040,000, a decrease from 1946 of $260,915.53. Gross passenger revenue was $630,000 in 1947, compared to $838,000 in 1946. A total of 234,000 first- and 382,000 second-class passengers were carried in 1947, a considerable decrease.

"As a corporation," Prather says, "the Panama Railroad Company owns and operates in various ways the railroad proper, the steamship line, the cargo docks and piers at Cristobal, the coaling plants, the telephone, teletype and electric clock systems, the Hotel Washington, and the commissary system with its numerous retail stores, warehouses and manufacturing plants. In addition, the railroad operates under lease certain cargo piers and docks at Balboa owned by the Panama Canal, as well as the Canal-owned Hotel Tivoli in Ancon." The Canal would have a hard time to get along without its strong right arm, the railroad.

CHANGE FROM PAST

To old-timers, who recall conditions throughout the Isthmus before the Canal was completed, the present magnificent railroad station in Panama, the imposing tropical type stations at Cristobal and Balboa, the modern coaling and oil wharves, the great piers, are hardly believable. To the casual tourist everything seems as natural as though he were at home. He sits in a comfortable coach and watches jungle and mountain, the tremendous Gatun Lake, deep swamps and the always incredible Canal glide smoothly and easily by in the space of an hour and 20 minutes from ocean to ocean. There is even a short tunnel to make the road complete.

It took the Spaniards 8 days to struggle along the rivers and trails in the same journey. The Church told King Philip II of Spain not to try to dig a canal, because what God had joined together—North and South America—man should not attempt to sunder. But the days of darkness have vanished. The New World Columbus gave to Spain, boldly and with genius carved the channel to East for which he vainly searched, and by cutting the world in two, united it forever with ribbons of water and steel.

The Voice of the Women

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include an editorial from the New York Times of April 19 and an article from Newsweek of April 18, both relative to the activities of the Federation of Women Shareholders in American Business:

[From the New York Times of April 19, 1949]

STOCKHOLDERS ON THE JOB

Nearly two decades ago Adolf Berle, Jr. and Gardiner Means published the Modern Corporation and Private Property. The work was an elaborate study of the structure and operations of American stock companies, and to the student of corporation finance it provided a mine of new and interesting material. But it is remembered by the general public chiefly for one theme which it developed. That was the theme that 38 percent of the business wealth of the country was concentrated in the hands of 200 of the largest corporations.

A fact about the concentration of wealth in the United States that hasn't received nearly as much attention is that those corporations are largely owned and financed by women. Women own more than 52 percent of the stock in General Motors and 47 percent of all railroad shares, and they outnumber men as holders of stock in United States Steel, International Harvester, General Electric, American Telephone, du Pont, and others. In fact, they control 70 percent of the privately held wealth of the country, according to the Federation of Women Shareholders in American Business, and the FWSAB thinks it is high time that something was done about it.

The federation is a comparatively new enterprise, but one which seems to have a pretty clear idea of where it is going. It isn't plotting the overthrow of present corporate management. It believes, however, that stockholder relations in the case of many of our big corporations can stand refurbishing and tidying up, and that this will be expedited if it has some of its own financial housekeepers on the directorates of these companies. At any rate, Mrs. Wilma Soss, who founded the organization 2 years ago, has announced as the 3-year goal of FWSAB the placing of one or more directors on the board of every major company by 1952.

At the moment the federation is putting much of its energy into a less ambitious but equally laudable campaign. It is trying to break down the practice long adhered to by some big companies of holding their stockholder meetings in places that are comparatively inaccessible. It is idle to talk about democracy in corporate management, they argue, while at the same time placing obstacles in the way of the fullest possible attendance at what should be the corporate equivalent of the annual town meeting. Some companies have seen the wisdom of this sound American argument, and acted upon it. The National Biscuit Co. only last week moved its meeting place to New York from New Jersey, and Socony-Vacuum has submitted a proposal to its stockholders which would enable it to hold its meeting where a large attendance can be accommodated. Others, however, have lagged behind the times in this respect.

These days, declared Justice Ferdinand Pecora last week, corporate management and owners owe it to each other to develop an economic democracy as a bulwark against communism and socialism. It is clear that this up-and-coming group of women stockholders grasps this important point; and one gathers that it means to see that corporate management isn't permitted to forget it.

[From Newsweek of April 18, 1949]

COMPANIES—THE VOICE OF THE WOMEN

Up until 2 years ago Wilma Soss was just another successful public-relations woman, fortyish and married to an outdoor-advertising man. That was before she had her run-in with the males who rule United States industry.

In May 1947, she stood up at the United States Steel stockholders' meeting and argued that there ought to be a woman on the board. Some of the directors present looked like the father of Life With Father, and naturally the matter was quietly interred. But at that moment, says Mrs. Soss, who has a somewhat theatrical manner, the Federation of Women Shareholders in American Business was born.

Last week, Mrs. Soss went further. At the first spring meeting of the federation she announced that by 1952 every big American corporation would have at least one woman on its board. Mrs. Soss, a crusader with a liking for statistics, says that women have the power to enforce that mandate. Women, she maintains, control 70 percent of the privately held wealth in the country. They own more than 52 percent of General Motors stock, 47 percent of the railroad shares, and outnumber men as owners of United States Steel, International Harvester, General Electric, du Pont, A. T. & T. and others.

"Women largely finance the 200 companies which Congress calls the concentration of power in the United States," she says. "It's time they helped run those companies."

Man's place: An achievement hailed at the meeting by the 2-year-old federation (which has Hortense Odlum and Ruth Bryan Owen Rohde among its officers) was the election of Helen Lehman Buttenwieser, a federation founder, as a trustee of the Title Guarantee & Trust Co. It was the first time a woman had been named to the board of a New York commercial bank.

Actually, the federation really thinks that men have been getting too big for their britches for a long time. According to Mrs. Soss: "Women had the first money in history. Silver flowed into the temples of the goddesses before there were male gods. Women were the first oracles, and businessmen from all over Asia Minor came to consult them. Women * * * put together society, started industry, agriculture. Men were the warriors and playboys. Only when the mystery of the generation of life became known did men become important.

Mailed-Ticket Business in Canada Booming as Result of Repeal of Excise Tax on Transportation

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to an Associated Press dispatch from New York City, appearing in a recent issue of the Honolulu Star Bulletin.

This points out that many persons in this country are evading the 15-percent tax on transportation by buying their tickets in Canada.

This tax was enacted during the war to discourage travel. Its continuation on the statute books not only is not justified at the present time, but imposes a particular hardship on the people of the Territory of Hawaii.

The situation resulting from the repeal of this tax by Canada offers another reason for acting now to repeal the tax.

The article follows:

MAILED-TICKET BUSINESS IN CANADA BOOMING

NEW YORK, April 25.—Americans have discovered they can beat the 15-percent travel tax by buying their air-line tickets mail-order fashion from Canada. And the mailed-ticket business is booming.

The bargain gimmick was created March 23 when Canada lifted its 15-percent tax on travel. That tax still is in effect in the United States.

But tickets between any two places in the world served by regular air lines can be purchased in Canada, without restrictions as to the departure point. This is in accordance with an international air-transport association agreement.

Thus a New Yorker wishing to fly to Los Angeles, for example, can write a ticket agent in Canada and pay $299.92 for a round-trip ticket which in the United States would cost about $44.94 more because of the United States tax, air-lines spokesmen said.

The situation on train tickets is somewhat different, because the railroads have agreed to sell tax-free tickets only on trips originating in Canada, according to a spokesman for the New York Central Railroad.

However, it would pay a resident of Seattle, for example, to go to nearby Vancouver, British Columbia, for a round-trip ticket to a distant point like Miami.

Somewhat smaller savings on travel taxes have been possible for some time for persons buying tickets in Mexico.

There, international travelers pay an 8-percent tax on the portion of the trip to the Mexican border—none of the rest of the trip.

Approach to Racism

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. DOLLINGER. Mr. Speaker, I would like to bring to the attention of this august body an article in the New York Times under the signature of a motion-picture writer, Mr. Philip Dunne, which appeared on Sunday, May 1. Mr. Dunne's article is of great importance in my estimation, because it concerns the current production of a film, which while not a social preachment, is in the tradition of other American-made motion pictures which dramatically present a vital segment of American life and many of its inherent problems.

In his article, Mr. Dunne reflecting the sentiments and convictions of Mr. Darryl F. Zanuck, vice president in charge of production for the Twentieth Century-Fox Film Corp., in writing of the motion picture Pinky, which touches on the controversial subject of the Negro in America says:

What we say and do on the screen in productions of this sort can affect the happiness, the living conditions—even the physical safety of millions of fellow citizens.

This article which manifests an awareness and concern over the American way of life and which indeed probes into our popular concepts of democracy, prompted me to recall that Mr. Zanuck has meritoriously won for himself in past years, public tribute and acclaim. Mr. Zanuck has garnered such widespread appreciation from the public because he and other of his colleagues have led the entire motion-picture industry in the production of picturizations of many typically taboo topics, including the plight of the migratory workers as depicted in his The Grapes of Wrath, the problems of labor in another of his prize-winning films, How Green Was My Valley, the question of anti-Semitism translated to the screen in his honored motion picture Gentleman's Agreement, the disturbing problem of mental health brought into vivid national focus by The Snake Pit, and now his latest entertainment venture into the field of Americanism—Pinky.

The American motion-picture industry, we must realize, by its attempt to mirror the daily living problems of the American people, has acted as a super salesman for Americanism at home and abroad, and it is for these reasons that I consider the appearance of Mr. Dunne's timely article in the New York Times of sufficient significance and interest to merit inclusion in the CONGRESSIONAL RECORD.

APPROACH TO RACISM—SCENARIST OF PINKY EXPLAINS HOW FILM WILL TREAT SUBJECT OF NEGRO PREJUDICE

(By Philip Dunne)

The production of Pinky marks another break with the long-standing taboo against films dealing with the problems of racial and religious prejudice. Last season saw Gentleman's Agreement and Crossfire, both of which were concerned with anti-Semitism. This year in Pinky and at least two other films, the motion-picture industry will touch on the inflammable topic of the Negro in American life.

I think it should be understood that the taboo existed, not because Hollywood producers are reactionary or socially illiterate, as some have maintained, but because the production of a controversial film of this nature entails a very real financial risk. A formal or informal boycott by any group or in any area can turn a legitimately anticipated profit into a loss. In this sense, it takes courage on the part of studio management to embark on such a venture.

CONFUSION

In addition, there has been considerable professional misunderstanding of the word "entertainment." Hollywood is forever exhorting itself to remember that the function of motion pictures is to entertain. To some, this has meant that the industry should confine its efforts to musicals, boy-meets-girls comedies, whodunits, and westerns. But others, I think with more wisdom, have maintained that entertainment can also be fashioned from the raw materials of contemporary life. They have seen the problem as one of presenting these materials, not as preachments, but as living dramatic stories.

When Darryl F. Zanuck assigned me to Pinky, he laid no injunction on me other than to remember that my function was not to lecture but to tell an emotional human story capable of capturing and holding the imagination of the audience. He could, and did, point to his own Gentleman's Agreement as a persuasive example of what he meant.

From the technical point of view, my task was not difficult. I had the advantage of some excellent preliminary writing by Dudley Nichols, who had had to drop the job half finished because of a prior commitment elsewhere. I also had the advantage of the fact that Mr. Zanuck had already accompanied Mr. Nichols up most of the blind alleys such a story offers and thus was able to save me a good deal of useless exploration.

OPINIONS

Politically, the script posed a much more difficult problem. Every American citizen, white or Negro, has his own ideas on the subject of race in America. Few Americans have been able to approach it without passion or prejudice. (It is significant that perhaps the only truly dispassionate and unprejudiced appraisal of the problem is the work of a foreigner, Gunnar Myrdal, in his monumental An American Dilemma.) Like every other American, I hotly defended my own views, as Mr. Zanuck defends his, which differ from mine in detail if not in essence. Mr. Nichols and Elia Kazan, who is directing the picture for Twentieth Century-Fox, hold still different opinions.

We were well aware of our problem: lacking agreement even among ourselves, how could we hope to reach 140,000,000 Americans representing nearly 140,000,000 differing points of view?

The answer, of course, is that our film will present no one point of view as the definitive one. We try to tell a completely personal story. Jeanne Crain, as Pinky, portrays not a race but an individual. The story is Pinky's, not ours, and while the tragic dilemma of her life is induced by the facts of racial prejudice, the solutions she finds are her own and affect only her. Pinky is acted upon by many other characters in our screen play. Some are kind, some brutal, some condescending, some just but harsh. We have tried to present them fairly and objectively, as we have tried to avoid preaching and confine ourselves to the facts. In many ways the writing and production of such a story is a tactical exercise in democratic practice.

OBJECTIVE

But I would not give the impression that we have remained completely neutral, because neutrality is as sterile dramatically as it is politically. Liberal democracy stultifies itself when it rationalizes away all conflict and passion. In our case, I feel that I can safely predict that no member of the Ku Klux Klan will find our film either entertaining or edifying. We neither deny nor condone the bitter fact of racial prejudice; we simply try to dramatize its effect on a girl who might be anyone's daughter, sister, or sweetheart. We are propagandists only insofar as we insist that every human being is entitled to personal freedom and dignity.

We have throughout remained conscious of our obligation to society in projecting such a film. The experience of the war has taught us that the motion picture is a powerful and persuasive vehicle of propaganda. What we say and do on the screen in productions of this sort can affect the happiness, the living conditions, even the physical safety of millions of our fellow citizens.

Beyond that we have tried to consider what the impact of such a film might be on audiences overseas, on friend and antagonist alike. For this reason, among others, we have championed no glib solution of the problem. We have tried only to present it fairly and realistically. We hope that each member of the audience will be moved to seek a solution of his own. If he finds it in his heart, our venture will have been a success.

Grade-Crossing Hazard

EXTENSION OF REMARKS
OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1949

Mr. WEICHEL. Mr. Speaker, especially since the advent of modern fast automobiles, the grade crossings of America have cost thousands of lives annually. The hazard is greatest in the cities and much study has been made for elimination. The Federal Government in its annual grant to the various States for improving Federal highways provides that part of such Federal grant might be used by the States to eliminate the great American hazard of grade crossings.

Mr. Speaker, out in my district the city of Fostoria, Ohio, has long been subject to the loss of life on grade crossings, but it was unable to pay the entire cost of eliminating the hazard. During the past several years effort has been made and Federal approval has been given to use part of Federal highway funds allocated to the State of Ohio for such grade crossing elimination. The effort of this Midwest community shows what can be done when the citizens go out to eliminate one of the greatest hazards of American life, and I want to include the article Let's Really Abolish Grade Crossings, from the Woman's Home Companion.

LET'S REALLY ABOLISH GRADE CROSSINGS

(By John T. Harris)

Wherever you live, in the city or country, you've probably read something like this in your local newspaper recently: "Three killed when train-auto collide"; "Four die, two injured, in grade-crossing wreck"; "Family wiped out in rail-highway crash."

The headline may vary but the story is essentially the same. Last winter a party of Ohio children bobsledding over an unprotected grade crossing suddenly stiffened in horror. Racing toward them was a gigantic streamliner. There was a futile grinding of brakes. Ten children who had come to frolic in the snow stayed to die in it.

For the almost 2,000 deaths at grade crossings each year—over five every day—you and I are partly to blame. Dangerous conditions persist only because of public apathy. Our neglect and indifference is also largely responsible for the yearly toll of more than 4,000 grade-crossing injuries—injuries that maim, cripple, or otherwise mutilate for life.

Until we act vigorously to eliminate grade crossings these death traps will continue slaughtering and mutilating our families, friends, and neighbors inexcusably.

You may ask: "Why is it our particular concern? Why don't the railroads build viaducts and underpasses"?

The answer, in all fairness, is that the railroads can't possibly do the job alone. It would cost approximately $33,000,000,000—more than all our railroads are worth—to eliminate every grade crossing by constructing a viaduct or underpass. In the United States today there are more than 226,000 such crossings—one for every mile of railroad track. And most were thrown across the rails—by our decision to have new roads—long after the railroad tracks were laid.

It is easy to damn the railroads as inhuman monsters and blanket them with the blame. But, aren't we just making them the scapegoat? Aren't we refusing to recognize that abolishing grade crossings is our problem too? And any way you look at it, we the public will pay the price in the end, either in steeper taxes, higher railroad fares—or human lives.

Of course the over-all task is tremendous. But much can be done if communities go to work at once, locally, if there's a dangerous condition nearby. One small midwestern town recently did that and solved a problem that had harassed it for over 50 years.

Fostoria, Ohio—a town not far from where the children were killed on the bobsled—has five railroad lines crossing the town and one another. Formerly, train and auto traffic often jammed to a standstill, with an estimated loss of one hundred and eighty-seven vehicle hours daily. When seven persons were killed at Fostoria's grade crossings in 1946, the town's 16,000 inhabitants went into action. A citizens' committee measured traffic flow, discovering that 54 passenger trains and 181 freight trains passed through Fostoria's three square miles every day. Sparked by the local newspaper and Parent Teachers' Association, the committee persuaded voters to approve a bond issue overwhelmingly. Result: alert Fostoria is promised four brand-new viaducts and underpasses.

"We did it through teamwork," Fred M. Hopkins, editor-publisher of Fostoria's newspaper told me. "When people and organizations in a town join hands to eliminate grade crossings they get action."

Your community could do the same. In Passaic, N. J., 2 years ago the mother of four small children, was killed at a particularly dangerous grade crossing. For days after the accident the victim's husband stood at the fatal spot soliciting signatures for a petition to the Governor of the State to eliminate the crossing. Civic and fraternal organizations got behind him. Just recently the Passaic Board of Commissioners approved a plan to abolish not only this death trap but all the city's other grade crossings.

In Rockville Center, N. Y., an energetic village transportation committee is now goading State and railroad officials to abolish local grade crossings which have plagued the Long Island town for decades. Some years ago the citizens of Rockville, Md., were so aroused by a tragic school-bus accident at an inadequately protected double crossing that they spurred the State and Federal Government to prompt action in replacing the crossing with an underpass.

Among the larger cities which have virtually eliminated grade-crossing death traps are New York, Syracuse, and Atlanta, Ga. In all three cities local agitation started the ball rolling. Citizens' groups prodded city officials who prodded State highway officials who, in turn, prodded the railroads. "When this chain reaction has been set off it almost always gets results," a grade-crossing expert in the United States Public Roads Administration told me.

Luckily local communities don't have to foot the entire bill. The Federal Government, States, and railroads will share the cost. Far-sighted Fostoria paid less than a quarter of the expense for its project. Half was borne by the Federal Government, a quarter by the State of Ohio and the remaining quarter split between Fostoria and the railroads. The city paid 90 percent, the railroads 10. Moreover, the railroads are also providing additional safeguards by installing a $700,000 interlocking signal system entirely at their own expense.

But usually the problem is not just local; best results can be achieved by working through your State directly. Almost all States now have legislation designed to help abolish grade crossings. These laws differ sharply on just how the States and the railroads will share the expense of building viaducts and underpasses. Before the automobile became common, railroads usually split the cost 50–50 with the States. Many still do. Yet ever since the Supreme Court ruled in 1935—in a decision written by so liberal a justice as Louis D. Brandeis—that "the railroad has ceased to be the prime instrument of danger and the main cause of accidents" at grade crossings, fair-minded States have been bearing a larger share of the cost. New York and Michigan, for example, require that 85 percent of the cost of eliminating grade crossings be paid by the State—the other 15 percent by the railroads.

But many States, and some with bulging surpluses, have good intentions on paper only—the money is there, legislative permission has been granted to spend it, but for one reason or another the work of eliminating grade crossings is not begun. One large eastern State approved a $300,000,000 program many years ago but to date has spent only a small portion of that amount. Here is where concerted action by interested women could achieve miracles.

The practice in many States of spending motor vehicle tax money for nonhighway purposes has seriously held up the elimination of grade crossings and other improvements. According to the American Automobile Association a staggering sum—over two and one-half billion dollars—of highway tax money collected by the States during the last 24 years has been used for purposes other than improving highways.

The money is diverted in a variety of ways. Some States dump part of it into their general funds. Delaware spends a portion for mosquito control, Louisiana for harbor improvement, Utah for the department of publicity and industrial development, Virginia for aviation. At one time Maryland annually diverted $75,000 of its gasoline tax money for oyster propagation. Recently the Georgia Legislature seriously considered increasing its driver's license fee and using half the resulting revenue to establish a school of veterinarian medicine.

Highway tax diversion is on the upswing. In 1947 it was 80 percent greater than in 1946. Rhode Island, for example, diverted over half its highway income in 1947. However, public resentment against diversion is increasing also. To date, 21 States have made diversion illegal.

Find out what your State law is and demand that a fair share of the State's highway revenue be used to abolish grade crossings. Learn what crossings, if any, are scheduled for elimination—your State highway department, public service or public utilities commission, or public works department can tell you. Urge your State legislators to support a stepped-up program.

Need—not politics—should determine which grade crossings should go first. To guide the order in which they are to be removed, Maryland has developed a plan of rating them according to danger.

Today only a little Federal money—approximately $50,000,000 annually—is available for abolishing grade crossings. Urge your Senators and Representatives in Washington to appropriate more. The available funds are administered by the United States Public Roads Administration and divided among the States. If a Federal project is being held up in your vicinity make it your business to learn why.

Unfortunately all grade crossings can't be eradicated overnight with overpasses and underpasses. Some, though, can unquestionably be closed. One of America's leading highway engineers tells me that approximately 30 percent of all our grade crossings could be closed with a little State and local cooperation.

Look around your community to determine if there are grade crossings which can be consolidated or closed outright. Then advise your State highway department. Al-

most all States have laws enabling them to abandon or close little-used crossings. True, the closing of any grade crossing is almost always resisted—people having the slightest need for it frequently invoke political pressure to keep the invitation-to-disaster open. But try to convince any such neighbors of yours that it is worth a little inconvenience on their part to ensure the safety of other citizens. Though we have been abolishing grade crossings since the turn of the century, today there are almost as many as when we began eliminating them, because new roads are still being built across railroads at grades, and crossings which should be closed never are.

Meanwhile, not as a substitute for underpasses and overpasses, but until they can be built, we must protect our remaining grade crossings with far better safety devices. For motorists to stop, look, and listen, while important, is not enough. It may shock you to learn that 85 percent of America's grade crossings are not properly safeguarded, according to the cautious Interstate Commerce Commission, the Government agency regulating railroads. Most grade crossings are still protected as they were in horse-and-buggy days with either the familiar flimsy crossbuck sign or an advance warning sign—both of which are utterly inadequate. And these are often obscured by trees, shrubbery, or billboards, or located too close to the tracks, or desperately in need of paint. At night you might not notice them at all—especially if they are not reflectorized. Is it any wonder that two out of three grade-crossing accidents occur at crossings protected only by such signs?

The best protective device known today is the new automatic short-arm gate combined with a flashing light signal. The signal can be either two alternately flashing red lights (common in the east) or a moving wigwag light on a swinging disk (common in the west) working in harmony with the automatic gate. When a train approaches, the red lights begin to flash. After 3 to 5 seconds the gate, illuminated by red lights, comes down, blocking the right half of the highway and leaving the left clear so that a car can't be trapped. The automatic gate rises only after the tracks are clear in all directions. Automatic gates coupled with flashing lights are even more efficient—as well as cheaper—than 24-hour watchman service. Motorists have been killed because they failed to see a watchman's flagging lantern and every year conscientious watchmen are run down by careless motorists whom they are trying to stop. Alert States and communities are now sharing with the railroads the cost of installing automatic gates and flashing lights.

But the fact remains that the only absolutely safe grade crossing is an eliminated one. A top railroad official told me frankly, "We've experimented for years but must conclude that the only way to stop grade crossing accidents is to get rid of the crossings."

Accidents alone are not the only toll taken by grade crossings. "The time lost at them adds up to millions of dollars every year," says the American Automobile Association. Occasionally its cost can't be reckoned in money. Not long ago a child, injured in a household accident, was being rushed to the hospital in the family automobile. The car was delayed at a grade crossing by a seemingly endless freight train and the child bled to death in his mother's arms.

In this atomic age grade crossings are an anachronism. It would be nice to believe that our highways of tomorrow will be without them. But the job has hardly begun.

Today sharp awakening to our responsibilities and bold action are desperately needed. We can stop this appalling butchery. Any town, like Fostoria, can eliminate grade crossings now—if it is willing to work at it.

Start an active Grade Crossing Committee in your community. It can include city officials, representatives of the railroads, motor clubs, bus and truck companies, parents' groups, fraternal, civic, business, labor and educational organizations. If you wish, the National Safety Council in Chicago and the Association of American Railroads in Washington will help launch your committee.

Remember: when a busload of children is massacred at a grade crossing, when a little girl's head with a blue ribbon still tied to her yellow hair is found beneath the cab of a locomotive, all of us share the blame. Grade-crossing deaths are our common guilt.

Self-Government of American Indians

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Assistant Secretary Warne before the Institute on Indian Self-Government Association on American Indian Affairs, New York, on April 8, 1949:

I am happy to meet with the members and guests of the Association on American Indian Affairs. I feel that the association should be warmly congratulated for calling together the group meeting here to discuss a subject as important as tribal self-government.

We have come around at long last to realize that the Indian people must be partners with the rest of us as we work to solve their problems. It would be a toss-up, I suppose, whether in the past Indians were ignored because of contempt for their ability for finding solutions, or out of a conviction that they could best be helped by dissolving the institutional forms and customs which have kept them Indian. We know that for years it was the deliberate policy of Government, aided and abetted by well-meaning citizens outside of Government, to bring to an end all things Indian—to break up the Indian system of land tenure, to discourage Indian speech, and to frown upon Indian social institutions. It is significant that almost no mention is made of tribal organization in the Meriam survey of 1928, except a passing reference to the fact that some reservation superintendents regarded tribal councils and courts half contemptuously, and in some cases seemed to consider the council rather a nuisance because it served as a forum for agitators.

We need only reflect on that remark to realize that we have made strides since 1928. We may not have solved our problems yet, but I am confident that we have found the method. Once other factors are favorable, the solutions will come.

Problems of human adjustment are never quickly or easily worked out. I still hear voices shouting in the debates on Indian administration, "Move them off the reservations," "Give them their land," "Make them accept their responsibilities," and other advice in the imperative tense. This sounds like the voice of coercion to me, because it allows no chance for Indian views or self-determination. Self-determination is what we want and must have, even when it seems a little alien to us who are aliens in this land.

What we need most is the knowledge which will enable us to awaken in our Indian fellow citizens a desire to move away from the past of their fathers into the future we have arranged for every youngster. The Navajo boys who went away to the war or to war jobs and found that they could not compete on even terms with white boys because of their lack of education were shocked into desiring what we most wanted them to have. They are now exerting effective pressure on the Government to remove the disadvantages under which their people live. That is as it should be. Once the desire is with them, our task is half done, providing always that we act fast enough in the Congress and in our administrative branch to satisfy the desire before it lapses into apathy.

As a Government official, I am chiefly concerned with tribal self-government as a means to an end—the end being the discharge of Federal responsibility in Indian affairs. I grant you that this may be a narrower view than your own discussions may take, but I do not see how I can usefully discuss more than this.

If tribal government can be one of the tools by which the adjustment we desire can be finally worked out, that is most important.

What are these problems of adjustment? You know them as well or better than I. The problems are reflected in poverty, poor health, and lack of educational opportunities.

A few days ago we sent to the Congress, at the request of President Truman, a bill to authorize a 10-year program of basic construction and social betterment for the Navajo and Hopi Indians of Arizona and New Mexico.

You have read the President's ringing words in which he made his request of Secretary Krug: "The United States, which would live on Christian principles with all of the peoples of the world, cannot omit a fair deal for its own Indian citizens."

The Navajo and Hopi peoples were self-supporting in their original environment, but for upward of 80 years that environment has been undergoing change and destruction, and they have increased in number. The relationship of man to nature which, in their early history, had been brought into a tolerable balance, has deteriorated badly. The task which we, with the proposed expenditure of $90,000,000 would undertake is to help these Indian people achieve a new balance, with new tools, new occupations, and a new outlook.

One of the largest of the Dakota Sioux tribes in a recent year had an annual per capita income of just about one-fourth of that enjoyed by the population of our poorest State—a State noted for its heavy composition of poorly housed, poorly fed, and poorly paid share croppers.

The Papago Reservation in Arizona has an infant mortality rate which shames us in the telling; of approximately 260 infants born each year, one-fourth die within the first year; only 125 or less than half reach the age of 18.

In Alaska, where we have responsibilities for 35,000 Indians, Aleuts, and Eskimos, tuberculosis destroys the life of our native people at a rate 16 times greater than the mortality rate for this disease in the States.

Recent estimates indicate that upward of 20,000 Indian children of school age are not in school today because there are no school rooms to accommodate them and no teachers. Additional thousands of children attend irregularly and soon stop entirely because their parents are seasonal laborers and have no way of leaving their children to attend school while they are away working.

These are some of the outward manifestations of the underlying fact that all is not well with our Indian people. The problem runs deeper than neglect and lack of opportunity. One source of it rises in the Indians themselves; the other sources must be

sought in the white men who try to do things for Indians.

Let me return to the Navajo and Hopi Indians for a moment to illustrate the nature of the problem. Much has been said recently of the agreement of 1868 between the Navajo tribe and the United States by which the United States undertook to furnish schools and teachers. What has been overlooked is that the Navajos pledged themselves "to compel their children, male and female, between the ages of 6 and 16, to attend school," and the United States agreed to provide a house and teacher "for every 30 children between said ages who can be induced or compelled to attend school."

Until recently the Navajo parents resisted sending their children to school for several reasons: (1) They needed the youngsters as herders; (2) they feared that the children, educated in the white man's school, would be unfitted for Navajo life; (3) or they withdrew children as a protest against Government programs generally.

The experience of the young Navajos during the recent war who were denied equal opportunities with their white comrades brought about a change of heart overnight. Now the Navajos are demanding more and better education, but there are facilities for only 8,000 of the 24,000 Navajo children of school age.

As recently as 1906 one of the largest of the Hopi villages was locked in a bitter internal fight over the question of cooperating with the Government. At one point a troop of military was called in, and but for a cool-headed commanding officer there might have been gunfire. The village settled its question in a bloodless tug-of-war by which the anti-cooperators were pushed out of the plaza. The defeated party moved away and built a new village, and to this day the members of the group have continued to resist the efforts of white men to compromise with them.

From these and thousands of like incidents which might be called to mind, I conclude that there remains in the Indian people, varying from tribe to tribe and probably from individual to individual, an underlying skepticism about the quality of or desirability of living in the white man's society. It is this skepticism, manifested at times as frank opposition, which keeps Indians aloof. So long as that remains, Indians will move but slowly in the direction of being one with us. It is a problem of internal adjustment which cannot be brushed away. Above all, we cannot allow ourselves to become impatient with the Indian who holds back from lack of confidence in our ability to decide what is best for him.

My study of the Indian problem has been intense during the 2 years that I have been Assistant Secretary of the Interior with a general supervisory responsibility over the Bureau of Indian Affairs, but I rely for much of my information on the older students in the Bureau. But this I have learned from humbling personal experience, that there are intelligent Indians with places of leadership among their people who feel that they have ample reason to question the good faith of the whole American people and their Government, and who are doubtful whether there is anything good in the civilization that we offer them. There are others with a crafty knack of adopting just enough of the white man's ways to impress fellow Indians who prey upon their fellows and foster and feed their suspicions. We English-speaking, normally educated Americans can see the basic path of forward progress that our country has set for itself and are not disturbed by political forays and excursions that follow the rabbit tracks of expedience and give a zig here and a zag there to the movement. But such backing and filling in the white administration of Indian affairs has raised a doubt that is real to many Indians that there is an intelligible pattern anywhere in the whole business.

Turning now to the white man himself—administrator, law-giver, teacher, missionary—I find that we have been too prone to make assumptions about Indians which have no basis other than the fact that they are good assumptions among white men. Sometimes they do not have even that much validity.

I find that the Spaniards in the sixteenth century made one assumption which has remained with us with varying intensity of application. The Spaniards thought that the quickest way to civilize the Indians was to tear up whole Indian villages by the roots and to move the people in among Spaniards where they could learn by example. Some of the colonies on our eastern seaboard made similar experiments. Then, beginning about 1880 and for the next 50 years we picked up Indian children on the reservations and shipped them to distant boarding schools, on the theory or assumption that if the children stayed away long enough, and if they were forbidden to speak the parental tongue or learn the tribal ceremonies, they would cease to be Indians. Some of the bitterest critics of white men and of the white man's government in our day are Indians of the generation which underwent that processing.

On the whole, we have assumed that Indians placed in a given set of circumstances would react like a white man in the same circumstances. Thus in 1887 we broke up large tribally owned landholdings into individual parcels and assigned or allotted a piece of land to each Indian man, woman, and child. The assumption was that the Indian on his individual farm would quickly learn the value of good husbandry and all the attendant virtues of citizenship. Why not, it was one of the tenets by which the white man lived? Nothing of the sort happened, or it happened only rarely. The result was that as quickly as the limitations against the sale of these individual parcels were lifted, the Indians sold the land, usually in a poor market or to white land grabbers who felt no compunction at taking advantage of the inexperience of the Indian, and the Indians became dependent on the Government or on their Indian relatives for assistance. Such land ownership held no desirable meaning to the Indian except that land could be sold and the money could be used right away for something that was attractive. One of the principal causes of today's poverty among Indians is traced directly to the workings of the 1887 law.

It is apparent, therefore, that the white man who deals with Indians has the problem of learning and practicing tolerance. We do not even have any longer the comforting assurance that if Indians fail to learn from us, it is not because we fail them as teachers and monitors, but because of their own inferior intellectual equipment. Now that the psychologists have learned to measure intelligence with tests which do not place a premium on English language skills, the Arabic numeral system or other factors common to our culture, we find that in native intelligence, Indian children rate favorably with white children of their own age. In recent tests involving 1,000 Indian children from five different tribes, the high scores made by a few Indian children were far above the high scores registered by public school children in a middle western town.

So we can conclude finally that we need to look into our methods of work and our habits of thinking in this Indian field. The Indian people must somehow come to have confidence in our purposes and our methods, and we in the non-Indian group must learn to inspire that confidence. I can assure you that introspection of this very nature has been going on and out of introspection have come action and method.

During the past 15 years the Bureau of Indian Affairs has rejected as worthless most of the traditional administrative devices of working with native peoples. The Bureau has been unjustly criticized at times for being experimental and for questioning such sacred cows as the academic school curriculum or private land tenure. The work of the Bureau has been solid; its contributions to administrative method in the field of native affairs have lasting value. How else can we account for the fact that for 10 years or more interested Government officials and scientists from Latin America, from Africa, Burma, India, and the hill districts of China have come to study Indian administration in the United States?

Most notable of the Bureau's contributions has been in this very field of tribal self-government—of participation by Indians through their elected and appointed spokesmen in the decisions by which their lives are chartered. Officials of the Bureau have assisted more than 150 tribes, bands, and villages in the United States and Alaska to draft written constitutions and business charters. The formation of such local governments was not for the purpose of taking Indians out of the onward current of American life, as short-sighted critics have charged. The purpose was rather to set up responsible, democratic governing bodies into whose hands the Federal Government might shift the multitudinous supervisory powers which by law had been given to the Secretary of the Interior and the Commissioner of Indian Affairs. Transfers of these powers have been taking place in an orderly manner and at an accelerating tempo. By such processes have Indians become partners with us in our joint concern for their physical and spiritual well-being.

The day must come when Indians, as individuals or as organized groups, are fully responsible for their own actions. It would be the height of folly to bring this about by the simple expedient of cutting them off from the protections which their treaties and the laws of Congress guarantee to them. Responsibility can be achieved, and is being achieved, by building upon the people, by helping them to create the organizations through which they can act and by seeking always to broaden the horizon for the individual.

I should not close these remarks without saying that I am particularly concerned over the fate of the Navajo-Hopi 10-year program mentioned earlier. This program represents the first effort of the Department of the Interior to place before Congress the complete situation faced by the Indians of a specific area. We go before Congress annually with a request for funds to operate schools and hospitals, to construct and maintain roads, to provide credit funds for farming operations and so on. In spite of our best efforts to particularize the needs of individual tribes and areas, we never quite succeed in moving the discussion beyond the maze of appropriation detail. There is neither the time nor the opportunity to suggest in full the relationship between this year's request for funds and our ultimate objective with respect to a given tribe. I am frank to say, also, that too frequently there is no direct relationship.

Now for the first time, we take two tribes, one located within the outer boundaries of the other, and explain what has been happening to the resources and to the people of each. We state what ought to be our objectives in terms of physical plant and human rehabilitation. Then we calculate costs and arrive at budget estimates over the years.

We are prepared to present similar programs for a number of tribes. The Bureau of Indian Affairs, with the help of the Indians and its own field and staff personnel, has been devoting the past year to the drafting of such plans. If this could be carried out for at least all the major tribes in the country, we would for the first time be in a position to calculate the magnitude of the task of human adjustment still remaining to be accomplished, and we should begin to

have some idea of the time it is going to take to accomplish.

The Federal Government must discharge its obligation to the Indian people. I know of no honorable way in which that may be done except by proceeding in an orderly way to place the Indian in our society as a fully participating member. It may cost us heavily in dollars, but we cannot afford the heavier cost in loss of prestige which must result if the Indians are left as outcasts in their own homeland.

Judge Frank W. Tomasello

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. KENNEDY. Mr. Speaker, it is a great personal pleasure for me to learn that Judge Frank W. Tomasello has been awarded the William H. Lewis award.

We from Massachusetts are proud of Judge Tomasello. He has rendered distinguished service.

I include as part of my remarks a newspaper report of the award.

JURIST AWARD IS PRESENTED TO TOMASELLO

The newly established William H. Lewis award, to be given annually to one of New England's outstanding jurists, was presented for the first time last night at the Boston City Club to Judge Frank W. Tomasello, an associate justice of the Boston Municipal Court.

The Lewis memorial scroll, established by Iota chapter of Boston University's law fraternity, Tau Epsilon Rho, is awarded in memory of William H. Lewis, first Negro elected to the Massachusetts Legislature.

PRESENTS HONOR

The presentation to Judge Tomasello was made by E. Mark Sullivan, former district attorney and Lewis' first law partner. The judge's wife was present to witness the ceremony.

Principal speaker at the dinner meeting was Judge Lewis Goldberg, of the Massachusetts Supreme Court, who discussed "Democracy Through the Law."

Others taking part in the program included: Dean Elwood H. Hettrick, of the Boston University School of Law; William H. Lewis, Jr., son of the late attorney; Bernard Kaplan, chancellor of the law fraternity's graduate chapter at B. U.; Melvin Chernick, chancellor of Iota chapter; and Wilfred Paquet, representing Governor Dever.

Second-Class Postage Rates

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a letter from Mr. L. R. Ward, publisher of the Benton County Review, expressing his views on the proposed postal rates. Mr. Ward has published a weekly paper for many years and is entirely conversant with these problems and the effects of the contemplated legislation.

BENTON COUNTY REVIEW,
Philomath, Oreg., April 19, 1949.

Hon. WALTER NORBLAD,
House Office Building,
Washington, D. C.

DEAR MR. NORBLAD: Just a few words about the pending bill to increase postage on second-class mailings.

1. We believe all users of the postal facilities should pay fair and reasonable charges.

2. However, it has not been shown that the Postal Department has an adequate cost-finding system and cannot determine what a fair and reasonable cost should be.

3. We do not wish to be subsidized by the Government, even to the point of securing mailing rates that are subsidies in fact.

4. Under present second-class mailing arrangements papers do give a large amount of free publicity to governmental projects, bond sales, Army, Navy, and other departments.

5. If the Government would pay a fair charge on all of these so-called free publicity releases we are sure the newspapers would be willing to accept a fair increase for postage costs.

6. A free press, in a system dedicated to the free enterprise, must, of course, be maintained. The bill has many features which would seek to destroy a free press as we know it. The American way of life would be materially injured by a curtailment of a wide distribution of reading matter such as most second-class mailings cover.

7. Not only would Government publicity be restricted, the very life of many communities would suffer, such as local campaigns for law enforcement, flood control, civic betterment, distribution of church and civic news, and a long list of similar services rendered by most publications.

8. If a balance sheet could be made up showing the work of the newspapers and magazines in carrying on the war effort, local and State publicity, I am sure it would show the newspapers and magazines giving many times more than they receive in any so-called reduced mailing rates.

Yours truly,

L. R. WARD, *Publisher.*

Incentives Versus Compulsion

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of May 4, 1949:

INCENTIVES VERSUS COMPULSION

A previously suppressed portion of the Hoover Commission's report on the national defense has come to light. It sharply attacks the Truman program of regimenting the whole Nation by means of "standby" legislation embodying ironclad control over 25 major facets of the national life. These emergency powers could be invoked not only if the country went to war but also if the Congress should declare that the economic stability of the United States was threatened.

This, then, is not a war program, but a program which could be introduced in time of peace. It would conscript everybody, men and women alike; permit censorship, rationing, price control, allocation by the Government of scarce material, use of public money to build Government-owned industrial plants of any description, control of wages, institution of universal military training, and many other things.

A group working as part of the Hoover Commission under the direction of Ferdinand Eberstadt, former chief of the munitions board, recommended that Congress give short shrift to such totalitarian notions.

The committee suggested instead that the Nation be given "proper directives, proper leadership, proper mechanisms, and proper incentives—that the Nation would produce more under voluntary conditions than under compulsory ones. Wage increases are natural incentives in a capitalist society; so, too, is every man's desire to better himself. Most men work better for the hope of reward than for the fear of punishment."

These statements are so self-evident that it is amazing that anyone should have to emphasize them. Mr. Hoover himself, during his services in the First World War, found that the voluntary method would suffice and that there was no need to think of compulsion in obtaining adequate food supplies for the Nation and its allies. It was characteristic of Mr. Roosevelt that he never gave that system a chance in the Second World War, but hurried to impose every conceivable sort of control as rapidly as possible.

When Mr. Truman is found following in his footsteps, the reason is not obscure. The fact is that some of the New Deal's wartime controls survive and have been absorbed as a permanent part of the New Deal peacetime program, and that very many more of them would have survived and so been absorbed if Congress and the people had not revolted in 1946. Now that his political fortunes have again improved, Mr. Truman has lost no time in seeking to recapture every power the New Deal had in war, and even to exceed those powers with others still more repressive.

The result is that this country is confronted with a boldly avowed demand that every citizen submit to a state discipline no less harsh than ever was imposed upon Germans by Hitler or upon Russians by Stalin. Mr. Truman's predecessor sought to justify totalitarian controls as necessary in war, Mr. Truman himself would adopt them as the essence of a domestic program in time of peace. He would not lack an occasion to proclaim that the Nation's economic stability was threatened. The New Deal debt, spending, and vast program of bureaucratic "services" already have the economy on the ropes.

The American people must make their choice whether they are to surrender to the state or to continue living as free men in the tradition of incentives and rewards which dates from the Nation's beginnings. That choice is before them, here, now.

Keep the Fleet To Keep the Peace—Argument for Larger Carrier

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. PLUMLEY. Since, Mr. Speaker, we maintain the position that we shall be attacked and not be the aggressor in any third world war, it follows that enemy

"X" will immediately seek to destroy all our boasted land bases in a repeat of Pearl Harbor. Everybody who might be hostile to us has a perfect blueprint showing the location of all the bases from which our long range bombers might take off, were they the aggressors. I might say that if our possible enemies do not have such maps it is just because we omitted some detail in our public advertising of our defenses and the character of weapons we would use.

Since it is true that the bases, the location of which we have advertised to the world, will be destroyed before we know it, the essential and necessary hope we have is found in a supercarrier, or two, off which guided missiles may be launched and from which planes carrying atomic bomb loads may fly.

Since our land-based planes will have been destroyed in a sneak attack, it seems to me we should have just one chance to save ourselves. A supercarrier, or two, in the Pacific, changing base, and as permanently unlocatable as a Dixie-Democrat at a national convention, could cause a lot of trouble and could save the United States.

You just cannot laugh it off. We still must be mistress of the seas, and to do that a supercarrier, or two, equipped with planes carrying atomic bombs and staffed with guided missiles, is really the answer in this new logistic and strategic war-torn world. The matter of cost is not the issue when the price of liberty is involved.

In this connection I would like to include, under leave heretofore granted, an article by David Lawrence:

ISSUES OF THE DAY

(By David Lawrence)

ARGUMENT FOR LARGER CARRIER

WASHINGTON, April 29—The Navy's case for the building of a carrier larger than previously built has never been given to the public due to the "gag" enforced against the Navy and not against the other services. Here are the essential points in that case:

1. The new carrier known as the "United States" is not a "supercarrier" or a new weapon but a logical development of an existing one.

2. The difference in size between previous carriers and the new one is actually only 100 feet in length and 30 feet in width. The large carriers hitherto have measured 990 feet long and 105 wide. The new one was to have been 1,090 feet long and 135 feet wide.

3. The new carrier would permit its planes to fly 1,700 miles out and 1,700 miles back, whereas the planes of present carriers have a range of only 900 miles.

4. In accordance with the unanimous agreement of the Joint Chiefs of Staff reached at Key West recently, the mission of naval aviation was described not as a primary instrument for strategic bombing but only as a means of assisting that mission.

PRIMARY PURPOSE OF CARRIERS

5. The primary purpose of carriers is to obtain and retain complete control of the seas against any threat from land or sea. It is to meet any menace against ships at sea, including those transporting fuel to supply land-based strategic bombers of the other armed services.

6. Included in this primary purpose is the attack upon shore installations from which submarines are sent out to prey on commerce.

7. The chief function of carrier planes in operations near land bases is to drop mines so as to block the egress of submarines through straits and narrow channels that lead to the sea.

8. The use of smaller carriers to hunt and fight submarines would be diminished, and the burden of antisubmarine warfare is increased unless a carrier task force can be depended upon to demolish shore installations where submarines are concentrated.

JET PLANES FROM CARRIER

9. Jet planes were to be flown from the new carrier. It has been erroneously stated that jet planes could not return to the deck of the *United States*. Not only could jet planes land on the deck of the proposed new carrier but they can land also on carriers of smaller size stationed at other locations at sea.

10. The new carrier would be safer and less vulnerable than any ship of any kind ever built. Its construction is of such a nature that nothing in the way of submarine operations, as known today, could sink the carrier. To ward off attack from the air, it has its own radar and fighter planes, which successfully kept every large carrier in the Pacific in the last war from being sunk from the air. No fast or large-sized American carrier was ever sunk by a submarine, either.

WOULDN'T GO THROUGH CANAL

11. The reason for the increase of 100 feet in length and 30 feet in width in the new carrier is that the Navy no longer is limited by the necessity of going through the Panama Canal. It is assumed that any future conflict will be a seven-ocean war and that America will have enough carriers in every ocean to keep control of the seas. The new big carrier, with a task force around it, could be placed at a strategic point in the Indian Ocean near the Persian Gulf or in the North Atlantic. It could protect commerce in the Mediterranean as well as in any ocean. It would cost less to build than it would have cost to build two battleships 5 years ago.

12. The Navy has led the whole world in carrier aviation and now has been frustrated in the natural development of a new weapon which it alone understands and has used to advantage in actual combat.

The real question at issue is whether each armed service shall be the judge of what improvements shall be made on its own weapons, assuming that it can keep within its budget.

Stockholders Deserve a Larger Share of Corporate Profits

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. PATMAN. Mr. Speaker, the emphasis in the majority of the discussions on the distribution of corporate profits has been given to the question of possible damage to big business if profits are not retained for expansion and replacement funds. More emphasis should be given to the fact that the people who finance corporations by investing in stocks deserve a larger share of those profits. I have received hundreds of letters from responsible and intelligent citizens giving facts and figures concerning the retention of profits by corporations. I would like to present to the Members some representative statements from those letters:

The first statement is from a manager of small estates. He says:

I happen to manage a good many estates where we must invest part of our money in bonds, and it is every month that I have bonds maturing that were paying 4¼ to 4½ percent and I now must invest the money in good bonds paying 1½ to 2 percent. You therefore can see what a trimming the beneficiaries are getting in these estates by corporations holding on to the dividends. In the first place I think it is a very narrow, short-sighted policy to try and build up corporations from earnings only. The best managed corporations have not done this.

I am enclosing the statement of a company that we own stock in. Please note that this company last year earned $36 a share, and gave the stockholders $5. In 5 years' time their current assets have gone from 25,000,000 to 57,000,000. This is another company that handed us some stock dividends that cannot be distributed to the beneficiaries, and you can't eat stock certificates. In 5 years' time the company earned $83.88 a share. The stockholders have received $13.25 a share, and two 10-percent stock dividends, but you can't buy groceries with them, nor does the Government get any income tax on them.

And here is another:

I am a stockholder in a small corporation, holding 42 percent of outstanding stock, but am in the minority, consequently I do not count. This corporation for the 3-year period 1945–47 shows: Earnings, $218,735; taxes, $89,610; dividends, $10,200; net income to surplus account, $129,125.

If this corporation had paid out in dividends two-thirds of its earnings, the stockholders would have benefited, and also the Federal Government. As it is, both lose. There must be hundreds of such examples.

I am strongly in favor of any measure that would require corporations to pay out two-thirds of their earnings and not allow them to build up these huge surpluses at the expense of Government.

A small-investment banker gave a particularly good summary of the situation:

Today many of our large and medium-size corporations are managed by individuals who have only a nominal financial interest in the enterprise and they seem frequently obsessed with the idea that earnings should be conserved in one way or another, plowed back into expansion, or just left idle in cash—not paid out in dividends. It is my thought that at times this is done to insure the various pension plans for the executives and to minimize the responsibilities and problems of the management. Moreover, the very failure to pay a greater percentage out in dividends aggravates the so-called difficulty of obtaining new equity capital. It is a sort of vicious circle. Managements complain that the public are not responsive to new stock issues, and in my judgment the reason they are not responsive is that managements themselves insist upon arbitrarily retaining an entirely unreasonable proportion of said earnings in the business.

Here is another typical example:

For the past 2 years I have accumulated 300 shares of Emsco Derrick and Equipment (New York Curb market) thinking that from an earnings standpoint for a low-priced stock, it might be a good speculation. For the year of 1946, earnings were $1.91, year of 1947 $2.76, and the past year 1948 their statement shows $5.81 net, a total for the 3 years of $10.48, and during those 3 years only 25

cents have been paid out in dividends. This is, of course, an extreme case of this type. However, at a recent meeting of the board of directors of this company, stockholders were told that they need not expect any dividends for some time, due to a large expansion program on at present and that funds were required for corporate purposes.

The following figures were submitted in a letter from a stockholder in the American Hard Rubber Co.:

I am a stockholder in the American Hard Rubber Co. and I am enclosing pertinent data, as disclosed in their report for 1948. In this report they include a break-down of a 10-year summary: In 1939 net sales were $6,844,833; net income, $497,869; preferred dividends, $181,456, and common dividends, $163,758. Ten years later, in 1948, net sales were $16,378,006; net income, $499,801; preferred dividends, $114,492, and common dividends, $88,477. So with an increase of sales of nearly ten millions, their net income shows an increase of $2,000, and the common dividends have been cut from $163,758 to $88,477. This doesn't indicate any brilliancy in managerial achievement, yet in their analysis of 1948 operations, to emphasize their brilliance, they divulge that compensations paid to 12 officers amounted to $170,552, or 1 percent of the gross, while dividends to common stockholders, $88,477, amounted to one-half of 1 percent of said gross.

An investment securities company president sent the following letter, which indicates that corporation officials have little or no concern about violating section 102 of the Internal Revenue Code:

I was interested in your recent statement that teeth should be put in section 102 of the Internal Revenue Code to compel corporations to pay out two-thirds of net income in dividends. While I realize that there are probably many instances under which such a dividend policy would work hardship on corporations, I believe that there are also many cases where dividends are being unfairly withheld from stockholders.

A week ago today I attended a stockholders meeting of the Harnischfeger Corp., in Milwaukee, Wis., which has recently reported earnings of $11.94 per share for the year 1948. Dividends paid out for that year amounted to $1.25 per share, or not much more than 10 percent of earnings. The directors on that same date declared a regular quarterly dividend of only 15 cents per share in spite of the big earnings for 1948.

According to the enclosed Standard Poor's report, this company in the past 9 years earned a total of $45.57 per share on common stock and in that same period has paid in dividends $5.90 per share. Since 1941 you will note that the book value has increased from $21.18 per share to $58.01 per share and that the net working capital has increased from $4,842,000 to $11,647,000.

I understand that over 80 percent of the common stock of Harnischfeger Corp. is owned by Mr. W. Harnischfeger, president, or members of his family. During the course of the meeting I inquired of President Harnischfeger, who was acting as chairman of the stockholders' meeting, if the directors had given careful consideration to the possible implication of section 102, in the light of their big earnings and their very conservative dividend policy. He informed me that the directors had carefully considered the matter at various directors' meetings and had decided that their policy was not affected by provisions of section 102 of the Internal Revenue Code.

As a stockholder of this corporation I sincerely believe that its management has done a good job in operating the business, but I also feel that in view of the very substantial amount of profits that have been plowed back into the business, this corporation should also give more consideration to dividends for minority stockholders whose problems, from a tax standpoint, are probably not identical with those who control over 80 percent of the stock.

While I believe that the Government must exercise great care in formulating any law that will force corporations to pay out profits that are really needed in the business, it is my opinion that at the present time many managements are deliberately withholding the payment of reasonable dividends because of personal tax considerations. Under such conditions it is not surprising that small investors hesitate to invest their surplus funds in common stocks, which could be one of the answers as to why capital markets are drying up.

Another letter offers some interesting ideas for revision of the tax laws:

May I offer the small support of one citizen to your efforts, and may I also say that many others to whom I have spoken about the matter are essentially in agreement with the comments below:

(a) Many corporations have grown at the expense of the stockholder—who is interested in dividends and not in the size of his company. Why should corporations be allowed to reinvest earnings without permission of the stockholders to whom they really belong? Today they do so. Many corporations appear to be operating primarily for the benefit of their top management. This is unfair. They should be returned to the rightful owners, and only a Federal law can do that.

(b) It would be desirable to eliminate taxes on corporations—then require them to pay out 90 percent of their profits in dividends.

(1) This would give the people with small income—widows, etc., who own a large portion of corporation stocks—a reasonable income, and at the same time well-paid corporation officers who own quite a few shares would pay their just share of tax.

(2) There would be an increased willingness on the part of individuals to invest venture capital in new and smaller corporations. This isn't true today because one stands to lose all—if the venture fails—and gain little (after double taxation) if the venture succeeds.

I believe the Members will recognize this correspondence as being of unusual caliber. The letters are well-reasoned and conservatively phrased. They point out a problem which this Congress should consider at an early date.

Citizenship

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks, I wish to include an address made November 2, 1948, by Hon. Cater Bowie, governor, South Carolina District Civitan International. Mr. Bowie is one of the outstanding leaders of civitanocracy of international renown and has done much to further the cause of good citizenship. I am genuinely proud to claim him as my constituent and personal friend. His address follows:

Mr. President and fellow Civitans of Charleston, I know all of you have heard many times how Civitan was originated. Therefore, I am skipping over the history of Civitan. However, the word "Civitan" was derived from the Latin "Civitas," meaning citizenship.

One requirement of Civitan is that all members must be qualified voters. I hope that everyone in this room is a qualified voter. I also hope that your wives and all relatives are qualified voters.

The Civitan International has suggested, or requested, that clubs do not take any part in politics, that is, sanction or unite together for any particular candidate. This suggestion is to eliminate friction among members within clubs.

However, Civitans, I think the time has come for Civitans of South Carolina, and of the South, to take part in politics, especially national politics.

As all of you know, today is general election day. This is the most important election that we have, and will have for many years to come. I regret to say that the people of South Carolina have always taken the least interest in the general election. This is due to the fact that the primary election has always been a ruling factor in our elections. However, the primary system seems to be losing out for many and various reasons. I may be wrong in the matter, but believe that our present primary system will be abolished within a short time.

I am very sorry to say that a great number of people in South Carolina and throughout the South, and even in this Civitan Club, are indifferent as to what is going on in national politics. These people do not seem to realize that the two major political parties in this country are trying to make a sacrificial goat out of the Southern States. Our way of life in the South is now endangered. Our great-grandfathers, who came here years ago, fought, and many died fighting Indians, helped to make our present way of living in the South possible. They handed us a grand and glorious country, with instructions to please keep it free of totalitarians and dictators, so that we can all enjoy life as we have been enjoying it, and not like the people of European countries, who must abide by the wishes of some dictator.

Our immediate grandfathers fought 4 long years against odds that were never known in previous history so that we could keep our State rights as well as individual rights. I had two grandfathers who fought in this war for 4 years. It was not that they were fighting for what they thought was right—they were fighting for what was right and guaranteed to the States by the Constitution of the United States. If you have any doubt about this, then I suggest that you read the Constitution for yourselves, and you will find, according to the original Constitution, each State was a sovereign State and had the right to conduct its own affairs. They, at that time, were united together in a federation, the same as they are today, for their own protection against any common enemy.

Furthermore, my own father, who is still living, at the age of 12 wore a red shirt and rode with Wade Hampton down the main streets of Columbia, S. C., and helped break down the doors of the statehouse when Governor Chamberlin, the carpet-bag governor, refused to open the doors and surrender the statehouse after his (Chamberlin's) defeat for reelection.

Our way of life in the South, which we have enjoyed from the year 1500, is now endangered. It is endangered by two political parties, who wish to force upon us in the South the FEPC, antilynch law, and other laws so that these two parties may be popular with a certain minority in the United

States. Should the FEPC be enacted it means that the South Carolina Power Co., down the street here, will not have the privilege of employing those whom they wish to employ, nor will they have the privilege of discharging those whom they wish to discharge. If they do, they will be indicted and prosecuted by the Federal Government. I am simply using the South Carolina Power Co. as an illustration—this will apply to me, and all other employers in the United States. Think it over, Civitans—this alone is enough to make every employer shudder.

The antilynch law which they are trying to put on the books is another terrible threat against the South. Why should all county officers in this county (when I say all, I mean everybody on the country pay roll) be responsible for what some hot-headed irresponsible people may do? The city authorities of Chicago, and the city authorities of New York, and other big cities, are not held responsible for mob action, are they? They are not indicted and thrown into jail because some gang happens to kill some person—then why should our county officials be held responsible for some particular mob or gang action?

To sum up the whole matter in a nutshell, it is this: Those political powers in the North intend forcing a certain element down our very throats, and make us like it, and ask for more.

Thank God, we have a few men in South Carolina who have some of the courage of their forefathers, namely: Governor Thurmond, Congressman Mendel Rivers, Tom Stoney, of Charleston, also Mayor Morrison, of Charleston, and a few others. These men are doing all they can, but they cannot fight our battles alone. We must let them know we are with them, and urge them to do their best for us.

We, ourselves, must use the only weapon we have left to fight with against those who intend breaking the backs of the white South. That weapon is our ballot. Use it today, Civitans, or forever hold your peace when undesirables come crowding you out of your place at theaters, churches, railroads, busses—and the very seat where you are now sitting. Thank you.

A Neutral View of Labor Legislation

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from the Washington Evening Star of May 4, 1949, entitled "The House Stands Firm."

No one can read this editorial without appreciating the clear and forthright statement on what happened in the House of Representatives regarding labor legislation. It ought to be read by every Member who believes in sane, sensible legislation in the field of labor. It ought to stand as an encouragement for clear thinking and a consciousness of our obligations and responsibilities as legislators.

THE HOUSE STANDS FIRM

The House vote to retain the essential principles of the Taft-Hartley law is being hailed as a defeat for President Truman. This, in a sense, is correct, but it would be more accurate to interpret the vote as a victory for common sense.

From the very beginning the drive to scrap the Taft-Hartley Act and to substitute the so-called administration bill has been tainted with fraud. On the one hand, the existing law has been extravagantly attacked on grounds that are without basis in truth or fact. On the other, the administration's substitute has been put forward as a measure that would adequately protect the public interest when, in fact, it would do nothing of the sort.

The set-back in the House might have been averted if there had been any disposition to be reasonable. But reason never entered the picture—at least, not until it was too late. The President, entirely committed to the professional labor point of view, was determined to give the labor leaders what they wanted. Neither during the committee hearings nor in committee would any compromise be considered. The bill which bore the OK of organized labor was rammed through without any real consideration of its merits, and then the President resorted to political strong-arm tactics in a misguided effort to force its adoption. At the eleventh hour, when it became evident that the House would not be bulldozed into taking this measure, the administration leaders there, without formal White House approval, offered six major concessions. Had these concessions been made at the outset, the compromise bill probably could have been passed. But they came too late, and the House on a roll-call vote, adopted the Wood bill, which has been accurately described as a modified Taft-Hartley law.

It is to be expected that this bill will be subjected to the same dishonest attacks that have been made on the present law. Indeed, some labor leaders have already said that it is worse than the Taft-Hartley Act. But these attacks are not true. The Wood bill is a reasonably good labor measure. It retains the essential principle that the public is entitled to some protection from the abuses of organized labor—a principle which was not recognized in the President's bill.

There cannot be any serious doubt that a great majority of the people want this protection. At any rate, the 217 Members of the House who voted for it did so after appraising sentiment in their home districts during the Easter recess, and in spite of every pressure that could be brought to bear against them by the professional labor bosses and the President. This ought to be enough to convince Mr. Truman and his labor allies that they can have a reasonable new labor law if they want it, but that they cannot palm off any measure that is a fraud on the people.

Rent Control Slips

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of May 2, 1949:

RENT CONTROL SLIPS

The Federal judiciary in Chicago is split wide open on the question of enforcing the Federal rent-control laws.

This disagreement seems symptomatic of a general distintegration of the control system. When Congress reenacted the rent-control law it was suggested in these columns that rent control was breaking down of its own weight and that control might not even last the 15 additional months prescribed for it by Congress.

Two United States judges here, William J. Campbell and John P. Barnes, hold that the general Federal practice act bars all suits for treble damages for rent overcharges asking less than $3,000. They are tracking a recent decision of the United States Court of Appeals to that effect.

On the other hand, Judge Michael L. Igoe holds the Philadelphia decision is invalid. In his opinion the clear intention of Congress in the rent-control laws is to open United States courts to all tenants seeking such redress.

The resulting confusion among lawyers, landlords and tenants is easily imagined, with more to come as cases are dropped and refiled in State courts.

The split at the Federal court house came after a flood of treble damage suits that indicated how widespread were private deals of landlords and tenants that did not follow the standards of the control laws. The number of such deals that stick must far exceed the number that wind up in disputes and lawsuits.

Rent control has long since encountered the law of diminishing returns which eventually nullifies all price-fixing legislation. Only in the heat of war passion is it possible for such regimentation to work smoothly.

Berlin and Lake Success

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Globe of May 4, 1949:

BERLIN AND LAKE SUCCESS

Two events on opposite sides of the world will exert a profound influence on the future of the United Nations. The events are the conquest of China by the Communists, a monumental occurrence whose impact has not yet reached Lake Success, and the preliminary conversations in New York toward a meeting of the Council of Foreign Ministers on German questions.

Superficially, the only connection of the UN with the Berlin negotiations has been to furnish a convenient meeting place for Messrs. Malik and Jessup. It is true, however, that no institution aside from the governments directly involved has so much at stake in these questions as the United Nations. Nowhere are the Jessup-Malik "conversations" followed with more intense concern than at Lake Success and Flushing Meadow. No delegate, or member of the Secretariat, or observer, doubts that the future of the United Nations will be shaped by the course of these negotiations.

The basic principle of the Charter is agreement among the great powers. Peace, in short, is supposed to be assured by the might of the Big Five acting in concert, and the keystone of the United Nations was the assumption that the Big Five would act in concert to keep the peace as they had done to prosecute the war. It is impossible to consider the United Nations apart from great

power contentions and disagreements; the two are inseparable.

Because of this fundamental principle, every development in the cold war has immediate repercussions in the United Nations. It matters little whether the particular dissension originated inside the organization, as in the veto controversy, or outside, as with the Marshall plan, ultimately the quarrel gets into the United Nations and adds its weight to the mass of frustrations that have accumulated in the course of the years.

The Berlin case might be likened to the straw that broke the camel's back. It was just the last bit too much. When the regular session of the General Assembly met in Paris last September the institution stood on the ragged edge of a crisis owing to the continuous strain of great power contentions. When, on top of this condition, the Berlin situation was given to the Security Council, no one could doubt that UN affairs had reached a genuine crisis.

With Vishinsky's veto of a Berlin settlement on October 25 it became blindingly clear that the UN as originally organized—on great power cooperation—was finished. Since great power cooperation for international peace and security was obviously undependable, something else had to be attempted unless the states were to surrender their search for assurances of peace. Out of this necessity came the Atlantic treaty, which up to the time of the veto was a rather nebulous expedient under tentative discussion. Vishinsky's veto made the situation clear in two respects: it reveals to the Western Powers the full extent of the dangers to them contained in the Russian action in Berlin and simultaneously the futility of further attempts at negotiation with Russia through UN machinery. Frustration had reached its limits.

The Atlantic treaty is an expedient, well within the framework of the Charter, to substitute a regional alliance as an assurance of peace within specific areas, in place of the sweeping and general guaranties written into the Charter. It is an experiment compelled by force of circumstances.

Now, as the Big Four appear on the point of renewing their efforts to make a German peace, the United Nations again faces new and unpredictable developments. Success of the Council of Foreign Ministers might restore confidence in the old concept of big power cooperation for peace. Failure would likely destroy any last vestiges of hope in that direction and force the United Nations toward networks of alliances. Whatever the outcome of the prospective conference, its effect will nowhere be more evident than at Lake Success.

UNCLE DUDLEY.

Taft-Hartley Law Repeal

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I have listened to all of the debate on the bill before us which aims to repeal the Taft-Hartley law of 1947. At times it was difficult for me to realize that I was actually in the House of Representatives where the legislative business for all of the people of this great country is presumed to be conducted.

We are not here, Mr. Speaker, representing labor or management. We are here to write a reasonable law which will govern the conduct of both groups, keeping in mind the paramount interest of the general public. There has been too much bitterness, too many charges and counter charges, in this debate to serve any useful purpose. The heat generated has been intense; the light we seek is very dim. It is indeed a sorry spectacle, Mr. Chairman, when representatives of the people cannot reason together and reach a satisfactory solution of the problems presented by this legislation.

Every Member of this body will admit that the writing of a labor law is a very technical proposition. It should have been written in the committee, but the Democrats refused to follow customary committee procedure. The full committee had no opportunity to amend the bill; in fact, the full committee never even read it, an unheard of practice. And then, to add further insult, the chairman of the committee asked the Rules Committee for a closed rule so this House would be perfectly gagged. This is democracy as practiced by the New Dealers in this House.

Mr. Speaker, I voted for the Taft-Hartley bill in 1947. It was a good law then; it is a good law now. I told several labor groups last week that I would vote for any amendment that would eliminate inequities between the parties covered by the present law. I stand on that ground today.

Now let us review some of the charges or complaints that the labor leaders have made against the present law.

First. That unions are prohibited from negotiating for a union-shop contract without being first authorized to do so through an election among the employees involved. Further, that it was not fair to require approval by a majority of the employees eligible to vote rather than a majority of those voting. Under the Wood bill, labor organizations will be able to negotiate union-shop contracts without specific prior authorization of the employees involved.

Second. That the present law is unfair because it makes the nonpayment of dues the sole ground on which unions can demand the discharge of an employee who has been expelled from the union. The Wood bill authorizes unions to compel the discharge of employees who have been expelled from the union.

Third. That the present law prohibited the union hiring hall and the recruitment of workers through a union hiring hall. The Wood bill provides that it will not be considered an unfair labor practice for an employer to notify a union hiring hall when he has jobs to fill.

Fourth. That the secondary boycott provisions of the Taft-Hartley law are unfair because they require union members to "scab" on their brother members. The Wood bill permits employees of the same local to strike against goods being produced for the account of an employer against whom other members of the local are striking.

Fifth. That it is unfair to penalize unions that strike when they fail to give 60 days' notice of their intenton to negotiate changes in contracts. The Wood bill abolishes this requirement.

Sixth. That the provision stating that employees on strike who are not eligible for reinstatement shall not be permitted to vote in representation elections is unfair. Unions charge that this gives power to employers to "bust" unions. The Wood bill provides that employees on strike can vote in representation elections if they have not been replaced for 90 days or more by a permanent replacement. Thus, under the Wood bill, an employer would not be able to bust a union by employing strikebreakers.

Seventh. That it is unfair to require the filing of non-Communist affidavits so long as employers are not required to do so. The Wood bill provides that employers file the same affidavit that union officers do.

Eighth. That the provision which authorizes the general counsel of the Labor Board to get injunctions to prevent secondary boycotts is unfair because no such authority is exercised against employers. Under the Wood bill, mandatory injunctions are abolished and the general counsel is authorized to apply for temporary injunctions against both management and labor.

Ninth. That it is unfair to require an election to be held among employees on the employer's last offer in disputes that involve the national health and safety. The Wood bill abolishes this requirement.

Mr. Speaker, the above changes contained in the Wood bill are made in a sincere effort to meet union criticism of the Taft-Hartley law and to achieve an evenly balanced labor-management policy. That is the aim, I believe, of every Member who has in mind the paramount interest of the general public.

Mr. Speaker, in conclusion, I call attention to a situation that threatens representative government. I refer to the organized pressure that is being exerted on Members in the House Office buildings, in the corridors around this Chamber, and in the packed galleries by labor and management. In all the years of my services in this body, I have never seen anything like it. We are not permitted, under these conditions, to legislate in a calm and reasonable manner. One writer of national reputation has said:

> What a sorry spectacle this is for a Nation which boasts that it is composed of freemen who believe in volition rather than coercion. This bullying of Congress by large pressure groups comprising labor or management factions is the order of the day. What else does the writing of restrictive legislation mean except to apply coercion of law to the economic behavior of certain groups so that, as the political strength of one ascends, the restraints imposed on the other side are increased?

Mr. Speaker, as for myself, I would vote to abolish all the labor law now on the statute books, so that both labor and management might sit around the table and write contracts in the spirit and temper of real collective bargaining. It was with regret that the parliamentary situation was such as to preclude me from offering a motion to that end. While at home during the Easter recess I conferred with groups of union leaders, A. F. of L. and CIO, and I raised the

question about abolishing all this legislation and hardly without exception these men said they could negotiate with management more easily and get better contracts without all this complex legislation. Under the existing conditions, neither labor nor management is free to deal with each other in the spirit of fair play. One side or the other is constantly on guard to avoid the violation of some provision of the law. This situation creates a conflict that is carried into the very negotiations between the parties. If it is to continue it will lead to economic chaos and ultimately to governmental usurpation of business and industry and the enslavement of the free workers in this country.

Incitement to Anarchy

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of May 2, 1949:

INCITEMENT TO ANARCHY

A New York Congressman, ARTHUR G. KLEIN, proposed a Nation-wide work stoppage by all union members as a protest against the Taft-Hartley law. His plan found no support among responsible union leaders. But that detracts nothing from the viciousness of KLEIN'S proposal.

Fred A. Virkus, Chicagoan who heads the Conference of American Small Business Organizations, denounced it as incitement to anarchy by a minority group against the great majority of the American people. That is an apt indictment.

How to Increase Gold Production—Gold Miners Are Disturbed About the Unfavorable Position of Their Industry

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. SANBORN. Mr. Speaker, gold mining throughout the world is in the doldrums. Ninety percent of the gold mines in continental United States and Alaska are closed. Canada has been forced to subsidize her gold mines, and the entire economy of South Africa is threatened because the International Monetary Fund opposes the effort of the South African Government to advance the price of gold.

What is the cause and what is the remedy for this situation? This is a question that must be answered and answered right, in the near future, because it does not merely concern the producers of gold, but the economic structure of every country in the world; for despite the contention of the managed-currency boys that they recognize the position of gold in our monetary and economic system only as a concession to orthodoxy, the value of every currency in the world is measured in gold and affected by fluctuations in the price of gold.

The price of gold has not advanced since 1934, while the cost of labor, equipment, and materials required to mine gold have doubled and tripled. Based on the purchasing power of the dollar, the price of gold is the lowest since the founding of this Republic.

Thirty-five dollars, the present price of gold in the United States, is equivalent in purchasing power to only $12.95 prior to 1934. Small wonder that gold miners are closing down.

I have been urged by gold miners and prospectors to suggest some method of increasing the production of gold by putting existing mines into operation and finding new mines.

Personally, I am opposed to subsidizing the mining industry because subsidies are a tax burden on the American people. In my opinion, the most effective way to promote the finding of new gold mines and the production from existing mines is to raise the price of gold to the equivalent of what it was prior to 1934; and since the present purchasing power of the dollar is 37 percent of what it was prior to 1934, the present price of gold should be $56 per ounce. This would not increase the value of gold. It would merely adjust the price of gold to the depreciated value of the dollar, thereby stabilizing both currency and prices; and thus preventing further depreciation of the dollar, which was responsible for the inflationary spiral of 1946.

INFLATION BY LEGISLATION

While everyone is aware that the dollar buys only about one-third of what it bought 15 years ago, few people realize that this depreciation of the dollar was brought about by the enactment of "must" legislation, prepared by those who planned it that way.

I will endeavor to show by simple arithmetic just what this "must" legislation has done to our money in 15 years.

From 1837 to 1934, the amount of gold constituting $1 was 23.22 grains; and since there are 480 grains in an ounce, simple division shows that this set the price of gold at $20.67 per ounce.

In 1934, the amount of gold constituting $1 was reduced from 23.22 to 13.71 grains; and again by simple division, this gives a price of $35 per ounce for gold.

In 1945, through the enactment of Public Law 84, monetary reserves were lowered from 40 to 25 percent, which resulted in reducing the amount of gold constituting $1 to 8.57 grains; and again by simple arithmetic—divide 480 grains by 8.57—we find that it requires 56 of these dollars to equal an ounce of gold. Consequently, the price of gold should have been increased to $56 per ounce.

SUBSIDIZING IMPORTS BY OVERVALUING FOREIGN CURRENCIES

But because we still permit foreign nations to buy our gold at $35 per ounce, foreign currencies are overvalued 60 percent, which has the effect of subsidizing imports 60 percent, and discounting exports 37½ percent. It also permits foreign investors to buy our choicest stocks at 40 percent discount, and sell them at 60 percent premium. Thus, foreign investors and international bankers are getting control of American industry; and subsidized imports from slave-labor countries are pouring into the United States to cause unemployment here and pay interest on foreign bonds held by the international bankers. The New England textile industry has already been reduced to a 4-day week, and we can expect to see this unemployment spread to industries in other parts of the country.

STOCK MARKET NO LONGER BAROMETER OF BUSINESS

Meanwhile, we are taxing free enterprise in the United States to build up socialism in Europe which is committed to the destruction of free enterprise everywhere, while European investors—rather than use their money to build up their own countries—are investing their money in the United States on the basis mentioned above; and, as a consequence, European investments and dollar credits in the United States have reached the staggering total of $26,000,000,000.

Is it any wonder that our stock market is no longer a barometer of American business; that our choicest industrial stocks are quoted at 60 percent of their real worth; and that 3,500,000 men are unemployed?

THE SO-CALLED DOLLAR SHORTAGE

We hear a great deal about the dollar shortage in Europe and other parts of the world, but we should not confuse dollar shortage with a shortage of money or purchasing power in Europe. There is a dollar shortage because, with foreign currencies overvalued 60 percent, anyone fortunate enough to convert foreign currency into American dollars can make a profit of 60 percent, or more, on the transaction.

An example of just how this works is shown by the following excerpt from the Wall Street Journal of September 16, 1948:

> The value of the French franc in terms of gold * * * plummeted to a new low yesterday * * *. An American $20 gold piece commanded 26,200 francs * * *. In the market for paper money, the American dollar was pushed to 440 francs.

This means, of course, that a pre-1934 dollar, which was redeemable in gold, would buy 13,010 francs; whereas our 1948 dollar, which is not redeemable, would buy only 440 francs, or approximately one-third as many.

Now let us pursue this situation a little further. Since, on that date, one 1948 American dollar could be bought with 440 francs, 35 American dollars could be bought with 15,400 francs; and any foreign nation could buy an ounce of American gold with that $35. An

ounce of gold contains 480 grains; whereas an American $20 gold piece contains only 464.4 grains. So it is evident that an ounce of gold would buy more francs than a $20 gold piece, or approximately 27,000 francs.

You will note, that by this simple process, any foreign nation could convert 15,400 francs into 27,000 francs at a profit of approximately 75 percent. This explains the mad scramble for American dollars in foreign countries.

Of course the rates of exchange are different than they were last fall, but the relative ratio of exchange has changed little.

THANK GOD FOR THAT "DOLLAR SHORTAGE"

So let us thank God for that "dollar shortage" because if it were not for that shortage, the international banker-racketeers would drain away our wealth even faster than they have been doing via the United Nations, Bretton Woods, lend-lease, Marshall plan, and now the Atlantic Pact—not to mention that economic absurdity, the Berlin airlift—all of which are instruments in the hands of the internationalists who would make the United States a satrapy in a world superstate, in which we would be outnumbered and outvoted 15 to 1.

The one-worlders are already gleefully pointing to the Atlantic Pact as the first step in world government. Show me an internationalist, who advocates the surrender of our national sovereignty to a world government, and I will show you a potential traitor to our country. One must be blind indeed who does not see that their activities are playing right into the hands of Stalin to bring about an economic collapse in the United States of America.

HOW TO SAVE BILLIONS OF DOLLARS FOR AMERICAN TAXPAYERS

While we are on the subject of the French franc, let us have a look at France's economy. In the $5,500,000,000 just authorized by the Congress for aid to Marshall-plan countries, there is an item of $750,000,000 allocated to France; and yet, not long ago, the Bank for International Settlements estimated that the citizens of France were hoarding about $3,400,000,000 in gold, nearly five times as much as the gold stock of the Bank of France. Why? Because the French people have no confidence in the integrity of their irredeemable paper currency. But, if we and the Marshall-plan countries would adopt a sound monetary system, in which the redemption of currency at face value on demand was guaranteed, this great hidden hoard of gold, held by the French people, would flow into the Bank of France where it would serve as a 40-percent monetary reserve for the issuance of $8,500,000,000 of sound, stable, redeemable curency; and France would require no financial aid from us.

A similar situation exists throughout the entire world; and if the United States would take the lead in adopting a sound monetary system along the lines of that provided in H. R. 2573, we would not only save most of the billions we are now futilely pouring into foreign countries, but we would put the nations of the world back on their economic feet in a matter of 12 months and—best of all—it would cost us nothing.

UNITED STATES MUST ACCEPT ITS RESPONSIBILITY

The responsibility for a sound monetary system rests squarely on the people and the Congress of the United States, and if we initiate such a program, other nations, particularly those benefiting under the Marshall plan, will be forced, of necessity, to follow us.

If we fail to rise to our responsibility, the kind of America we have known—the kind of America handed down to us by the founding fathers—is finished.

CAUSES OF 1929 DEPRESSION AND 1946 INFLATION

Perhaps a little explanation is needed regarding Public Law 84 (1945). Prior to 1934, the American people enjoyed the right of redemption of their currency at face value on demand. That is, they could demand and receive from any bank, in appropriate denominations, 23.22 grains of gold for every dollar of paper currency presented. To insure this redemption, our laws required that all currency in circulation be backed by a 40-percent monetary reserve which, for more than 150 years, had been universally recognized as the minimum monetary reserve necessary to insure redemption of currency. Thus, it became axiomatic that currency was worth only two and one-half times the monetary reserve back of it (2½ times 25 percent of 13.71 grains is 8.57 grains).

The violation of this inexorable economic and monetary law was what precipitated the depression of 1929 because, when European banks permitted their reserves to fall from 40 to 21 percent (a drop of 47½ percent, their currencies dropped proportionately. In a frenzied effort to restore these reserves, they sold everything they owned that could be converted into gold; dumped their American stocks on our market and broke our market; withdrew silver money from circulation in India, and dumped silver on the world market, driving the price of silver down from 65 cents per ounce to 26 cents per ounce. This destroyed 60 percent of the purchasing power of that three-fifths of the world's population residing in the Orient and in the Middle East just as effectively as if $10,000,000,000 of their money had been sunk in the Pacific Ocean. You simply cannot destroy the purchasing power of more than half the people of the world without precipitating a world panic and depression.

REPEATING ERRORS OF 1929

In view of what happened in 1929, it is difficult to understand the manner of reasoning of those responsible for the enactment of Public Law 84 (1945), which was sent to the Congress as "must" legislation.

The effect of this law was to depreciate the dollar an additional 37½ percent and cause commodity prices to advance 60 percent; but because this law was enacted at the time price controls were eliminated, 99 percent of the people blame the rise of commodity prices to the elimination of price controls. As a matter of fact, if prices had been frozen at the 1945 level, half of the business and industry in the United States would have been forced to close or go bankrupt.

DOUBLE TALK, EVASION, AND MARXIST JARGON

With these facts before us, with a sharp decline in the prices of raw materials, farm and mine, and 3,500,000 people unemployed, it is very disconcerting for the President's advisers, particularly Leon Keyserling, to give us nothing better than double talk, evasive answers, half-truths, and Marxist jargon.

NOT ENOUGH GOLD IN WORLD TO STABILIZE WORLD CURRENCIES

As stated above, I firmly believe that the price of gold should be advanced to $56 per ounce, but I am not sure that a free market in gold is the answer, because the value of the dollar will fluctuate with the price of gold. For example, if the price of gold should advance to $80 per ounce—and this is possible because there is an acute shortage of gold in the world—the purchasing power of our dollar would drop to 26 percent of what it was prior to 1934, and commodities would advance 42 percent; because when you divide 480 grains by 80, you get 6 grains, which is approximately 26 percent of 23.22 grains, the amount of gold which constituted a dollar from 1837 to 1934.

Advancing the price of gold above $56 per ounce does not increase its value or volume. It merely causes further depreciation of the dollar. It has long been obvious that there is not enough gold in the world to furnish an adequate base to support our monetary structure or supply reserves adequate to insure redemption of currency now in circulation. This base, or reserve, should be doubled; and that can be achieved only by adding silver to gold at a ratio based on the relative production of these two metals. This means that the only sound solution of the world's monetary and economic problems lies in a return to bimetallism along the lines of my bill H. R. 2573.

DANGER IN A RETURN TO THE SINGLE GOLD STANDARD

To return to the single gold standard would be fine for the banks bulging with synthetic dollars, since it would cause these dollars to advance from 37-cent dollars to 59-cent dollars, but it would be mighty tough on the debtors who would be forced to repay borrowed 37-cent dollars with 59-cent dollars.

The shortage of gold also makes it possible for the international bankers to gain control of it through scarcity, and manipulate its price to further their conspiracy to control raw materials, production, distribution, credit, money, and the value of money.

It should be obvious to everyone of ordinary intelligence that there has long been a national and international conspiracy to destroy our domestic economy, and drain away our wealth to the extent that we would be forced to accept the status of a province in a world government, in which we would be outvoted and outnumbered 15 to 1; or would be forced to surrender control of our economy to a band of international banker-racketeers.

CURRENCY THAT IS NOT REDEEMABLE IS FIAT MONEY

The principal instrument of these coconspirators is a debauched, manipulated, irredeemable currency. Currency that is not redeemable is fiat money; and the only way that fiat money or managed currencies can work is through collectivism, or completely government-controlled economy. This means complete coercion of individuals, controlled production, rationing, and price fixing.

Therefore, the only way to escape the net that is being woven about us is to strip the conspirators of the tools with which they work, by adopting a sound monetary system, in which the redemption of currency is backed by adequate monetary reserves of gold and silver, the prices of which are pegged and maintained at fixed and proper ratio. (See H. R. 2573).

In my humble opinion, gold should not be considered a commodity subject to fluctuations in price, but a constant, invariable measure of the value of currencies, goods, and services.

HOLD FAST TO WHAT IS TRUE

We must hold fast to what we know to be true; and refuse to compromise with what we know to be wrong, if we are to be worthy of our heritage. Neither socialism nor a one-world government will solve the problems of the world; they will merely accentuate them.

Three irrefutable truths must be recognized: (1) Our Government cannot give anything to our own people or foreign nations that it does not first take away from our own people, either through taxation or unsound economic and fiscal policies. (2) Our domestic economy is different from that of all other nations and must continue to be different if we are to hold our national supremacy and maintain our high standard of living. We must recognize the fact that free trade is possible only between nations and peoples who have the same standard of living. The United States has but 6 percent of the world's population and 6 percent of the world's land area. Free trade will not bring the other 94 percent up to our standard of living, but will drag us down to theirs. The protective tariff is the keystone in the arch which supports our domestic economy. Remove the keystone and the arch will crumble. (3) Our ancestors did not come to America for security but opportunity; and while a reasonable amount of social security is desirable, yet when social security is extended to the degree that it destroys free enterprise and individual opportunity, the inevitable result will be serfdom. Complete security is enjoyed by those in prison; and not too long ago, 10 percent of our population had complete security—were housed, clothed, and adequately fed—but we fought a great Civil War to end it, because we called it by its right name—"slavery".

SOUND MONEY IS FIRST REQUISITE OF A SAFE AND SANE WORLD

Sound money, which can be best achieved by a return to bimetallism, will not only bring peace and economic stability to the world and save us most of the billions of dollars we are giving away, but will quadruple the recoverable mineral wealth of America and usher in an era of the greatest prosperity we have ever known.

I appreciate that the forces arrayed against a return to a sound monetary system are powerful; that they control many of the avenues of communication; and are deliberately misleading our people with their propaganda.

But the most powerful force in America is public opinion; and by carrying the truth to every home in America, we can defeat the evil forces which would sell America down the river.

It takes courage to fight the entrenched forces of evil—it might temporarily hurt the business or political aspirations of timid souls—but, God hates a coward.

Typical Reaction to Press Goons' Attack on Your Congressman When He Is Down

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MAY 3, 1949.

Hon. EDWIN ARTHUR HALL,
Member, House of Representatives,
Washington, D. C.

DEAR SIR: Am sorry to hear that your honorable father is sick. I pray for his recovery.

May I say that I am fully aware of the stinking Binghamton newspaper, that filthy scrap paper stinks like her editors and always makes an issue out of nothing when the matter is concerning you. They want you to run the United States Government business according to their dictation. You refuse to bow to them because you are a representative of all the people in your district, not representing the local newspaper goons. Their editorial rubbish—think it's a crime for a man to visit his sick father. (I talked to many people about this subject.) But the people have great respect for a person caring for his parents and visiting them when they are sick. It's more important than business, for business is always here while life goes out forever.

The people know your good deeds so as long as you keep up the good work and want to be their Congressman you will be elected again and again in spite of the press' efforts to smear your character.

Respectfully yours,

J. D.,
Binghamton.

Nine Thousand Lose Jobs in Loyalty Tests

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of May 3, 1949:

NINE THOUSAND LOSE JOBS IN LOYALTY TESTS—OLD POLICE RECORDS CAUSE FIRINGS

(By Tony Smith)

Soviet spies, ex-burglars, thieves, and sex offenders have been unearthed by the Federal Government's employee loyalty investigation program, it was learned today.

The search for subversives in the Government and among those seeking jobs with Uncle Sam yielded 141,400 sets of fingerprints that matched those kept in the FBI files.

FBI Director J. Edgar Hoover reported to Congress that 5.5 percent of the 2,537,843 persons checked had previous police records. As a result, 8,881 persons have been dismissed from the Government service by the Civil Service Commission, Mr. Hoover said.

MANY IN STATE DEPARTMENT

The program turned up 21 live Soviet espionage suspects, 45 Communists, and 108 suspected subversives in the State Department alone, it was reported. All of those subjected to spy investigations have resigned or been dismissed, it was said. The same is true of those known to be members of the Communist Party. Some of them moved on to the jobs in American agencies of the United Nations, Government records show.

Many of the former law violators brought to light by the loyalty check were minor offenders who had served their sentences. Others, convicted of major crimes, were found to be loyal. Some had been rehabilitated, the records showed. A few were still at their old tricks. These were reported to the heads of the departments in which they worked. Some were fired.

EMPHASIS ON ESPIONAGE

Throughout the check the emphasis was on employees and officials of the Government suspected of espionage activities. Here are excerpts from reports on some State Department workers:

"Mr. ———'s file reflected that he is a close associate of suspected Soviet agents. Most of the derogatory information on him was developed in late 1946. There is nothing in the file to indicate he has discontinued working for the Department."

"GREATEST SECURITY RISK

"Mr. ———. This former employee's file is the largest in the Civil Service Administration. It reflects that he furnished material to known Soviet espionage agents and that he has had consistent contact with a long list of Communists and suspected Soviet agents. This subject was in all probability the greatest security risk the Department of State has had. He was first recommended for dismissal July 24, 1946. He finally resigned voluntarily December 13, 1946.

"Miss ———. Her file shows that she signed Communist Party election petitions on a number of occasions. The Security Committee of the State Department decided she was not a security risk on April 15, 1947. It later decided she should be dismissed on grounds of being an undesirable employee. The subject resigned April 25, 1947. This case shows that the Security Committee is inclined to accept a 'change of heart'."

FIRING RECOMMENDED

"Mr. ———. Appointed to job in State Department in November 1946. On January 7, 1947, a Government investigative agency received information that his brother and sister were possible agents for the Comintern in the United States. Investigation reflects he once was instructor at an institution noted for its radical theories. On February 6, 1947, a Civil Service report said there was evidence of his disloyalty and recommended that he be fired."

Baltimore City Health Plan

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. BEALL. Mr. Speaker, under unanimous consent I include in the RECORD the fourth of a series of articles by Agnes E. Meyer on Maryland solves health program, now appearing in the Washington Post:

HOSPITALS COOPERATE WITH LOCAL PRACTITIONERS—BALTIMORE CITY HEALTH PLAN

(By Agnes E. Meyer)

(Fourth of a series)

The plan for medical care of the indigent in Baltimore differs from that operating throughout the State of Maryland because the presence of two great medical schools and their hospitals together with city living conditions create different means for the solution of different problems. The eventual success of the Baltimore health plan—it is in operation only 6 months—may revolutionize the social function of the hospital and its relationship to the community.

It will establish a new pattern for solving medical care of low-income groups on a voluntary basis. It may also set definite limits to Federal control under any contemplated laws for a national medical-care program.

Upon completion of the plans for the counties of Maryland, already described in these articles, the State committee on medical care appointed a separate group, with Dr. Powell J. Reed, vice president of Johns Hopkins University, as chairman, to make a comprehensive study of medical-care needs in the city of Baltimore.

This committee emphasized that it is "erroneous to consider the population as separated into two groups, the ill and the well. Health or its converse, illness, is a graded matter for every individual. In a very true sense it may be said that each person is ill to a certain degree and well to a certain degree * * *. Thus the problem of medical care involves a constant screening process that is carried out partially by the individual himself, partially by the physician and partially by the various agencies and organizations that are concerned with maintaining or restoring health."

To gain the support of the medical profession the commitee on medical care presented its report to the Baltimore City Medical Society, the Baltimore Hospital Conference, and several other medical societies and received their endorsement.

CLINICS FOR INDIGENT

Under terms of a legal contract with the city health department, each hospital participating in the new plan agreed to organize and maintain a medical-care clinic for the specific benefit of the indigent. The clinic is the administrative center for all clients and all participating local physicians. Two such clinics have now been in operation 6 months, one under the supervision of the hospital of the University of Maryland, the other under Johns Hopkins Hospital.

The Johns Hopkins clinic adjacent to the hospital has agreed to care for 3,000 relief clients certified by the welfare department. Of these 6,000 have already registered in response to personal letters sent them by the director of Johns Hopkins Hospital, Dr. Edwin L. Crosby, followed by personal interviews with local physicians by Dr. Harry L. Chant, director of the new clinic.

The functions of the clinic are the following:

1. It accepts enrollments, does a complete health examination of each client and keeps the records.

2. It arranges for the assignment of the client to a local participating practitioner. Both the client and the doctor are free to accept or reject the assignment. Payment to the doctor is on a per capita basis, $7 per year per client. This is the total cost to the clinic per client except for free medicaments which are purchased from any druggist on a voucher. The hospital receives $10 per client per year for its supervision of the clinic and the program as a whole. The local practitioners do the home and office care.

3. If a case is beyond the experience or facilities of the local doctor, the hospital takes over the patient in its regular outpatient service. Thus the hospital receives payment for services formerly rendered free of charge to the indigent. It also has the advantage of teaching home care to its students and an opportunity to familiarize them with the family unit, whether well or ill. As the relief clients are a fairly stable group, the first-class students are assigned to the families as health advisers and follow its social as well as its medical problems.

There is great need for teaching and experimentation in this kind of medical care. It is public health work in the deepest and most practical sense. The top medical staff is drawn from the hospital's various classical clinical departments. At the same time there are bilateral opportunities for the practitioners from the neighborhood to receive the guidance of the hospital faculty and to learn through their patients how to use the hospital for their clients.

Thus, practitioners who have usually had but a short period of good training are encouraged to continue their studies. Although the doctors were cautious at first, they found these aspects of the program persuasive. The good relations that were established between the doctor and the clinic through their patients was and still is the best selling factor for the health plan.

THREE-HOUR SESSIONS

Twenty neighborhood practitioners have been appointed by the hospital for the year to work in the clinic for one or more 3-hour sessions per week at a fee of $10. Five of them are Negro doctors. There is no quota. It is simply a matter of finding able men. Most of these men had no previous affiliation with the hospital. The permanent staff, in addition to Dr. Chant, the director, is an assistant clinician and internist to guide the consultations, three nurses, the supervisor, Miss Sarah Green, being experienced in public health nursing, one social worker, and a clerical staff of eight. Two laboratory technicians do blood counts and other routine tests in the clinic.

The total number of cooperating doctors is 91, of whom 68 are white and 23 Negroes, for an area that is predominantly Negro in population.

The average load of patients at the clinic is about 70 per day, as many as possible by appointment. During my visits there was a succession of unforeseen emergency cases, as the clients are encouraged to come in with any kind of problem, medical, social, or emotional. Usually all three factors are combined. "You can set up all the routines you like," said Dr. Chant, "but necessity always upsets them."

THREE THOUSAND EXAMINATIONS

By the end of March 3,000 physical examinations had been completed out of the total registration of 6,000. The number of patients which the cooperating local practitioners accept varies greatly in number. The young men just starting take from 200 to 250, but a large number accept only their old patients.

The clinic is diplomatic in its handling of physicians. It takes care not to upset existing relationships between clients and their doctors. Some of the doctors were encouraged to increase their load when the first payments were received. The busiest doctors stated that the per capita payment of $7 is considered inadequate remuneration.

The abuse of the program by clients was serious at first. Then Dr. Chant sent out notices to clients who are heads of families, explaining that they are privileged to have a personal physician but that the doctor must divide his time among many people. The results of this education as to restraint in the use of free visits were good, and most of the doctors who had resented the excessive visits became reconciled though a few dropped out.

HOME CARE

The initial physical examinations at the clinic, perhaps its most significant feature, have been helped in acquainting the doctors with their patients. If they are confronted with knotty problems which they cannot handle, the hospital staff helps them out. Hospitalization is a problem in Baltimore as everywhere else. There is a shortage of 400 beds for lack of personnel.

But chiefly the medical program is directed toward home and office care by the physician and for consultation services for the physician through the specialized clinics of the hospital.

The new plan is a vast improvement on the ambulatory care given solely through the established hospital clinics, as the clients often failed to return after costly examinations. Now they are under constant observation of a private physician who keeps them under continuous treatment. It is an improvement also on the specialized clinic which examined patients only for its specialty whereas here the examination is comprehensive.

Public Housing

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. JONES of Alabama. Mr. Speaker, under leave to have printed in the Appendix certain editorials, I include an editorial, For the Third Time, which appeared in the New York Herald Tribune on Saturday, April 23, 1949; and Housing and the House, which appeared in the New York Times on Saturday, April 23, 1949:

[From the New York Herald Tribune of April 23, 1949]

FOR THE THIRD TIME

Again the Senate has passed the housing bill, and again the great decision rests upon the House. This is the answer to America's need for slum clearance and homes. The issue has confronted our people too long; we cannot wait year after year. At this point the Senate has spoken with an unmistakable firmness that more and better housing is imperative, and we hope that the House at last swings into line. The national temper is unmistakable; the best brains of both parties are in agreement on dominant aims and practical details. The final Senate vote, 57 to 13, has a passionate authority that commands an end to distraction.

Senator BRICKER tried to beat down the housing bill on a befogging amendment to forbid segregation as a price for accepting Federal construction funds. It was a proposition that may have tried the souls of

some Senators, but the choice was plain—housing or no housing. In this futile and embarrassing exercise, the Senate saw through the confusion and responded to the immediate welfare. Some who voted against the Bricker amendment may suffer political reprisal, but we trust that their courage will carry its overweighing compensations. Honesty has a way of paying off.

Three times the Senate has earnestly delivered its verdict for public housing. Let the House this time stop its shilly-shallying. We must have housing.

[From the New York Times of April 23, 1949]

HOUSING AND THE HOUSE

"We shall enact comprehensive housing legislation, including provisions for slum clearance and low-rent housing projects initiated by local agencies. This Nation is shamed by the failure of the Republican Eightieth Congress to pass the vitally needed general housing legislation as recommended by the President."

This was the promise of the platform adopted by the Democratic National Convention on July 14, 1948. That promise has now been redeemed in the Senate, with passage of the national housing bill by a healthy margin of 57 to 13.

It now remains to be seen whether the Democrats in the House will also join in redeeming the party platform promise. The membership in the House stands as 260 Democrats, 171 Republicans, and 1 American Labor Party member, so that much depends on how well the majority party holds its lines. This does not by any means absolve the House Republicans from taking a liberal and realistic position on the bill, for their party has repeatedly written, in the House, an unpleasant record on housing, which they will now have an opportunity to expunge. This record was reflected in the weasel wording of the Republican campaign platform, saying: "We recommend Federal aid to the States for local slum clearance and low-rental housing only where there is a need that cannot be met either by private enterprise or by the States and localities."

We invite House Members regardless of party to search their conscience for the honest answer as to whether the need for low-cost or low-rent housing has been met by private enterprise. It was the opinion of 33 out of 35 Democratic Senators voting this week that it had not been, and that was likewise the opinion of 24 out of 35 Republican Senators. It is a sound opinion.

The lobbying opponents of this legislation have made every effort to frighten Congressmen, and their rallying cry has been the bogeyman of socialism. To this we reply that if anything could be counted on to assure a change of our political complexion in the United States for the worse it would be the continued failure of Government to see that average family had a livable home in which to rear its children.

Our Government, at one level or another, and at one period or another, has seen to it that railroads, shipping, and the air lines were subsidized so as to survive and expand, for the general welfare; it has steadily subsidized the postal service; it has helped the farmer, to the extent of billions of dollars; it has protected American business against foreign competition; it has provided public education for the Nation's children; it has aided religious worship through tax exemption; it has assisted the war veteran with educational grants and with pensions. Against this long record of subsidy, we are willing to face the horrendous dangers in a measure that attempts to assure, both through private enterprise and public subsidy, the wholesome and democratic aim that the American family shall have a decent home.

Statement of Hon. Charles F. Brannan, Secretary of Agriculture

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following supplementary statement by Secretary of Agriculture Charles F. Brannan in regard to farm income price-support recommendations before the House Committee on Agriculture, Monday, April 25, 1949:

Since making my farm-program recommendations, the committee's comments and public discussion seem to have centered on three broad questions. These deal with cost, how the proposed program would operate, and the degree of Government control involved. With your permission, I should like to take up these questions a little more fully than has been possible heretofore.

First, let us look at the cost question.

As you know, this question involves many values in addition to dollars. We can and will use certain dollar illustrations, but, as your own experience will verify, our economy is so complex and dynamic that it has never been possible to make accurate dollar estimates in advance for price-support operations.

It has been said that the production payments called for in my proposal would be costly and that the cost must be estimated now. Yet title II of the Agricultural Act of 1948 provides for the same kind of payments, and no estimates of the cost of that legislation were ever requested or made prior to its adoption.

Title I of the act of 1948 continued the wartime level of price supports, yet no cost estimates were called for or considered at the time of its adoption, even on potatoes, for which we were then carrying out the most expensive price-support operation in history.

The same point could be made about earlier legislation. New bills and amendments have been enacted year after year on the basis of needs and the benefits to be derived. Actual results have been measured against actual costs, which is the only valid comparison.

My recommendations contemplate the operation of price-support programs through the Commodity Credit Corporation, as they are being operated today. And as you know, Congress does not appropriate in advance for the CCC because, for a host of obvious reasons, the dollar requirements cannot be estimated accurately in advance. But Congress has a very effective control over costs. It controls authorizations and appropriations. If a particular program results in a greater outlay than the Congress is willing to continue, the Government's commitment may be changed for ensuing years. No program can cost more, over a period of years, than the Congress makes available.

Another point we need to keep in mind as we deal with the cost question is that we must always make comparisons. It helps no one to compare the costs of one program against no program at all. The American people have already taken the position that the farmer should have adequate returns, and until a better method is brought to light the farm price support method is the one we should use. We have such a program in operation now. We have legislation on the books that is scheduled to go into effect next year. We have had considerable experience in the past.

Due to our expanded productive capacity and the possibility that our foreign markets will diminish, costs under any effective program may increase. The least expensive program in the public interest, for the long run, will be that which encourages the greatest and most efficient consumption of farm commodities which would otherwise be surplus. These facts must be taken into account as we consider the recommended program. An absolute figure without comparisons is bound to be misleading and to give substance to the fallacious arguments of the enemies of price-support legislation.

The real core of the question of cost is how effective we choose to make our program. Obviously, we are not going to get something for nothing in this farm-program business, any more than anywhere else.

In my statement of April 7, I laid before you my views on the public need for a strong farm income and price-support system. I said it can serve the interests of all the people by helping to prevent depression, build bigger markets for industrial goods and jobs for workers, maintain high-level production of farm commodities, conserve natural resources, maintain reserves for national security, strengthen the rural community, and provide consumers increased supplies at attractive prices.

A program that will effectively contribute toward these ends is worth a considerable public investment.

But let us not try to kid anybody—either the farmer or the general public. Any program which is so designed that the public investment is always sure to be small is going to be an ineffective program at the very time a strong program is needed. It is not likely to give adequate service of the kinds I have listed, either to the farmer or to the general public.

What is adequate?

An eastern financial journal says that my proposal "promises to farmers more than they are entitled to." That is a matter of opinion which the Congress is going to settle. But let me emphasize this question: In the public interest, how far down do you dare let farm income slide?

Farm prices already have come down 15 percent since the beginning of last year. The prices paid by farmers have stayed close to their peak level and are currently only about 2 percent under last summer's level. The purchasing power of what the farmer sells has come down to the lowest point since 1942.

Under my proposal, the income standard from which price supports would be computed is 15 percent lower than that actually received last year.

How much lower does the public interest permit farm prices to go without similar cuts for all other groups?

Let me clear up one other point in this connection. My proposal is plainly not a guaranteed-income scheme. If the farmer's production fails for any reason, price support does not help him. This proposal does proceed toward an income objective. It does offer a means of computing price supports from a minimum income standard, recognizing that we are more fundamentally concerned with income than with price. It does offer a means of extending price support to those commodities which are most important in the farm-income picture. But it cannot provide farmers a guaranteed level of income unless Congress should make a flat commitment on every commodity produced by farmers, and I am sure nobody expects this will be done. Under my proposal, farm prosperity would certainly continue to depend upon individual enterprise and abundant farm production as well as upon high-

level employment and purchasing power in the whole economy.

Let me also point out that this is a price-support recommendation—not a consumer-subsidy proposal. I have merely recommended those methods of supporting farm prices which will do most to lick the surplus problem by encouraging consumption. There is a considerable difference between (a) subsidizing consumption with the hope that the benefit will trickle down to the farmer and (b) supporting farm prices in ways which will give consumers the most for their money. I am, of course, recommending the latter. The payment method for use on perishable commodities will enable us to go on producing and consuming somewhere past the level where straight dollar demand would temporarily stop us. That enables genuine demand and our real productive power to exert greater influence in our economy.

There have been a number of reckless estimates of the costs of the proposed program for the year ahead. None of the authors of the statements have estimated the cost of the present program. If I understand the estimates correctly, all of them assume a severe depression and low farm income. I confess that I do not assume a depression. On the contrary, the whole proposal is designed to help avoid a depression by maintaining reasonable farm income.

Some people may be planning on depression, but the Government of the United States must plan otherwise. By action of the Congress, we are committed to a policy of promoting maximum employment, production, and purchasing power. In my opinion, a strong farm program is an essential of that policy.

If national income stays high and reasonably well distributed, farm prices will not rest on the supports and therefore supports will not be costly.

If, however, you assume a depression, then you must be aware that farm surpluses and city unemployment will almost certainly force into existence programs of straight relief and very likely some form of a food-stamp plan which could be very costly. In my opinion, an equal amount of money used for production payments would be much more effective in supporting farm prices and would keep us on the side of preventing depression rather than waiting for it to develop.

With those observations for background, let us now look at how the proposed program would operate for various commodities and try to get an idea of costs as we go along.

For the purpose of the commodity-by-commodity discussion which follows, I am assuming one and the same level of support regardless of whether that level is established under the income support standard formula, the present formula now in force and effect, or the formula described in title II of the act of 1948 or, for that matter, any other formula. In short, I am making a comparative analysis with respect to method only. Obviously a lower support price would mean a relatively lower commitment by the Government and thereby lower losses where any losses to the Government occur. It would certainly mean lower income protection to farm people.

COTTON, TOBACCO, CORN, AND WHEAT

As has been indicated in my previous statement and in subsequent discussions, no change is proposed in method of supporting the farmers' price of cotton, tobacco, corn, and wheat which coincide with the present price-support operations with respect to these commodities. That is, we would use commodity loans and purchase agreements. Therefore, any estimate of loss or gain on these commodities under the proposed program is equally applicable to the present or authorized program.

HOGS

Of the nonstorable or perishable commodities in group 1, hogs present one of the most difficult support problems with which we may be confronted.

For the purposes of an example, let us take a year's production goal of 20,000,000,000 pounds of hogs, live weight, and a price support level of about $16.50 per hundredweight. Then let us assume that we have 1,000,000,000 pounds of live hogs which will not clear the market at a price which will reflect the support price to the farmer. Assuming this excess production, there is an immediate obligation to support the price of hogs through a purchase program, the only method now authorized by law. This would cost about $230,000,000. This estimate is reached as follows:

The initial obligation would be about $165,000,000; this assumes that we would buy the hogs at the farmer's gate and that the acquisition of the hogs could be accomplished with no expense whatsoever to the Government. Everyone knows that this is an unreasonable assumption because we cannot buy hogs at the farmer's gate, nor, in fact, can we buy them at stockyards.

The only practical way to buy hogs is from the packer after slaughtering, processing, curing, and so on. Buying it from the packer in the form of fresh and cured pork would involve the additional expenditure of at least $65,000,000. Immediately upon acquisition of the pork, arrangements must be made for its proper storage. This means additional handling and storage charges by the month. Pork can be kept in good condition under the best refrigeration for only 6 months to 1 year. That being the case, the Commodity Credit Corporation would have to go into the world market to find a purchaser within a relatively short time. The pork obviously could not be sold into the American market because it would break the support price. The Government would be faced with a total loss of the $230,000,000 plus carrying and disposal charges, less whatever could be realized from sales to offshore customers.

With this $230,000,000 a production payment to farmers could be made on 21,000,000,000 pounds of hogs in the approximate sum of $1.10 per hundred, live weight (or more if payments were made only on marketings). In other words, the price of hogs, live weight, in the market place could be reduced by $1.10 before it would cost this Government 1 cent more money than it would be obligated to pay under the purchase method. This $1.10 is about 7 percent of the $16.50 assumed support level. If a 7 percent reduction could be carried all the way through to the retail level, it would be possible to reduce the consumer's price of pork by about 7 percent and at the same time give him access to the finished pork product from 1,000,000,000 pounds of live hogs. Perhaps this example is an oversimplification. There are many factors which might influence the final conclusion in a small way in either direction. But we do believe it summarizes the essential facts.

BEEF, LAMBS, AND CHICKENS

I don't suppose anyone on the committee expects us to be in a program of supporting the price of beef cattle and lambs in the near future, but if and when we are, the operation would be analogous to the hog example I have just given. This would also be true with respect to chickens.

EGGS

If we undertook to maintain egg consumption at about the present levels, it appears that an annual commercial movement of about 4,000,000,000 dozen eggs would be required. Let us assume that production or marketings exceed the 4,000,000,000 dozen figure by 300,000,000 dozen eggs. What would be the cost under the present purchase program?

Based on our experience over the last two seasons, the surplus of 300,000,000 dozen purchased as dried eggs would probably cost the CCC about $120,000,000. However, this is again only the initial cost. Additional costs would be incurred because of transportation, storage, and other charges, which might well run another $52,000,000. Since little or no prospective outlets are available for these eggs, the entire inventory would represent a potential loss to the Government.

Under the production-payment plan, this cost of $172,000,000 would allow a production payment of about 4 cents a dozen on the 4,300,000,000 dozen eggs available for the commercial market. This ought to permit a decline in retail prices in excess of 4 cents a dozen and give consumers access to the additional 300,000,000 dozen eggs.

MILK AND MILK PRODUCTS

Under the proposed program with regard to milk and its products, we would continue full use of present marketing agreements and orders, extend those programs as and when producers and handlers desire, and continue to use purchases of dairy products as a price-support method wherever this method would be most economical and otherwise consistent with the public interest.

We would not, however, make purchases for which we could not find acceptable outlets.

We would use the purchase method mainly to relieve spot surpluses and seasonal problems which could be met most efficiently in this way.

The board of directors of the Commodity Credit Corporation recently estimated that $20,000,000 may be required in this type of operation between now and the end of this calendar year. We are just coming into the flush milk-producing season and it is imperative that we make the best possible arrangements to discharge the CCC obligation to support this commodity.

Whenever any large-scale operation becomes necessary, we should use the production-payment method. As a rule, this would cost the Government about the same amount as would purchases and would make more milk and milk products available to consumers at lower prices than would otherwise be the case. It would also call for a greater consumption of our grain and forage production.

As I previously indicated, the payment method could be used, if Congress so decided, not merely to support prices but directly to encourage greater production and consumption of milk. Prices of fluid or class I milk to consumers over the country these past few months have ranged between 22 cents in several eastern cities to a low of 14 cents in one of the major Midwest cities. In a 4-quart container, milk is now selling in grocery stores in Chicago at 16¼ cents a quart.

To the extent that the objective is to increase consumption of milk by lowering the price to the level which will secure the greatest consumption, it may be necessary to use additional sums of money and relate the payments to costs of production, the support operation and the reduced price to consumers.

For whatever assistance it may be to the committee, here is one guide estimate. If a payment of 1 cent were made on every quart of class I milk consumed in fluid form the cost to the Federal Government would be around $150,000,000 per year. It is obvious, however, that to achieve the desired result such a payment would not be necessary on much in excess of one-half of the milk so consumed.

POTATOES

While the demand for the main livestock items is relatively elastic, this is evidently

not true of potatoes. Small changes in market supplies cause much greater changes in market prices. I believe a satisfactory production-payment program can be operated for a great deal less money than we have been spending on potatoes.

When the CCC has fulfilled its obligations under the existing law to support the price of potatoes for the marketing season of 1948, it will have expended approximately $225,000,000. This program will have maintained the price to producers at an average of $1.75 per bushel for grade A potatoes. The total production last year was 445,000,000 bushels. Therefore, in order to maintain this level, it will be necessary to withdraw from the market and dispose of approximately 123,000,000 bushels. With the use of $225,000,000, we could have reduced the price of sales for commercial purposes to about $1 per bushel and retained the farm return at the support level. Consumers would have benefited accordingly.

Let me make it very clear that, in my opinion, the major portion of the potatoes withdrawn from the market during the 1948 season represents excessive and unjustified production, which by the use of production payments, acreage allotments, or marketing quotas, or marketing agreements and orders, should be eliminated in future years so that such losses to the Government on a single crop would not be incurred.

There are other commodities now receiving support, both storables and nonstorables, for which we have made no comparisons, and the general factors would be the same as those previously discussed. Some will continue to be supported.

Some of the commodities not now under support are of sufficient importance to the income of some sections of the country and are of sufficient importance to the national diet that it is conceivable that, at some date in the future, support prices should be made available to them under appropriate circumstances. But to estimate those kinds of factors now does not in my opinion, come within the realm of practicability.

For these reasons and the others already discussed, to estimate the over-all cost of the program would serve no useful purpose.

Another misunderstanding of my recommendations which I should like to clear up has to do with the amount of Government control involved.

This is somewhat related to the cost question. On the one hand, we hear that a program will be too costly, and on the other hand, we hear it said that if we place limits or conditions upon the amount of price support, this is regimentation. The two arguments conflict. It should be clearly understood that the only so-called Government controls involved in my recommendations are those which limit the amount of the Government's commitment to farmers.

I state categorically:

1. That my recommendations call for absolutely no form of authority or control not contemplated by title II of the Agricultural Act of 1948.

2. That the legislation I have recommended is less restrictive than any so far enacted by virtue of the fact that it offers more encouragement to the abundant consumption and production of farm products and, thereby, offers more protection against surpluses. This program would increase inducements for desirable adjustments without ordering them.

3. That the present legal right of producers to accept or reject by referendum any proposed mandatory limitation upon their marketing should not be infringed. As you know, a farm marketing quota program cannot be put into effect for any commodity unless at least two-thirds of the producers voting in a referendum have accepted such regulation. The Secretary cannot even propose such a mandatory limit except under carefully defined conditions which safeguard the public interest.

Farmers fought for the legal rights they now have to impose marketing limits upon themselves. In the view of those who did so, these rights represent an extension, not an infringement, of their freedom. I adhere to this principle.

For the record, let me give you the citations to provisions of title II, Agricultural Act of 1948, and preceding legislation, which carry every type of authority to which my own recommendations refer. Unless otherwise noted, the citations will refer to title II, Agricultural Act of 1948.

Production payments: Section 202 (a).

Acreage allotments and marketing quotas: Sections 311 et seq., Agricultural Adjustment Act of 1938; sections 203–208 of title II.

Marketing agreements and orders: First provided in section 8, Agricultural Adjustment Act of 1933; also see CONGRESSIONAL RECORD of July 7, 1948 (94 CONGRESSIONAL RECORD A4409) for confirmation that it was the intent of title II, Agricultural Act of 1948, that the Secretary have authority to condition price support for certain commodities upon there being in effect marketing agreements or orders regulating the marketing of such commodities.

Soil conservation as a condition required for price support: See section 8, Soil Conservation and Domestic Allotment Act. When the farmer's income was supported in part through payments under this act, full payment to a farmer was conditioned upon observance of soil-conserving and soil-building practices. See also section 202 (a), title II. This lists compliance with production goals as a condition for price support. Under this provision, by administrative determination, a particular acreage of soil-conserving crops would be a production goal upon which price support could be conditioned.

Parenthetically, let me say that with a realistic income and price support in effect, the farmer should be able to operate with more regard to soil conservation than he otherwise could. This is another reason why I regard this recommendation as a fair one.

Limitation of amount of price support per farm: In principle, this is not different from limitations upon the size of conservation payments (see sec. 8 (e) of the Soil Conservation and Domestic Allotment Act and the appropriations for such act in the Department of Agriculture Appropriation Acts for 1948 and 1949). Nor is it different in principle from limitations upon private use of the public domain such as irrigation water and grazing lands.

With regard to the recommended conditions and limits as a whole, let me make this one observation: Price supports are granted by the public in the public interest, not as a matter of inherent right. The public has also established certain other policy objectives in the field of agriculture. In my opinion, it is entirely proper that the program should connect up the various policy objectives that are naturally interrelated.

Labor-Management Must Reason Together

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the problem of labor-management legislation has become a political football. Reason has fled and Congressmen have chosen sides. It seems to me, Mr. Speaker, that both groups will have to compromise and resolve the problem in the public interest.

In today's Washington News there is an editorial which expresses my views in this matter. Under leave to extend my remarks, I include it at this point:

MAKE A FRESH START

This session of Congress will not substitute for the Taft-Hartley Act the kind of labor law which the Truman administration and the union leaders have tried—and failed—to bull through.

The votes in the House have made that clear.

This session still can pass a new labor law based on reason and justice—one designed to protect the essential rights of workers and employers alike, to give neither labor nor management unfair advantage and to serve the paramount public interest.

That is what it should do.

But if that is to be done, the administration and Congress will have to back away from their present stalemate, acquire wisdom, and make a fresh start.

Mr. Truman will have to tell the union leaders that he cannot deliver a law completely satisfactory to them.

He will have to tell them that, if they want the Taft-Hartley Act repealed, they must accept an adequate degree of legal responsibility to the public for what they do with organized labor's power; they must, that is, accept some Taft-Hartley principles in any new legislation.

Extremists in Congress, on both sides of the issue, will have to develop a willingness to meet on sensible middle ground.

The present situation is ripe for constructive efforts to reach a reasonable compromise.

In the House, Republicans and southern Democrats proved their ability to defeat the administration's bill, but could not muster enough support to pass their proposed substitute, the Wood bill. So the House has dumped the whole question of labor legislation back on its Labor Committee, which has announced that it will try to write a satisfactory new measure.

The Senate's Labor Committee has rubber-stamped the original administration bill, but passage of that bill by the Senate seems as unlikely as it proved to be in the House.

Many of the Taft-Hartley Act's supporters acknowledge that it is not perfect and are willing to accept new legislation meeting valid objections by labor and the administration—though not to scrap certain Taft-Hartley principles which they consider sound and essential.

Of course, if Mr. Truman, the union leaders, and their followers in Congress want to keep the Taft-Hartley Act on the books as a political issue, they can do that by maintaining a no-compromise attitude. But we are convinced that what most of the American people want is a determined effort to remove this issue from politics by settling it fairly.

A Test of Sincerity

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Test of Sincerity," published in the Washington (Ind.) Herald, April 22, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A TEST OF SINCERITY

It long has been suspected that the claimed interest of President Truman and his administration in civil rights for Negroes was something less than skin deep. Knowing that any civil-rights program would be filibustered to death by Senators from southern States, which are safely democratic, the President could toy with civil rights for Negroes for the sake of garnering the votes of Negroes in northern States, in many of which they are the balance of power.

It also has been suspected that the administration's claimed interest in housing for the underprivileged was more a vote-getting scheme than it was sincere.

Both suspicions have been proved by events of this week and our own Senator HOMER E. CAPEHART played a major part in proving them.

The administration's public-housing bill was before the Senate for debate. It was claimed by the administration that the purpose of the bill was slum clearance and to provide adequate housing for all underprivileged.

Senator CAPEHART led the fight on the floor of the Senate for two amendments; one was an antisegregation amendment which would insure Negro families equal opportunity to occupy any housing built under the proposed law; the other was to prohibit the leasing of any such housing to Federal employees for the reason that all Federal employees are paid sufficient salaries that they cannot be classed as underprivileged and that they have sufficient incomes to lease adequate housing from private owners.

The amendments took the administration forces by surprise. They didn't want the antisegregation amendment because much of the housing was planned for southern States where segregation is an established institution. To defeat it they were forced to reverse their civil-rights stand and vote the exact opposite of the way they were voting a few weeks ago on the civil-rights bill.

Neither did they want the amendment to exclude Government employees from housing to be built under the bill because much of the housing was planned for Washington, D. C., and other centers where thousands of the faithful among Government employees would be provided with housing, largely at Government expense.

Both amendments were defeated but to do so the administration forces had to show their true colors. Their actions showed that their true interest is not in the welfare of the Negroes or in providing housing for those who are really underprivileged. Their true interest is using Government money to buy votes of minority groups.

Report Lifts Lid on Dangerous Developments in Germany

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the May 7 issue of Labor.

REPORT LIFTS LID ON DANGEROUS DEVELOPMENTS IN GERMANY

Big-business men and bankers in the American military government in Germany are opening the way for a third world war, by blocking the breaking up of German "trusts" and "international cartels," which put Hitler in power and built up his military machine for the Second World War.

That sums up an extraordinarily important report, made public this week by a three-man commission which was sent to Germany late last year to see how the military government headed by Gen. Lucius D. Clay is carrying out orders issued by Presidents Roosevelt and Truman, to end the trusts and cartels.

The sending of the commission was a result of charges and demands made by Senator HARLEY M. KILGORE (Democrat, West Virginia).

The Commission was headed by Garland S. Ferguson, a conservative Republican member of the Federal Trade Commission. The other two members were Samuel S. Isseks, a Department of Justice antitrust attorney, and A. T. Kearney, a Chicago businessman.

They found that, despite the orders, the American "decartelization" officials have not smashed a single one of Germany's giant monopolies, and have left the door open for American big-business men and bankers to resume their old cartel ties with the German magnates who used the Nazis to crush labor unions, and to carry out their schemes for world conquest in the Second World War.

The report names a number of American officials in Germany in distributing the blame, but puts most of it on General Clay's two "economic advisers."

The first one was Gen. William H. Draper, who came from the Wall Street banking firm of Dillon, Read, which played a big part in financing the industrialists back of Hitler.

Draper afterward became Under Secretary of the Army, and went to Japan, where he fixed things up for Jap and American monopolists as he had done in Germany.

Draper's place as Clay's adviser was taken by Lawrence Wilkinson. He was one of the American businessmen and bankers who put on an Army colonel's uniform during the war, and then bobbed up in "strategic" places in the organization supposed to "decartelize" Germany. Incidentally, Wilkinson's chief assistant, a man named Hawkins, is a son-in-law of Draper.

The American people would be shocked by hundreds of statements in the report, but only one can be presented in the space available here. This one was made by Isseks.

He cited remarks and letters of top American military government officials in Germany—before last year's election—saying the trust- and cartel-busting program should not be pushed, because the administration in Washington would change after November 1948, and there would be a change in policy.

In other words, men like Draper and Wilkinson had reason to believe a Republican President, Dewey, would reverse the Roosevelt-Truman policy and give free rein to the German and American monopolists and international cartelists.

State Department Fumbles, Pacific Goes Anti-American

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

STATE DEPARTMENT FUMBLES, PACIFIC GOES ANTI-AMERICAN

(By Edgar Ansel Mowrer)

Secretary of State Dean Acheson is so busy with European affairs that he has had little time to devote to the disaster in Asia. He admits that United States foreign policy has suffered a defeat there. He has not yet confessed the magnitude of our China debacle. Still less has he avowed its cause.

Obviously, the basic reason for the present catastrophe was F. D. R.'s wartime policy of sacrificing all our other allies to his central purpose of winning Russia's friendship. This implied world-wide cooperation between Communists and non-Communists. When this collapsed like a punctured balloon, the United States was left without an Asiatic policy. Since then it has been unable to find one.

Today, this indecision in Washington is jeopardizing the rest of Asia. American prestige there, mountain-high in 1945, has sunk to an all-time low. The United States is so unpopular that to get elected in Manila, capital of a country given its independence by the United States, candidates find it necessary to damn America.

Domestic anti-imperialists like Owen Lattimore attribute this exclusively to Washington's failure to adopt a general hands-off attitude throughout the east. Other experts less sympathetic to the Soviet line believe it comes rather from our conspicuous failure to stick to principle—in other words, to our indecision.

Examples are everywhere.

REHABILITATION PROGRAM FAILS

Take Japan. That small, overcrowded, overindustrialized group of islands can prosper only through the development of overseas commerce. Therefore, the original American idea was to revive Japanese commerce with China for the benefit of both countries. Now China has been lost. Japanese merchants will do business there on Russian terms—or not at all.

Neither the President nor the Secretary of State nor even Douglas MacArthur has yet thought out an alternative.

Again, the loss of China ought to have produced in Washington a new strategical plan for the defense of our Pacific position. One effective way to protect the Philippines would be for the United States, in full cooperation with other Pacific powers, to take over the island of Formosa and hold it temporarily as a neutral "safety zone."

American leaders are, however, afraid of the inevitable charge of "imperialism" which would start in Moscow and reecho throughout Asia. Therefore Formosa will probably be left to the Chinese, that is, to the Soviet Union, whose naval power in the Pacific will then move several hundred miles south.

UNITED STATES OVERSENSITIVE

Obviously, since the United States administration is so sensitive to the charge of "imperialism," one might have expected it to uphold the Asiatic nationalists against the French and the Dutch in Indochina and Java, respectively.

Yet instead, the United States Government has straddled. American interests in Europe are real and urgent. The United States needs the cooperation of the French and the Dutch as much as it needs that of the Asiatics. Yet to Asiatic nationalists in Washington, failure to stand firmly on the principle of full and rapid emancipation shook their faith in America.

Indecision again.

Perhaps the most costly example of our failure to act firmly and swiftly in Asia is the administration's failure to push the formation of an East Asiatic bloc, now more commonly called a Pacific union.

This is the brain child of President Elpidio Quirino, of the Philippines, and of his indefatigable representative at the United Nations, Ambassador Carlos P. Romulo. Communist occupation of south China will threaten the Philippines directly. It will endanger the other countries of southeastern Asia. Most of the governments concerned are aware of this and support the idea of the Pacific union. Siam and Burma are ready. So, up to a point, are Australia and New Zealand and Ceylon.

PACT GAINS IN INDIA

India under Prime Minister Jawaharlal Nehru still hesitates. Pandit Nehru and his handsome sister, Madame Pandit, new Indian Ambassador to the United States, suffer from a belated attack of the "Czechoslovak disease," which is the belief that it is possible for a country to be neutral between Russia and the non-Communist powers. Yet India's decision to remain within the Commonwealth is an indication that neutrality is weakening under the irresistible pressure of circumstances.

But here, too, Washington still hesitates while the Asiatic situation worsens from hour to hour.

Basing Point

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, May 5 (legislative day of Monday, April 11), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post under date of April 29, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BASING POINT

By a 4-to-4 vote (Justice Jackson not participating) the United States Supreme Court has upheld the Federal Trade Commission order outlawing the basing-point system for rigid steel conduit manufacturers. Because of the split decision the Court issued no opinion—merely affirming the judgment of the lower court. The result is to perpetuate the confusion regarding the legality of pricing practices involving absorption of freight charges.

The FTC contends that in both the cement case decided about a year ago and the steel conduit case, its order was directed against collusive price fixing and that individual use of the basing-point method, if undertaken in good faith for the purpose of meeting competition, is not under attack. However, in the steel conduit case the FTC did not base its order merely on charges of conspiracy. It claimed that the manufacturers have violated the antitrust laws, regardless of the conspiracy charges, by using identical delivered prices with the knowledge that all other firms in the field were using the same price formula. This second count in the indictment differentiates the steel conduit case from the cement case. Alarmed businessmen have interpreted it to mean that a single seller may not meet a competitor's price in any market by quoting an identical price, or use a pricing system if he knows that another seller is using that same system.

To be sure, spokesmen for the FTC maintain that this interpretation is incorrect. Illegality exists, they assert, only when price uniformities are so persistent and rigid, so based on a general determination to act together, as to have the effect of a price-fixing conspiracy. Nevertheless, the decision in the steel conduit case admittedly makes it easier to prove the existence of tacit collusion and causes businessmen to fight shy of any kind of pricing practice that results in identical delivered prices.

Since the Supreme Court failed to clarify the important issue raised in the steel conduit case, legislative action is being urged either to revise the antitrust laws or, as an alternative, temporarily to ban FTC suits against basing-point price systems, if undertaken in good faith. Of course, a moratorium on suits would not solve the problems raised by the basing-point system, but it would prevent hasty changes in existing legislation that might not be in the public interest.

There is little hope that Congress will find time at the present session to grapple with the complicated issues raised by pricing practices. Although revision of laws affecting pricing policies and competition is clearly needed, as Senator JOHNSON says, to solve the problems that are now worrying industry, proposals for thoroughgoing, permanent revision would lead to prolonged discussion and heated arguments. The preferable alternative, therefore, is to pass pending measures temporarily banning FTC orders against noncollusive, delivered price systems and freight absorption. Businessmen would then be freed from harassing doubts about the legality of their pricing policies and the way would be left open for permanent legislation later on, dealing comprehensively with unsolved problems of competition and pricing.

Why Official Misinformation Exaggerating American Aid to China?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the New York Times by Mr. Frederick C. McKee, a distinguished American citizen whose devastating questioning of State Department releases seeking to give the American people the impression this Government has given huge and continuous and effective military aid to China is all the more important because he has been an outstanding supporter of administration policies regarding United Nations, Marshall plan, Atlantic Pact, and aid to Greece and Turkey:

ADEQUACY OF MILITARY ASSISTANCE QUESTIONED, POLICY CRITICIZED

(The writer of the following letter is chairman of the China Emergency Committee for Aid to Anti-Communist China.)

To the EDITOR OF THE NEW YORK TIMES:

Clearly, the desperate plight of anti-Communist forces in China and the broad southward sweep of Red armies over Asia now compel a reorientation of this Government's policy toward the East. Underlining the critical nature of events, Under Secretary of State James E. Webb advised me in a conference at the Department several days ago: "Our policy in China is under the most serious consideration at this time."

It comes as no surprise that China policy is at this critical hour under serious consideration. Anything else would be incredible. Equally amazing is the State Department's utter and continuing failure to give the American people some explanation of its stand on China.

A United States Government firmly committed to containment of communism, a Government spending billions to carry out that policy in Europe, has offered little more than token aid to stem the Red wave in China. Yet every effort to elicit some definitive policy statement or explanation of this strange action has met either silence or the disappointing rejoinder that we are "waiting for the dust to settle." American voters have been mere spectators in a grim and moving world panorama which vitally affects our lives and those of our sons and daughters to come.

SCOPE OF AID

I write at this time because not only has the State Department failed to provide an explanation of its actions, or inactions; it has issued, at intervals, a series of statements and accounts of aid to China which have created the impression that $2,000,000,000 in military assistance has been accorded China since VJ-day. Obviously, if our country had furnished any such vast military aid since VJ-day, we could have little hope of supplying further effective military aid at this critical juncture. The truth is that the impression of a constant stream of military aid to China, amounting to some $2,000,000,000, is false.

Senator PAT MCCARRAN, of Nevada, tried last week to disperse some current false impressions with analysis of a letter of Secretary of State Dean Acheson stating that China had received $2,000,000,000 of military aid since VJ-day. Senator MCCARRAN demonstrated that instead of $2,000,000,000 in military relief Chinese non-Communist forces after VJ-day received only $110,000,000 of usable military aid in time to be of value in last autumn's big campaigns. Nevertheless, in the New York Times "News of the Week in Review" on April 24 your reporter referred to the "$2,000,000,000 in military aid" of which, he wrote further, "it was estimated that 90 percent had been eventually acquired by the Communists. * * *"

The fantastic implications of the State Department's publicly announced figures on United States aid to China must be corrected before any intelligent appraisal of this aid can be made. Such an appraisal must be made if our future policy is to rest on realism rather than fantasy or on misinformation, already so effectively spread that many regard it as fact. At the very least, an answer must be got to the now vital question: Have we given China's non-Communist forces a constant stream of aid; or has it been a pittance? The facts show effective military aid to China since VJ-day totals $105,000,000.

The Department's publicly announced figures list grants and credits to China since VJ-day totaling $1,000,300,000, and classified as "military" aid. Even the Department's break-down, which saw detailed analysis in a few newspapers, denies its own military classification.

ANALYSIS OF GRANTS

The Department break-down details $694,700,000 of the $1,000,300,000 as lend-lease; "military aid under SACO" (Sino-American Cooperation Organization) at $17,700,000; excess United States Army stocks in west China, $20,000,000; and "transfer of United States naval vessels, $142,900,000." The $125,000,000 military grant authorized by Congress in April 1948 was the last item of the break-down.

Of the lend-lease, $335,817,910.56 is reported as service and expenses. This item embodied funds for transportation of Chinese armies from Burma to China and re-

patriation of Japanese. Against the balance of $358,882,085.44 reported in lend-lease account, the Chinese have only issued $105,400,000 in receipts, indicating a wide discrepancy. Furthermore, even of this $105,400,000, we are advised that only about 20 percent represented actual military equipment and ammunition; 40 percent quartermaster's supplies, and the other 40 percent miscellaneous supplies, including medical items. While the latter items are no less necessary than guns and bullets, only guns and bullets kill the enemy.

We are further advised that the item of naval vessels, charged at procurement cost of $142,900,000, included large numbers of landing and similar craft, many without guns or ammunition—all of little or no value in the civil war.

Proper discussion of the $125,000,000 grant for military equipment authorized in April 1948, in order to be realistic, must recognize that the first shipment did not leave the United States until October; and that $30,000,000 of this $125,000,000 is still unshipped—because it has been assigned a B–4 priority, which is much lower than commodities destined for Greece, Iran, and Turkey.

Not only has the Department of State consistently utilized monetary rather than itemized accounts of aid to China, in such reluctant disclosures as have been made, but all efforts thus far to procure a written list of the actual items sent to the Chinese have failed to produce results. Moreover, advices which I consider reliable have pictured an imposing array of obstacles placed in the way of such meager effective aid as has been authorized. For example:

After the $125,000,000 China Aid Act was passed by Congress in April 1948, it was agreed that part of this aid would consist of equipment and ammunition for a 10-division program. Chinese and American representatives in Nanking computed the total cost of this program to be $37,783,386.68, based on 1945 standard list prices. This basis was agreed upon in conferences between the Chinese, United States Ambassador Leighton Stuart and Maj. Gen. David Barr. Subsequently, the Chinese authorities were summarily informed by the Department of the Army, which had agreed to implement the program, that the total cost would be $74,987,810. This latter, said the Army, was because costs should have been computed at current replacement costs.

As a result of this change, only about 50 percent of the 10-division program was fulfilled. The unfinished portion consisted of about one-third of the rifle cartridges and all of the trench mortars, 37-millimeter guns, 75-millimeter howitzers, and their ammunition.

PROCUREMENT COSTS

Not only did all these negotiations delay shipment of supplies desperately needed by the Chinese, but curious discrepancies evolved between prices charged China and those charged other countries for similar goods. This Government charged China $105 per thousand rounds of .30 caliber ammunition, plus $8.40 for loading on cars. The original procurement cost of this ammunition was $45.80 per thousand rounds. We shipped Turkey the same ammunition for $4.80 per thousand rounds—charging Turkey a rate of 10 cents on the dollar of procurement costs.

The examples given above are typical of the long series of negotiations, delays, and inadequacies which characterized American aid to China from VJ-day to the present. During that time the Communist hordes have moved steadily southward, and China's pleas for more effective help, delivered with greater speed, have gone unanswered.

Several Members of Congress have demanded an investigation into the whole China policy—its origin, the reasoning behind it, and the names of those responsible for it. In justice to our democratic system of government, the State Department can do no less than give a definitive explanation of its conduct.

FREDERICK C. MCKEE.

WASHINGTON, D. C., *April 27, 1949.*

International Trade

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I consider it a high honor and real privilege to include the following editorial by Wilbur B. Mueller, editor of the Moline (Ill.) Dispatch, which received the 1948 editorial award of the United States Council of the International Chamber of Commerce. The award and bronze plaque were for editorials on international economic relations. I feel this excellent editorial is both timely and on a most important subject.

INTERNATIONAL TRADE

We have in mind the statement of a senatorial candidate who visited this office prior to the election and answered a query about his views on the so-called Marshall plan, now called ECA. We asked him whether he was for it, and he said "Yes." He said he would be for it if it worked, and if it didn't work he wouldn't be for it after, say, 1950.

The common sense view of the Senator-elect, probably, was that in the long run international trade must do its part in pulling other countries out of the economic slough. Perhaps they can be pulled out temporarily by subcutaneous injections of artificial stimulants but unless trade generally is revived together with wholesome currencies, they will slip back into the slough again.

We had a good many conversations on foreign trade with the late George N. Peek, who used to work that angle in Washington when attached to the Roosevelt regime. Peek knew all the angles favored by the Roosevelt people and he explained them gently. He told how and why they ought to work, but the fact is that they didn't work. Foreign trade didn't revive enough to do much good between the predepression slump and the beginning of the Hitler holocaust. Between 1939 and 1945 a normal exchange of goods between the various nations didn't have a chance. Since 1945 too many nations have been "busted," in the vernacular. We are now expected to fight a cold war against Russia and at the same time provide gears that can mesh so the economic machine can begin pouring things out of the hopper.

It is blithely stated here and there that all Europe needs is for the people to get to work, and that is true as far as it goes. But getting to work means more than merely waving the arms and clearing rubble. Capital is needed to rehabilitate the people and cities, but that alone is not sufficient. Desirable old industries must be restored and new ones must be established. If we could restore Europe to her 1932 status economically, that still wouldn't be enough. That is where the disastrous slide in morale was started.

It is assumed sometimes that all we need do is buy European goods so Europe can have dollar exchange to buy from us—but that is only partly true. They need dollar exchange in Latin America and South America, too. The United States is the most powerful industrial country in the world, but we cannot absorb the surplus product of all the peoples of the alphabetical list of countries from Aden to Zanzibar, nor even a moderate part of the exportable surplus. The United States of America is neither a cornucopia nor a bottomless pit.

A few days ago we saw a very beautiful lamp base. It was of a delicate, translucent white, soft to the eye and good even to the touch. We were told it was of alabaster, a sort of stone so soft it can be scratched with the fingernail, and that it is produced and worked largely in Italy. Some alabaster is found in the United States, but people here do not have the patience to carve it into delicate patterns and figures. Italy doubtless has other exportable products, but this is one. Italy has alabaster and the talent to carve it. America wants alabaster. Italy needs our money more than she needs her alabaster. We want the alabaster more than we want certain amounts of money. It is a fair trade and it would be sound trade—sound to its very core.

In south central Europe the natives carve cuckoo clocks which are very popular among Americans who like cuckoo clocks—and the number seems large. In Brazil and elsewhere down below, they produce coffee, and there is tea in China and India, spices in Ceylon, coconuts in the western Pacific and so on, almost endlessly. We want these things and dozens of other commodities that show up in our own industrial processes, such as minerals, chemicals, and vegetable products. When we buy what we actually want and give dollar credits therefor it is sound business.

The trade barriers and tariff walls appear properly only when someone tries to carry coals to Newcastle, and we may as well resign ourselves to the fact that such walls always will exist. Yet a refugee from Czechoslovakia tells us that for some reason they didn't used to grow lettuce in that country. Czechoslovaks obtained their lettuce from the gardens of northern Africa, but at nearly prohibitive cost because of five separate tariffs imposed on that one commodity. The tariffs were not imposed to prevent a scarcity in Africa nor to protect lettuce growers in Czechoslovakia. They were imposed by these two governments, and by those in between, purely for revenue, and some of them may have been for spite.

If the peoples of Europe and elsewhere are to get to work, their governments must quit not only military aggression but also economic and ideological aggression. They must quit trying to bring home the bacon at the expense of other countries. They must restore peace of mind first. In a world shadowed by the blasts of Bikini, this is no time to be rebuilding futile walls with trowel in one hand and pistol in the other.

The United States can supply only sound trade permanently and profitably to the rest of the world. If we try to do more, for too long, the keystone will fail, and the whole structure, too frail even after our most Christian efforts, will be reduced to wreckage.

To sum up what we have been trying to say, there should be no punitive or spite tariffs and no export levies except to prevent shortages. People abroad should be permitted to travel more freely. There should be more welcome mats and fewer iron curtains—and on that issue the free nations should take a more definite stand. Those who like democracy should sell it on its own merits and not by economic pressure; and those who feel otherwise should be required to sell their political commodity rather than inject it hypodermically by stealth. If it is to be a free world, and only in a free world can we have lasting peace and prosperity,

the people must be free to choose their own governments. The world needs peace first, then reconstruction, then that desirable climate when men can see some reward for going to work.

Bungling Strategy by New Deal

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 4, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including a timely editorial that appeared in the Washington Post today.

BUNGLING STRATEGY

The defeat that the administration has sustained is not diminished by the House recommittal of the Wood bill to the Labor Committee. For the action of the House the previous day in rejecting the Lesinski bill in favor of this substitute measure is proof positive that the administration will either have to accept a labor bill modeled along Taft-Hartley lines or else make up its mind to live with the Taft-Hartley Act.

Responsibility for this political debacle rests squarely upon the shoulders of House leaders who refused until too late to consider reasonable amendments to the defective administration bill. A good share of the blame for their strategic defeat is attributable to the shortsighted tactics of labor leaders who fought retention of various protective features of the Taft-Hartley Act that have proved their worth, especially provisions for injunctive relief in case of strikes constituting a threat to the national welfare. Finally, the President himself seriously impaired the chances of passage of the administration bill, first by presenting his lieutenants in Congress with a ready-made bill tailored to fit the specifications of labor leaders, and more recently by trying to coerce Congress into accepting that bill by threatening to deny patronage perquisites to Democrats who voted against it.

The political bungling that led to the rout of the administration has served at least one good purpose. It has shown that Congress cannot be bullied into passing a one-sided labor bill that fails to protect the interests of management and the public as well as labor. Although the Wood bill failed of passage, the House rejection of the Lesinski bill, even in its hastily-amended form, demonstrated beyond the shadow of a doubt that Congress will not approve any labor bill that does not embody most of the safeguards against abuse embodied in existing legislation. If there is to be any new labor legislation at this session of Congress, the administration forces will either have to make further concessions to the demands of opponents or risk the possibility of a legislative revolt that might result in passage of a measure quite as stiff as, or even stiffer than, the Wood bill.

The choice, therefore, appears to lie between retention of the Taft-Hartley Act in unamended form or acceptance of a compromise measure that would eliminate or modify those provisions of the law that have proved undesirable or oppressive without destroying essential safeguards against the abuses that prevailed under the old Wagner Act. Unless a reasonable compromise is reached, the Taft-Hartley Act will remain a political issue, and labor unions and anti-labor groups will continue to put pressure on members of Congress and candidates for office to indorse or oppose changes in the law that may not be in the public interest.

Labor legislation should, of course, be judged solely on its merits as an instrumentality for insuring a system of collective bargaining fair to employers, employes, and the public at large. It is essentially a nonpartisan type of lawmaking, as evidenced by the split party votes in the House. If the administration had proceeded on that assumption it would not have lost political face by making repeal of the Taft-Hartley Act a partisan issue.

Program of the Interior and Insular Affairs Committee

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address entitled "Program of the Interior and Insular Affairs Committee for the Eighty-first Congress," delivered by me before the convention of the National Rivers and Harbors Congress in Washington, D. C., on April 8, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROGRAM OF THE INTERIOR AND INSULAR AFFAIRS COMMITTEE FOR THE EIGHTY-FIRST CONGRESS

Mr. Chairman, ladies, and gentlemen, it certainly is a pleasure to be here with you this morning. When my distinguished fellow Senator, JOHN MCCLELLAN, of the great State of Arkansas, offered me the opportunity to come and talk to you this morning, I jumped at the chance. I am very familiar with the fine work that your organization has done over the years in fostering cheap water transportation throughout the country. I want to pay tribute to you for your accomplishments along that line.

Back in my home city of Omaha, we are keenly aware of the importance of cheap transportation, particularly water transportation. Omaha is a very important transportation center. We have seen what cheap water transportation has done for other cities. Perhaps we have been just a little bit jealous of the prosperity that it has brought to other cities. At any rate, there are very few Omahans that are not enthusiastic about developing the navigation possibilities on the Missouri River. We realize that a 9-foot channel for barge traffic can make all the difference to our prosperity. That channel is just as vital to the rest of my State as it is to Omaha. The difference in cost of a few cents a bushel to the farmer in shipping his wheat to market may not seem like a lot, but when it applies to every bushel of wheat, and when it goes on for year after year, the cumulative effect on farm prosperity is tremendous. I believe the farmers all through the State realize that fully.

As a topic for this address, Senator MCCLELLAN has assigned me the subject, The Program of the Interior and Insular Affairs Committee for the Eighty-first Congress. I presume I was assigned that topic because of the fact that during the last Congress I was chairman of that committee. As a result of the political overturn of last fall, I am chairman no longer, of course. My good friend, Senator O'MAHONEY, of Wyoming, succeeded me in the position. Under those circumstances, perhaps it would be presumptuous to try to lay down the program of the committee. I shall not try to assume the prerogatives of the present chairman. Senator O'MAHONEY and I see fairly well eye-to-eye, however, even though he is a Democrat and I am a Republican. Perhaps it will be in order for me to discuss the work of the committee and explain just how it fits into the Federal activities relating to development of our water resources.

Some of you may recall that the Congressional Reorganization Act of 1946 combined five of the old smaller committees into one major committee called the Senate Committee on Public Lands, now named the Committee on Interior and Insular Affairs. One of those former committees was the Committee on Irrigation and Reclamation, of which I have been a member ever since I came to the Senate in 1941. Since the congressional reorganization, the Committee on Interior and Insular Affairs has continued to handle legislation relating to reclamation development, including broadly the whole program of the Bureau of Reclamation. That is how we get into the problem of our water resources. Senator MCCLELLAN is a high-ranking member of the Public Works Committee, which handles flood control and navigation questions. It might seem that there would be some conflict between the two committees, but, as a matter of fact, we get along extremely well. We both have the same general aims and purposes. In fact, four Members of the Senate are members of both committees.

It is true, however, that there is sometimes controversy regarding the management and development of the possibilities of our rivers. In the West, from about the ninety-eighth meridian of longitude on west, water is very scarce and very valuable. All through the West it is a great problem to secure a dependable supply of water to sustain life and to maintain agriculture. A major part of our activity is concerned with bringing the water in the streams to the land by means of irrigation works. In constructing those works we have to be very careful to secure the maximum benefit from each drop of water. That is the job primarily of the Bureau of Reclamation. It is the function of the Committee on Interior and Insular Affairs to handle the legislation dealing with that problem.

It is a fact, however, that problems do sometimes arise in the use of our water in the West, problems that must be reconciled. Perhaps I can best illustrate this point by referring to our program for development of the water resources of the Missouri Basin.

The Missouri River drains an area of 529,000 square miles, or approximately one-sixth of the land area of the entire United States. It covers a part of the area of 10 different States. In the western and northern part of the basin, in Montana, Wyoming, Colorado, and the Dakotas, the people are chiefly interested in the possibilities of irrigation and power development. In the lower part of the basin, particularly Missouri, eastern Kansas, and Nebraska, and part of Iowa, the greatest interest is in flood control and the development of navigation. My State, Nebraska, is right in between. It is the only State that lies entirely within the Missouri Basin. In the eastern part of the State there is plenty of rainfall for crop production, and we are very much interested in developing

navigation on the main stream. In western Nebraska, on the other hand, the greatest interest is in irrigation. You can probably understand that for a Senator representing the entire State it is necessary to reconcile the divergent interests and work to help with the attainment of both types of development.

As a general program for developing this entire basin, we are following what is called the Pick-Sloan plan. This is a plan developed jointly by Gen. Lewis A. Pick, for many years division engineer for the Corps of Engineers in our area and now Chief of Engineers, and W. Glenn Sloan, formerly Administrator of the Bureau of Reclamation's work in the valley. Under this plan, the engineers have responsibility and authority for constructing the navigation and flood-control works on the main stem of the Missouri and carrying a 9-foot channel for navigation as far as Sioux City, Iowa. The Bureau of Reclamation has the chief authority for the planning and construction of irrigation works on all the tributaries. The Soil Conservation Service of the Department of Agriculture backs up the work of these two principal agencies with smaller check dams, conservation treatment of the soil, and other work to retard water run-off and prevent soil erosion. Various other agencies, such as the Fish and Wildlife Service and the National Park Service, also play a part in the plan.

To coordinate the entire construction program, we have a group called the Interagency Committee on which the principal bureaus and also the States through their governors are represented. This committee is charged with the responsibility of seeing to it that construction proceeds in a balanced, efficient manner and that conflicts are ironed out. The construction projects of the various agencies are carefully dovetailed into each other so as to prevent wasteful expenditure of the public funds.

For example, at one project with which I am particularly familiar—the Harlan County Dam on the Republican River—the engineers are constructing the dam. It is to provide flood control, power, and water for irrigation. The Reclamation Bureau is building the irrigation ditches and other irrigation works and is handling the actual operation of the irrigation side of the picture.

To return to the Pick-Sloan plan itself, it is always a problem on our western rivers of being sure that there is enough water to carry out the plans that are adopted. For some years before 1944, there was controversy as to whether there would be enough water for both the irrigation and navigation development. By the terms of the Pick-Sloan plan, this conflict was specifically recognized and reconciled, and the works to be constructed in the basin are adjusted to the master plan, so as to make sure that all the principal needs will be met.

It is important to realize that the Pick-Sloan plan has the stamp of approval of the most outstanding water engineers of the country. Those are the engineers in the Bureau of Reclamation and the Corps of Army Engineers. Representatives of these two agencies have appeared before Congress and testified that the plan will work and will provide the benefits that are in the program. In other words, the reputations of these men are at stake. The Corps of Engineers feels confident that there will be enough water to maintain the 9-foot channel on the Missouri as far as Sioux City. The Bureau of Reclamation, by endorsing this plan, has made it plain that the program of the Corps of Engineers will not interfere with its plans for irrigation. How then can the sponsors of the MVA expect anyone to believe that a new plan for river development would be superior from an engineering point of view?

I want to emphasize these points because there has been controversy about the whole program for our Missouri Basin development from time to time. The plan has been subjected to criticism from two principal sources during the past few weeks. One source of criticism has been certain task force reports prepared under authority of the Hoover commission, which I shall touch on briefly in a moment. The second source of criticism has been from those who advocate an MVA for the Missouri Basin.

Since the proposed Missouri Valley Authority would be a complete substitute or alternative for the Pick-Sloan plan, it may be worth while examining the proposal in some detail. Evidently the two ideas run along parellel lines. They are both methods for controlling and using the water and related resources of the Missouri Basin. They both have the same goal—that is, to secure the maximum benefits for the people of the region and the Nation from those water resources. Both of them would operate within the same limitations, and that means, primarily, the limited amount of water. The sponsors of the MVA do not pretend that they can create any additional supply of water from the skies, nor secure it from the oceans or from outside the Missouri Basin.

The proposed MVA is not yet a plan for control and use of the waters, of course. It is simply a proposal to set up a board with broad authority which would be supposed to frame such a plan. Naturally, it is difficult to discuss a plan which has not yet been developed. At the same time, we can perhaps get some notion of what is proposed by the MVA sponsors by studying the public statements that have been made in its behalf.

The bill to establish an MVA, S. 1160, was introduced in the Senate on March 2 this year. At that time, three of its sponsors, Senator MURRAY, of Montana; Senator HUMPHREY, of Minnesota, and Senator GILLETTE, of Iowa, made addresses in support of the bill. I would like to quote briefly from their statements in an attempt to get an indication of just what its sponsors believe is wrong with the Pick-Sloan plan which could be corrected by an MVA.

At that time, Senator MURRAY said: "Between these two great Government agencies there is an irreconcilable and dangerous conflict which is based on a physical condition that they are completely powerless to remove, namely the fact that the navigation-flood control program of the Army engineers depends on impounding and holding a large amount of water for downstream use, while the Bureau of Reclamation requires an ever-increasing amount of water for upstream area irrigation and power generation. Latest engineering studies reveal that there simply is not enough water over wet and dry cycles to meet both needs."

Please note that statement about latest engineering studies. The Senator does not indicate what studies he refers to.

A little later on, Senator MURRAY said: "The O'Mahoney-Millikin amendment presumably gives first priority to the upper-basin States on all waters. Yet the Army engineers' program, already authorized, and some of it already being built, requires a tremendous proportion of that very water belonging to the upper-basin States. So the farmers who have been led to believe in the strength of the protection afforded them by this worthy, fair-sounding amendment are apparently putting their faith in an illusive fortress built on sand."

Let me say that if this is Senator MURRAY's fear, I believe he can stop worrying. The O'Mahoney-Millikin amendment does give first priority to beneficial consumptive use of water in the basin. That use, including water for irrigation, takes priority over the navigation development. It is absurd to suppose that the Army engineers could take water which the farmers need for irrigation. If General Pick and the engineers suppose that they can secure water for navigation in that manner, they are not as smart as I think they are. I might add that I have a very high regard for General Pick's engineering ability and common sense.

In his address Senator GILLETTE sounds somewhat the same theme. He declares: "The Senator from Montana [Mr. MURRAY] and the backers of the proposed Missouri Valley Authority quickly contended and demonstrated that there was still not enough water in the river for both plans; that the basic conflict continued."

This statement is made in the face of the fact that the engineers of the Army and of the Bureau have staked their reputations on the finding that the plan will work.

Senator HUMPHREY in his address speaks as follows: "I am also interested in the irrigation possibilities of the Missouri. There has been no agricultural justification for hundreds of thousands of acres of the proposed Sloan irrigation projects, and these malpractices might bankrupt tens of thousands of our farm people. It is now obvious that the Pick flowing channels will take millions of acre-feet away from much-needed irrigation." It is evident from that statement that Senator HUMPHREY is not particularly interested in the navigation possibilities of the Missouri.

Altogether, if we can judge from the quotations of its sponsors, one of the principal purposes of MVA, apparently, would be to give up the idea of developing navigation on the Missouri. At least that is the impression that I get. Elsewhere in the discussions on this subject is a suggestion of a slack-water channel with locks. I do not know if this suggestion is made seriously or not. Offhand, it sounds like a suggestion intended to sabotage the whole idea of Missouri River navigation. Turning the broad Missouri into a sort of lock canal, with all the delay and inconvenience to shippers that that would entail, would be a sure way to condemn the river to uselessness.

In passing, I might point out that there are only two reasons given for substituting the MVA for the Pick-Sloan plan. First, the sponsors of MVA are fond of charging that there is a lack of coordination under the Pick-Sloan plan. I have mentioned the effort we have made to meet this problem through the Inter-Agency Committee and through the careful dovetailing of the two plans. Second, MVA proponents are fond of charging that the Pick-Sloan plan is unsound from an engineering standpoint. That type of charge is a little absurd for a layman to make. If there is anything wrong with the engineering program, most of us are not likely to know it until it is proved by an expert unprejudiced engineer. If we must choose between the judgments of Senators MURRAY and HUMPHREY on the one side, and the Army and Reclamation Bureau engineers on the other, it is pretty obvious where the choice should go.

On these two points of criticism, the whole case for an MVA appears to be based. The MVA proposal goes far beyond an attempt to deal with these two phases of the problem, however. It proposes to establish a superboard to control the destinies of the entire basin. This board would be virtually free from control by Congress and would have authority, broadly speaking, to override State water laws all through the valley. This board would apparently have the power to decide along what lines a development should proceed, regardless of the wishes of the people of the valley or their State officials or

their representatives in Congress. Apparently it would have authority to subordinate navigation completely to irrigation, or irrigation to navigation, or both to hydroelectric power. Whatever changes we may need to make from time to time in the Pick-Sloan plan, I do not believe we need give away all our rights.

A little earlier I mentioned the discussion of the Pick-Sloan plan contained in two of the task force reports prepared for the Hoover Commission on Organization of the Executive Branch of the Government. In one of these, the report entitled "Water Resources Projects," prepared by A. B. Roberts, a consulting engineer of Cleveland, Ohio, there is a good deal of discussion of the financial aspects of the plan. It is an interesting discussion, although I feel that in a good many instances it makes suggestions directly counter to established Government policy as expressed in any number of Congressional enactments.

From our point of view, the more important task force study for the Hoover Commission is the one on Organization and Policy in the Field of Natural Resources, prepared by the Library of Congress. In fact, it is evident that this report is the main source of the material on which Senators MURRAY, GILLETTE, and HUMPHREY prepared their charges against the Pick-Sloan plan. Yet a careful reading of the task force report does not substantiate the charges.

This task force report makes a number of specific criticisms of the conduct of operations in the Missouri Basin and suggests various changes in administration, some of which may be very sound. When it comes to considering the engineering aspects of the plan, however, it presents no new material worth mentioning. It simply rakes up all the old controversies between the Corps of Engineers and the Bureau of Reclamation that were settled and reconciled by the Flood Control Act of 1944.

A little earlier I quoted Senator MURRAY'S statement regarding what he called latest engineering studies on the supply of water available for Missouri Basin development. It is evident that these so-called latest engineering studies are nothing more or less than the Hoover Commission task-force report. This task-force report is not an engineering study at all. It simply quotes again from some of the studies made by some of the engineers and the Bureau of Reclamation in 1944 and prior years. In fact, there are no thorough, complete engineering studies of the entire Missouri Basin, except those by the Bureau of Reclamation and the Corps of Engineers. While the studies of these two agencies are kept continually up to date, no over-all summary of their findings has been published since the 1944 reports. In other words, when the sponsors of the MVA claim that recent developments have given us new facts that we did not have in 1944 they are simply talking through their hats.

It is noteworthy that the Hoover Commission itself, including distinguished representatives from the Senate, the House, the executive branch of the Government, and from outside the Government, did not endorse the findings of its own task forces. It presented them purely as suggestions for discussion, and then went on to make its own recommendations. In fact, the Hoover Commission itself did not specifically mention the Pick-Sloan plan one way or the other.

Meanwhile, construction under the Pick-Sloan plan is proceeding rapidly, and a tremendous amount of work is being done despite obstacles. The President's budget for the next fiscal year requested about $104,000,000 for construction by the Corps of Engineers in the Missouri Basin, and about $87,000,000 for construction by the Bureau of Reclamation, in addition to smaller sums for some of the other agencies. Although the House of Representatives has reduced these requests to some extent as of today, the House committee has promised in general terms to continue to support the program. In any case, I feel confident that we shall get adequate funds for continued construction either through Senate action or at some other point in the consideration of the appropriation bills. It is evident that the Pick-Sloan plan is still progressing rapidly, and that criticisms of it are no more than the sniping of disgruntled partisans.

They are not delaying its progress yet, nor have they succeeded in forcing through the profound changes in our political processes or our social system which are contemplated in the MVA proposal.

I do not want to give the impression that I believe the Pick-Sloan plan is sacred in every detail, or that we should resist every proposed change. The plan, as constituted at present, has not been determined in every detail. In fact, not every dam in the overall plan has even been authorized as yet. The plan is being changed from time to time in detail as the survey work progresses. I believe we must recognize that additional experience and new facts may require changes from time to time. We should always be willing to consider such proposals.

In fact, one suggestion of the Hoover Commission seems to have a good deal of merit. This is the recommendation for the creation of a Board of Impartial Analysis for Engineering and Architectural Projects to study and report on the public and economic value of project proposals by the Interior Department and the Corps of Engineers. This new Board would be located in the President's office.

Certainly we cannot have too much of impartial study of proposed projects. In effect, this proposed Board would amount to nothing more than an expansion and strengthening of the functions of the Bureau of the Budget in reviewing these projects. Certainly there is some value in having departmental proposals reviewed by competent and impartial analysts.

The Hoover Commission does not suggest that this proposed Board should also direct the conduct of an impartial engineering survey of the entire Missouri Basin program. If that could be done in an efficient way, I don't believe any of us would object to it. The difficulty would lie in finding engineers who would be truly impartial and fit to conduct such a survey. As I mentioned a moment ago, the only engineers really familiar with the work are those in the Bureau of Reclamation and the Corps of Engineers. Presumably, there would be no point in directing them to review the findings of their own bureaus. On the other hand, a Board of Review assigned to such a function might be carefully chosen to select a certain set of views. Since the President has endorsed the MVA on a number of occasions, it is reasonable to suspect that a Board carefully selected by him would come out with a ringing endorsement of the MVA. That is a danger to be guarded against if we want to get any worth-while results from a new review of the whole program.

In this address, I have not tried to lead you to any permanent conclusions. I have merely tried to bring you up-to-date with some of the developments from a Washington point of view in the whole plan and program for developing the water resources of the Missouri Basin. I have tried to draw out some of the meat of the present controversy and point to where these various proposals lead us. I hope that all of you, and particularly all of you from the Missouri Basin, will continue to give your best thought and study to these problems. The important thing is to find the right and best solution, and that is far more important than a victory for either one faction or the other in this controversy. We have a common stake in the success of the development of the basin, regardless of which avenue is finally chosen.

First Anniversary of Israeli Declaration of Independence

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the Senator from Illinois [Mr. DOUGLAS] at the meeting in commemoration of the first anniversary of the Israeli declaration of independence, held at Carnegie Hall, New York City, May 4, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The people of I rael have a particular claim to the event we are celebrating on this fifth day of Iyar 5709. But in its largest sense, the declaration issued at Tel Aviv 1 year ago invites a universal celebration, for the search for freedom is never just a local one, nor are the results of that search only local. Whatever increases or diminishes the cause of freedom in one point of the globe does so throughout the globe. Among men who love freedom, what happens to a part of us happens to all of us. We mourn our losses together and we rejoice together in our triumphs.

Tonight, we who love liberty—Jews and non-Jews alike—have a cause to rejoice together. For Israel lives—not only as an idea—not only as the theme of a prayer—but it lives as the Third Jewish Commonwealth. It lives despite all efforts to keep it from being born. It lives despite all efforts to crush its life when it was born. It lives because the ageless vitality of the Jews and their ageless love of liberty produced in our day a generation of Joshuas and Maccabees—a generation that looked to its own faith and its own strength to win a resting place for Israel in its own homeland.

In an epoch filled with practical men—in an epoch which looks with suspicion at any force other than barefaced force—the history of Israel in the past year calls us back to some ancient truths. It reminds us that faith can still move mountains when faith is joined as a handmaiden to a love of liberty. It reminds us that acts of liberation are not achieved by men who make Machiavellian calculations about risks or favorable omens. The liberation of peoples—as Maj. Aubrey Eban said in Washington recently "is an act of faith rising up in defiance of logic and drawing its strength from the moral and spiritual impulses which are decisive in all areas of human conflict."

In this single year, the people of Israel had thrust on them a complex of tasks which other nations have dealt with over many generations of growth. In Israel's case, however, there was no time to deal with them a nibble at a time. A dyke in history had suddenly burst open, and there poured over the Jewish

people a torrent of all the pent-up problems that had gathered density since the first days of the Diaspora.

First, there was the declaration of freedom announced 1 year ago tonight. That alone would command the respectful attention of history. But the year called for much more than a ringing manifesto. It called for much more than a reinforcement of all the established modes of government when the mandatory power vacated the land. The year called for deeds of valor—for a spirit of sacrifice to drive back the invader whose falling bombs could be heard above the declaration of independence. It was contrary to all the primary teachings of Judaism to accept war as a solution to international problems. Israel did not invite war with its Arab neighbors. It pleaded for a chance to negotiate a peaceful settlement of the points at issue with them.

But practical men, making practical calculations, felt there was much to be gained by launching an attack on the infant state. The present misery of countless thousands of Arabs was the bitter fruit of that venture. War was thrust on the Israeli and they had no recourse but to face up to it. The results of the battles that followed made fools of the experts and realists who forgot that the trial of strength in the Holy Land was not merely gun against gun, but rather of spirit against spirit. It was a trial of strength between the spirit of the effendi on the one hand, and the men of the Hagganah in whose hearts and minds there dwelt the souls of the 6,000,000 sacrifices to Nazi barbarism. The latter mastered the field. The effendi fled it.

Yet the military task was but part of Israel's labors in the last year. While its port cities were being bombed—while its settlements were being attacked—while its resources were being heavily taxed to support the armies in the field, Israel faced the task of bringing into the land the scattered remnants who had survived the gas chambers and the crematoriums of Hitler's Germany. Some sense of the magnitude of this task—and it has only begun—can be grasped from a comparative figure: Within the last year alone, the rate of immigration to Israel was 20 times as great as the flow of peoples to the United States at the peak of our immigration phase. This is a staggering feat. It is not without its trials and pains. But the rot of the displaced persons camps had to be ended.

When the total problem of immigration is mastered, the solution offered may prove to be one of the more important social inventions of our day. Many western states are now torn between a need for granting essential economic freedoms to their citizens while at the same time blending those freedoms into the social, economic, and political needs of the community as a whole. A harmony between the interests of the one and the many, between private and public interests, was achieved in Israel before the present wave of migration. And if that harmony can be maintained in the future, we may see another instance where the law goes forth from Zion. Other nations might lay aside doctrinaire solutions which are now competing with one another for mastery over the peoples of the west and look to the way in which peace, justice, freedom, and order have been achieved in the newest state in the family of nations.

The declaration of an intention to be free—the fight in the field to insure the physical integrity of the new state—and the absorption of tens of thousands of immigrants who had to be housed, fed, clothed, and put to work, would alone have justified the hopes held for the future of Israel. But the people of that land still found the strength and the will to hew out a permanent cornerstone for future years. They elected a constituent assembly to draft a basic law by which the new state was to be governed. This is no easy task in tranquil times. For constitution making is the most exacting of political arts. But to undertake it at a time when external dangers were still present—to elect a representative government under conditions which other peoples have cited in justification of dictatorship—speaks volumes on where Israel stands in the ageless struggle between totalitarianism and freedom. By this act, Israel proves it does not pay mere lip service to freedom. It serves the cause of freedom by risking everything in its name.

I have spoken thus far on what the Israeli have done for themselves in the past years. But it is appropriate in this hour to point out that Israel has lifted itself as far as it can by its own bootstraps. President Truman has, of course, extended a powerful hand to Israel in the past. His trust in the new state has been more than justified. Americans of all creeds honor him for his deeds on behalf of the new state. But if the full hope held out for the future of Israel is to be realized, a further helping hand must be extended to it. The people of Israel have won a right to it. There is no reason why they should not get it.

In measuring the consequences of any such help to Israel, two world needs should be borne in mind. First, Israel has a compelling interest in maintaining the peace of the world. As Moshe Sharett pointed out, "There is no people today which in obedience to a sheer instinct of self-preservation dreads another world war more than the Jews." The facts behind Mr. Sharett's observation are self-evident. Israel rests at the crossroads of the world. Any outbreak of general hostilities would immediately engulf Israel and might lead to a ravaging of the new state. The foreknowledge that this would happen makes the maintenance of peace in the world a matter of life and death to the Israeli.

What follows is a corollary.

We know from experience that mass poverty in any nation, gross inequalities of wealth, ignorance, social backwardness, and political instability are forces which breed revolution and war. Such nations either tempt the intervention of stronger ones, or they breed a race of adventurers who divert attention away from domestic problems by waging war on neighboring states. Because of its depressed condition, because it fits the classic description of a political powder keg, the Middle East is marked with a giant danger sign for those who earnestly search for peace. The danger is not abated by maintaining the status quo as the English have tried to do. It is increased. But it can be abated if to the political sovereignty of the Middle East states there is added a policy of social and economic rehabilitation. Money is needed to do this. Technicians are needed. But examples are also needed. And in this respect, Israel can be to the Middle East what Athens was once to the Hellenese in Pericles' day. The course of its own social and economic development may goad the pride of its neighbors to go and do likewise. And to the extent to which they do do likewise, the danger of revolution and war are lessened.

What do these general statements imply in specific terms?

As a first step, Israel belongs in the United Nations where its voice for peace can be heard. Article 4 of the United Nations Charter sets forth the proposition that membership in that body is the right of all "peace-loving states which accept the obligations contained in the * * * charter, and, in the judgment of the organization, are able and willing to carry out that obligation." Israel has repeatedly declared its acceptance of the obligations of the charter. In many respects, it exceeds the qualifications of states who are now part of the United Nations. It is truly independent—while some nations are satellites to others. It is a true democracy—while some states are dictatorships. It has internal stability—while some states are torn internally either by large-scale civil war, or by repeated palace revolutions. Most of the members of the United Nations have already granted individual recognition and I fail to understand why it is so difficult for them to do collectively what they have done individually. I might add in passing, that it seems ironic that the people who taught the world the doctrine of universal peace should be kept waiting hat in hand outside the door of an organization formed to advance that doctrine.

It may be argued that there are still unsolved differences between Israel and its neighbors, and that until they are settled, Israel should be kept outside of the United Nations. Yet if the solution to all differences between states was a criteria for membership in the United Nations, there would have been no United Nations in the first place, or being formed, there would be no need for it. For the Messianic era would be upon us. But the United Nations was formed for the express purpose of solving international disputes. Its very being acknowledges the fact that differences of interest and points of view are an immutable part of this imperfect world. In this connection, experience in Holy Land matters has shown that whenever the parties directly concerned were able to negotiate with one another as equals, the road to peace was straightened out. And until Israel can stand in the United Nations Council on the basis of legal equality with other nations, and not merely as their guest, the road to peace in the Middle East will be a tortuous one.

In November of 1947, the United Nations declared that the state of Israel had a right to come into being. In May of last year, the United States was the first to recognize the new state. And ever after, when the United Nations for various reasons, wavered in its resolve, a strong word from the United States bolstered the wobbly legs. A word from the United States on the matter of admitting Israel into the United Nations is needed now. I have every confidence that it will be forthcoming.

While Israel has won the right of membership in the United Nations, it has similarly won the right to have and hold the new portion of the city of Jerusalem. The area was built by Jews. It was defended by them against hopeless odds. And, in the absence of the old city, it is the closest approximation to the city that forms the heart of Jewish dreams and prayers and hopes. A state of Israel without at least the new city of Jerusalem would be as soulless as a body without a head. President Weizmann has offered what I believe to be a workable approach to the issue of the security of holy places that has been raised. "The Government and the people of Israel," he said, "are conscious of the international interest in the safety of the holy places and the right of free access to them. We pledge ourselves to insure full security for religious institutions in the exercise of their function; to grant the supervision of the holy places by those who hold them sacred; and to encourage and accept the fullest international safeguards and controls for their immunity and protection." In this connection, I should like to observe that if the keys to the sepulcher have been entrusted to an Arab family for generations I believe the world has every reason to be confident that the assurances given by President Weizmann on other holy places will be no less scrupulously

honored. Perhaps one solution may be for the old city to be internationalized so that Christian, Jew, and Arab may all have their places of worship under joint control.

In addition to a ratification of Israel's membership in the United Nations, and its rights to the new city of Jerusalem, there is one further point on which it needs outside help. The problem of Arab refugees, the problem of new migration to Israel, and indeed, the problem of the economic and social rehabilitation of the whole of the Middle East, invites the application of point four in President Truman's inaugural address. It invites American technical assistance and a blend of private and public capital in the development of river authorities modeled after our own TVA. Here at home, the area covered by TVA has been transformed and infused with new life. Where it was formerly disease ridden, impoverished, and sparsely populated, it is now healthy, economically productive, and capable of absorbing thousands of new settlers.

The TVA model can be applied in the case of the Jordan River—with immeasurable benefits not only to Israel but to Trans-Jordan as well. And it can also be applied in the case of the Tigris and Euphrates Rivers with immeasurable benefits to Iraq and Syria. These three rivers, around which so much of human history is woven, now invite a high union between technology and diplomacy. They offer themselves as a passageway to the solution of the population pressures of the Middle East, to their economic and social rehabilitation, and to their political stability. In the name of humanity, in the name of the peace of the world, we must offer our own special knowledge and resources to the full utilization of these three rivers. When there is enough for all in the Middle East, the jealousies and hatreds will lessen and the prospects for peace will rise.

I close with the words of President Weizmann:

"The glaring light of public attention is focused upon the state of Israel. More is expected of it than is usually demanded of such small states born in the throes of adversity and crisis. The cultural traditions (of the Jewish people) encourage the world to expect a corresponding achievement by Israel in modern times. (It) cannot hope to surprise the world with any manifestations of material power, and Israel has no deeper longing than to turn its energies into the arts of peace. In this generation, as always before, Israel must make its mark through the achievements of its mind and spirit. I pray that the coming year of independence will be not unworthy of the first, and that Israel will remain forever faithful to its most universal and significant ideals."

To these words of President Weizmann, I add the use of his first name:

"L'Chaim!—To life."

Financial Aspects of the Disabled American Veterans Organization

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I am sure that all of my colleagues agree that one of the greatest obligations of our American people is to care adequately for our disabled ex-servicemen—the men who will bear with them throughout their lives the scars and wounds of battle, whether or not they are hospitalized. On several previous occasions—for example, on July 2, 1945, June 8, 1948, and other times—I have commented on the floor of the Senate regarding this outstanding work of the Disabled American Veterans organization. I have spoken very frankly on the financial needs of this organization in order to carry on its indispensable work supplementing Government activities in this field.

Ordinarily I would not even presume to take the time of the Senate to discuss the financial problems of any private organization. I do, however, make an exception in the case of the DAV because I feel that what the DAV needs is not mere verbal tributes, not mere pats on the back, but what it needs is straight, helpful talk regarding its financial problem.

In recognition, therefore, of the needs of Wisconsin's disabled American veterans—yes; the needs of our disabled heroes of all the other 47 States as well—I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD a frank statement regarding the financial aspects of the DAV's work.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

WORTHY DAV APPEALS FOR FUNDS

About a year ago, I advised my colleagues that the incorporated trustee of the DAV, the Disabled American Veterans Service Foundation, was then dramatizing its appeal for much-needed funds by full-page display advertisements in many magazines and newspapers, featuring 270 cash prizes, totaling $51,265, which were awarded in an intriguing mosaic patterned cross-word puzzle contest. So successful was the DAV Service Foundation in this new formula of raising badly needed money for a worth-while cause that it acquired more than $1,000,000 net profits therefrom, out of which its board of 13 trustees has so far allocated the sum of $750,000 to the national headquarters of the DAV for its Nation-wide service activities on behalf of war-disabled veterans and their dependents.

This successful experience encouraged the DAV Service Foundation to conduct a second word-puzzle contest, which started during the early part of January 1949, as to which original puzzle-solution entries were submitted up until before midnight of April 30, 1949. Judging by the full-page display advertisements that have appeared in many prominent magazines and metropolitan newspapers throughout the country, the second national puzzle contest conducted by the DAV Service Foundation will probably also prove to be successful.

I understand that official substitute solutions may be submitted by the contestants up until June 29, 1949, after which there will be an evaluation of the relative solutions, with the possibility that the top tied valid high scorers will have to compete in the solution of from one to four sets of five tie-breaking puzzles before the winners of the 330 cash prizes, totaling $100,000, and of the several automobile promptness prizes, will have been awarded.

Inasmuch as my long-time friend the very able Millard W. Rice, is the executive secretary of the DAV Service Foundation (he was formerly national commander and national service director of the DAV, as well as national legislative director of the VFW), I am particularly confident that very meticulous care will be taken in the evaluation of the relative solutions by the contributing competitors in this second puzzle contest—just as was the case as to its first puzzle contest—in determining the final winners. This will be in accordance with the rules of the contest, without any consideration whatsoever as to the location, race, creed, color, or financial or educational status of the respective contestants, but only on the basis of their relative skills in their puzzle solutions, which should be completed by early next fall.

I am sincerely hopeful that the DAV Service Foundation will have been enabled to raise more than a million dollars from its second puzzle contest, just as it did on its 1948 contest, notwithstanding the fact that other organizations have patterned after the formula thus proven to be feasible for raising funds for service-giving purposes.

DAV IDENTO-TAG PROJECT

Many of my colleagues will no doubt recall having received miniature automobile license tags during the last several years, from the Disabled American Veterans. This is another unique and highly constructive method of raising funds. The DAV endeavors to send out such Idento-Tags to all automobile owners, as a result of which it returns about 5,000 sets of keys each month to their respective owners—a very effective Nation-wide key insurance—which results in substantial net profits to the DAV, after payment of all expenses incident to the manufacturing and assembling of the Idento-Tags, processed mostly by handicapped veterans and the dependents of veterans.

I would like to point out that if 100 percent of the recipients of these neat little key-ring Idento-Tags were to return 25 cents or more, the DAV would have no financial problem in maintaining its staff of some 300 full-time national service officers.

These two unique methods of raising funds have heretofore made it possible for the DAV to maintain its invaluable Nation-wide service activities. But such finance-raising projects have not yet been sufficiently successful to enable it to build up as extensive a service set-up as the needs warrant or to build up a much-needed reserve trust fund for the future. Judging by the experience as to World War I veterans, it will be necessary to maintain expert national service officers for the benefit of our World War II disabled veterans for the next 30 years or more.

Although most of my colleagues in Congress, as well as State and local governmental officials throughout the country, probably already know something about how ably and faithfully the DAV serves those Americans who were wounded, injured, or disabled while fighting in our country's wars, I believe that because of the magnitude of its task it is desirable to explore the subject more fully.

OUR GOVERNMENT'S LIMITATIONS

Although virtually all Americans believe that one of the primary obligations of the Government should be to see to it that all of our country's disabled war veterans and their dependents should be adequately provided for, I fear too many of them have erroneously assumed that such obligation must have been already fulfilled. Much as our Government has done for veterans, it has not, cannot, and really should not be expected to provide for an automatic solution for all of the problems of all disabled veterans and their dependents.

It is neither practicable nor desirable that the Government should underwrite all of the problems of all disabled veterans; such an easy method would be detrimental both for

the disabled veterans themselves and for America's taxpayers.

The Government could not, and should not, provide sufficient compensation to every disabled veteran to obviate completely the necessity for receiving income from other sources.

Several Administrators of Veterans' Affairs, during the past 29 years, have clearly, emphatically, and repeatedly stated that the task of rendering adequate service to America's disabled veterans is a job far greater than can be taken care of merely by the Veterans' Administration. The services of a nongovernmental congressionally chartered, volunteer organization, such as the Disabled American Veterans, are essential, if our disabled veterans are to become and to remain adjusted to useful civilian living, through suitable, gainful employment. Only thus can our disabled veterans be saved from dependency upon Government compensation, and be enabled to live as happy, self-supporting Americans.

ASSURING GAINFUL JOBS OUR RESPONSIBILITY

If American citizens, as employers, should fail to provide ample opportunities for the suitable employment of partially disabled veterans, then obviously such disabled veterans would have no other alternative than to seek to become completely dependent upon Government doles. That is not the American way. That is one of the reasons why I have introduced in the Eightieth and Eighty-first Congresses legislation to encourage employers to hire handicapped veterans.

Less than 7 percent of the some 2,000,000 service-connected compensated disabled veterans are rated by the Veterans' Administration as being totally disabled. The remaining 93 percent are considered as only partially disabled and therefore receive lesser rates of compensation. Their inadequate income from disability compensation must obviously be supplemented from some other source, preferably from suitable, useful, gainful employment.

WHY GOVERNMENT NEEDS DAV HELP

In accordance with its congressional charter, the DAV cooperates with the United States Veterans' Administration and all other public and private agencies devoted to the cause of improving and advancing the condition, health, and interests of wounded, injured, or disabled veterans.

The fact that America's war-disabled veterans saw fit to form their own organization—the Disabled American Veterans—should not, therefore, be regarded as an implied criticism against any Federal agency.

During the last 29 years, the DAV has been extending, free of any charge, much-needed advice, counsel, and assistance to scores of thousands of disabled veterans in technically establishing their legal entitlement to governmental benefits to which, under certain legal limitations, restrictions, requirements, and provisions, they may be lawfully, equitably, and factually entitled. Acting as the defendant, the Government is called upon to pay the damages—in the form of disability compensation for service-connected disabilities, medical treatment, hospitalization, vocational training, and other benefits provided by law—to the successful claimants.

It would be very inconsistent to expect the Government also to furnish the attorney for the claimant.

COMPLICATIONS UNAVOIDABLE

Officials and employees in governmental bureaus must necessarily operate under complicated, technical regulations, legal interpretations, precedents, schedules of disability ratings, service letters, and other guiding policies and procedures in their administration and application of the some 800 laws pertaining to veterans and their dependents. Lest he encroach upon the jurisdiction of some other governmental official within his own section, division, or agency, or with the policies and procedures of some other Federal agency, the jurisdiction of any one governmental official or employee must, naturally, be narrowly circumscribed.

My colleagues have all had sufficient contacts with governmental officials to be well aware of the full significance of this division of responsibility. No matter how much we might simplify government—as constantly advocated by myself and by my colleagues in the two Houses of Congress and outside of Congress—such division of authority is, to some extent, unavoidable.

BAFFLING TO VETERAN CLAIMANTS

It just is not, and probably never will be, completely feasible for any veteran to go to one governmental official, or even to one Government office, to find out what he may be entitled to under any one or more of the numerous laws which might be pertinent, any more so than such an ideal situation can ever prevail as to any corporation which conducts business operations in more than one State.

Our Federal Government is exceedingly complicated, and its requirements are oftentimes utterly baffling to the average disabled veteran. He needs expert counsel as to the proper preparation, presentation, and prosecution of his claim for any benefit, privilege, or preference, to which he may be potentially entitled under any appropriate Federal law.

WHY A DAV

It was because of the realization of this difficulty—that the Government could not, and should not, be expected to take care of all of the complex, varied problems of America's disabled war veterans and their dependents—that the DAV was formed, some 29 years ago, by distressed, disappointed, disillusioned, disabled veterans of World War I.

Distressed disabled veterans need the helping hand of their own organization, the Disabled American Veterans, formed in 1920, congressionally chartered in 1932, and specifically designated in several Federal laws as a spokesman for America's war-disabled veterans.

THE DAV'S SERVICE SET-UP

Consisting exclusively of America's war-wounded and disabled veterans, the congressionally chartered Disabled American Veterans has, for 29 years, been specializing in extending its vital rehabilitation services, free of charge, to all disabled veterans and their dependents.

The DAV has been freely extending badly needed services to scores of thousands of disabled veterans each year, through its nearly 300 trained, experienced, full-time national service officers (all themselves disabled veterans) stationed in DAV service offices located in all of the Veterans' Administration's regional, district, and central offices throughout the country. Supplementing their work, the DAV also has more than 1,500 department and chapter service officers.

All of these service officers are skilled and experienced in the work of helping disabled veterans technically and factually to establish entitlement to any governmental benefits to which they may be lawfully and equitably entitled, such as service connections, disability compensation, medical treatment, hospitalization, and vocational training.

These service officers also use great resourcefulness to assist their disabled buddies to acquire and to retain adjustment to usefulness and self-support through suitable productive employment.

Let me point out that the peak service load will probably not be reached until 1960. Moreover, it is a fact that inasmuch as sharp curtailments in its budget have caused the VA to trim its staff of contact men, a heavier load has been assumed by the volunteer service organizations, of which the DAV is outstanding.

Specifically designated in several Federal laws as a spokesman for America's war-disabled veterans, and dedicated to the program of rendering needed service to, for, and by America's disabled war veterans, the DAV has been serving the men to whom the Nation owes a debt beyond payment.

The DAV maintains national headquarters at 1423 East McMillan Street, Cincinnati, Ohio, and its national service headquarters at 1701 Eighteenth Street NW., Washington, D. C.

The present national commander is a great American—Gen. Jonathan M. Wainwright, the hero of Bataan and Corregidor. Vivian D. Corbly is the national adjutant. Its legislative director is Francis Sullivan, its employment director Kenneth C. Bradley, and its director for claims Cicero F. Hogan.

The organization publishes a newspaper—the DAV Semi-Monthly—devoted to the interests of disabled veterans.

INCORPORATED TRUSTEE FOR DAV

As related in my statement concerning the same question 4 years ago, the DAV decided, back in 1931, that the potential donors who support its service program should have the assurance of a continuity of policy as to the expenditure, by the DAV, of all funds contributed. Therefore, the DAV formed a trusteeship, under the laws of the State of Ohio, known as the Disabled American Veterans Service Foundation.

The primary purpose of the DAV Service Foundation is to receive donations from interested social-minded Americans, and then periodically to make allocations, from its accumulated trust funds, to the national headquarters of the DAV—as the operating congressionally chartered membership organization of America's disabled defenders—to enable it to continue to maintain and further to expand its Nation-wide set-up of full-time, expert national service officers, national civil-service officers, and national employment officers.

In order to be enabled to carry on this service activity on a basis commensurate with the responsibilities assumed, the DAV, it has been estimated, should be enabled to expand its service budget up to $2,500,000 per year.

Under the terms of a trust agreement with the DAV, all foundation funds are placed into separate State trust fund accounts, according to the States of origin of the funds raised.

The activities of the foundation are under the supervision of 13 trustees, 10 of whom each serve for 5-year periods, two expiring each year, with the other three consisting of the incumbent national commander and the chairman of the national finance committee of the DAV, and one other.

The president of the foundation is Miles H. Draper, attorney, of Tampa, Fla. Maj. Gen. Irving J. Phillipson, of New York City, director of industrial relations of Botany Mills, is chairman of the foundation's finance and budget committee.

The DAV Service Foundation maintains offices at 808 Seventeenth Street NW., Washington 6, D. C., and also at 11 West Forty-second Street, New York 18, N. Y.

NEEDS ARE GREAT

According to the trustees—all prominent and conscientious civic-minded citizens—a trust fund of $50,000,000 should be built up to meet the DAV's needed annual service budget of $2,500,000.

Every social-minded individual and corporation has the opportunity to support this important work through generous donations to the DAV Service Foundation of money, real or personal property, shares of corporation common stock, preferred stock, bonds

and debentures, assignment of Government bonds, designation in insurance policies and wills, by purchase of its permanent personalized service plaques and Independence Hall wood relic plaques, by becoming a contributing competitor in its annual puzzle contests, and by other methods.

Other constructive plans of raising funds are now being considered by the DAV Service Foundation and if the public is fully informed of the purpose of such funds, I am sure an enthusiastic response will follow.

CONCLUSION

As a United States Senator and as an American, I urge my fellow citizens to contribute out of their generous hearts to the need of our disabled veterans. I know how the average citizen these days is overwhelmed by many appeals from worth-while organizations. I know, too, that the average citizen has his own financial problems during these inflationary times.

But we must never forget that we would not be enjoying our liberty today but for the fact that these veterans were willing to sacrifice their health, their bodies, their very lives on the land, on the sea, and in the sky in order that this Nation might endure.

It is our creed, therefore, that we must fulfill the needs of those men who came back from the war with the scars and pain of battle. Let us fulfill our creed by our deeds. Let's not just pay token tribute to disabled veterans. Our ex-servicemen don't need a lot of "hot air." They don't need a lot of talk, however sincere. They do need constructive aid to help make them self-supporting Americans. They ask so very little and gave us so very much.

We here in the Congress are challenged to enact legislation that will assure their welfare. Over in the House of Representatives now pending before the Veterans' Affairs Committee are a considerable number of bills in their interest. I personally, as I have indicated, have introduced legislation to help them and I will continue to do all that is within my power. It was my pleasure to address the graduation class here in Washington, D. C., of a service officer class—many young men who had lost an arm or a leg and yet who are functioning as whole men, stout-hearted, brave, conscientious, and who were embarking upon careers to help their buddies, yes, to help make their buddies adequate.

In the interests therefore of our disabled veterans, I have taken the liberty of referring to this organization and indeed to its financial needs. I know that the American people will endorse my action just as they endorsed in hundreds of letters my previous statements pointing out very frankly the problems of this great group of veterans, the DAV and the DAV Service Foundation.

Address by Maj. Gen. Lewis A. Pick Before National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by Maj. Gen. Lewis A. Pick, Chief of the Corps of Army Engineers before the annual meeting of the National Rivers and Harbors Congress at the Mayflower Hotel in Washington, D. C., on April 8, 1949.

I take pride in inviting the attention of the Senate to the remarks of General Pick. He has fully set out the objective policy of this seasoned agency as it proceeds with the construction of public works for the control and elimination of floods and the development of our inland waterways and our coastal ports in the interest of our economic welfare and development.

I say that I take special pride in submitting this address by General Pick, for he has been well and favorably known to us in the Missouri Basin and especially in Nebraska, because he served for many years as Chief of the Missouri River Division of the Corps of Engineers with headquarters at Omaha, until his well-deserved promotion to leadership of the entire engineering corps.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

ANNUAL REPORT OF THE CHIEF OF ENGINEERS, UNITED STATES ARMY

It has long been the custom for the Chief of Engineers to come before the National Rivers and Harbors Congress each year and present an outline, as it were, of the river and harbor and flood-control work assigned to the Corps of Engineers by the Congress of the United States. Consequently, in this, my first appearance before you, as Chief of Engineers, I follow a precedent maintained by many distinguished predecessors. It is a circumstance which I appreciate fully. Yet I hardly need to assure you that I shall give to this office the utmost of my ability to maintain those traditions of the corps which have become bywords among the American people—nonpartisan public service, high engineering efficiency, proper administrative economy, and unswerving devotion to the national welfare.

I hope, in turn, that your Nation-wide organization will continue its fine cooperation with the Corps of Engineers in our extensive civil-works programs.

For many years the National Rivers and Harbors Congress and the Corps of Engineers have had a common bond in a common objective—the improvement of our waterways and harbors for navigation, commerce, and flood control.

Our earliest responsibilities were in the field of water-borne transportation. In normal peacetime economy waterways have always played an important part. In emergencies of war they have been vital. To meet heavy and immediate demands, our waterways are unexcelled. They are capable of any expansion to relieve overtaxed carriers of rail and highway.

The records of national progress lend emphasis to the importance of the inland shipping industry. Of 95 cities listed in the 1940 census with populations greater than 100,000, 62 are on navigable channels improved by the Federal Government, and our major industrial centers are located where they can take advantage of water transportation.

By the close of the current fiscal year the record of accomplishment of the Corps of Engineers in the improvement of rivers and harbors in the interest of navigation will include as completed projects 190 harbors, 400 locks and dams, and 27,000 miles of improved inland channels.

But rivers and harbors work is a continuing job. To get the greatest value for our transportation dollar, the people must improve their waterways to the fullest practicable extent. No one from those regions need to be reminded of the economic progress to be encouraged by increased improvement of the Red, the Arkansas, the Missouri, and similar streams in the United States. Then, again, there is the need for keeping our improvements attuned to the trend toward larger vessels and greater tow lengths—with 2,000 horsepower towboats moving 14,000 tons of cargo in a single trip.

Among projects waiting to be undertaken are the further improvement of the Mississippi River system's waterways; the completion of our intracoastal waterways; the construction of navigation feeders into inland areas off the Gulf of Mexico; the completion of the Sacramento River project; the completion of the projected improvement of the Columbia and Snake Rivers in the Northwest and many others. All of them will contribute greatly to the progress of their respective regions and, consequently, to the economy of the Nation, as a whole.

During the war years, the maintenance of our important waterways and navigation structures fell far behind. This was due to critical shortages of manpower, materials, and equipment. The postwar resumption of maintenance has been on a limited scale to conserve the materials and equipment needed by industry for the country's quick conversion to a peacetime economy.

The result has been a large accumulated backlog of such work. In addition to maintenance dredging, there are breakwater repairs needed at many of our coastal harbors. And the badly worn machinery and facilities of older structures in our canalized waterways should be replaced.

The President's budget for 1950 would provide appropriations of $75,000,000 to cover the entire field of maintenance, operations, and care.

We are currently engaged in the construction of 79 river and harbor projects, 23 of which will be completed this year. The President has recommended the appropriation of funds sufficient for construction work on 67 river and harbor projects during the 1950 fiscal year.

Federal flood control on a Nation-wide basis is still in its infancy. The first act for flood control, general, was passed in 1936. The first appropriation act pursuant to the authorization of this 1936 legislation was made for the fiscal year 1938—only 11 years ago. We lost four working years of this short period during the war. Yet by the end of the fiscal year 1948 the Corps of Engineers had completed 172 local protection projects and 56 reservoirs. The cost of these projects amounted to $483,000,000. And I am happy to report that the estimated value of flood damages already prevented by these works exceeds $500,000,000. By the close of the current fiscal year we will have increased the total of completed projects to 60 reservoirs and 201 local protection works.

The 1950 program for flood control, general, as contained in the President's budget, provides for the continuation of work on 156 projects, 60 of which will be completed during the fiscal year. In addition, the program provides for the initiation of two projects—one in Illinois and one in southern Florida. It is estimated that the projects included in this program will provide average annual flood control and other benefits in excess of $260,000,000. An analysis of the benefits and costs shows that the benefits to the Nation during the assumed life of these projects will exceed their cost by more than $5,000,000,000.

While it is seldom possible, within the scope of practical engineering and economics, to prevent all the flood losses that may occur on any river system, we know that approximately 75 percent of the remaining unchecked flood damages can and will be pre-

vented. Flood-control works now planned for future construction, together with those now in operation or under construction, will, when completed, reduce the calculable losses from floods on our Nation's rivers by $700,000,000 annually.

These figures, of course, do not translate into dollar benefits the alleviation of human suffering, protection of life, and stabilization of community enterprise. They place no dollar value to the contribution of projects to our national defense, yet the assurance of uninterrupted transportation facilities and the protection of strategic industrial areas are of vital importance in any national emergency.

Major elements of the general flood-control program are the comprehensive river-basin plans of improvement, authorized in the Flood Control Act of 1938.

At the present time, Congress has authorized 15 of these comprehensive plans. They include the Connecticut, Ohio, Missouri, upper Mississippi, Arkansas, Rio Grande, and Willamette River Basins. They also include programs for central and southern Florida, and for the Los Angeles River in California. Congress has further recognized the importance of these basin plans in flood control acts subsequent to 1938, by increasing monetary authorizations until the authorized expenditure for partial accomplishment now totals $1,507,000,000. This is 60 percent of the total monetary authorization for general flood control.

Since these plans include work in the major river basins, where the greatest flood hazards exist, it is important that they be prosecuted at a uniformly rapid rate, in accordance with efficient scheduling and planning. This procedure actually results in ultimate savings in construction costs to the Federal Government. Of even greater importance, however, are the facts that floods continue to occur, and that flood losses will continue until these plans are completed and in operation.

The comprehensive river-basin plans are actually a program for the control and use of floodwaters, and for conservation of the water resources of the Nation. Congress has specifically directed that the Corps of Engineers—in reporting on projects for flood control and other purposes—must consider related water problems and uses—such as navigation, power development, water supply, recreation, preservation of fish and wildlife, and abatement of pollution.

In many cases, dams required for flood control also afford opportunity for development of economical hydroelectric power. To leave this major water use undeveloped would be grossly inefficient and wasteful. Moreover, it would not be in accordance with congressional directive.

To date, we have in operation three multiple-purpose flood-control projects, with an installed capacity of 106,000 kilowatts of power. The Dale Hollow project, in Tennessee, began power production last December. Additional power units are currently being installed at Denison Dam, in Texas and Oklahoma, and at Norfork Dam, Ark. Power installations now authorized by Congress will result in an ultimate installation of about 5,000,000 kilowatts of power. Since there is a general power shortage throughout the Nation, this is an important collateral aspect of the flood-control program.

The drainage problem in the United States is one of great magnitude. Our estimates show that there are almost 24,000,000 acres of undrained potential farmland, and that about 15,000,000 acres of this land can be brought into production, or have its production improved by a combination of drainage and flood control.

In the Flood Control Act of 1944 Congress gave legislative recognition to the fact that channel and major drainage improvements are an essential part of—and complement—flood-control improvements. All studies under river-basin planning of the Corps of Engineers recognize this relationship, and certain projects involving major drainage features have already been authorized by Congress.

Recreation is not given economic value in our estimates of benefits to be derived from completed reservoirs.

Yet the recreational needs being served today by our completed reservoirs is strikingly reflected in the record of public patronage. By actual count there were more than 2,000,000 visitors during 1948 at Lake Texoma, which is created by Denison Dam, on the Red River, in Texas and Oklahoma. An estimated 10,000,000 persons enjoyed our reservoirs during the year for boating, swimming, fishing, picnicking, and camping.

As a result of the continuing program of examinations and surveys, a large number of investigations have been completed since the war. Currently we have approximately 500 surveys under way, with reports passing through the various stages prior to transmission to Congress. These investigations represent the first step in the solution to remaining flood problems. The plans recommended are comprehensive in scope and involve conservation and use of floodwaters as well as control.

Outstanding among these reports is the one recommending a comprehensive program of control and development for the Columbia River Basin. This plan calls for a total Federal expenditure of $3,000,000,000. I have prepared my tentative report to Congress on the Columbia Basin plan and have submitted it to the governors of the affected States, and to other Federal agencies, for their comments.

In taking up the reins as Chief of Engineers I am deeply aware—as you are—that although much has been accomplished in river and harbor and flood-control work by the Federal Government, the present is a challenging period. We are confronted with urgent tasks of greater magnitude than heretofore undertaken in conserving and developing our natural resources. As rapidly as sound engineering and the national economy permit, our streams must be harnessed to remove the threat of floods, to eliminate the annual toll of life and property loss, and to put all of our rivers to work for the benefit, safety, and convenience of our people.

In these laudable purposes and objectives of your organization the Corps of Engineers is at your service.

The Basing-Point System in North Carolina—State Divided Arbitrarily by Cement Trust for Basing-Point Pricing—Identity of Bids Reach Perfection Here—Small Business Jeopardized Unless Congress Stands Firm on Moratorium

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. PATMAN. Mr. Speaker, North Carolina has been outstanding in her leadership in the good-roads movement. Early recognizing the significance of motor transportation, North Carolina set about building highways of permanence. Many miles of North Carolina's intricate and modern network of highways are constructed of concrete. Millions upon millions of barrels of cement have been used by North Carolina not only in the construction of highways and bridges but in permanent public improvements of all types. But, prior to the Supreme Court decision in the Cement case on April 26, 1948, North Carolina, like her 47 sister States, was handicapped in the purchase of cement, steel, and other commodities by the basing-point system.

BASING-POINT SYSTEM IN ACTION IN NORTH CAROLINA

The identity of bids received by the authorities in this State year after year had the drab sameness encountered wherever bids were received for cement. As brought out by the Federal Trade Commission in Docket No. 3167 in the matter of the Cement Institute et al., most of western North Carolina was based on the Alpha Portland Cement Co.'s plant at Ironton, Ohio, and the central and eastern sections of the State were based on the Lone Star Cement Corp.'s plant at Norfolk, Va. These two facts together mean that the element of phantom freight, that unearned increment of the Cement Trust, was included in cement shipments to many, many destination points within the State. The record shows in FTC Docket No. 3167 that a higher mill base price was in existence in 1936 for western North Carolina than for parts of Virginia which were closer to the Ironton basing point.

I am confident that North Carolina and North Carolinians are as concerned about the effect of a moratorium on any part of our antitrust and fair-trade-practice laws, as are most of her neighbors and her neighbors' citizens. As a purchaser of large quantities of cement, of steel, and other construction materials, with no steel or cement plants within her borders for private and public improvements, North Carolina is particularly well situated to reap the harmful results of the basing-point system, the system which has for its foundation the control of prices, the restraint of trade, and the harvest of phantom freight with which to create larger and larger monopolies within our basic industries.

Typical of such cement bids were bids received by North Carolina's division of purchase and contract, Raleigh, N. C., on February 22, 1945, bid No. 3896, on 500,000 barrels of portland cement for shipment to various destinations during the period March 1, 1945, to March 1, 1946.

The bidders totaled 14 in number, namely, Alpha Portland Cement Co., Cumberland Portland Cement Co., Giant Portland Cement Co., Lehigh Portland Cement Co., Lone Star Cement Corp., Medusa Portland Cement Co., National Cement Co., North American Cement Corp., Pennsylvania-Dixie Cement Corp., Signal Mountain Portland Cement Co., the Standard Lime & Stone Co., Southern States Portland Cement Co., Universal Atlas Cement Co., and the Volunteer Portland Cement Co.

North Carolina table follows:

Destination	Bidder													
	Alpha	Cumberland	Giant	Lehigh	Lone Star	Medusa	National	North American	Pennsylvania-Dixie	Signal Mountain	Standard	Southern States	Universal	Volunteer
	Destination price	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*	*Destination price*

NOTE I.—All the prices quoted above are for delivery in cloth bags.
NOTE II.—The price of high early strength portland cement will be 50 cents per barrel higher than the price for normal portland cement.
NOTE III.—A cash discount of 10 cents per barrel will be allowed for full payment of invoices within 15 days of the invoice date.

BASING-POINT BIDS TO NORTH CAROLINA MUST HAVE BEEN MADE AND CHECKED BY ONE MAN

The prices offered by all bidders were identical. In other words, 14 bidders, bidding to more than 350 destinations, bid prices which were identical. Surely, the law of averages would have had a few prices different. But such was not the case. Therefore, it is a logical assumption that all bids were made and checked by a central figure or a complete affinity of understanding in some written form must have existed among the 14 bidders to produce such perfection.

SMALL BUSINESS VICTIMS OF BASING-POINT PRICING

If our Federal and State Governments could not break through the stronghold of basing-point pricing monopolies, trying as they did year after year, what chance has small business in the face of such tactics, unless the Congress and the courts lend a firm supporting hand to our antitrust laws?

Without this aid, and standing alone, small-business enterprise is in jeopardy. Let us have no moratorium on justice. To the contrary, let us turn our thoughts toward an America free of monopolies; an America where the keystone of our economy—small business—can go forward without looking fearfully over its shoulder at the deepening shadows cast by untrammeled greed and avarice.

Editorial From Long Beach (Calif.) Newspaper on United Nations

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1949

Mr. DOYLE. Mr. Speaker, I am pleased to present for your reading and consideration an editorial which appeared in one of the daily newspapers in my home city of Long Beach, Los Angeles County, Calif., under date of Monday, April 25, 1949. On the 8th of April 1949, on the floor of this House, I undertook to briefly, but emphatically, urge to your attention that I felt the United Nations Organization was the first hope of world peace. Part of my brief remarks at that time were as follows:

I, from my native State of California, have the utmost faith in the United Nations as the first and best hope for world understanding and cooperation. It was so conceived. It has done a good job; I pray God that its sinews shall be strengthened and perpetuated as a strong, virile, vigilant group.

I am very happy and proud that this daily paper in my own home city has taken its editorial time and space to again call to the attention of its readers the fact that the United Nations Organization has great potential value and that, without the United Nations Organization functioning vigorously and vigilantly, there will be little hope of world peace. I commend the reading of this editorial to your individual and group attention:

ONLY 4 YEARS AGO

It was 4 years ago today 48 nations met in San Francisco to form the United Nations Organization. It was a meeting full of hope. It was planned that the nations would set up a world police force to keep any aggressor from enslaving other nations. The Organization was formed, but the police force was never made a part of the Organization.

During the 4 years since that meeting many nations have been enslaved by the aggressions of Russia. There is constant danger of war because Russia has refused to abide by the principles set out in the UN Charter. War goes on in China. There has been violation of the UN decision by the Dutch in Indonesia. There has not been one major disturbance stopped by UN action. But 4 years is a short time as history is measured.

The UN is meeting in New York City at this time. There are other meetings being held under its directives in other parts of the world. It is now composed of 54 nations and is a place where those nations come together to discuss world affairs. There never has been an organization so set up where so many nations participated.

Being weak because it has no police power, the Organization could do nothing when Russia seized Poland or Czechoslovakia. It has no power in China as the Communist

armies march south. Its weakness stems from the veto which has been used so many times by Russia. By the veto rule one nation can nullify the decisions upon which all the other nations agree.

Although it has become little more than a debating society, the UN still has great potential value. It has been said that as long as men meet and talk over their problems, they will not fight. This was proved a fallacy when Japan attacked Pearl Harbor at the moment her representatives were talking peace in Washington. But there is hope when 54 nations are constantly meeting in an effort to keep the peace.

To take the place of a UN police force, the North Atlantic alliance has been formed. It is recognized as being within the meaning of the UN Charter which allows regional nations to combine their forces for mutual protection. It thus, in effect, becomes a part of the UN. In so doing it strengthens the whole structure. It is something added now which was intended when the nations met 4 years ago.

We, like many others, have been greatly disappointed that the Organization has been unable to guarantee peace. But it seems peace is more assured today than it was a year ago. The nations are meeting constantly and are cooperating to a greater extent than ever before. Four years is a short time. The United Nations continues to be the only world forum. We should continue to support its efforts to bring lasting peace. Without it there would be little hope. With it, there is always hope.—L. A. C.

Peace, It's Terrible—Humorous Sidelights by Columnist Othman

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Peace, It's Terrible," by Fred Othman, published in the Washington Daily News of April 29, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEACE, IT'S TERRIBLE
(By Fred Othman)

Everything was glittering in the Senate caucus room, including the gold stud in the shirt front of the only Senator who looks like a Senator—the white-haired and hot-tempered Chairman TOM CONNALLY, of the Foreign Relations Committee.

The glitter came from the high-power television lamps, cunningly wired into the mammoth chandeliers and throwing multicolored prisms of light from the crystals on Senators, statesmen, and awed high-school students alike.

Awed was right. Up for consideration was ratification of the North Atlantic treaty, and what beats me is why the more important the subject the duller is the palaver that surrounds it. This was important, indeed. And much of the time it was pretty durn difficult to figure out what Warren R. Austin, the United States Delegate to the United Nations, was talking about.

Well, sir, up on the wall was a giant map of the world, showing which nations already had signed the pact that everybody hopes will end wars. And some genius, so help me, had painted out the signatory nations in a dead, flat black. I never did see such a funereal-looking map at what should have been such a joyous occasion.

So Ambassador Austin, who used to be a Senator himself, told in language ponderous why he believed the Atlantic Pact was a good idea.

Four years ago, it seems, the Senators thought they were ending all chance of war when they concocted the United Nations out in San Francisco. They still think it would have worked if it hadn't been for those Communists in Russia going back on their word. That wasn't all. Every time the other nations thought up a good idea the Soviets vetoed it. Thirty times so far they have used the veto, said Austin in a sepulchral voice.

So what we need now, he continued, is the Atlantic Treaty as a kind of backstop for the UN. If anybody starts a war (and it was obvious he was thinking about Russia and nobody else), then the UN gets first chance to stop it. If it can't—and at the moment it seems powerless in this line—then all the fellows who signed the Atlantic Treaty would hop in with their guns to help out the pal who was poked in the eye. This includes us and 11 other nations.

Austin said he figured this treaty in itself probably would scare off any world-wide bullies. And as the UN began to function better and better, he said there would be less and less need for the treaty.

So fine. Along came Senator ARTHUR V. WATKINS, of Utah, who said that if the western nations were cooperating so well as it is, then what's the real use of them all signing a sheet of paper, promising to cooperate?

This made Austin sore. He blew up. He shouted, and when finally he calmed down his fingers were trembling. And that's the way it is these days with international peacemakers. Always getting sore and whacking each other with their olive branches.

Endorsements of the Work of the DAV and the DAV Service Foundation

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD a series of endorsements of the work of the DAV and of the DAV Service Foundation. I believe that these endorsements will be of real interest to my colleagues and to the American people because they indicate the tremendous and unanimous support of outstanding authorities in this field.

ENDORSEMENTS

Veterans who are disabled as the result of service in the defense of our Nation can never be repaid for the sacrifices they have made. In acknowledging this, our Government accepts a sacred obligation. That obligation is embodied in Public Law No. 16, which provides for the physical and occupational rehabilitation of disabled veterans whose abilities for earning a livelihood have been weakened or destroyed through service to the Nation in war.

The Veterans' Administration is dedicated to carrying out to the utmost the determination of the American people to provide practical and permanent rehabilitation "for those who gave most," the disabled veterans of our Nation.

In this task the Veterans' Administration is receiving valued cooperation from veterans' organizations, employers, and public and private agencies in local communities throughout our land. The help afforded by the Disabled American Veterans is an essential part of this common American enterprise.

As Administrator of Veterans' Affairs, I know what the cooperation of the Disabled American Veterans has meant to Veterans Administration in fulfilling its mission. I am sure that the help that the Disabled American Veterans Service Foundation gives to our disabled veterans is an important service to the cause of veterans' affairs. (Carl R. Gray, Jr., Administrator of Veterans' Affairs.)

The Disabled American Veterans represents in its name, in its purpose and its accomplishments those veterans who have been disabled in the service of their country. They—more than any others—deserve first call on all we can do.

The DAV has been a great help to us in this important work. We welcomed this help in the past. We count confidently on it for the future.

I am pleased to add my endorsement of the National Service Fund of the Disabled American Veterans. Certainly, this program, which has for its objective the rendering of service to those who served, is a worthy one. It merits the support of all who are interested in the welfare of our disabled ex-servicemen. Your efforts are commendable and I wish for your program the success it deserves. (Gen. Omar N. Bradley, former Administrator of Veterans' Affairs.)

I want to express to you my admiration of the services which the Disabled American Veterans is giving to disabled veterans. Being a World War I veteran and also a lawyer, I can appreciate what your organization is doing.

It stands to reason that if such disabled veterans are to obtain the full protection that Congress intended, many of them will need the advice and help of persons fully familiar with the laws governing the rights of veterans. I do not believe that this is the type of service that usually could be rendered by the ordinary practicing lawyer. Too often the time spent by the lawyer would be out of all proportion to the amount involved and either the lawyer would be underpaid or the veteran overcharged.

It has been suggested, I know, that the Government might employ persons to act as counsel for the disabled veterans. This would, I am sure, be impracticable. Such employees of the Government almost inevitably develop a psychology which causes them to try to save the Government money instead of seeing that absolute justice is done to the veteran.

Your organization's method for solving this problem is admirable, namely, the training of war-handicapped men as specialists in veterans' legislation who can advise and help a disabled veteran in securing the benefits that Congress and a grateful America want the veterans to have. Your program deserves the support of all. (Oscar R. Ewing, Federal Security Administrator.)

GENERAL EISENHOWER'S COMMENTS

I am delighted to hear that you are taking effective steps to raise substantial sums for this purpose. Your efforts will be fully rewarded in the lasting appreciation of veterans who will have sacrificed so much for the cause for which we are fighting. (Gen. Dwight D. Eisenhower.)

I accept life membership in the Disabled American Veterans with a sense of distinction. Membership in no group in the world carries greater honor than does membership in the Disabled American Veterans. (Gen. Douglas A. MacArthur.)

Be assured that we of the American Federation of Labor who have long relied upon the principle that unity develops strength look with favor upon the valuable service-giving activities of the Disabled American Veterans' organization. (William Green, president, American Federation of Labor.)

The job of providing physical and occupational rehabilitation for America's war wounded and disabled veterans can be accomplished only with the effective cooperation of many other public and private agencies, citizens, and employers. Among the cooperating associations, the Disabled American Veterans has been outstanding.

The DAV helps the Veterans' Administration to help America's war-disabled veterans. Its incorporated trustee, the Disabled American Veterans Service Foundation, in turn helps the DAV to maintain its Nation-wide set-up of nearly 300 full-time, trained national service officers. Their technical information, advice, and assistance to individual disabled veterans, and their practical liaison with governmental agencies and prospective employers, has been of such great value as to have justified the Veterans' Administration in furnishing office facilities for them in all of its regional, district, and central offices.

Generous public support of the DAV Service Foundation will assure continuance of the DAV's valuable service activities for the benefit of America's war wounded and disabled veterans and their dependents. (O. W. Clark, Deputy Administrator, United States Veterans' Administration.)

This is to express my appreciation for the important work undertaken by the DAV, on behalf of those who have given more to their country than can ever be fully repaid. Labor's heart goes out to the disabled veterans, many of whom come from its own ranks, and we are eager to do everything we can to help those handicapped veterans and their dependents to secure the fair and generous treatment to which they are entitled. (Philip Murray, president, Congress of Industrial Organizations.)

The DAV is not appealing for your sympathy nor to your patriotism, but is presenting a practical plan for making useful, independent citizens of our disabled veterans. It is to be commended for its excellent work. (Robert R. Wason, former president, National Association of Manufacturers.)

The Nation's first obligation surely is to stand by its fighting men disabled in the line of duty. The DAV's success in this drive should be desired by all citizens, for an adequate DAV staff will mean that those who have bravely fought and bled for us all will not be disinherited and forgotten. Many pleas are made to the American public. This is one campaign that surely merits the generous support of every one of us. (Editorial, the New York Times.)

STATEMENTS BY TWO AMERICAN PRESIDENTS

The purpose of your Nation-wide rehabilitation program * * * to extend needed assistance to members of our armed forces who become disabled, as well as to disabled veterans of the World War and their dependents, is, indeed, a worthy one and merits the full support of our citizens. (The late President Franklin D. Roosevelt.)

The Disabled American Veterans are performing a most useful function in helping disabled comrades to help themselves. As I told you during your visit to the White House, our disabled veterans deserve every assistance within the power of the American people.

Surely, in this postwar reconversion period there is no more important and timely work to be done than that of assisting disabled veterans. All Americans should cooperate in the great task of helping these veterans to make as complete a transition as possible to productive civilian life.

I feel certain that all organizations and individuals who are interested in the welfare of our country will assist you. (President Harry S. Truman.)

In a message recently issued to the American public by General Wainwright, the foundation's appeal is put in a nutshell.

"The DAV," General Wainwright said, "maintains a Nation-wide staff of trained service officers. These men, disabled veterans themselves, are on constant duty in all Veterans' Administration offices * * * to help their disabled buddies with all their problems * * * employment, compensation, insurance, hospitalization, and social. They have rendered effective, material assistance to more than a million disabled veterans in their fight to regain independence, security, and happiness, to again lead normal, wholesome, productive lives.

"So, as a good American, will you cooperate by helping us to continue this vital, humanitarian work for the boys who fought for you?"

Citizens who are grateful for the sacrifices of America's disabled veterans will, I feel sure, generously support the vitally important service program sponsored by the Disabled American Veterans Service Foundation.

How Much Will Free Medicine Cost?

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Much Will Free Medicine Cost?" published in the Livingston (Mont.) Enterprise of April 29, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW MUCH WILL FREE MEDICINE COST?

The social planners, who believe that the world should be made over to agree with their own viewpoint, have introduced in Congress a bill to provide health insurance, with free medical treatment for everyone.

But free treatment doesn't mean that at all. According to reliable estimates this so-called free treatment would be very expensive indeed.

The bill is misleading because it does not call for any specific appropriations to put it into effect. It says merely that Congress is authorized to appropriate as much as will be needed for each of the services proposed.

Not even the backers of the bill will come out with an estimate of its cost because they have no idea of what it will take to put the various health plans into effect.

A 3-percent pay-roll tax is proposed, but that admittedly is but a nominal amount to raise funds with which to start the health plan, not to put it into effect.

Complete medical service for everybody, including all the appliances needed for the ill, including crutches, wheel chairs, ambulances, false teeth, eyeglasses, and the like, could mount up to an enormous sum.

It would be necessary to educate thousands more young people every year to become doctors, nurses, dentists, various kinds of technicians, and to fill all the other occupations which would go with health services.

One cannot imagine the extent to which the program would expand because the socialization of medicine would mean the necessity to socialize or control related industries.

Take food, for example. Undoubtedly diet has a great deal to do with health and if the Government is to guarantee good health to everyone it might be necessary to supervise the Nation's diet.

Or to go off on another tack. Some people say that thoughts control the functions of the body and that health of the body is related to health of the mind. Will it become necessary for the Government to see to it that everyone thinks proper thoughts and is free from all kinds of mental tensions and worry which contribute to ill health?

To confine ourselves to the bill before Congress, the American Medical Assocation estimates that the bare services called for in the health-insurance bill will be $6,000,000,000 a year. Hospitals and schools and ambulances and eye correction and fixing of teeth would be extra.

W. Rulon Williamson, former actuary of the Social Security Board, who should have a pretty good idea about what is eventually planned by the bureaucrats, estimates that the ultimate cost of the program could go as high as 18 percent of the pay roll of the Nation, might reach a plausible medium of 12½ percent, and would be at least 7 percent, depending upon what free services were insisted upon.

The mounting costs of socialized medicine in England and New Zealand indicates that no matter what plan this country finally adopts, it will be at least twice as costly as the first estimates.

No, we can rest assured that if the Government gets its finger into the health problem of the Nation the taxpayers and the wage-earners will not find that its service is free.

Noted Columnist Justifies Senators Watkins and Donnell in Efforts to Get Truth on Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "In the Nation—The Two Senators on the Far Left," written by Arthur Krock, and published in the New York Times of May 6, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—THE TWO SENATORS ON THE FAR LEFT

(By Arthur Krock)

WASHINGTON, May 5.—Senate committees tend to become exclusive inner cadres of the exclusive club which is the Senate itself, and they do not relish intrusion upon their deliberations by Senators who are nonmembers. This attitude has exposed, currently, Senators WATKINS, of Utah, and DONNELL, of Missouri, to a good deal of scorn, irony, and shouting in the hearings on the North Atlantic Pact before the Committee on Foreign Relations, to which they don't belong.

But the belief that they are performing a very useful service to a country which too often has been misled on foreign policy it was

asked to approve, and the hope that the country may realize this, seem to sustain them.

Senators WATKINS and DONNELL sit with the committee by sufferance, and on the far left. They are allowed to question the witnesses only after committee members have finished their interrogations. At that point Chairman CONNALLY usually emphasizes the "allowed" part of the arrangement. But in their meek, resolute way the two Senators plod ahead in their campaign to evoke a full and informing debate on constitutional and other issues implicit in the North Atlantic Pact, which they obviously fear would not be forthcoming if the committee did all the questioning.

THE HEART OF THE MATTER

In a letter to Chairman CONNALLY on March 23, requesting the privilege now enjoyed by the two Senators, they virtually gave that reason for the request. "In view of the probability," they wrote, "that the committee has nearly, or perhaps entirely, arrived at the conclusion [that the treaty should be approved in the form submitted by the Department of State], we think * * * every other Senator should be granted the right of participation in both the public hearings and executive sessions to be held by that committee respecting the treaty." Agreeing that nonmembers of the committee should have no voting rights, they asked, however, for permission to question witnesses directly. And they slyly pointed out that among the precedents was the fact that Chairman CONNALLY himself had been "permitted to interrogate witnesses" in connection with a Texas judicial nomination before a committee of which Mr. CONNALLY was not a member.

Their line of inquiry thus far indicates that they are attempting to stimulate complete candor by advocates of the treaty on these points: (1) to what degree, in effect, the pact eludes the constitutional provision that Congress alone may declare war; (2) to what degree it transfers from Congress to the President's decision as to when and how the armed forces of the United States shall be employed to carry out, through creation of a state of war, the obligations assumed with the co-signatory nations.

The two Senators joined forces to this purpose last winter when Mr. WATKINS arose in the Chamber now and then to state anxieties about the North Atlantic Pact and concluded from certain remarks by Mr. DONNELL that the Missouri Senator was of the same mind. Consultation led to the letter of March 23 to Chairman CONNALLY and the presence of the intruders on the far left of the committee table.

"They form a strange pair," is the comment of a daily observer. "They seem a little forlorn, but profoundly determined, a little wilted, but still implacably upright under the chairman's heavy scorn. He treats them as men toward whom charity has worn a little thin, sometimes grumbling remarks in what is rather too loud to be *sotto voice*.

HAVE CLARIFIED ISSUES

But their conscientiousness surmounts all this, and they undoubtedly have clarified the issues and improved the hearings. Whether their efforts will dispose of troublesome questions for Chairman CONNALLY and Senator VANDENBERG in the floor debate does not seem probable, and there are those who charge them with precisely the opposite purpose. But clearly Mr. WATKINS and Mr. DONNELL are primarily interested in apprising the Senate and the people of the full potential of the treaty before it is approved, both with respect to the obligation to which it commits the United States and the means and methods by which that obligation will be executed. When one recalls that lend-lease was represented by administration spokesmen as a measure leading away from our involvement in World War II, this effort becomes even more commendable.

The Secretary of State has been much more candid than some of his predecessors in conceding the facts of a bold administration proposal in foreign policy. Mr. Lovett, the former Under Secretary of State, was no less, frank, though the questioning took him onto technical ground. The testimony of John Foster Dulles squarely met the issue the two Senators are attempting to clarify. They cannot claim responsibility for this, yet the product is what they are after.

But whether candor or subtlety dominates Senate debate on the treaty, neither tactic can dissolve these realities:

The North Atlantic Treaty commits the United States to regard an attack on one signatory as an attack on all, including the United States. If ratified, it becomes the supreme law of the land. The President is sworn to take care that the laws be faithfully executed. While he may not execute the treaty, before resort to Congress, by methods and means that will put this Nation in a state of war, that will depend on circumstances of which inevitably he will be the judge.

Cartels Could Strangle America

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 28, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Junius B. Wood, which appeared in the magazine Nation's Business for May 1949:

CARTELS COULD STRANGLE AMERICA

Like giants licking their wounds before returning to battle, international cartels are raising their heads from the ruins of war.

These Goliaths of world trade, their astute strategy cloaked in secrecy, are now mysterious but dominant factors in the world's hopes and efforts for a permanent peace. In their individual fields, they are world governments by their own right and, in many of those countries which they call home, the actual power over the state.

In the moves made so quietly behind the open conferences, the United States is caught in an amazing position. It is the healthy host on which cartels fatten and profit. Our generous billions are rebuilding European nations that wage economic war on us through powerful international cartels which soon can—and some already do—have their former stranglehold on American security and economy. The appeasement of peace is more bizarre than that of war.

Scholars and diplomats can interpret the issue as an academic test to decide whether free competition—the economy of American democracy—or monopoly which is encouraged and fostered by European governments will survive in the world. To our Government attempting to stock-pile strategic materials for defense, to manufacturers at the mercy of foreign cartels for essential raw materials, to the merchant and businessman and to the millions of Americans who pay the bills, it is not academic but real and vital.

Chaste diplomatic language shuns the word "cartel" as suggestive of evil. International commodity agreement is preferred but it means the same. In the plain language of the United States, a cartel is a monopoly, forbidden by law in this country. When the monopoly is in more than one country, it becomes a cartel. An American member of a cartel can be prosecuted under antitrust laws but most other countries encourage and protect them. They are old in Europe, the first in 1470, when Pope Paul II and King Ferdinand of Naples outlawed competitors and pooled production and profits of their alum mines to fight the Turks and Hussites.

If the United States were practical as well as a good-natured Santa Claus to the world, it would not be a willing victim of cartels which threaten its material well-being. The issue will come before the United Nations. Given the cues by their profitable cartels, nations will vote together. The inclination of the world organization will be to strip the United States of what defensive weapons it has against the powerful combinations. The United States must make its own fight.

Cartels to control manufactured products are the most numerous but the United States with its inventive genius, private initiative, free competition and industrial development knows how to cope with them. The situation is different in the face of world cartels which monopolize the production and distribution of raw materials. American private ingenuity has found substitutes for many basic commodities but the fight to get fair treatment for American producers from raw-material cartels must be made through our Government.

The United States is wholly dependent on imports from abroad for many of the raw materials necessary for industry and daily life. Organization set-up, sources, methods of operation and attitude toward the American market differ for each cartel. Brief sketches of several of the most important show the complicated workings of all.

TIN

No tin mines are in the United States and all is imported, either ore or in bars. Even with such substitutes as electroplating, aluminum foil, ball bearings, plastics, cellophane, glass, paper, and noncoated containers, this country needs half the world production of tin or, on a per capita basis, 10 times that of any other country. Mines are in Bolivia, Malaya, Dutch East Indies, Indochina, Thailand (formerly Siam), Nigeria, Belgium Congo, Portugal and Cornwall.

The International Tin Committee, a cartel of governments—Britain, Holland, Belgium, Bolivia, France, and Thailand—controlled 90 percent of the world's tin until dissolved December 31, 1946. It so effectively blocked our Government's prewar attempts to stockpile tin—indispensable for armaments—that Prof. K. E. Knorr wrote: "Civilization may be liquidated but not the tin producers."

As a war measure, our Government built a smelter and refinery at Texas City, Tex., in 1940. Congress has decided to keep it in production until June 30, 1951. The Tin Processing Corp., a Dutch concern, is employed to operate the plant. This same company has charge of the Dutch Government's East Indian tin properties but no criticism is made of its operation of our plant.

The big grief of our Texas City plant is that it cannot get enough high-grade tin concentrates from the tin-producing countries to run at full capacity though the owner of the plant (United States Government) is financing those countries. The plant gets most of its ore and bars from the Hochschild Armaya and smaller mines in Bolivia. The output of the larger Patino mines—basic wage $90 a year—goes to that corporation's smelters in England. Tin mining by dredges in the East Indies, though crippled by Japanese destruction, is cheaper than the deep shafts of Bolivia and the ore is higher grade, making the Bolivian ore doubly expensive.

Since the announced dissolution of the tin cartel, control and distribution of the world supply operates in the framework of the United Nations. A 14-vote study group—Australia, Canada, India, Malaya and Nigeria, United Kingdom, France, Belgium, Netherlands, Italy, Czechoslovakia, Bolivia, China, Thailand, and United States—has $40,000 a year for a secretariat in The Hague and a monthly bulletin. A combined tin committee of eight—Canada, India, United Kingdom, France, Belgium, Netherlands, China, and United States—is in Washington.

The study group keeps abreast of the world tin situation; production, smelting, and consumption. With its estimates for a coming year, the Tin Committee meets each January 1, and allocates the expected surplus output, but only of bar tin, to different countries. Although it does not fix prices, limit production, or decide who shall sell to whom, the United Nations Tin Committee has the practical effect of a tin cartel on which the United States, the only nonproducer, is entirely dependent for this industrial necessity. It shows how this country can fare in the United Nations.

The quota of bar tin allocated to a country is what the Committee decides the country needs, not what it wants. A producing country also can hold as much bar tin out of the surplus pool as it wants for its own use. It can sell crude ore without consulting the Committee. This means that, as long as the United States is a member of the Tin Committee, this country is held down to a ration of bar tin but can buy crude ore from whatever countries will sell. The Reconstruction Finance Corporation is the exclusive buyer and no private import licenses are issued.

Bar tin is so compact and valuable that smelter-owning countries have severe penalties for smuggling or bootlegging. Tin ore, on the other hand, contains such a high percentage of waste that shipping it across oceans to a smelter, as the Untied States must do, is a big expense. If this country were assured of an open market to buy bar tin, free from cartel or United Nations control, it could shut down the expensive Texas City smelter.

The richest tin mines are owned by governments. If these monopolists, now operating in the United Nations, won't give the United States more tin as a partial return for its loans—a private pensioner might offer to mow the lawn—they might, at least, permit us to build a smelter near their tin deposits to reduce our transportation costs.

INDUSTRIAL DIAMONDS

Of all cartels, the so-called diamond syndicate has the firmest grip on a prime necessity for American industry. London is its home. DeBeers Consolidated Mines, Ltd., of South Africa is its cornerstone but it operates through three subsidiaries: Diamond Corp., Ltd.; Diamond Producers Association, Ltd.; and Diamond Trading Co., Ltd. During a year it sells more than 95 percent of the world production of diamonds. The only ones it does not sell are from Brazil, Venezuela, or Arkansas. American dealers I talked with have an impression that merely handling these will blacklist them from further purchases from the syndicate.

DeBeers bought into companies operating mines in French, Belgian, and Portuguese African colonies but its subsidiary Diamond Trading Co., Ltd., the exclusive selling agency for all mines, is the cartel's most effective weapon for world control. It was the bright brain child of either Cecil Rhodes or Barney Barnato Isaacs who developed an abandoned digging into one of the world's richest mines. Another South African statesman, Sir Ernest Oppenheimer, brought it to the present perfection. As half the profits of a mine may go to a colony and all pay heavy export duties, the four nations are stanch supporters of the cartel.

The United States is the market for 80 percent of world production of industrial diamonds for cutting tools. While industrials are only 28 percent of the value of world production, they are 85 percent of the weight in carats. A mine produces both gem and industrial stones like prize apples and nubbins from the same tree. The Nation does not weep when fewer gems are added to the jewel boxes of Park Avenue dowagers but when the supply of grubby industrials is choked, American industry slows down from jet plane velocity to an oxcart crawl.

The United States tried to break the syndicate fetters with an antitrust suit in 1945. The allegation was that a bank account, advertising agency, an engineer to buy machinery and other employees in the United States put the syndicate within jurisdiction of American courts. The syndicate answered that it did not do any business in the United States and, last July, the court agreed.

American dealers again go to London to buy diamonds. The syndicate's invitations to sights, as its semiannual sales are known, are limited to dealers who can show a certified bill of exchange for $80,000. Even this evidence of ability to buy does not permit a dealer to rummage through the display to pick out stones. They are separated into series of gem or industrial diamonds and further divided into packages. A buyer must take the bad with the good in a package so the syndicate will not be stuck with inferior stones.

When German invasion threatened London, syndicate offices and stocks migrated. An invitation from its best customer to come to the United States was declined. It settled in Canada and Bermuda and stayed out of our jurisdiction. American dealers did their buying there and the syndicate limited our Government's war reserves to a few weeks' supply of diamonds. It is similarly unresponsive to American present efforts at stock piling. Diamonds still must be found where nature has planted them and the syndicate has fenced in the fields.

QUININE

This is a minor item in our annual trade balance but highly important for the health of the country. The growing of cinchona bark, the source of quinine, is a Dutch colonial monopoly but French, English, and Swiss manufacturers and distributors join the Dutch in fixing prices and quotas throughout the world for the finished malaria remedy.

Some cinchona is grown in Sumatra but 95 percent of the world supply comes from Java where the government owns one-tenth of the plantations. The government forbids the export of seeds or increased plantation acreage and requires licenses for exports of bark and then only to approved manufacturers. Adding to government revenues is the primary purpose of the rigid controls—restricted sales and high prices to consumers and low prices to growers. Natives have burned their crops in protest against the bare subsistence prices offered by the government monopoly.

At the same time, the world and the United States in particular suffered from a lack of quinine. Regardless of the relative efficiency of quinine or atabrine and other substitutes as malaria remedies, the medical profession advises supervision by a physician when using substitutes. Malaria sufferers can dose themselves with quinine.

Anticipating war, this government attempted to lay in a reserve of quinine. Negotiations collapsed when Dutch representatives frankly disclosed that Germany would take all they cared to raise. The lack of quinine showed later in the casualty lists of American troops in tropical climates. One consideration for our aid to the Netherlands might well be that we do not again lack the quinine so necessary for life and health.

MERCURY

Cinnabar has been mined in California, Oregon, Texas, and Arkansas. The New Almaden and New Idria mines in California, the latter worked for 100 years, were the last to close. Mercury content was low and labor costs were high.

The United States now depends entirely on Mercurio Europeo, an Italian and Spanish cartel which fixes production and sales, for our needed mercury. It has many industrial uses and is a must for percussion fuzes. The United States should be able to get enough flasks of mercury for its needs as a slight return for aid it is giving the two countries.

QUEBRACHO

Argentina and Paraguay produce 98 percent of the world supply of the tannin needed for tanning leather. Tannin is extracted from quebracho, the hardest of woods. Producers must get permission from their governments and comply with quotas and prices fixed by the Forestal Land, Timber & Railways Co., Ltd., a British corporation whose Spanish name runs to 12 words. After its subsidiaries in the United States were prosecuted by the Department of Justice in 1943 and 1945, it took a tip from the diamond syndicate and now operates from England, Canada, and South America, beyond reach of our laws but not of our markets.

RUBBER

Until the war, the British and Dutch cartels enjoyed a free hand in fixing rubber quotas and prices in a world which they had divided, with the United States as the largest consumer. Their colonies produced 97 percent of the world supply of natural rubber. Foreseeing trouble in 1939, the United States asked for an increase in its quota but the Dutch said they wanted to stock pile for themselves. The Japanese moved in and our source of natural rubber disappeared.

The Nation's determined efforts to meet the crisis are an industrial epic. Millions were invested in plantations on the Amazon where wild trees supplied half the needs of the world 30 years earlier. Factories were built to reclaim used rubber but the greatest accomplishment was a dozen plants to produce synthetic or chemical rubber.

These facilities are Government-owned and privately operated. Congress has decided that they must produce at least one-third of their full capacity until June 30, 1950. Improvements and experience have cut production costs down to those for natural rubber.

East India plantations also are again producing at close to their prewar capacity. Cutting down trees was more difficult for the Japanese than wrecking tin-mining machinery.

Rubber may be the bellwether which will disclose the attitude of the United Nations toward moves of the United States to protect itself from exploitation by cartels. Though not yet stated in open meeting, it has been suggested that if the United States puts into practice its policies for stimulating world trade, supplying other nations with dollar exchange and aiding people of all backward areas, it will withdraw from competition with their production. That could mean closing the synthetic-rubber plants which protect this country from again depending entirely on the cartel.

Those nations which profit so richly from cartels would vote for that. The United States must fight alone. It has the tools if it will use them.

"Combine our international lending with our Government stock piling," is a mild suggestion of Prof. G. A. Briefs, who has many

years of cartel observation behind him. "Cartel countries could be asked for collateral—tin, industrial diamonds or other items on the stock-pile list—when they receive a loan. That is sound banking practice."

The Marshall plan and the Export-Import Bank of Washington assure this Government of sympathetic hearings by nations receiving American loans. American funds can be a powerful leverage on cartel-minded nations. The home addresses of cartels beyond the reach of American laws are in countries receiving loans from the United States. The cartels are not beyond control by those countries. The cartels are big revenue producers for the countries but the governments may consider it better business to tone down cartel demands on the United States and continue receiving loans.

Tariffs and trade are outmoded weapons in an age where all are friends around the table but they can have their uses. Public opinion and good will also have weight, especially with a generous giver. Such drastic and unpleasant remedies should not be necessary. In fairness, American Goverment and industry should be freed from exactions of quotas and prices by cartels which operate from countries receiving United States aid.

That is only fair exchange. It will be far from an even trade but the United States can charge off its short end of the bargain as a prodigal investment for the good of mankind and world peace.

A few months ago 22 nations sat down with our representatives and tabulated what materials they needed from our $16,000,000,000 Marshall plan. They also needed loans from the bank. All transactions should not be one-sided.

It is time to sit down again and tabulate what we need from them—the materials which American industry must have to survive and certainly the 67 commodities which our Government is stock piling for national security.

The Marshall plan already has distributed $4,000,000,000. The Export-Import Bank has made loans. Agreements to protect the United States and its industry from the extortions of foreign cartels must be signed before the last balances are distributed and this country finds itself stripped of bargaining strength.

Bargaining should not be necessary in the first place—merely fair treatment for our country.

Basing-Point Parent Earns Greatest Sum in 20 Years—Big Steel Net for First Quarter 1949 Nearly $50,000,000—Moratorium Would Provide Blank Check on Small-Business Enterprise

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. PATMAN. Mr. Speaker, without benefit of the basing-point system, the United States Steel Corp., according to an AP dispatch reported in the Washington Star, April 27, 1949, earned more in the first quarter of 1949 than in any like period in 20 years. Had the unearned increment of phantom freight been added to these stupendous earnings that sum might have been many millions more.

After the Cement decision the colossus of the steel industry abandoned the basing-point system. But, Big Steel, the father and perfecter of the phantom twins, "basing point" and "Pittsburgh plus," does not give up easily. Its hand stayed by the courts, Big Steel relies upon the Congress of the United States to obtain the authority it now lacks to once more use the basing-point system.

SMALL BUSINESS THE LOSER UNDER THE MORATORIUM BILL

United States Steel, also a leading exponent of the art of merger, consolidation, integration, and expansion, continues to grow day and night beyond all reasonable bounds. If the Congress intends to preserve and strengthen small-business enterprise and to maintain a healthy business structure, then the moratorium nor any other bill of like character will be allowed to pass.

Keeping in mind the earnings of Big Steel were for only one quarter, the annual rate would approximate $200,000,000. The Wall Street Journal of April 27, in a comparison of the March quarter for 1948 and 1949, shows the 1949 quarter net earnings were almost twice that of the 1948 quarter for the same period.

The Wall Street Journal also brings out the point that "authorized projects still to be completed amounted to $238,000,000 as of March 31. This means a total postwar facilities program of $986,000,000." Think of it—almost a billion dollars dedicated to the cause of monopoly.

It is a grave question indeed when we consider the import of the vast expansion programs that this and other corporations have under way. The intensified programs of integratian, of purchase of competing plants, and of the general expansion of big business should make us pause and meditate upon the direction in which we are going.

Our country has been made great by the effort expended by individuals, whether they be farmers, merchants, manufacturers, miners, or any other form of endeavor under our freedom of choice in vocation or avocation.

I know of no better way to preserve and strengthen our economy than to preserve and strengthen our antitrust laws, certainly the passage of a moratorium bill is diametrically opposed to that proposition.

The article from the Washington Evening Star follows:

BIG STEEL EARNINGS FOR QUARTER LARGEST IN NEARLY 20 YEARS

NEW YORK, April 27.—Business prospects of the steel industry had a sharp vote of confidence today from its largest producer—United States Steel Corp.

Big Steel reported its net income for the first 3 months of 1949 was $49,928,670, largest in nearly 20 years.

The company shipped more steel products—5,491,216 tons—than it ever has in any previous 3-month period.

$1.50 A SHARE DIVIDEND

Its directors boosted the dividend on common stock to $1.50 a share from the previous $1.25, which had been paid since December 1947. It may be noted, however, that a special $1 additional payment was made 3 months ago.

Irving S. Olds, United States Steel chairman of the board, said he hoped dividend payments of this size could be continued. He added the company expected high-level operations to extend "into the third quarter" in the absence of labor difficulties or national catastrophe.

"Business is holding up very well," Mr. Olds told a news conference yesterday after the earnings and dividends were announced. He said the backlog of orders represented 4 to 5 months of operations at current output levels. New orders in the first quarter were 10 percent ahead of the like 1948 period, although the March rate was around 7 percent under that of the final 1948 quarter.

COMPARISON OF EARNINGS

The first-quarter net income was equal to $5.01 a common share and compares with $27,857,341 or $2.48 a share in the like 1948 period, and $41,510,274 or $4.05 a share in the preceding quarter.

United States Steel announced its figures after the New York Stock Market had closed, with the final sale of its common stock here made at $72.25 a share. At San Francisco, where trading still was in progress, price of the shares climbed to a closing figure of $73.50.

The second largest producer in the industry—Bethlehem Steel Corp.—reports its first-quarter results tomorrow.

Insanitary Buildings in the District of Columbia

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a list furnished me by the Board for the Condemnation of Insanitary Buildings in the District of Columbia of some of the properties and owners who are under active consideration at this time.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

ADDRESS OF PROPERTY AND OWNER

1317 Ninth Street NW.: Edeleen, Milton.
1323 Ninth Street NW.: Bell, Myrtler.
1230 Tenth Street NW.; Miller, Thomas.
1236 Tenth Street NW.: Taylor, Fountain L.
1238 Tenth Street NW.: Miller, Thomas.
405 Fifty-third Street NE.: Berry, Spencer S.
1213½ Blodgen Court NW.: Hoy, Lewis F.
1907 Capital Avenue NE.: Steward, Gillard J. and Annie J.
220 D Street NW.: Webster, John C. or G.
18 Dingman Court NW.: Lloyd, Fannie L.
19 Dingman Court NW.: Ball, John E.
20 Dingman Court NW.: Nelson, Joe.
21 Dingman Court NW.: Lockwood, Charlotte.
22 Dingman Court NW.: Lockwood, Charlotte.
23 Dingman Court NW.: National Tax Investment Co., Inc.
24 Dingman Court NW.: Lockwood, Blanche Catherine.

25 Dingman Court NW.: Lockwood, Blanche Catherine.
26 Dingman Court NW.: Lockwood, Blanche Catherine.
28 Dingman Court NW.: Lockwood, Blanche Catherine.
29 Dingman Court NW.: Slattery, Mary E.
30 Dingman Court NW.: Slattery, Mary E.
515 Dingman Court NW.: Cusick, Marie Louise.
517 Dingman Court NW.: Cusick, Marie Louise.
112 F Street SW.: Nash, Charles M. and Doris H.
114 F Street SW.: Nash, Charles M. and Doris H.
116 F Street SW.: Nash, Charles M. and Doris H.
118 F Street SW.: Nash, Charles M. and Doris H.
5923 Foote Street NE.: Hall, James.
326 G Street SW.: Downey, John F.
326 Pleasant Court SW.: Downey, John F.
328 Pleasant Court SW.: Downey, John F.
303 H Street SW.: Cullinane, Mary A.
19 McCullough Court NW.: Cummings, Carl S.
20 McCullough Court NW.: Lockwood, Blanche C.
21 McCullough Court NW.: Harris, Lillian V.
22 McCullough Court NW.: Cummings, Carl S.
23 McCullough Court NW.: Mayton, Waverly E. and Geraldine G.
24 McCullough Court NW.: Mayton, Waverly E. and Geraldine G.
25 McCullough Court NW.: Mayton, Waverly E. and Geraldine G.
426 New York Avenue NW.: Morgan, John W.
418 Ridge Street NW.: Troiano, Mary E.
420 Ridge Street NW.: Troiano, Mary E.
434 Ridge Street NW.: Robinson, Willis.
455½ Ridge Street NW.: Lopatin, Harry.
457½ Ridge Street NW.: Lopatin, Harry.
459½ Ridge Street NW.: Lopatin, Harry.
13 Virginia Avenue SW.: Miller, Emilie A.
15 Virginia Avenue SW.: Settle, G. W. and May C. W.
17 Virginia Avenue SW.: Miller, Emilie A.
323 B Street NE.: Drown, Marian Julia.
325 B Street NE.: Drown, Marian Julia.
303 New York Avenue NW.: Greenburg, Harry and Anna.
305 New York Avenue NW.: Gibbs, Constance H.
307 New York Avenue NW.: Schlesberg, Jack and Dorothy.
309 New York Avenue NW.: Schlesberg, Jack and Dorothy.
311 New York Avenue NW.: Schlesberg, Jack and Dorothy.
313 New York Avenue NW.: Keefer, Gertrude M. and Ethel L.
2140 Eighth Street NW.: Guildfield Baptist Church, Inc.
531 Fifteenth Street NW.: Wall, Kit, Jr.
1927 Capitol Avenue NE.: Lewis, Landon H.
413 Ridge Street NW.: Kern, Anna L.
448 Ridge Street NW.: Davis, Kemp.
450 Ridge Street NW.: Elkins, Philip L.
452 Ridge Street NW.: Barrett, William F.
454 Ridge Street NW.: Montegomery, Louise.
456 Ridge Street NW.: Kettler, Carl.
458 Ridge Street NW.: Trachtenberg, Sarah.
460 Ridge Street NW.: Trachtenberg, Sarah.
429 Ridge Street NW.: Hughly, Charles W.
28 D Street SE.: Walling, Helen M.
433 Ridge Street NW.: East, Philip and Irene.
435 Ridge Street NW.: East, Philip and Irene.

The Bold New Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, May 6 (legislative day of Monday, April 11), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Bold New Program," published in the Reporter for April 26, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BOLD NEW PROGRAM—CAN WE LEARN TO EXPAND IN A CIVILIZED WAY?

Not long after President Truman delivered his inaugural address, Secretary of the Interior Krug told the Eighty-first Congress that American reserves of certain industrial materials were virtually nil. Krug was not out to chill the Nation's blood: he was not at that moment telling the usual story of resources that had been plundered or squandered in the customary reckless ways. He was referring to resources that the United States had never contained in quantity—minerals and metals, for the most part, with singular, useful properties. In the last few decades, American technology has learned how to use them in the production of everything from truck bodies to antitank shells; having discovered the advantages of these largely un-American materials, our technicians now cannot get along without them. They come from most of the continents and islands of the world. If they were to cease coming, American production would be severely disorganized. Some phases of it could scarcely continue at all.

American technology runs largely on electricity. To be controlled, electricity must be insulated. Mica, the best insulator known, comes primarily from India. American technology is built very largely of steel, partly of aluminum. Chrome is a necessary ingredient of stainless steel. The best chrome ore comes from Russia. Aluminum has replaced steel for many purposes. The best bauxite, the ore from which aluminum is extracted, comes from Latin America. The harder the uses to which steel and aluminum are put, the higher the temperatures they must withstand, the greater the pressures they are designed to resist—the more they must be alloyed with metals like cobalt and chromium, molybdenum and vanadium and nickel.

Altogether there are about 150 metals and minerals on which the prosperity of the United States in peace and the security of the United States in war depend. Not many are found in sufficient quantity and quality on the mainland or our island possessions. In 1946 the United States imported from overseas 97 percent of its manganese, 100 percent of its tin ore, 73 percent of its tungsten, 40 percent of its vanadium, 47 percent of its bauxite, and unusually high percentages of about 90 other indispensable metals and minerals.

The United States dependence on the rest of the world is most conspicuous when it comes to metals, but it is not confined to them. In 1946 all the fiber and natural rubber consumed by American industry, and one-quarter of the vegetable oils were shipped in from overseas. Nor is it likely that, among metals, our impoverishment will continue to apply only to obscure ones; the supply of high-grade rich iron ore in the Mesabi Range can be expected to last only a generation or so.

The percentages show the proportion of key minerals imported by the United States the year after the war ended. During the war, America requires far more substantial imports. The weapons of modern warfare, guided missiles, jet planes, and so on, require an increasing amount of chrome, bauxite, and the rest. Congress has appropriated $800,000,000 to stock pile such materials, but no adequate reserve of them can ever be accumulated. The industries of cold war—even those of peace—consume the metals and minerals too rapidly. If American industry is to maintain its present output, still more if it is to expand, the supply of raw materials from the rest of the world must be abundant and dependable.

The scarce metals and minerals prevent us from reverting to continental or even hemispheric isolationism. If the pressing demands of technology could force us into technocracy, we would have to plant the American flag on every land in the world. We cannot even dream of doing this; and under no circumstances would we do it. We need the availability of raw materials without assuming the burden of conquering and ruling over every country where they are to be found. We do not want forcefully to impose a pax Americana; we would not know how to. Neither do we want to establish a new type of dollar diplomacy—a scarce-metals diplomacy. We need a global policy as vast and at the same time as intricate and varied as the globe itself. We need an efficient system of organization, in which the possessors and the consumers of the raw materials participate as equals.

With this problem confronting America, the President proclaimed, on Inauguration Day, his program of making the benefits of our scientific knowledge and industrial progress available to underdeveloped areas.

In these areas—the zones of the diseased, the shabbily dressed, the inadequately fed—a large part of the raw materials that the United States requires lies under or grows in the earth. Now that we count so heavily upon these underdeveloped areas, their inhabitants, for our sake as well as for theirs, cannot remain underdeveloped. If we can effectively pass on to them some measure of technical skill, adequately supported by capital investment, they will be able to produce or extract or grow their special materials in greater volume and with greater steadiness than they can now. The same and similar skills can raise their standards of living, lower their death and disease rates, and provide them with more to eat and to wear. The part of our patrimony that the program offers to share—our technical ability—is, says the President, inexhaustible.

The generosity of the idea is matched only by the difficulty of its realization. Carried out hurriedly, on the assumption that each one of our skills is by itself a miraculous cure-all, the project might bring about nasty results.

The introduction of a new technique presents only minor difficulties in a society that already employs a multitude of modern techniques. By using hybrid corn, European farmers can get larger crops from the same land without increasing their labor. Europe is prepared to make use of the augmented supply; the roads and railroads, the depots and mills to handle the extra corn are already there. But bringing a new technique into a nonindustrial society—where the texture of civilization is spotty and precarious—may be profitless and even highly dangerous.

One of the dangers is that, with the acquisition of a new medical or technological skill, an area will be confronted by an explosive, and temporarily unmanageable, increase in population. In 1945, a village of 3,000 people in British Guiana was chosen for an experiment in the elimination of malaria. Previously, the birth rate and the death

rate of the village were evenly balanced. Three hundred and fifty of every thousand children died in infancy. By 1947, DDT had exterminated most of the malaria mosquitoes. The birth rate had doubled; infant mortality had gone down to 67 a thousand. So now the suburb needs more of everything—food, houses, and furniture—and if these are not provided, poverty may keep the population down as disease once did.

The simple passage of a skill from the west to the east, Africa, and the islands—instruction in killing flies, opening mines, cross-pollenizing plants, or operating machines—may mean very little in itself even when it is not actually hazardous.

Not long ago, for example, the British discovered a method of doing away with the tsetse fly, which for centuries had prevented the raising of healthy cattle in South Africa. If South Africa receives sufficient quantities of tsetse killer, it can be made safe for steers. Not enough feed, however, can be grown in or near the best cattle country to support large herds. There is suitable land for cultivating feed farther north, but it cannot be used until it is cleared and drained, until roads and houses are built, and machinery is installed. If all this were done, a railroad would have to be built to bring the feed to the cattle and another to move the cattle to the sea for export. The elimination of the tsetse fly, in itself, will not increase the world supply of meat, unless it is accompanied by an array of other skills and enterprises of great magnitude.

A great many techniques—each of which picks up where another leaves off—will have to be introduced into the backward areas. This means the shipment of machines, the importation of fuel to make them function, the establishment of training schools.

All this requires capital. The capital can come only from the governments and the businessmen who have it—mostly those of the West. Foreign investors will shy away from enterprises in underdeveloped areas unless they are protected against some of the hazards of investment—sudden nationalization of their properties or discriminatory taxation. They will not invest unless the underdeveloped areas have sound credit and currency systems and agree to abide by certain common rules of business behavior.

With rules established, an additional incentive for private investors to risk their capital in overseas projects could be provided by a scheme to insure private investors against the abnormal business risks that they would not encounter in domestic investment. The wider the risk is spread, the more countries the insurance scheme embraces, the lower the premium investors would have to pay for protection. The United States Government might well take the initiative in setting up this insurance fund for American investors.

How much America can afford to invest overseas is almost impossible to calculate. In 1948 net private long-term American investment abroad reached $761,000,000. A yearly investment of $2,000,000,000 overseas in the immediate years ahead would make a tremendous contribution to the task, and appears comfortably within our capacity. If a climate of hope and confidence is created in which investment could thrive, the primary difficulty would, in fact, be to choose which of the almost unlimited projects foreseeable should be the first to be tackled.

Before the proper climate is created, technology needs to be rescued by another skill—economics—and by another type of know-how—politics.

Knowledge of economics and politics is needed to make sure that the first effects of industrialism on technologically innocent people are not wretchedness and rebellion.

Fortunately, the burden of the program does not fall entirely on the United States. Europe can provide many of the products necessary for development. And Europe's need for new sources of raw materials is much greater than ours.

The leaders of the nations participating in the Marshall plan are aware of the fact that the 4-year program will fail irreparably if not enough raw materials start coming in, between now and 1952, from nondollar areas. This is a necessary condition if the Marshall plan countries are ever to approach the volume of production and of exports that they are supposed to reach within the next 3 years.

The President's new program can be conceived and carried on over a span of decades. The best that we can hope is that by 1952 it will have made a substantial start. It must be developed and articulated enough to take over when the Marshall plan ends. In the period from now till 1952, American investment to help develop the resources of backward areas would be added insurance for the success of the European recovery program, as well as insurance for adequate continuing supplies of the raw materials we need.

The international-payments troubles in Europe can be relieved, in large measure, by the operation of the new program. For they are partly the result of the breaking of the nineteenth century three-cornered trade whereby, for example, far eastern countries earned dollars from their raw materials exports to the United States, used those dollars to buy supplies from Europe, and thereby provided Europe with dollars to pay for the excess of Europe's imports from the United States. A strong flow of American dollars investment in areas that have little money or industrial skill but plenty of resources would be the best guarantee of a return to freer and steadily expanding world trade.

Finally, America now has a chance to get out of a rather awkward schizophrenia. This Nation, dedicated to the cause of free enterprise and of capitalism, has to a large extent left to the Government the monopoly of foreign spending and investment—an embarrassing and rather silly contradiction.

Was it the need of scarce raw material that prompted the announcement of the new program, or was it the necessity of obtaining through a peaceful policy what we could not conceivably conquer by force of arms? Or perhaps it was the awareness of our responsibilities toward the world and at the same time of the limitations of our resources, for we haven't the means to continue indefinitely the Marshall plan or to extend it to Latin America, Asia, and potentially the whole world. There may be some truth in any one of these motives and in a hundred more. There is always a rather distant relationship between a policy and the various motives that have contributed to its enactment. Moreover, our country has the curious habit of announcing and reaching basic policies as if they were casual improvisations. This was the case when Franklin D. Roosevelt announced the policy of the unconditional surrender and when the idea of the Marshall plan first came out. It is the case with Point Four. It usually turns out that there was some thinking and planning before the announcement of a new policy, and then, when the announcement is made, thinking, and planning proceed with ever-increasing momentum because of the expectation it has aroused in the outside world.

This new program is likely to affect the UN radically, although no one knows now in what measure the UN will contribute to carrying it through. Perhaps the UN can be better strengthened by regional or even bilateral agreements than by debates and resolutions on what to do with the charter. All these partial agreements buttress at various spots the structure of the UN and provide the conditions for its strength. If multilateral trade is gradually reestablished, the UN will be the gainer. If new nations just emerging from colonialism find in western know-how the way to accelerate the pace of their progress, the UN will again be the gainer.

The major characteristic of the new program is that no matter from which side it is considered it makes sense. It is rounded, well balanced—even if it is, and will for some time remain, little more than a program for reaching a program. It depends on America, but it doesn't make America the Atlas that sustains the world. It presents extraordinary difficulties, which can be overcome if the technicians and experts of western civilization apply the experience and the knowledge they are supposed to possess and the countries to be developed are willing to accept their responsibilities. The greatest danger is that the program will be carried through by single-minded experts, each following his own approach and technique, independent and unconscious of all the others that are needed if the job is to be done. The program is a formidable test of our capacity to act. It is a greater test of our capacity to think.

The Welfare State as I See It

EXTENSION OF REMARKS
OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. BIEMILLER. Mr. Speaker, there is a great deal of misinformation—much of it deliberate—being spread about the welfare state. Today, at a luncheon given by the United States Chamber of Commerce, Mr. Nelson Cruikshank, director of social insurance activities for the American Federation of Labor, was asked to speak on the subject, The Welfare State As I See It.

Mr. Cruikshank's speech deserves attention as an excellent statement of the truth about this often-misunderstood subject. Under leave to extend my remarks, I am inserting it in the RECORD.

Mr. Chairman, ladies and gentlemen, I should like first to express sincerely my thanks to President Shreve and those in charge of planning this panel program for inviting me to participate in a discussion on this subject with these distinguished guests. I am sure those in charge were not entirely ignorant of what the point of view of a representative of the American Federation of Labor would be on this subject. It is a tribute to your sense of fair play and your typical American desire to hear both sides that you have asked me to take part.

The term "welfare state" has become a fighting term. The reason is that it has taken on two quite opposite meanings. There is one meaning ascribed to the term which is based on a concept of the State or Government as something foreign to and removed from the people and which seeks to control, direct, and provide for all the people's needs. Such a program of Government action—whether prompted by good or bad motives—removes incentives from the individual, stifles initiative, and becomes inevitably the master of the people that it set out to serve. Recent history abroad provides extensive support for that view.

To that kind of all-inclusive government activity I know that you as individuals and your organization are unalterably opposed. There we are on common ground. Labor likewise opposes and will oppose with all the force at our command any attempt by any government to control the details of daily

living and our relationships with each other, even if it is alleged to be for our own good. That is why we are against the Taft-Hartley Act.

Both employers and labor must oppose despotism in any form. There is no such thing as a benevolent despot.

There is another concept of the welfare state, however, that is rooted in a quite different idea of the nature of the state. This is the idea that the state can be the servant of the people. The idea that Lincoln expressed as "a government of the people, by the people, for the people" is not three ideas of government, but one. The only kind of government that can genuinely be for the people is one that is by and of the people. The state, like the Sabbath, is made for man and not man for the state.

If a people succeed in maintaining this concept of government the state then becomes the instrument through which they do those things for themselves which they cannot do individually. Though they use the instrumentality of government they are still performing these functions for themselves. Under such a concept individual opportunity can be maintained and enlarged and individual initiative can be encouraged.

Now under such an idea of the nature and the purpose of the state the concept of the welfare state takes on quite a different meaning from that which I first described. In line with this idea which was that held by the founders of our Government it is no question as to whether we should have a welfare state. That question was settled in 1789 with the adoption of the Constitution. The purpose of government in the United States of America was set forth clearly in the preamble of that document where, "We, the people of the United States" are committed until such time as that document is changed to six enduring programs. We are to form, establish, ensure, provide, promote, and secure. The fifth of these action programs to which we are committed is to promote the general welfare through the National Government.

This is reenforced in article I, section 8:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States."

It is significant that the first defense of a broad power of Congress to act for the general welfare was conducted by Alexander Hamilton in reference to the question of the establishment of a national bank. Opponents of the bank argued that no power was given by the Constitution to the Congress for such a purpose. But Hamilton supported his argument by reference to the general welfare clause.

Since that date there has been a host of enactments sponsored by every political party, that has been developed in our history, of both liberal and conservative persuasion to implement the welfare activities of our National Government. Every time that Congress has passed a tariff act we have engaged in an activity of the welfare state.

In this long development there have been some historic milestones. One of them was the enactment of the Homestead Act of 1862 signed by that most distinguished Republican President, Abraham Lincoln. After a long and bitter battle this was a decision on the part of the people's representatives in Congress to dedicate the vast resources of the public domain to the needs of the plain people as it provided for the settlement of public lands in quarter-section units. I like also to point out to those who allege that the idea of social security is a foreign concept that actually we launched on a social-security program through the enactment of this law. When we so dedicated the public domain we were actually providing a combined old-age security and unemployment compensation program, as a study of the waves of migration from the eastern industrial areas to the valleys of the Middle West in their relation to successive periods of unemployment in the industrial areas will show.

It needs to be pointed out also that this kind of activity by a welfare state was not confined to aiding people in search of family security or who were endeavoring to escape the hazards of unemployment. Vast amounts of land were granted to corporations supposedly as an incentive to the development of our railroad transportation system. In the period from 1850 to 1871 grants of land from the Federal Government and from the States to the railroads amounted to a total of 179,000,000 acres. This is more land area than the total of the States of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, the District of Columbia, Virginia, and North Carolina combined.

I am not here to condemn the use of the public land in this manner; I am only pointing out that when we talk about the welfare state we have to remember that the welfare activities of the State have been at least as lavish in the support of business enterprise as they have been on behalf of plain people. I cannot refrain, however, from pointing out that these enormous grants make the claims in this industry which we see in railroad advertisements and railroad-sponsored editorials that this is the only industry that pays its own way appears in rather awkward relation to the established facts.

We need only to look at the budget of the United States Government submitted for the fiscal year 1950 to find that the activities of the welfare state are by no means confined to the extension of aid to unfortunate individuals. A ship operator, for example, has available detailed and expertly prepared charts and tide tables printed by the Hydrographic Office of the Navy at an expense of $4,451,000. In contrast to that those who seek aid from the Federal Government either from management or labor's standpoint in the development of sound labor standards have to rely on the Bureau of Labor Standards in the Department of Labor whose total budget for the year is only $391,000. The Bureau of Labor Statistics operates on an annual budget of $5,450,000. A navigator of oceangoing vessels has prepared for him by the Government annual tide tables that will tell him for every day and every hour of the year the status of the tides and the flow of the currents in every port in the world. But a citizen who is responsible for steering a course in sound labor-management relations finds that the item for printing and binding in the Department of Labor is exactly zero. Twenty-five million dollars is set aside this year for the Agricultural Extension Service. In 1947 we had a tiny budget of $37,000 under which the Department of Labor was providing similar aids to American citizens responsible for furthering understanding of collective-bargaining processes. The Eightieth Congress wiped out even this minute item. It is our contention that if it is worth four and a half million dollars to publish charts and tide tables and twelve million to maintain aids to navigation and another twenty-four million to provide weather information to keep ships from running aground, it is worth at least some comparable figure to aid those in charge of collective bargaining programs from running into the rocks and shoals of industrial strife.

When the frontier was exhausted and the public lands were all settled or given away and we found ourselves still faced with the insecurity of old-age and unemployment, the Government simply continued its basic policy of dedicating its resources and instrumentalities to the aid of people to provide through a system of social insurance against these contingencies. That is how our social-security system came into effect as an activity of the welfare state.

In this connection and in reference to a social security case (*Helvering* v. *Davis*) a notable opinion was written in 1937 by Justice Cardozo of the United States Supreme Court. This opinion runs so directly to our subject that I wish to quote from it at some length. Before doing so I should like to remind you that Justice Cardozo was not a New Deal appointee but was appointed to the High Court by President Hoover, a President who I imagine is not lacking in admirers in this room. Justice Cardozo said:

"Congress may spend money in aid of the general welfare. * * * There have been great statesmen in our history who have stood for other views. We will not resurrect the contest. It is now settled by decision. * * *

"The purge of the Nation-wide calamity that began in 1929 has taught us many lessons. Not the least, of the solidarity of interests that may once have seemed to be divided. * * * Spreading from State to State, unemployment is an ill not particular but general, which may be checked, if Congress so determines, by the resources of the Nation. If this can have been doubtful until now, our ruling today * * * has set the doubt at rest. * * * The hope behind this statute is to save men and women from the rigors of the poorhouse as well as from the haunting fear that such a lot awaits them when the journey's end is near. * * * The problem is mainly national in area and dimensions. Moreover, laws of the separate States cannot deal with it effectively. Congress, at least had a basis for that belief. * * * Only a power that is national can serve the interests of all. * * * The issue is a closed one. It was fought out long ago."

It is in the spirit of this decision that we in labor shall seek to employ the instrument of Government to meet other needs that cannot be met by individual action.

One of these areas is in the field of public housing. According to the report of the Senate Committee on Banking and Currency (S. Rept. No. 84 of the 81st Cong., 1st sess.) the facts are that we must be prepared to build or rehabilitate an average of at least 1,300,000 nonfarm dwelling units and between 200,000 and 300,000 farm units each year over the next 12 years if substantial progress is to be made in bettering housing conditions of American families. The record of the private building industry, particularly since the war, establishes conclusively that it cannot handle the job alone since nearly two-thirds of our families who have incomes of less than $4,000 are completely out of the housing market in terms of being able to buy or rent the homes constructed by the private building industry.

In the field of education we decided over a hundred years ago that the education of our children is not properly a field for business enterprise operated for profit and we established a system of free public schools. In the course of our national development we are now faced with the fact that we cannot leave the support of these schools dependent entirely on the uneven financial resources of the localities and States. It has, therefore, become imperative that the one agency to which we all belong by right of birth or naturalization; namely, the Federal Government, must be used to give assistance in meeting the cost of educating our young.

Another common need is for a method of meeting the high and unpredictable cost of medical care through an extension of the principle of social insurance. We do not wish to see the Government in the practice of medicine. We do not wish to regiment doctors or patients. We do not wish to socialize medicine, and no bill supported by organized labor in the United States calls for any such thing. We, the working people of America, seek simply to promote the

general welfare by using the instrumentality of Government to establish a fund contributed to out of our own wages with like contributions from our employers to remove the ever-present dread of doctor and hospital bills that can drive us to the relief rolls and the loan shark.

Experience has taught us that every forward step in the field of social and economic welfare brings some dangers. Advances in this field are no more free from hazards and pitfalls than was the conquest of a continent by our pioneer forefathers. As we seek to utilize the services of Government we must be on guard against Government becoming our master. But we also recognize that people cannot guarantee their freedom by such a simple formula as limiting and crippling the power of their Government.

The essential problem is not one of restricting and limiting the field of Government action but in keeping the control of the Government in the hands of the people so that it remains their servant. Eternal vigilance is the price of liberty. Eternal vigilance and not eternal obstructionism. We gladly join with our friends in business in the exercise of that vigilance. Together we can use, and not be used by, the resources of Government which in another age helped men break through the frontiers to a more satisfactory life.

Next Steps in China

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 28, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the New Republic under date of May 2, 1949:

NEXT STEPS IN CHINA

The fighting drags on in China, but the 20-year war is over. The Communists have taken power in Nanking where Sun Yat-sen once raised the banner of democracy. They have fought in obedience to Soviet orders; but they have won because they came closer to realization of Sun's principles than did the regime identified with the democratic world.

Indifferent to both sides, and utterly weary, the Chinese people have desired only peace. In recent weeks Li Tsung-jen, a sincere and courageous man, spoke for that universal desire. But the final effort to win a settlement, like the war itself, was lost by the unparalleled arrogance, incompetence and corruption of the regime of Chiang Kai-shek. As always, Chiang delegated responsibility and withheld power. He left Li, as acting president, to negotiate in Nanking. From his "retirement" in Chekiang, Chiang commanded the Nationalist armies and immobilized 75 percent of the Government's gold, silver, and foreign-currency reserves needed to combat its financial crisis. The peace terms offered by the Communists were harsh, and in some cases unenforceable. Yet the Communists sent their best leaders to negotiate a settlement. Their discovery that Li lacked any real power may have been as important as their own duplicity in the collapse of negotiations and the resumption of fighting. When the Communist offensive began, it was Chiang who ordered the retreat of the navy and air force to Formosa, and the abandonment without a struggle of the last natural line of defense.

Before the Communists now lie open and undefended the rich rice fields of Hunan, the industry of the lower Yangtze Valley, the great coastal cities of Hangchow and Shanghai. For the Communists these areas present great problems as well as great rewards. They have advanced from an export-surplus area in North China and Manchuria to an export-deficient area. They have experienced great difficulties in occupying Peiping and Tientsin. In Shanghai, 6,000,000 Chinese are kept alive by a rationing system based on American supplies of rice, flour, and petroleum. Those supplies will be cut off, by act of Congress, if Shanghai falls. And normally the Communists would first consolidate their new conquests in rural areas. But if, as A. T. Steele cables from Shanghai, the Communists are pressing forward at Russian insistence, then Shanghai will fall; a constitutional convention of the Communist Party and its front organizations will be called; a new national Government of China will come into being.

It will not be a true coalition government. In local administration it may make use of non-Communist technicians. In policy determination its hard core will be Communist, and linked closely to Russia. All talk of an imminent break between Mao Tse-tung and Stalin seems to us to be coffee-house chatter.

There are conflicts between Chinese nationalism and Soviet imperialism. The Soviet Government alone maintains foreign concessions in Manchuria. It has won control of Outer Mongolia. It is pressing into Inner Mongolia. It has been wringing concessions in Sinkiang from a nationalist delegation in order to make the most of the present situation and to spare the Chinese Communists the onus of yielding new concessions. But for Moscow, locked in conflict on a world front, the Chinese have become the great antagonists of the West in Asia. And the Chinese Communists in turn have chosen sides in the world war they foresee.

In the future, Chinese nationalism may win over Communist subordination to Moscow. Today China's new rulers remember that to bring about their destruction America delivered $3,000,000,000 worth of supplies to their enemy. Ninety percent of these supplies were used mainly by the Communists. But they remember that American bombers shattered their towns, that American fighters strafed their trenches, that American bullets killed their comrades. Their rank and file has been indoctrinated with hatred of America. And the new government of China will be bitterly anti-American. For that hatred toward a nation which has been committed historically to the independence and unification of China we have our military leaders, our Republican Congress and Chian's hobby, led by Henry Luce, to thank.

The State Department, which Republican leaders now berate, has lately shown rare wisdom in China. It has maintained its legations in Peiping and Tientsin. It has encouraged American businessmen, missionaries, and educators to stay on under Communist rule. It has refused to be stampeded into sending more aid to a hopeless cause.

The National government (Dean Acheson wrote Senator CONNALLY on March 14) does not have the military capability of maintaining a foothold in south China against a determined Communist advance. The Chinese Government forces have lost no battles during the past year because of lack of ammunition and equipment. There is no evidence that the furnishing of additional military material would alter the pattern of current developments in China. It would only prolong hostilities and the suffering of the Chinese people, and would arouse in them deep resentment against the United States.

We have rejected the use of nonrecognition as a diplomatic weapon. And when the Chinese Communists establish a national government we shall have to recognize it. Recognition will mean resumption of full trade relations, acceptance of the Communist delegations in the United Nations, and treatment of the Nationalists as rebels. The major decisions will center around the future of Formosa.

Formosa, where Chiang suppressed a genuine independence movement with terrible brutality 2 years ago, is now the scene of a new movement for independence from China. Chiang has transferred his air force and his gold reserve there. He hopes that its airfields and deep-water bases will lead America to take his Formosan regime out of Chinese sovereignty and place it under the protection of the Supreme Commander of the Allied Powers as part of the Japanese sphere of occupation. The lesson of the last 3 years is surely that any such action would be a foolhardy gamble that is bound to end once more in failure.

Two years ago, in the New Republic, Evans Carlson predicted the exact course of events that have taken place in China. Almost all liberals held the same views. In unregenerate conservatism and unreasoning fear we supported a regime that had no support among its own people. In the name of opposition to communism we pledged ourselves to a regime that paid lip service to the outward forms of democracy and mocked the basic values that those forms exist to serve. It collapsed in the face of a superior economic and social system, and by identifying democracy with its pretentious greed we made its inevitable defeat our defeat. The idea that we could have saved Chiang by more aid, that we should have taken completely a country far larger in size and population than our own, is monstrous. We have neither the capacity, the opportunity, the legal sanction, nor the moral right to intervene in any such way. If our reaction to the events in China starts us thinking in such terms, we could be altogether lost.

The lesson of China is that there are narrow limits to the action of any country; that American aid is always marginal; that the regeneration of a people is primarily a test of that people's own strength; that the strength of a people lies in the devotion of its leaders to the practice of democracy day by day; and that if the strength which democracy offers to an embattled people is denied them, no other aid can replace it, and their battle sooner or later is lost.

The Business of Freedom

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Secretary of Defense, Hon. Louis Johnson, before the thirty-seventh annual meeting of the Chamber of Commerce of the United States, at the Statler Hotel, in this city, last Thursday, May 5, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Tonight I am going to talk to you members of the Chamber of Commerce as one businessman to another. I am responsible for the most important business enterprise in American life today—the business of freedom. If we succeed, your business, your way of life, your right to say what you please, to do what you please, to worship or not as you please, to find fault with your Govern-

ment if you please—all these inherent rights of freedom will remain for you to enjoy.

My job is to make America so strong on land, at sea, and in the air that no aggressor will dare to attack us, or to interfere with our enjoyment of our inalienable rights as free Americans.

I say it is my business because I have the responsibility as Secretary of Defense. In fact, it is your business as well as mine. It is the business of every American. It can succeed only if it has everyone's physical, material, and moral support. It is an insurance business—insurance against war. Each of you as a citizen and as a taxpayer holds one of our policies and each is one of our beneficiaries.

In a sense, it is a new business for our democracy. Prior to Pearl Harbor, the very idea of preparedness was repugnant to millions of our people. Free people abhor war. They do not want to die. They do not want to kill. They want to live and let live. Their very idealism takes their minds off war and preparations for war. Aggressors have recognized that tendency and have tried to exploit it to their own advantage.

In the past, it was the aggressor, the dictator who was always ready for war. Now we have learned what we always should have known, what Washington tried to impress on the American people in the infancy of our historical growth, that to be free we must be prepared. And so our democracy has been compelled to go seriously into the business of national defense.

National defense is big business. This year it is a $15,000,000,000-a-year business. In 1944 it ran to $90,000,000,000. World War II cost us more than $300,000,000,000 for goods and services.

In another major conflict we would require production of arms on a far greater scale than that of World War II. Such a war would call for the most gigantic production effort the world has ever seen.

We know full well not only the cost of war in material resources, but, even more important, its physical horrors and personal tragedies as well. We have no illusions about war as the great crucible for testing and purifying the human race. On the contrary, we know it to be a great destroyer of human and natural resources. And this we knew even before the atom bomb. The total potential destructive and killing power of scientific weapons of mass destruction cannot even be measured now.

We are determined that we shall not be victims of war. We seek to prevent it. We seek to eliminate the causes of conflict. Our support of the United Nations has been wholehearted and sincere. We have never sulked in our tents or withdrawn our memberships when developments did not suit us.

We have come to the aid of nations in distress. We have given generously of our treasure and our resources to strengthen democratic governments all over the world, to help them create and maintain better living conditions for their people, and to discourage the forces of chaos and revolution.

We do not covet the territory of any of the nations we have aided, nor the territory of any country in the world. We have no designs on other peoples. We are free, and are determined to stay free; and we shall resist encroachment upon our freedom with everything we have. That is why we support an Army, Navy, and Air Force. That is why we must be in the business of national defense on a large scale.

We must constantly bear in mind that our industrial and individual wealth makes the United States the greatest prize ever regarded by a would-be conqueror. Our military strength, backed by our total industrial capacity and 147,000,000 loyal Americans, is our line of defense.

National defense must be sound economic business. In time of war, waste may be excusable if it saves human lives, but today every step possible must be taken to get top return for each dollar spent.

Business efficiency—as you are well aware—can result only from eternal vigilance on the part of every person responsible for the expenditure of public funds. Sound policies are needed to guide procurement officials. These things do not come about by chance. They are the results of long years of hard and conscientious work by men who put the national interest first—high above sectional or special interests or the interests of any one segment of American business—large, medium, or small.

Those of us who are engaged in the business of national defense realize that a sound program of preparedness calls for the utilization of our entire productive business system—big business and little business.

We have big business. We need big business. We can thank our lucky stars that we had mills and plants big enough to handle the big war-production jobs of basic metals, and to mass produce and assemble such large items as tanks, and trucks, and ships, and planes.

We have small business too, and they too played a vital role in the victory. For them we can thank the wisdom of our forefathers whose political economic system made possible the establishment and healthy growth of hundreds of thousands of these smaller units, the so-called "small business" of America.

These hundreds of thousands of small businesses, scattered throughout our land, together with our millions of independent farmers, are the essence of our democracy—they are our basic safeguard against the dangers of statism. It is high time that those few power-seeking and merger-mad corporation officials in our midst realize that the enemies of our economic system are gambling on a hope that American big business, by concentrating more and more economic power in fewer and fewer business enterprises, will finally drive us into some form of the corporate state which can readily be seized by a small group of ruthless men to spell the death knell of freedom.

The National Military Establishment appreciates the value of small business to our whole economy and to production of military items particularly and is bending every effort to have it share in its defense program. Let me tell you what we are doing to get orders for small business.

But first, what is small business?

The Military Establishment accepts the definition in the Selective Service Act of 1948, which says a business is small if it does not occupy a dominant position in the trade or industry of which it is a part, if the number of its employees does not exceed 500, and if it is independently owned and operated.

Under this definition 99 percent of the 4,000,000 American business enterprises of all kinds would be classified as small. Since we in the National Military Establishment are interested primarily in production, let us take a look at the industrial business population.

There are approximately 320,000 manufacturing plants in the United States. Again, approximately 99 percent of them are small. The workers in these small businesses comprise 65 percent of all manufacturing employment. They produce 62 percent of the total industrial output.

You will find these small plants in many industries and widely dispersed all over the country. More and more of them are moving to the outskirts of large metropolitan areas or to towns which were formerly only shopping centers in agricultural regions. Their very dispersion offers a special incentive in an atomic age for giving procurement orders to small business.

None of us wishes war, but we must prepare for all contingencies. And if war does come and it proves to be an atomic war, we must assume the big industrial centers of our country will be among the first targets. The main burden of producing war material will then fall on the smaller plants which are scattered in the smaller cities and towns. It is therefore good procurement planning for peace or war to give orders to small business now. In this way we will be developing our potential national assets, strengthen ourselves defensively and alleviate the evils of the huge overcrowded industrial city—and award more and more contracts to the backbone of our free-enterprise system, the small-business man.

The National Military Establishment is interested in small business because it wants to know that the productive capacity of all plants, including the small, is available. It is interested because it feels that small business is one of the institutions we Americans believe in and want. We must not forget that practically every American business in existence today once started as a small business.

The Congress recognizes the deep interest that the American people have in small business. From 1933 to 1944 more than 570 bills and resolutions dealing with one or another of the myriad aspects and problems peculiar to small business were introduced in the Congress of the United States.

In the Armed Services Procurement Act of 1947 Congress provided that—and here I quote—"a fair proportion of the total purchases and contracts for supplies and services shall be placed with small-business concerns."

The Selective Service Act of 1948 carries a provision to the same effect.

On December 12, 1947, President Truman transmitted similar wishes on this matter to the heads of the executive departments and establishments.

And as Secretary of Defense, I intend to carry out the President's wishes in every respect.

Now let me give you some specific examples of small-business contracts awarded by the National Military Establishment.

We recently let a contract for engines for the General Patton tank. The Continental Motors Corp. got the contract. It subcontracted 46 percent of its work to 191 first-tier subcontractors. Of the 191, 133, or 70 percent, received contracts of $20,000 or less. These subcontractors in the main were small businesses producing such items as piston rings, valve springs, bushings, castings, forgings, nuts, bolts, washers, and gaskets. The pattern work on this contract was divided among 10 companies which employ 50 people or less.

A very recent check in the Navy indicates that of the total number of orders placed for materials for a prototype cruiser, approximately one-third went to small-business concerns.

Small business also comes in strong as subcontractors at the second, third, and fourth tier. Total figures on these are not available, but we are planning some case studies to find out the total impact of certain types of large prime contracts on small business.

The role of small business is not confined to subcontracting. To be sure, many small-business men say they prefer to work as subcontractors because they are accustomed to their existing relationships with prime contractors.

In January and February of this year the Transportation Corps of the Army alone placed 62 percent of its 13,000 procurement actions with small business; and they were all prime contractors.

During World War II small business handled thousands of prime contracts. For example, 71 percent of the prime contractors performing work for the Philadelphia ordnance district employed 500 or less; 56 percent of the prime contractors employed 100 or less.

As an excellent example of the geographical dispersion of subcontractors let us consider the six-jet B–47 Air Force bombers now being produced by Boeing. Thirty-two companies throughout the country will participate under the subcontracting agreements in the Boeing prime contract. These companies are located in every section—Pasadena, Minneapolis, Dayton, Dallas, Chicago, Philadelphia, North Hollywood, Rock Island, Wichita, Detroit, and Los Angeles.

How well is the Military Establishment carrying out the intent of the Congress that small business get a fair share of the orders placed? Let us again look at the record.

During the 7 months ending January 31, 778,000 contracts totaling $2,675,000,000 were made by the Army, Navy, and Air Force. Preliminary statistical analysis reveals that approximately 70 percent of these purchase actions have been placed with small businesses. These contracts account for about one-third of the dollar volume of procurement by the three departments.

These statistics relate to prime contracts. They do not reveal the total volume of orders that small business is getting as a result of the present defense program.

Small business participation in military procurement varies greatly by item. Nearly 100 percent of some items are bought from small business. Others are chiefly the products of large plants, or are in the developmental stage when best engineering and technical results can be obtained by having all the work done in a prime contractor's plant.

The National Military Establishment is proud of its record with small business. We are not saying that our procurement equals, exceeds, or falls short of being a fair proportion which is the goal we are seeking. That term has never been defined. We can say, however, that it is substantial.

As I have been talking about the billions being spent for national defense, some of you undoubtedly have been thinking "Why am I not getting some of that business?"

The fault is not with us. The Army, the Navy, and the Air Force want more companies to want to do business with us. They tell them so—the Navy in its pamphlet, Selling the Navy, the Army in its booklet, Purchased Items and Purchasing Locations, the Air Force in its Guide for Selling to the United States Air Force, and the Munitions Board in its guide on Military Procurement.

Getting business from national defense is a selling job. Far be it from me to give this group of past masters of salesmanship a lecture on the art and science of selling. You know far better than I that its main points are knowing what the customers want, how and where they buy, and then showing how your product fills their needs, when and where they exist.

The salesman who performs these functions, be he owner, employee, or bona fide sales agent of a manufacturer, is always welcome because he renders a valuable service to the National Military Establishment.

But there are others who prostitute the profession of salesmanship who seek to convince the small-business man that only by buying through them can he get orders from the Government. To the small-business man I must emphatically say, "That is not so. There is no need for special brokers, for 15-percenters, for 10-percenters, for even 5-percenters. There is no need for anyone to intervene between small business and the Government to procure Government contracts."

And to those who claim to sell "influence at the right spots" I say, "We will drive you out of the National Military Establishment!" And let those who engage in questionable brokerage activities heed this warning!

Let me repeat: There is no need to have any broker between small business and the Government to procure Government contracts.

The Army, Navy, and Air Force, with the cooperation of the Munitions Board, are intensifying their efforts to make certain that every manufacturer knows how to do business with the National Military Establishment, what is being bought, and what offices do the buying.

Our coordinated procurement program is designed to expedite selling. Of course, the objective is increased efficiency in military procurement, but when the responsibility for buying total military needs in certain items is placed in either the Army, Navy, or Air Force, the results should be good. Right now the Munitions Board is studying the efficacy of this program. Many businesses have indicated that they like our coordinated procurement operation; but one purpose of the Munitions Board survey is to determine its acceptability to small business. Eighty percent of all procurement is now coordinated through the Munitions Board.

We are planning for an all-out effort to assure the national interest—if war is ever forced upon us. Knowing the nature of our potential enemies, anything short of an all-out effort would be criminal; it would be suicidal.

And the greater the all-out effort; the more important small business becomes.

There is a special role for small business which I particularly want to stress. These small businesses are often the firms that can produce the last 10 percent which may spell the difference between victory and defeat.

Say we need 100 items. Our regular sources can produce 90. Ten more are needed for successul operations. We cannot wait for our major suppliers to expand or reorganize their production lines. We have to get the goods and get them quickly.

Here is where the flexibility and organizational simplicity of small business pays off. Frequently, these small-business men can get production on the needed 10 percent while a big company is tooling up.

Out-of-pocket expenditures may be higher for that fraction. In time of war we might have to pay more. But in many cases costs might be less. In any event, in terms of the benefits obtained it would be cheap.

I have heard rumors that small business believes that the National Military Establishment is confining its industrial mobilization planning to a few large companies. These are unwarranted. Let me give you the facts.

The Munitions Board and the three Departments have an industrial capacity allocation program. They are developing specific and realistic production schedules for a substantial number of manufacturing facilities. At present 22,000 have been cataloged, 17,500 of these are small business.

Small-business men may need special help when we call on them for all-out war production. They will encounter technical, managerial, engineering, research, and financial problems which never occur in their normal peacetime operations. How far any outsider, even the Government, can or should go in helping them is a serious question. We are developing plans to review this entire area. You can be sure that in this inquiry we will seek the advice of industry and finance, and particularly that of small business.

In emphasizing our policies to make the maximum use of small business I want to point out that we are not unaware that additional burdens may be put on the three Departments to place orders, supervise, inspect and store. That is a burden I think we all will recognize as warranted and which the Departments will gladly accept in the cause of maintaining free enterprise and in order to keep our economy in diversified shape against any possible emergency.

I have attempt to give you some of the results of our current operations in procurement and to indicate our basic philosophy toward small business as well as some of the plans we are developing. In emphasizing the role of small business I have not forgotten what we owe to big business. The Military Establishment is a team of well-trained officers and highly qualified civilian experts. We draw on industrialists and scientists and businessmen for advice and counsel. But we don't assume that everything can always be perfect and beyond improvement. We need criticism, sound objective criticism. And we welcome it. A democracy thrives on criticism. A dictator cannot take it.

Our military program and our military policies are instruments arising out of the needs of our dynamic American society. Behind them are the determination, the will, the courage, and the faith all America has in these democratic institutions which have made us the hope of civilization. America is again alert. The spirit that permeated our Declaration of Independence and our Bill of Rights and placed us on the side of decency and fair play in two great wars is again manifest. It is the spirit of the Marshall plan. It is the spirit of the North Atlantic Pact, and of our other efforts in all parts of the world to stop encroachments on freedom and peace. In this struggle we offer to humanity a warm and generous heart. We will prevail, for the cause of dignity, peace, and the fuller life is the ideal to which America has ever been dedicated, and the hope of the ages is on our side.

Columbia Valley Administration

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD parts of two radio addresses which I delivered recently clarifying the Columbia Valley Administration bill, which was recently introduced.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXPLANATION OF THE COLUMBIA VALLEY ADMINISTRATION BILL, S. 1645

SECTION 1. PURPOSE OF THE BILL

The bill carries out the recommendations made by President Truman in his special message to Congress on April 13, 1949, asking that a Columbia Valley Administration be set up to:

1. Provide a complete program for the many Federal activities dealing with the region's resources, eliminating existing waste and duplication. This agency's powers will be considerably less than those of TVA, since it will not take over functions of many Federal agencies, but will provide a unified development program to be carried out by those agencies working with the CVA.

2. Transfer administration of our development program to the Northwest, so that all interested groups—local, State, and Federal, private and public—can have a voice and participate in the program. This agency will be where the work is to be done—not in Washington, D. C.

3. Carry out complete development of our region's resources to insure a prosperous

future, while maintaining full protection for all local rights including water rights established under State laws.

SECTION 2. DECLARATION OF POLICY

Provides for cooperation with local people and local organizations, and for the Administration's activities to be in accord with national policy. Use of water will be based on beneficial consumptive use, a policy that has always been followed in Idaho.

SECTION 3. CREATION OF ADMINISTRATION

The Administration shall have its offices in the Columbia Valley region. It can be sued in any United States district court in this region by any person or organization.

SECTION 4. BOARD OF DIRECTORS

Three full-time directors will be appointed by the President, subject to Senate confirmation. All of them must live in the region, and at least two must be bona fide residents of the area at the time of appointment. None of the directors can engage in any other business while serving on the Board.

The Board must furnish an annual report to the President and Congress.

SECTION 5. STATE AND LOCAL PARTICIPATION

The Board is instructed to work with local people and organizations. Advisory councils will be set up and the Board will meet regularly with these councils and representatives of States, counties, cities, labor, business, and all other such groups. These advisory boards will report annually direct to the President on the activities of the Administration.

SECTION 6. GENERAL POWERS

The Administration can build and operate projects for reclamation, flood control, conservation of natural resources, electric power, and navigation. In connection with these projects they can provide for recreational facilities, sanitation, and pollution control, and must protect fish and wildlife.

In securing property needed for these projects, the Administration does not have even the same right of condemnation now used by the Reclamation Bureau and Army Engineers. The Administration can condemn water rights only on land it has acquired for one of these projects; land that will be used for a dam or reservoir. It cannot touch any other water right, and these rights remain fully protected under State laws.

Construction work will be done by private contractors under competitive bidding, except for emergency jobs. The Administration can conduct any of its activities through—or in cooperation with—other Federal agencies, State and local governments, or any other public or private agencies. It will not take over the functions of the Forest Service, Soil Conservation Service, Fish and Wildlife Service, etc., but after its program is submitted to the President and Congress it may use CVA funds for carrying on projects through these agencies. This achieves the objective of over-all planning and coordination of functions without absorbing all these Federal agencies operating in the region. The only functions taken over by the Administration are the Bonneville Power Administration, Bureau of Reclamation, and the civil functions of the Corps of Engineers. The Hoover Commission recommended that these three agencies be consolidated, so this change is actually a reorganization plan on a regional basis.

SECTION 7. COORDINATION OF PLANS

In preparing its programs, the Administration must consult with other Federal agencies, State and local governments, and interested organizations and citizens.

Programs must be submitted to the President and to Congress, together with proof that each project is economically sound and is in the public interest.

SECTION 8. TRANSFERS TO THE ADMINISTRATION

Functions and property of the Bonneville Power Administration, Bureau of Reclamation, and the civil-works activities of the Corps of Engineers in the Columbia Valley are transferred to the Administration. No other transfers of properties or functions are made by the act. All projects now underway, such as Palisades Dam, will be completed as soon as possible by the Administration.

SECTION 9. DISPOSITION OF ELECTRIC ENERGY

The Administration can sell surplus power wholesale under Federal laws giving preference to public bodies and cooperatives. Necessary transmission lines can be built and the power shall be sold at the lowest possible rate in order to encourage the widest possible use.

Power revenues will be used to pay off the total power construction cost with interest, and to pay part of the cost of storing water for irrigation.

The Administration cannot condemn electric utility systems.

SECTION 10. RECLAMATION

Existing laws, such as the 160-acre limitation, will govern reclamation of land. Land to be irrigated by reclamation projects cannot be acquired by condemnation. Existing water rights are protected and future water rights will be acquired under the provision of State laws. The act states in the strongest possible terms that all water rights will be protected. The Administration will not even have the condemnation power possessed by the Reclamation Bureau for the past 45 years, since the only water rights it can touch will be those on land acquired for building a dam, which, of course, would be of no further value.

SECTION 11. ALLOCATIONS AND ACCOUNTS

Estimates shall be made of the cost of each project, and this cost divided according to the purposes of the project. On a multipurpose dam, a certain amount must be charged to power, so much to reclamation, flood control, and all other purposes for which the project is built. These cost allocations must be approved by the President before the project is undertaken.

Complete statements are to be submitted annually, and accurate books shall be kept in accordance with Federal laws.

SECTION 12. FINANCING AND REPAYMENT PROVISIONS

All major projects or new major activities must be approved by Congress in the administration budget program. Once this authorization is received, the Administration has contractual authority to complete the projects on the most economical construction schedule. They will not be subject to unjustified cuts in appropriations, or any of the delays that now force the continual closing down and expensive reopening of reclamation and flood-control projects, with fixed expenses continuing on while no work is being accomplished. Projects can be completed swiftly and economically, saving huge sums of money.

The CVA fund is established in the Treasury. Into this fund go the appropriations from Congress and the administrative revenues. Advances from the fund will be made for projects such as reclamation and power dams, as well as any revenue-producing activity. These advances will be repaid fully with interest over a reasonable period of years but no interest will be charged on irrigation costs. The interest rate will be set by the Secretary of the Treasury. Part of the costs to be repaid by water users can be repaid from other revenue, such as interest on the power investment.

Administration activities that do not produce revenue or have not been authorized must be financed by congressional appropriations.

SECTION 13. PAYMENTS IN LIEU OF TAXES

The Administration will make annual payments to State and local-taxing units sufficient to offset the loss of taxes on property acquired by the CVA. If the Administration's activities require any special State or local services, payment may also be made to the taxing units to defray these costs.

SECTION 14. PROCUREMENT OF SUPPLIES AND SERVICES

Provides for competitive bidding on purchases, except when quantities are small or an emergency arises.

SECTION 15. PERSONNEL

Provides for hiring employees on a merit basis, and for social-security benefits, workmen's compensation, and other necessary protection for all employees. Political tests or qualifications in hiring are specifically prohibited, with penalties provided for violations.

SECTION 16. INDIAN LANDS

Special provisions are made for Indians whose land is needed by the Administration.

SECTIONS 17, 18, AND 19, MISCELLANEOUS

These clauses are the usual ones repealing laws in conflict with the act, providing a savings clause and for the act to be carried out in the general welfare.

QUESTIONS AND ANSWERS ON S. 1645, TO ESTABLISH A COLUMBIA VALLEY ADMINISTRATION

Question. I'm a farmer. Will CVA take away my water rights?

Answer. Absolutely not. CVA cannot touch your water rights. The bill says in plain language that the Administration cannot affect or in any way interfere with existing water rights. The laws of the State of Idaho shall govern in all matters concerning water rights.

Question. Will the CVA be able to condemn water rights?

Answer. No; the CVA would have even less power of condemnation than is now held by the Bureau of Reclamation. If land is acquired for use in the building of a dam or reservoir, of course the water right on this land is no longer of value and goes to CVA with the land. The bill specifically prohibits the Administration from condemning any other water right.

Question. How will construction of projects be handled under CVA?

Answer. The bill directs the Administration to carry on its construction work by contract with private firms, just the same as the Engineers and Reclamation Bureau do now.

Question. I have received pamphlets and form letters in the mail telling me that a CVA would have power to compete against private business in many fields. Is this true?

Answer. Absolutely not. The Columbia Valley Administration would have no powers that are not now held by existing agencies.

Question. But these pamphlets tell me that CVA can undertake any activity it desires without approval of anyone else. Isn't this true?

Answer. It is not true. All activities, programs, and projects proposed by the Administration must be approved by the President and Congress before any action can be taken. Even a single dam cannot be built until Congress authorizes its construction.

Question. If these projects still have to be authorized by Congress, how can the CVA construct them quicker, and cheaper than existing agencies do now?

Answer. Under the present set-up, the Reclamation Bureau and Army engineers projects are delayed periodically because Congress cuts their appropriations or refuses to give them any money at all. All planning and work must be done on a year-to-year

basis. Under this bill, when a project is authorized by Congress, the Columbia Valley Administration is given contractual authority for the entire cost of the project. It can thus complete it on the quickest and most economical schedule, with no costly delays.

Question. We've heard a lot about the Hoover Commission to increase efficiency and save money in Government through reorganization. What do they recommend be done with the Reclamation Bureau and the civil construction work of the Army engineers?

Answer. The Hoover Commission recommended that these two agencies be consolidated, in order to eliminate present costly waste and duplication. This bill carries out these Hoover Commission recommendations on a regional scale, so it is really a reorganization plan for increasing efficiency and eliminating waste.

Question. Does the CVA take over functions of all Federal agencies in the area?

Answer. No. The only agencies whose functions are turned over to the Administration are the Reclamation Bureau, Bonneville Power Administration, and the civil construction work of the Corps of Engineers. This carries out the Hoover reorganization plan.

Question. But I have received a pamphlet from a group called the Idaho Development Association that says CVA would be an economic dictatorship, since it would take over all the functions of the Grazing Service, Soil Conservation Service, Fish and Wildlife Service, Indian Service, Forest Service, Bureau of Mines, National Park Service, and Geological Survey. Isn't this true?

Answer. It is absolutely false. These agencies retain their present functions under the CVA bill. Groups opposing a CVA seem to work on the principle that Idaho people will read their propaganda but will not read the bill itself or statements of President Truman and the bill's sponsors. Consequently, these propaganda pamphlets are full of such false statements.

Question. How can all the various functions be coordinated if these agencies still retain them?

Answer. After a proposed program for such coordination has been authorized by the President and Congress, CVA funds may be used for carrying out these projects in cooperation with or through the other agencies.

Question. Will projects now under construction be completed under a CVA?

Answer. Yes. The bill specifically instructs the Administration to complete all projects now under way at the earliest possible date.

Question. Are construction costs charged to water users repaid with interest?

Answer. Such costs on all revenue-producing functions except irrigation are repaid with interest.

Question. Will any changes be made in the sale of electric power?

Answer. No. The Administration must sell this power according to Federal law, which means sale only at wholesale, with preference being given to cooperatives and to municipal systems.

Question. What is done with the profit from this sale of power?

Answer. It is used to pay off the cost of construction, with interest, and to pay part of the cost of storing water for irrigation.

Question. Does this bill change the present law limiting farms on reclamation projects to 160 acres?

Answer. It does not. The present 160-acre limitation law is contained in the bill with no change. Anyone criticizing this section is evidently opposed to the present law, as they are the same. Large land companies have been trying for years to repeal this law.

Question. Won't the taxes on my property be raised to make up for the loss in taxes on property or land owned by the CVA?

Answer. No, since this bill provides for payments to the State and local governments sufficient to make up the loss in property taxes.

Question. Will local groups have a voice in CVA operations?

Answer. They certainly will. Advisory councils of local citizens and representatives of various groups will meet regularly with the Board. These advisory groups report directly to the President on activities of the Administration.

Question. Can the CVA condemn land to be placed under cultivation in a reclamation project?

Answer. No.

Question. What about veterans' preference for reclamation lands?

Answer. In accordance with existing Federal laws, preference will be given to veterans desiring to settle on reclaimed land acquired by the Administration.

Question. Can the CVA condemn electric-utility systems?

Answer. No.

Question. The Idaho Reclamation Association tells me that under this bill all water litigation would be taken to a Federal court in Portland. Is this true?

Answer. Absolutely not. The Administration would have no connection with water litigation since the bill plainly states that water rights are under the sole jurisdiction of State law and the Board is prohibited from interfering with any water right.

Question. If I have a grievance against CVA can I take it to court?

Answer. Yes. The CVA can be sued in the Federal court nearest to your home.

Question. Could water needed for irrigation be taken for navigation uses?

Answer. Absolutely not. The bill states water shall be used on the basis of beneficial consumption, and states clearly that irrigation is given preference over navigation.

Question. Couldn't water rights be condemned to insure an ample flow of water for navigation or for the generation of power?

Answer. No. The Administration is prohibited from condemning any water right. As stated before, the only water rights it can acquire are those on land it has already purchased for construction of a dam or reservoir.

An Unfair Formula

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Unfair Formula," published in the Fall River (Mass.) Herald-News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN UNFAIR FORMULA

Senator HENRY CABOT LODGE, JR., was defeated recently in his effort to improve the formula for distribution of Federal aid to education, but he was on sound ground, nevertheless. The formula that is in the education-aid bill is not fair.

It is quite easy to suspect that some national educators formed an opinion on how they would like $300,000,000 apportioned among the States and then framed a plan that would attain the desired result. Propaganda in behalf of this bill has been a great success, but that does not improve its merit.

For instance, Massachusetts teachers were told by an educational committee that if they would help push the bill through Congress, they might be able to secure a salary increase for themselves from the money which would come to Massachusetts as a share of the $300,000,000. It failed to tell the teachers that Massachusetts will have to put more into the education fund than she receives from it and that there will be less money left in this Commonwealth as a source from which teachers might ask for pay raises.

A research organization has studied the results of the formula when applied to $300,000,000 and some of the payments into the fund and receipts from it would be as follows:

State	Pays in	Receives	Nets
Alabama	$3,056,000	$14,451,000	[1] $11,395,000
Mississippi	1,743,000	15,469,000	[1] 13,726,000
North Carolina	4,209,000	21,070,000	[1] 16,861,000
Massachusetts	9,571,000	4,115,000	[2] 5,456,000
Rhode Island	1,555,000	645,000	[2] 910,000
New Jersey	8,713,000	3,840,000	[2] 4,873,600

[1] Net gain.
[2] Net loss.

At the outset it should be acknowledged that Federal grants-in-aid for education, or any other purpose, must have some relation to the economic status of the States individually. Unless such an arrangement is utilized, the objectives that are sought may be unattainable.

The main reason for using Federal funds for purposes that essentially are interests of the States, cities, and towns is that most of the latter have exhausted their tax sources. The Federal Government can take some money by methods not readily available to them. Of course it all is the money of the people of the States, cities, and towns that goes into the Washington Treasury.

Strong guards are needed to insure that some States do not relax their own taxing powers and rely upon Washington to keep them. There are States that advertise the fact taxes are very low within their borders. Indeed some inform industries they will be taxed hardly anything if they will move their plants to such States. Obviously these States are exploiting the Federal Treasury and must be required to raise more money themselves before becoming entitled to full Federal aid.

The income of a State is a means of judging its economic position and there can be no objection to inclusion of income as an element of the formula of a distribution system. But it should be the actual and true income of a State and not the fictitious figure that is specified in the aid-to-education bill.

This school-aid measure would base part of the hand-out on the average income of a State over a period of 5 years beginning 8 years ago. That is a false income figure. Actual income of today and next year may be entirely different in relation to that of other States.

Further, the income referred to in the bill is prior to Federal taxes. Now everybody knows that in States where incomes are high, the Federal Government makes a high-percentage levy, and the net income after taxes is something entirely different from the gross receipts.

Also, some States have had community property tax laws for many years and any distribution based on income would have a different bearing upon them than in States without community property tax plans during the 5-year period.

Those who think Massachusetts will receive some kind of a financial windfall through the Federal aid-to-education bill should revise their opinions. Massachusetts will suffer a net loss of $5,456,000 through the operation of this bill and therefore will have fewer dollars for financing education without our own State.

It is to be hoped that the aid-to-education bill will not be adopted in its present form. A much more equitable formula is essential. Also, if Federal funds are limited, there must be a study of the priority of various projects. Social security, health, and housing may be found to be subjects more urgently requiring Federal help than education. Food, shelter, and good health surely are prime requisites.

Address by the Secretary of Defense on the Occasion of the Laying of Cornerstone of New American Legion Headquarters Building

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Secretary of Defense, Hon. Louis Johnson, at the laying of the cornerstone of the new American Legion headquarters building at Indianapolis, Ind., on Friday last, May 6, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This ceremony of laying a cornerstone for the new American Legion headquarters, is a consecration to the spirit of our American youth. It is a consecration to that spirit which was ours in 1917, when my own generation of American young men dropped their books and their tools to take up arms for their country. It is a consecration to that same spirit that in 1941 fired a later generation to respond eagerly to the Nation's call in the hour of need—and carry through to victory.

The American Legion has been devoted from its very inception to the fostering of that spirit. It is that spirit that has served so valiantly to protect our liberties in the past, and, today as ever, constitutes our bastion of defense, for ourselves and for our posterity.

As Secretary of Defense, I count upon that spirit of youth to give us peace.

The youth of America harbors no aggressive design on any other nation. Our young men want peace. They want peace for their mothers, their sisters, and their sweethearts. They want peace in which to live and work—to marry and raise children in this free and rich land of ours.

Let no nation deceive itself, however, and read in this desire for peace any note of softness or weakness. In fact, in our very humane and democratic concern for the civilized values lies our real reservoir of strength, our greatest weapon of defense.

We hear a great deal these days about secret weapons and how vital it is that they be kept secret lest they fall into the hands of potential enemies. In the United States we have one weapon more powerful than all the atomic bombs, the guided missiles, the battleships, the airplanes, and the tanks. Precious as it is, we do not fear losing it. It is safe. No enemy can steal it. It will never become obsolete. It will always be modern. And, far from keeping it a secret—we are anxious to share it with others. This weapon is not a mechanical invention or a physical contrivance. It belongs in another realm. It is the spirit of freedom in which we have nourished our youth. This spirit of freedom permeates our history and has served to keep our country ever young and our democracy ever vibrant. This spirit is in the very fiber of our people. From generation to generation, it has renewed itself throughout our great continental expanses—in the rich earth of our hills, in the plains and in the sandy sea coasts—in the cities and the towns. It has prospered in our climate—in the sun, in the rains, and in the harvests.

This spirit of freedom throbs in the farmer's breast as he plows his land—shows itself in the clear eyes of the young men and women in our factories. It is a precious heritage for everyone to share. It warms the heart of Protestant, Jew, and Catholic alike.

So long as we preserve this will to freedom, we need not be afraid. So long as the spirit of freedom flourishes, in the free councils of our towns and the legislatures, America will be secure.

As we dedicate this cornerstone today, it is highly fitting, therefore, that we reflect upon these unchanging principles in a reavowal of our faith in the basic verities of our democracy, that have made us the beacon of hope to freemen everywhere.

These ideals of freedom, that are at the very basis of our democratic Government, may not always be visible to the naked eye—but they are there just the same.

Shortly after World War I, veterans home from the battlefields began to wonder whether it still existed. They looked around. They were shocked and hurt to see that some of the youngsters were not at all like the youngsters they remembered. They were rebellious—seething with unrest, with inner tensions—anxious and restless. So, while we oldsters were fitting back into the old grooves, tried and true, here was a new generation eagerly rushing to a new tempo, kicking up their heels at the ideals we cherished and raucously ridiculing the old order of things.

It was the flapper age. The new music—jazz—was loud and fast. There was excitement—delinquency—yes, a lot of crime. Pretty soon there was a lot of talk that the postwar generation was going to the dogs. And many began to worry whether if faced with real danger, this new generation could take it.

But young Americans kept on being born. Immigrants continued to flock to our shores. The country kept on growing. We had a depression in the early thirties, along with the rest of the world. It was rough. There was grumbling and suffering in the United States. But freedom proved to be a resilient mechanism. Indeed, its springy sinews somehow absorbed the shocks, bore the blows, and carried us through.

On the European Continent—in Germany, in Italy—things did not go so well. There the people were not so lucky. Their faith in freedom proved too fragile. In their despair, they sacrificed their liberties to totalitarian blandishments—to dictators. It was a cruel and fruitless sacrifice. It did not work. It was not long before the world went mad and the Continent was plunged into war.

When World War II struck in Europe, we were just getting back on our feet here in the United States. Wages were rising. Standards of living were improving. We had the prettiest and fastest automobiles in the world and we loved every shiny fender. We had push buttons to make machines do most of our heavy work. And the younger generation was engrossed in a new music called swing. We were having fun.

Then suddenly something happened. And the grocery clerks, the lawyers, the doctors, the pastry cooks, the car salesmen, and swing hep cats—almost overnight—turned themselves into flying-fortress pilots, bombardiers, machine gunners, sailors.

The easy-going factory bosses changed into grim drivers for production for the sinews of battle. We were now the arsenal of democracy.

Thus it was that the German and the Jap who had joked about the soft and pleasure-loving Americans—and had gambled on it—learned the hard way what most of us had known all the time; that an American grocery clerk in a night fighter is a deadly terror; that a pastry cook in a B–17 can aim a bomb as accurately as he lances air holes in apple pies; that a lawyer in a tank does not stop to argue; and that a jitterbug can be light on his feet, fast, and tough, when he parachutes into enemy territory with a machine gun in the crook of his arm.

Once we invoked this real reservoir of our strength, there could never be any doubt of the final outcome.

Today, May 6, marks the anniversary of Gen. Jonathan Wainwright's surrender at Corregidor and brings us back to that trying time in the earlier stages of the war when, for awhile, the American flag was lowered in the Pacific. It is a wonderful commentary on the spirit of our youth, that even during that surrender and throughout those days that followed in the dark prisons of Luzon, our young captives never despaired. And so when they passed each other in the damp corridors they would whisper, "God bless America." They had faith, even in those darkest moments, that our flag would again somehow be gloriously raised, and they would not be daunted.

The men of World War II, like their fathers before them, were peaceful men. True to our traditions, they despised war. Nevertheless, when war came, they assumed their duties with the determined grim knowledge that here was a desperate task which must be carried through to the end. There was no air of vainglorious boasting—just the quiet realization that an aggressor had run amuck in the world molesting freedom everywhere and that before men could resume the peaceful pursuits, the aggressor had to be firmly brought down to unconditional surrender. That mission, our youth accomplished successfully.

I am very proud to be here today to speak on an occasion so similar to the one that brought our World War I leader, Gen. John J. Pershing, here to Indiana's War Memorial Plaza. General Pershing spoke of the valor of the soldiers of World War I. He called on our men and women to shoulder with equal steadfastness, the responsibilities of good citizenship.

I wish General Pershing were here today. We would like to tell him how well we are keeping the faith, how loyally another generation of youth nurtured in the ideals of American life went forth to fight for freedom, and what we are doing to keep that spirit alive today.

When good citizenship again demanded the hard task of war, the call was answered,

and victory was won. The spirit of American youth, and the spirit of freedom have triumphed again. They will always triumph. Here in this hallowed ground the past and its glory live immortal in that spirit—in the memory of young men who gave their lives in two wars.

Those of us alive today—particularly those who have lived through World War I and World War II—know that there are no words properly to express our thanks, our reverence, and our deep affection for those who gave their lives to keep us free. We try as we can, by lasting memorials such as this new building will be, to show our deep feeling of humble gratitude. And we know that the reason our young men have fought in the past—and will fight again if the need should arise—lies in our having the right kind of a democracy, the right kind of freedom; in that spirit of fair play and good fellowship we have in America. These are the ideals that produce such young men and women as ours. These are the ideals of the American Legion.

Our young people are sound, and the undying spirit of liberty courses strongly through their veins.

But it isn't just physical strength that makes America so strong. The real edge we have is freedom—freedom of speech, of religion, freedom to choose our government. The sum of these is freedom from fear. Our Government is our own—it does not belong to any dictators ruling by edict. Here, we are one people. We have no old-world animosities. America takes to her heart men and women whose parents may have fought each other overseas. In this land, they live side by side as friends.

Here in the United States there is no place for any doctrine of racial superiority, or of religious intolerance. Each can worship as he pleases. Each can speak his mind.

This is the American spirit, and to the youth of America who have so richly merited this precious heritage, we today lay this cornerstone.

Intellectuals for World Government

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I include as part of my remarks an article by Mr. Alfred Kohlberg, of New York. He presents a sorry picture of a once great organization, the American Academy of Political and Social Science. I commend it to every Member of the House.

INTELLECTUALS FOR WORLD GOVERNMENT

"You must organize the second-rate intellectuals and use them to popularize Communist ideas." (Stalin to the American Communist Party.)

The fifty-third annual meeting of the approximately 60-year-old American Academy of Political and Social Science was held in Philadelphia, April 8 and 9 last. Delegations were present representing the Governors of 9 States, 95 colleges and universities and 175 international, civic, scientific, and commercial organizations, and one subject of the meeting was World Government. An uninformed visitor might logically have expected words of wisdom from historians, scholars and statesmen based on a lifetime of study and association with world government efforts from the Hague to San Francisco.

Instead, the delegates present, manfully (and old-lady-like), struggled to stay awake through 2 days and nights in the stuffy ballroom of the Benjamin Franklin Hotel, lulled by the soothing words of foreign diplomats and 11 Americans. Of the 16, the 5 diplomats and 3 of the Americans (2 from the UN staff and 1 from Alger Hiss's former United Nations Administration Section of our State Department) were quite evidently, and not unexpectedly, obligated to avoid frank discussion of realities in today's explosive world.

Of the other eight, not hogtied by the official responsibilities, one might have expected to learn of the history of past attempts at world government, of the reasons that caused the United Nations of January 1, 1942, to be abandoned for the weaker UN of 1945, and of some of the advantages and disadvantages of a world government, if established.

Of the eight unhampered Americans who spoke, two, Clair Wilcox and Elvin H. Killhefer, debated the International Trade Organization without discussion of world government. The other uninhibited speakers on world government were Cord Meyer, Jr. (president of United World Federalists, Inc.), Randle Elliott (McGraw-Hill correspondent in London), Clark Eichelberger (director of American Association for the UN), Roger N. Baldwin (director of the American Civil Liberties Union), Kermit Roosevelt (who spoke on the Middle East only), and Walter William Van Kirk (of the Federal Council of Churches).

If any of the speakers named had any qualifications either of scholarly standing or practical experience in the field of past world government efforts their biographies as distributed at the meeting carefully concealed the fact from the delegates, as did their speeches. All accepted world government as the ultimate good, though they disagreed on the methods to be followed to this utopian goal.

Young Mr. Cord Meyer, Jr., whose attractive personality and evident sincerity distinguished him from the paid propagandists in the service of world salvation, frankly stated that his organization stood firmly for inclusion of the Soviet Union in their world government, if the Soviets would accept.

This was the nearest that any of the speakers came to the problems that face the world today. That the Comintern is a world government in being today, embracing 27 self-governing republics, as well as certain other areas, that one-quarter of the population of the world owes it loyalty, was not even hinted at. That this red world government claims it will embrace half of mankind by the end of this year when it expects all China and southeast Asia to join it, willy-nilly, was not referred to, nor did anyone hint that a world government including the Soviet Union would amount to a world coalition government, with the usual result to which we have become accustomed the past 3 years.

A large number of Americans are qualified by scholarship and a smaller number of retired diplomats and foreign correspondents who had close association with League of Nations and Hague attempts are qualified to speak from a background of study and reflection, plus experience. The fact that none appeared on the program might lead one to guess that the American Academy is not made up of the second-rate intellectuals at whom Stalin aimed.

The comment of a Chinese auditor, who had apparently ridden in American taxicabs, was "if we had a convention of taxi drivers we'd probably hear more sense."

May 1—Loyalty Day

EXTENSION OF REMARKS

OF

HON. EARL T. WAGNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. WAGNER. Mr. Speaker, I ask my fellow Congressmen to join with me in commending the work of the National Loyalty Day Parade Committee, with headquarters at 1111 Seventeenth Street NW., Washington, D. C., which was established to combat the effects of Communist propaganda and other activities on May 1—the traditional Communist May Day throughout the world.

This committee requested civic, labor, and church leaders and veterans' organizations throughout the country to organize competitive patriotic parades or attend religious ceremonies in cities and towns all over the Nation on that day. It asked State governors and the mayors of the country's principal municipalities to endorse its program and proclaim May 1 as Loyalty Day.

Many governors responded stating that the legislators and people of their States, with good reason, resented the fact that the first day of May in each year had been set aside by the disloyal and subversive groups in our country for the purpose of demonstrating their disloyalty and promulgating their insidious propaganda. These governors and mayors who supported the principles of the National Loyalty Day Parade Committee pointed out that it was important that the people of the United States and of the world be not deceived by the May Day celebrations of the subversive groups in their cities and States. They said it should be clearly understood that the vast majority of the people of the United States are loyal to the ideals and ideas upon which our Nation was founded. In the present state of international affairs a rededication to the ideals of our country was considered most appropriate and desirable. Therefore, many governors and mayors, in compliance with the joint resolutions of their assemblies and senates and city councils, proclaimed the first day of May as Loyalty Day.

I call upon my fellow Congressmen to endorse these principles and to commend the work of the National Loyalty Day Parade Committee, its chairman, the Honorable Maurice J. Tobin, and its director, Peter W. Hoguet.

It is more than fitting that we compete in time, spirit, and ideology with those who are tirelessly working to de-

velop propaganda and other activities destructive to the basic principles of our country. I also ask my fellow Congressmen to seriously consider some action toward recognition of Loyalty Day throughout the country. It would be quite proper to pass a resolution that such a day be proclaimed and that the President of the United States be asked to issue a proclamation that May 1, 1950, is designated as Loyalty Day. Such a proclamation could read as follows:

LOYALTY DAY

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION

Whereas the strength and influence of our Nation depend in greatest measure upon the loyalty of our citizens to the principles and ideals upon which our Nation was founded and upon which its greatness rests; and

Whereas we must ever be alert to the danger that confronts us by reason of evil forces seeking to destroy our country by bringing about disloyalty to our Government and the principles and ideals that it embodies; and

Whereas it is fitting that we should set aside a day for the special observance of the principle and obligation of loyalty to our country:

Now, therefore, I, Harry S. Truman, President of the United States of America, do hereby designate Monday, May 1, 1950, as Loyalty Day, and do set aside that day as a public occasion for the active manifestation of our fidelity to our Government and to the principles and ideals which it symbolizes.

And I urge all patriotic, civil, educational, and religious institutions and organizations, wherever practicable, to conduct exercises or services on that day designed to emphasize and strengthen our loyalty to the United States.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this — day of ——— A. D. 1950, and of the independence of the United States of America the one hundred and seventy-fourth.

By the President:

———— ————,
Secretary of State.

A week ago, through the efforts of the National Loyalty Day Committee and other groups cooperating in their program throughout the Nation, May 1 was observed as an occasion for Americans to renew their allegiance to the democratic institutions which have made our country great. Many leaders—governors, mayors, labor councils, veteran and church organizations recognized that it was appropriate on this date to take stock of the past accomplishments of our Nation and to realize that our future progress depends upon the vigilance with which we safeguard our Republic and work to keep it strong and effective. From Washington several Congressmen helped the national committee in its efforts to encourage as wide a participation as possible in the Loyalty Day program by leaders in the principal cities and towns who were asked to organize competitive patriotic parades or encourage the members of their organizations to attend special religious ceremonies on that day. Most active supporters included Congressmen JOHN F. KENNEDY, of Massachusetts; AUGUSTINE B. KELLEY, of Pennsylvania; GEORGE A. SMATHERS, of Florida; RICHARD M. NIXON, of California; OLIN E. TEAGUE, of Texas; CHARLES R. HOWELL, of New Jersey; JOHN D. LODGE, of Connecticut; and myself.

On May 1 in Los Angeles more than 10,000 people participated in special services in the Hollywood Coliseum and in the evening joined several thousand more in a Loyalty Day parade organized by various civic and labor leaders, including Roy M. Brewer, national secretary IATSE; W. J. Bassett, secretary, Central Labor Council of Los Angeles; Irwin Deshelter, California Council, CIO: Mayor Fletcher Bowron; and Gene Autry, who served as chairman of the committee. Governor Warren recognized the importance of this day and in issuing a proclamation urged the people of California to participate in patriotic observances on this day and pledge themselves anew to the preservation and advancement of our American ideals.

In Boston more than 5,000 persons participated in a special parade from the State House down to Beacon Street to Charles Street, through Boylston and Tremont Streets, to historic Boston Common. Senator KARL MUNDT, of South Dakota, in speaking from the Parkman bandstand, said:

The time has come when freedom has to fight back and when champions of freedom everywhere must stand up and be counted.

Mayor James M. Curley and His Excellency Paul A. Dever, Governor of the Commonwealth of Massachusetts, were honorary chairmen of the Loyalty Day committee.

In Buffalo, N. Y., the largest Holy Name Society rally ever held was organized through the joint efforts of Austin Roche, president of the Holy Name Society of Buffalo, and Paul Dolan, State commander of the Catholic War Veterans. Mayor Bernard J. Dowd, following the proclamation of Gov. Thomas E. Dewey, Governor of New York, stated:

It is especially appropriate on this loyalty day, as a matter of religious and patriotic duty that we should assemble in our respective houses of worship to reaffirm our abiding faith in God, to monopolize the spiritual forces of the Nation and to rededicate ourselves to the maintenance of those religious and patriotic principles upon which our American civilization is based.

New Jersey's Gov. Alfred E. Driscoll on April 29 in his proclamation stated:

Whereas we hold it to be self-evident that through undivided national allegiance we may strengthen our national security and, whereas the great freedoms upon which our Nation is founded imply no license to support causes and leaders which would subvert them * * * I call upon all citizens to join in appropriate patriotic parades, rallies, and religious services in their respective communities.

His request was more than answered in the cities of Newark and Trenton by respective Mayors Vincent J. Murphy and Donald J. Connolly. The organizations which took part in the procession were cheered along the parade route and as they passed the reviewing stand in front of City Hall. Grand marshal of the parade was William Swazey, World War II hero of Trenton; General Chairman William H. Falcey led thousands of marchers in a colorful procession which was organized by a citizens' committee which included Frederick A. Clarici, president of the Central Jersey Industrial Union Council, CIO; Joseph G. Landgraf, president of the Mercer Central Times newspapers; Edmund Goodrich, publisher of the Trentonian; William Griffin, program director for WTTM; Comdr. Robert Fisher, Post 93, American Legion; and Col. Ed. Thorp, trustee for the VFW, Mercer County.

In Santa Fe, N. Mex., Gov. Thomas J. Mabry, from his hospital bed, had a statement denouncing communism sent to the Trade Union Courier with the request that it be featured in their Loyalty Day edition. The Governor said:

America need not fear subversive efforts of foreign agents so long as the press, the radio, our leaders, and our churchmen continue to give the public the facts about actual conditions in Russia. No patriotic American would ever be misled by propaganda praising false foreign ideologies.

In Wisconsin, the National Loyalty Day Committee's request for organization of some special patriotic parade or services was answered in Ashland by Thomas E. Anderson, Department Commander of the Wisconsin Veterans of Foreign Wars, who stated that a 2-day district meeting, with National Commander-in-Chief of the VFW Lyle T. Beggs leading the district parade on Sunday, May 1, would emphasize the fact that it was a Loyalty Day parade. In addition Gov. Oscar Rennebohm at Madison said:

Being completely in sympathy with the objectives of the National Loyalty Day Committee, I, Oscar Rennebohm, Governor of Wisconsin, hereby proclaim Sunday, May 1, as Loyalty Day in Wisconsin. We must compete in time, spirit and ideology.

From Charleston, W. Va., Okey L. Patteson, Governor of West Virginia, stated:

I wholeheartedly endorse the Loyalty Day program; best wishes for the success of this campaign.

Gov. William M. Tuck, in the midst of special ceremonies commemorating Virginia's apple blossom festival, called Loyalty Day observance to the attention of the press.

Ir Austin, Tex., Governor Beauford H. Jester said:

The National Loyalty Day Committee has been organized to combat the effects of Communist propaganda and other Communist activities on "May Day," May 1. It is the expressed thought of this committee that we who believe in democracy must compete vigorously in time, spirit and ideology with those who are working tirelessly for principles opposed to and destructive of those principles that are basic in this country. Texans will be entirely in accord with this effort to make May Day "Loyalty Day" instead of "Red Day." Therefore, I, as Governor of Texas, do hereby designate May 1, 1949, as Loyalty Day in Texas, and call upon all citizens, civic groups, church leaders, veterans organizations and other groups to endorse and join

in the observance and celebration of this significant day.

In Pierre, S. Dak., Gov. George T. Mickelson called on the people of South Dakota "to endorse and join in services in their communities in observance of May 1 as Loyalty Day."

In Pennsylvania, where Loyalty Day parades last year had the active support of Congressman AUGUSTINE B. KELLEY and many other civic, labor, and church leaders as well as veterans' organizations, Gov. James H. Duff responded quickly to the National Committee's request.

Gov. Douglas McKay in Salem, Oreg., said he was "glad to endorse the program that the Secretary of Labor is sponsoring to call attention of American citizens to the purpose for the observance of Loyalty Day."

In Ohio special services were held throughout the State and in the city of Cleveland Mayor Thomas A. Burke sponsored with the Catholic War Veterans a special demonstration on the public square.

In answer to Mayor William O'Dwyer's proclamation some 200,000 New Yorkers marched in Loyalty Day parades along Fifth Avenue in Manhattan and Flatbush Avenue in Brooklyn, dwarfing by far the 10,000 to 12,000 Stalinists who paraded on Eighth Avenue in their annual "May Day" event. Secretary of Labor Maurice J. Tobin, as grand marshall, stated, "This is an opportunity to express loyalty to the American way of life" and when asked about the Eighth Avenue paraders commented, "If they love Russia so much, I think it would be a good investment for America to provide the boats for them to go over there."

In Albany Mayor Corning's proclamation was followed by a Loyalty Day program on Sunday, May 1, which was highlighted by a demonstration of religious groups, school students, and veterans who paraded to the State capitol steps for special ceremonies.

Vice President ALBEN W. BARKLEY was the principal speaker at a second day of loyalty observances in New York City on Sunday, May 1, when more than 30,000 people attended a demonstration at the Polo Grounds which was sponsored by Francis Cardinal Spellman. Saying he had seen the contrast between life in a free country and life under totalitarian rule, Mr. BARKLEY told the gathering, "Life is worthless without liberty." Attending the Brooklyn parade with Secretary of Labor Maurice J. Tobin, which began early in the morning of April 30 and brought out 70,000 paraders, Mayor O'Dwyer said:

> The main purpose of the parade is to let the enemies from within know that the people are on their toes and will not stand for them.

In New Hampshire, George Clark, adjutant of the VFW, Department of New Hampshire, notified each post throughout the State to conduct an appropriate patriotic demonstration, and Governor Sherman Adams unqualifiedly endorsed the program of the National Committee.

In Missouri, Joseph M. Darst, mayor of St. Louis, called on schools, churches, and civic and patriotic organizations to join with him in observance of May 1 as Loyalty Day.

In Minneapolis, Mayor Eric G. Hoyer contacted civic, religious, business, labor, and leaders of veterans' organizations, including Dr. Herbert B. Brunner, Rev. Arnold Love, Rev. E. S. Hjortland, E. J. Grimes, Robert Wishart, Phillip Pillsbury, George Phillips, Cecil Newman, and representatives of all of the veterans' organizations who formed a Loyalty-Day Committee and joined with Mayor Hoyer in issuing a proclamation urging "all patriotic citizens within our city to observe this day in prayer and personal reaffirmation to the fundamental concepts of democracy and the American way of life."

Michigan's Gov. G. Mennen Williams endorsed plans to observe May 1 as Loyalty Day and said:

> I understand that the Pontiac CIO Council has made plans to observe this occasion with a mass pledge of loyalty to American institutions. I think it would be a good thing if every Michigan community could observe this day; the propaganda of groups which use May 1 as a holiday ought to be offset by those who believe in the American way of life.

Polish citizens of Baltimore combined Polish Day and Loyalty Day in the expressed hope that their ancient fatherland would regain its independence from Soviet Russia. Senators MILLARD TYDINGS and HERBERT R. O'CONOR and Mayor Thomas D'Alesandro were joined in the speakers' stand by Stanislaw Mikolajczyk, former Premier of Poland, who addressed the gathering of several thousand and told them:

> There may be times as at present when an enemy nation gains temporary control over the lives and destinies of the people of Poland, but the fierce and determined action of freedom-loving men and women will prevail against the forces of evil.

Senator O'CONOR said:

> Communism must be recognized as the most dangerous threat of the moment.

Chairman of the ceremonies in Patterson Park was the Honorable Paul E. Burke.

In Augusta, Gov. Frederick G. Payne set aside Sunday, May 1, as Loyalty Day throughout the State and urged civic, labor, church leaders, and veterans' organizations to observe the day with fitting ceremonies to emphasize loyalty to American ideals.

In particular—

Governor Payne said—

> these organizations can work effectively to combat Communist propaganda which traditionally reaches a peak on May Day in many parts of the world.

In the city of Baton Rouge, La., Gov. Earl K. Long stated in his official proclamation:

> It is proper that we expend our best efforts to combat the effects of communistic propaganda and other communistic activities.

In Atlanta, Ga., Mayor William B. Hartsfield requested various civic clubs and other organizations "to utilize May 1 in impressing upon the people of Atlanta the high obligation of every citizen."

In Phoenix, Ariz., Dan E. Garvey, Governor, was joined in a special proclamation by Nicholas Udall, mayor of the city of Phoenix. Said Governor Garvey in his proclamation:

> Whereas in this period of political and economic world turmoil we can no longer accept complacently the benefits of our way of life in these United States, but must work consistently to maintain those benefits, and, whereas, May 1 is a fitting occasion upon which to stress the necessity for combating subversive activity and propaganda and to take up the challenge against those who are tirelessly working to develop a spirit and an ideology destructive to the basic principles of our country. * * * I proclaim Sunday, May 1, as loyalty day in Arizona.

Many other prominent leaders gave their support to the work of this national committee and others lent their names to several local committees in the principal cities of the country. It is hoped that these and other leaders of civic, labor, business, veteran, and church organizations will continue their efforts throughout the year. It is encouraging to know that some plans for next year are already going forward and that the national committee has become a permanent body incorporated under the laws of New York—Loyalty Day Parade, Inc.

It is fitting that the good work of this National Loyalty Day committee should continue and be encouraged by the broadest possible support. Toward that end I wish these remarks to be entered in the CONGRESSIONAL RECORD that those who have initiated this most worthy project be further encouraged in the continuance of their program. Next year every community will want to join with this committee and go along with their excellent idea. For this year, congratulations and a well done for a good start.

Monthly Rates for Residence Exchange Service in Cities Over 100,000 Population

---

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. CROOK. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the following tables of rates in regard to residence exchange service.

I understand the data is estimated to make 3½ pages in the CONGRESSIONAL RECORD at a cost of $262.50.

Data is being had from the utilities collection legislative reference, Library of Congress:

Monthly rates for residence exchange service, cities over 100,000 population, Bell System (except Chesapeake & Potomac Telephone Co.)

[Figures in parentheses indicate number of messages or message units included with monthly guaranty]

THE HOME TELEPHONE & TELEGRAPH CO.,
Fort Wayne, Ind., April 4, 1949.

Mr. T. J. SLOWIE,
Secretary, Federal Communications Commission, Washington, D. C.

DEAR SIR: The following information is furnished in answer to your letter of April 1:

Schedule of residence exchange rates applying at Fort Wayne, Ind.

	Monthly
Individual line	$2.75
Four-party line, city	1.75
Eight-party line, rural	1.75
Extensions stations	.75

Yours very truly,
FRANK E. BOHN,
Chairman of the Board.

APRIL 5, 1949.

Mr. T. J. SLOWIE,
Secretary, Federal Communications Commission, Washington, D. C.

DEAR SIR: In accordance with your request of April 1, the following is a tabulation of the monthly rates for all classes of residential exchange service furnished in the city of Rochester, N. Y.:

Optional message or flat rates

1 MR, $4.95, including 80 messages; next 120 at $0.0554 each; next 50 at $0.0493 each; over 250 at $0.04 each.
1 FR, $6.00.
2 FR, $4.75.
4 FR, $3.80.

These are interim rates established by the New York State Public Service Commission on November 21, 1948.

Yours very truly,
J. E. WYCKOFF,
Commercial Superintendent.

The Chesapeake & Potomac Telephone Cos.—Monthly rates, residence service, cities over 100,000 population

	Individual line	2-party line
Baltimore, Md.:		
Flat rate	$6.00	$5.00
Message rate	[1] 4.75	[2] 3.50
Norfolk, Va.:		
Flat rate	4.75	3.75
Message rate	[3]	[2] 3.00
Richmond, Va.:		
Flat rate	4.75	3.75
Message rate	[3]	[2] 3.00
Washington, D. C.:		
Flat rate	4.75	4.00
Message rate	[4] 3.75	[5] 2.25

[1] Includes 50 message units. All message units over 50 at 5 cents each.
[2] Includes 40 message units. All message units over 40 at 5 cents each.
[3] Not offered.
[4] Includes 50 message units. All message units over 50 at 4½ cents each.
[5] Includes 45 message units. All message units over 45 at 4½ cents each.

APRIL 6, 1949.

Mr. T. J. SLOWIE,
Secretary, Federal Communications Commission, Washington, D. C.

DEAR MR. SLOWIE: This will acknowledge receipt of your letter of April 1, 1949, in which you request a schedule of monthly rates applicable to residential subscribers in the city of Tampa, Fla. Accordingly, you will find attached hereto in duplicate the schedule presently in effect. There is also attached in duplicate a map showing the boundaries of the several rate areas shown on the schedule. The base or first rate area includes all of the territory located within the city limits of the city of Tampa.

These rates have been in effect since July 1, 1926, and this company is preparing to submit a request to the Florida Railroad and Public Utilities Commission for increase in rates and the information incident to the filing is being assembled. It is now estimated that the rates applied for will show an increase of approximately 15 percent over those shown on the attached schedule. If we can be of further service, please advise.

Very truly yours,
D. A. KAFKA,
General Commercial Superintendent.

LOCAL EXCHANGE TARIFF, TAMPA, FLA.

A. Within the base or first rate area, which is bounded by the municipal limits, main station residence rates are as follows:

Individual line	$4.35
2-party line	3.35
4-party line	2.35

B. Within the second rate area, main station residence rates are as follows:

2-party line	$4.35
4-party line	2.60

C. Within the third rate area, main station residence rates are as follows:

2-party line	$5.35
Party line	3.10

D. Beyond the third rate area, main station residence rates for dial phones are as follows:

Party line:	
Within 1 mile beyond third area	$3.85
Within 2 miles beyond third area	4.10

PENNSYLVANIA TELEPHONE CORP.,
Erie, Pa., April 7, 1949.

Mr. T. J. SLOWIE,
Secretary, Federal Communications Commission, Washington, D. C.

DEAR MR. SLOWIE: The monthly rates for all classes of residential exchange service in Erie, Pa., requested in your letter of April 1 are as follows:

Individual line	$4.00
2-party line	3.25
4-party line	2.75
Multiparty line	2.75

Yours very truly,
PENNSYLVANIA TELEPHONE CORP.,
CARL H. MCKENZIE, *President.*

ASSOCIATED TELEPHONE COMPANY, LTD.,
Santa Monica, Calif., April 6, 1949.

Mr. T. J. SLOWIE,
Secretary, Federal Communications Commission, Washington, D. C.

DEAR MR. SLOWIE: In compliance with the request contained in your letter of April 1, 1949, we are showing below the primary hand set station rate applicable to each grade of Long Beach exchange residence service:

Each primary hand-set station	Local service	Extended service
Individual line	$2.75	$3.25
2-party line	[1]	2.75
4-party line	2.00	2.60
Suburban line:		
Zone 1	2.25	[1]
Zone 2	3.00	[1]

[1] Service not offered.

Very truly yours,
ASSOCIATED TELEPHONE CO., LTD.,
EDWIN M. BLAKESLEE, *President.*

Education, Taxation, and the Private-Enterprise System

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Education, Taxation, and the Private-Enterprise System," written by M. Vashti Burr, and published in the Pennsylvania Grange News of May 1949. Mr. Burr in his article opposes Federal aid to education.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION, TAXATION, AND THE PRIVATE ENTERPRISE SYSTEM

(By M. Vashti Burr [1])

One cannot fully appreciate the significance of the numerous proposals for Federal aid to education, particularly those relating to elementary and secondary education, without giving serious thought to education, taxation, and the private-enterprise system as integral parts of the same picture.

THE AMERICAN SYSTEM

No one can honestly refute the fact that of all the factors which have made America great, with a higher standard of living than any other nation on earth and with a characteristic desire and capacity for helping other peoples, even while maintaining its own high standard of living, there are none so important as the American system of local self-government and the American system of free enterprise.

The Federal-State system and the system of free enterprise are imperilled by excessive taxation and consequently excessive control on the Federal level—first of all by the continuing tendency toward cutting off State and local governments from normal sources of revenue, whereby they may fulfill their own constitutional responsibilities—and secondly by the tendency to lessen incentive and penalize initiative, thus developing a system in which all the people gradually become dependent upon Federal hand-outs, grants, or aid in various guises.

A keystone in the American system of local self-government, encouraged and vitalized in the past by the spirit of free enterprise, has been and should be the American educational system, especially in the field of elementary and secondary education, untrammeled by reliance upon centralized national government.

Yet there are those, and in surprisingly large numbers, or at least vociferous and articulate numbers, who insist that the central government must assume responsibility for all school costs in order to equalize educational opportunity in the interests of

[1] The author, a former high school teacher, has been a practicing attorney of the Pennsylvania bar for 24 years and, since 1942, of the District of Columbia bar. Recognized as an authority on constitutional and tax law, Miss Burr also serves the Commonwealth of Pennsylvania as deputy attorney general.

national welfare. They propose extraordinary measures for grants-in-aid to education which will tax all the people heavily, in order to make it possible for the Federal administration to administer aid and guidance to all areas, not only to those comparatively few where, because of special conditions, there seems to be a special need.

In this, as in certain phases of political thought, we find the struggle between what we may call the Hamiltonian and the Jeffersonian concepts.

ECONOMICS AND POLITICS

In 1791 Alexander Hamilton declared "that the interference and aid of governments are indispensable" and he proposed the use of public funds as capital through the public debt. However, the concepts enunciated by Thomas Jefferson prevailed. On the other hand, those who have believed with Jefferson in the theory of the Constitution that the Federal Government is one of limited powers have not been as vigilant as they might have been. Too many seem to have forgotten that the price of freedom from excessive government is eternal vigilance. They have become, apparently, outnumbered by supporters of Hamilton's view (managed economy), to such an extent that the latter may have succeeded in persuading the Congress to a too-wide assertion of Federal power in its interpretation of the interstate-commerce and general-welfare clauses of the Constitution.

The intervention of the Federal Government in the economic system to control, or attempt to control, its swing in one direction or another has become the rule. Economics and politics are so closely intertwined today as to be inseparable. The question has become: "How far shall the Federal Government be permitted to intervene?" If we are to have a free society, with a dynamic economy, we must continue to have the private enterprise system with only so much control as will assure order and establish rules.

Every American, whether he or she supports the family by private employment or has his or her savings invested in private enterprise, must of necessity lend active, informed support to the Members of the Congress and of the State legislatures in their efforts to maintain the Federal-State system of government. We can either

(1) provide the essential services by State [3] and local taxes [2] and by contributing to the Federal Government [3] sufficient moneys to enable the Federal Government to perform its primary functions and to make grants-in-aid on the basis of need to those few States which have not yet become so economically prosperous that they can finance their health, education, and assistance programs out of the State and local tax moneys, or

(2) support the view of many well-meaning pressure groups by saying with them, to our Members in the Congress: "Because there is need in a few States, the Congress should take over the responsibility for financing all State programs in order not to miss anyone."

If we follow the latter course, we not only say to Members of the Congress: "We will not re-elect you to Congress unless you see to it that Federal tax dollars, irrespective of need, are spent in every district you represent." We will, in effect, force the National Government ultimately to take over all State and local, business and individual, responsibility for employment and all public services. In that event, with the Government running all business, private and public, how would the Government raise sufficient revenue? Whatever it takes over is tax-free, as in the case of public lands. It could not any longer tax enterprise or income from private employment, and its principal present source of revenue would disappear.

FEDERAL-STATE COOPERATION—TAX COORDINATION

However, we believe that the American people do not prefer a centralized system analogous to those alien systems wherein the States are mere administrative districts of a Central Government. If they do not, they should express support of those legislators in Washington who adhere to and respect the division of powers between the Federal and State Governments and who appear to be the only champions against all-out violations of the spirit of the Constitution. They should urge those legislators to adopt proposals, such as those made by the Joint Conference of Representatives of the Congress (House and Senate) and the Governors' Conference (1946-48), with the aim of closer relationship and cooperation between the Federal, State, and local governments in the selection of items or subjects for taxation and in the collection and use of tax revenues.[4]

The Eightieth Congress enacted into law one of those proposals, namely to correct the inequities between community property and non-community property States. The other proposals, for which there are many pending bills in the Eighty-first Congress, are (1) reduction or repeal of the transportation and communications taxes and other excise taxes which can be efficiently collected and administered by the State and local governments; (2) a more equitable division of revenue from inheritance and estate taxes, as provided in Representative RICHARD M. SIMPSON'S bill in the Eightieth Congress (H. R. 3653); and (3) relinquishment of Federal tax on employers levied to cover administrative expenses of the State employment security programs.

These proposals constitute logical steps toward effecting an adequate arrangement between the Federal and State Governments, and between the States and their local subdivisions, whereby the tax revenues of each will be better defined, more definite, and free from needless interference from other governmental units, and the sources of taxation would, so far as practicable, be allocated or earmarked for each of them.

HOME RULE AND PRIVATE ENTERPRISE

It is extremely unlikely that the Federal administration will sponsor any proposal to help the States to help themselves by agreeing to let the States have any more tax sources. The trend is rather to encourage State and local governments, and individuals and private enterprise as well, to become dependent upon the Federal Government.

It is now proposed to spend a minimum of $15,000,000,000 in Federal aid for elementary and secondary education between 1950 and 1960, exclusive of billions for institutions of higher learning through scholarships and research programs. Add to this program still other billions for public health insurance at Federal Government expense (meaning at the expense of every American who pays taxes), extended social security coverage, general assistance, etc.—all in addition to the usual expenses of running the Federal Government, international relief programs, defense, and interest on the public debt.

It is absurd to assume that the American people do not know that they can accomplish all of the aids, alleged by the Federal administration and pressure groups to be needed, by financing from private sources (individual and private enterprise) and by State and local government revenues, at a minimum cost, greater efficiency, and within the framework which assures to future generations that freedom of initiative which has made our people free and strong.

The United States Government owes over $250,000,000,000—$6,000 for every American family; the States and their political subdivisions owe $20,000,000,000. If government took all of the wealth of all the corporations, it would not put the country on a sounder financial keel; but it would put the corporations out of business and the workers out of jobs. The Federal Government is costing annually an average of $948 per family now, exclusive of the national debt. Add to that the State and local government spending and we find that government, at present, costs 30 percent of all the earnings of all of the people. In other words, we are spending on government now the equivalent of one-third of our working time and effort. How much further can we go?

PRIVATE ENTERPRISE AND THE SCHOOL SYSTEM

Needless to say, the professors and teachers are important cogs in the American economic wheel. Unfortunately, they have not always been adequately recognized as such—as essential parts of the social and economic system—thus lending fuel for argument for those who would favor having the Federal Government virtually take over the educational systems through a process of taxing and giving aid in the form of grants or loans.

In his excellent article entitled "Fire Bell in the Night," [5] Henry M. Wriston, president of Brown University, maintains that "the theorist, the technologist, and the production man are in indissoluble partnership; each has his place, but the initiation of the productive cycle is with the professor."

The growing imbalance between the number of faculty members in publicly supported and privately supported institutions has reached the point where the number of teachers employed by the public or paid from the Public Treasury is now vastly larger than those employed by privately endowed or supported institutions. It is a fact, which may be shocking to many, that it is not alone the professor in publicly supported institutions who is now dependent upon public funds for his salary. Most of the larger private institutions are drawing very large parts of their budgets from contracts with the Federal Government. President Wriston points out that "in some institutions this has arisen to 50 per cent or more. In such circumstances," he says, "many professors even in endowed institutions no longer look to endowment—that is, to private enterprise—to supply the tools of their trade and meet the costs of their experiments, or even a substantial part of their salaries. They have become dependent upon Federal funds." As emphasized by President Wriston, "they are not likely to be opponents of the expansion of governmental activities. Not being dependent upon private enterprise, they will have less and less concern for the fate of the enterprise system."

Professors whose livelihood and labor are increasingly dependent upon Federal funds are not going to be inclined to resist Federal "encroachment" or to be greatly concerned over the fact that many privately endowed institutions would find their programs almost crippled if Federal Government contracts were withdrawn. President Wriston sums up the challenge in these words: "Those who have an interest in the preservation of the enterprise system will be well advised to see to it that the private institutions are not weakened further and that Govern-

[2] Forty-six percent of Pennsylvania's State revenue results from taxes on the privilege of doing business on the earnings of private enterprise.

[3] Ten percent of every $1 in the Federal Treasury comes from Pennsylvania.

[4] See S. Rept. No. 1054 (80th Cong., 2d sess.) entitled "Coordination of Federal and State Taxes."

[5] Vol. X, No. 1, Tax Review, January 1949, published by the Tax Foundation, Inc., 30 Rockefeller Plaza, New York, N. Y.

ment does not engulf or even dominate higher education."

In view of some of the extraordinary proposals which have been made and are being made in the Congress of the United States, let us underscore that challenge by declaring that those who have an interest in the preservation of the American system will be well advised to see to it that Government does not engulf or even dominate elementary and secondary education.

If the Federal Government (even on the modest scale of only several million dollars per year for the first few years) should take over the responsibility for supplying the means of support of the educational systems in all school districts in all the States, as now proposed, there would be no turning back. It isn't done. Once the responsibility is assumed under a broad authorization by the Congress, it would not only be a recurrent but an everlasting responsibility.

Elementary and secondary education are basic channels through which a centralized government, under the leadership of one who aims to perpetuate himself or his clique in power, could wield extreme, albeit subtle, influence in molding the society in the ways best suited to such an aim. This has been amply demonstrated by nationalized school system in many foreign lands. It would be grist for the mill of a Hitler, Mussolini, or Stalin. It must not happen here.

Repairs to the White House

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THF SENATE OF THE UNITED STATES

Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Boners in White House Repairs," published in the Philadelphia Evening Bulletin of May 3, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BONERS IN WHITE HOUSE REPAIR

I am an architect. During my career I have designed and altered some of the biggest houses in this country. I know as much about residential design and construction and about modern methods as anyone.

The public should fully realize that the Senate Appropriations Committee has approved the estimate of $5,400,000, submitted by the budget, for restoring the White House the press reported that Chairman CANNON, fo the House committee, has expressed it as his conclusion, from the information submitted, that they should tear down the present building and construct a new one and thereby possibly save 13 percent of the estimated cost of restoration (which is a comparatively small saving).

I categorically state that (1) the present White House could be restored so it would be as sound as a new building constructed on the same plans; (2) it would not be possible for anyone to legitimately spend $5,400,000 in properly restoring the present building; (3) to build an identical new building would cost more, without question, than the restoration in these days; (4) it naturally would cost a great deal more to build a bigger White House.

All the experts seem to have agreed that the inner foundation walls need to have footings under them, i. e., a wide base under the bottom of a foundation wall or pier to spread the weight in the ground. But, as to the outer walls, the press reported that Commissioner Reynolds of the Public Buildings Administration stated before Congress that "the outer walls are exceptionally thick" and that their foundations have footings 6 feet wide on both sides under them. That is sufficient width for any New York skyscraper. I note that Mr. Reynolds would not express an opinion as to what should be done, as it is not his project. In old times they often did not put footings under inner walls when the foundations rested on firm ground in cellars not affected by frost. In restorations we often put them under such old walls if needed or if they have settled in the interim years. It is not necessary to sink down such foundations themselves to a further depth of 20 feet, as was suggested, in order to reach hard pan—solidified gravel or stone. There are many other methods equally effective and less expensive. Apparently a great many people involved know very little concerning residential construction. A house is not an office building.

As to the questions of design and sentimental value, the White House in its very simplicity and smallness is and always will be a stirring sight to every visitor. It is not a palace, and not even good architecture, but a simple house imbued with its history and events and time, and has won an impressive dignity not equaled by any magnificent palace. With a simple beginning, it has acquired the character of our people, steeped in the traditions of the past—which only old stone, brick, and mortar can retain—through their very struggles and pains it emerged with a quiet serenity. No modern architecture, and most certainly not any flapper modernistic style, can produce such quiet serenity and dignity. We prefer restoration of the old. The famous Truman Gallery was an improvement in a way, in that it relieved the pinched effect of the tall columns in the south portico. If some people believe that our old buildings should be replaced by newly designed ones, then let them begin with the Treasury and the Capitol, which are certainly inadequate.

If the powers of the moment determine upon a new duplicate or entirely different White House, then it should be designed by a most carefully selected group of the leading residential architects of the country. We want no more smug-looking filling stations like the new east wing.

I do not desire to get a finger in the pie and am not a seeker of publicity.

ARCHITECTUS.

The Berlin Airlift

REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. McCORMACK. Mr. Speaker, events of a stirring nature are under way in Europe. Agents of the major powers are about to confer in Paris on the future of Germany. All persons are following these matters closely.

But I think that all of us here in the House of Representatives would do well to pause in honor of the brave and gallant airmen who brought about the situation whereby the Soviet Union has agreed to talk things over with the western nations.

I refer, of course, to the personnel of the Berlin airlift operation. It was their superb accomplishment, made in the face of terrific obstacles, that compelled the Soviet Union to agree to a conference.

Members of the House, Republicans as well as Democrats, have long known of the great work that the men on the airlift have done. Quite a good many members have made the trip into Berlin by means of the airlift. They have all recounted the excellence of the operation conceived by that brilliant soldier, Gen. Lucius D. Clay.

And the chairman of the House Armed Services Committee, the gentleman from Georgia [Mr. VINSON] has been fully aware of what has been going on. I know he is gratified at the performance of our flyers and their ground crews.

Last February 15, Mr. VINSON introduced a bill to establish the decoration Medal for Humane Action for award to persons on duty with the airlift. I think it is a meritorious bill. It is H. R. 2737. It should be acted upon favorably as soon as possible.

The airlift was set up on June 26, 1948. Since then American airmen have made 127,969 flights carrying 1,173,895 tons of goods and passengers into Berlin. Twenty-seven of our men were killed in the course of this work.

The British contribution to the lift, I might add, consisted of 61,278 flights in which 354,355 tons of freight and passengers were transported. Twenty-six of their men were killed.

All of this has brought the cold war into a new phase and most favorable to us.

I might say that one of the men, a very fine correspondent, who has been very much interested in seeing appropriate action of this kind be given to the brave Americans who participated in the successful Berlin airlift is Dick Rendell, of the American Broadcasting Co., who, on several occasions spoke to me about legislation to give to those who participated in this airlift proper recognition through the medium of an appropriate medal. I am sure that if the Committee on the Armed Forces reports out legislation along this line that such legislation will receive the immediate unanimous consideration of the Members of the House of Representatives.

The Problem of the Aged

REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. KEEFE. Mr. Speaker, under the social-security program we provide for old-age pensions to those over 65, which in my State of Wisconsin averages about $36 a month. Nation-wide these pensions average about $25 a month. Under

the old-age survivors' insurance provisions of the Social Security Act the average payments to beneficiaries will not exceed $36 a month. Then we say to old-age beneficiaries that if they earn in excess of $15 a month their pensions will be taken away. We likewise say that if they become inmates voluntarily or involuntarily of a publicly supported institution they lose their pensions under social security. Thus, we are in effect compelling thousands of our elder citizens to live on annuities that under present conditions cannot afford adequate bare subsistence and reduce them to a level even below, in many cases, the subsistence levels provided for the population of Germany.

A privately operated home for the aged can take in voluntary inmates, and these people can continue to receive their old-age pensions which helps pay for their care. Thousands of these old people are unable to enter such institutions and are compelled to live in constant fear of illness and lack of proper nutrition. It therefore has impressed me for years that this whole program must be reappraised with a view to building fine, decent county homes where people may voluntarily go and still retain their pensions, enabling them to pay the per diem cost of operation and thus receive proper nutrition, nursing, and medical care.

As a step in the direction of accomplishing this end, I have offered legislation in this Congress that would permit the voluntary inmate of county institutions to continue to receive his or her old-age pension. This legislation known as H. R. 947 is before the House Ways and Means Committee. I am hoping that the committee will report the matter favorably at this session.

In addition to that I have offered legislation to change the definition of hospitals in the Hospital Construction Act, known as the Hill-Burton law. Under the present legislation, institutions that provide principally domiciliary care are not included in the program. This would exclude county homes and county institutions for mental diseases generally from receiving hospital construction benefits under the law. My bill would extend the benefits of the Hill-Burton law to provide Federal assistance to the counties in the construction of county homes even though the principal care rendered was domiciliary in character. It would also permit the rehabilitation of the existing structures, and so forth, to provide for suitable homes.

As a part of these remarks I wish to include an editorial dealing with the problem which appeared in the Oshkosh Daily Northwestern. The editorial follows:

FACING PROBLEM OF AGED

At Marshfield a recent incident formed the basis for serious and practical comment in an editorial in the Marshfield News-Herald in regard to a glaring lack of facilities in that community for proper and needed care of aged persons who have no mental health impairments.

The case in question had to do with a woman resident of Marshfield on public relief who had no place to go and in which to live. It was found that the home for the aged at Port Edwards was filled to twice its capacity. The only available county institution that could house her was the Wood County Hospital or asylum, built and operated primarily for caring for incurable mental patients. That hospital also care for about 20 persons who are not mental cases, but are more or less mentally infirm or senile, due to advanced age.

The Marshfield newspaper stated that many Wisconsin citizens have protested this grouping of the mentally ill and those in fairly good mental health in county hospitals originally designed for persons whose mental illness cannot be cured. It said on this matter:

"We have failed to provide sufficient space and facilities in our county home for the aged. That is where this woman belongs. That is where 20 others, now in the Wood County Hospital should be. And any attempt to place blame upon others for sending her, and the 20 others referred to, to that kind of living conditions is not good citizenship. We must shoulder the blame ourselves."

Going into the problem further, the Marshfield Hews-Herald stated:

"It is so easy to slight public charges. It is so easy to overlook the ever-increasing number of aged men and women who must spend the last years of their lives as public charges.

"Eventually, we must meet head-on this problem of providing for the aged. If it means another home for the aged in north Wood County, then it must be built. The problem cannot be sidestepped, even though taxes in all categories and at all levels are steadily increasing. The fact is that there is a sufficient number of patients now in the Wood County Hospital to populate a fair-sized home for the aged. How much happier they would be in more normal surroundings than they are now among younger, incurable mental patients. Let's not attempt to place responsibility or blame upon others, let's shoulder both ourselves. Let's face up to the problem."

Our own Winnebago County also has the serious problem of decent care for aged indigents and action to solve the situation has been slow and uncertain over a considerable term of years.

Since the Winnebago county home was destroyed by fire in 1944, county old-age charges have been boarded out at county homes in various counties. There are, at last report, about 55 of these. This, however, is not the complete picture.

Many persons in the county, at least 150, should now be in a county home. Some are taking up space in Mercy Hospital in Oshkosh. Reports are they are not ill but senile and simply in need of housing care. Others are in private homes, living alone and also in need of care. These homes could be sold or rented to relieve the local housing shortage. Still others are living with relatives who, though not complaining, find it inconvenient and hard to be suitable companions because of age differences.

The county board special committee on the institutions project failed to put over the proposed county asylum plan largely because supervisors felt that cottages or a less expensive county home can and should be provided for the aged first. If an asylum is built first, the home-for-the-aged problem is merely postponed that much longer.

The proponents of the plan for cottage-style old-age care believe a number of cottages can be erected for $300,000 and another $100,000 be spent in fireproofing the old asylum.

The amount of money set aside now for institution construction is $400,000.

In the cottage plan, as used in Manitowoc County, the aged live in units of two, three, or four in a small cottage. Central heating plant, dining room, recreation, and administration quarters are in a master building within a short radial distance from the cottages. Individuals may plant gardens or utilize space around the cottages for recreation.

Winnebago County has its serious problem in respect to the indigent aged and is still far from working out a prompt and satisfactory solution.

A Message That Will Probably Fall on Congressional Deaf Ears

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. REED of New York. Mr. Speaker, what a refreshing thing it is to see the message from an organization which still believes in and functions under a home-rule program. The greatest civic achievements can usually be credited to those communities where the people believe in themselves, their own courage, their own determination, and build upon their own resources. It is reminiscent of an old saying of 2,000 years ago "You will confer the greatest benefits on your city not by raising its roofs, but by exalting its soul."

I know that the people of West Virginia are proud of this home-rule program, and will look with justified pride upon it.

Under leave to extend, I am inserting a most unusual letter from the West Virginia Chamber of Commerce with reference to the subject of Federal aid:

WEST VIRGINIA CHAMBER OF COMMERCE,
Charleston, W. Va., May 2, 1949.

Hon. DANIEL A. REED,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN REED: Under bills pending in the Eighty-first Congress to provide "Federal Aid for Education" to the States, West Virginia would receive $9,360,000 annually, which sum, under provisions of an act of our Legislature would be apportioned 71 percent to teachers' salaries, 29 percent to bus drivers and other school employees.

Regrettably ignored was a request filed February 10, 1949, with the Chairman of the Senate Committee on Labor and Public Welfare, seeking an opportunity to present the opposition of the West Virginia Chamber of Commerce to this Federal "aid" proposal, and we therefore avail ourselves of this means of presenting what seems to be conclusive evidence of the willingness as well as the ability of the people of West Virginia to support their public schools without burdening an already seriously overburdened Federal Treasury.

Figures in the attached table show that West Virginia taxpayers have increased elementary and high school financial support 137 percent during the past 10 years; school teachers' salaries have been more than doubled; and precipitous as the rise of income of West Virginians has been in the past decade, public school support has kept pace with it.

Having increased "State aid" payments from $1,000,000 to $45,000,000 annually in a 15-year period, the people of West Virginia are now centering their efforts on measures designed to increase local financial support

for schools. Based on a 1947 legislative act, $7,000,000 more of local revenues are anticipated by the fiscal year 1951; an act of the 1949 legislature contemplates the eventual release of $72,500,000 of presently impounded bonding capacity for local school building purposes, and the legislature also provided $10,000,000 of temporary aid to schools for buildings, thus making a good start on the problem of a $100,000,000 backlog of school building needs in West Virginia. It is our firm conviction that a Federal aid hand-out would not only retard, but might even reverse the present healthy trend toward greater local and State responsibility for school support in West Virginia.

Respectfully yours,

H. A. STANSBURY,
Managing Director.

Income and related data on elementary and high schools in West Virginia

[Compiled by the West Virginia Chamber of Commerce, Apr. 10, 1949]

Fiscal year ending June 30—	Receipts (thousands of dollars)					Total as percent of State income payments	Teachers average annual salary	Per capita pupil cost [1]

[1] Based on net enrollment.
[2] Based on estimated income payments of $2,100,000,000.
[3] Estimated.
[4] Based on estimated income payments of $1,900,000,000.
[5] Based on estimated net enrollments: 1949, 426,000; 1950, 433,000; 1951, 460,000.
[6] Includes $5,000,000 annually for buildings.
[7] Based on estimated income payments of $1,800,000,000.
[8] Based on estimated income payments of $1,710,000,000.

Sources of data: West Virginia State Superintendent of Schools; State Education Association; U. S. Department of Commerce, and West Virginia Chamber of Commerce.

NOTES.—For fiscal 1946, latest year available for all States, (1) average U. S. teacher's salary was $1,995 and (2) United States average of school expense as ratio of State income payments was 1.72 percent, West Virginia ranking sixth among all the States with 2.42 percent of income payments of that year devoted to local schools.

"DEFAMATION BY RADIO OR TELEVISION

"SEC. 330. (a) Each corporation engaged in chain broadcasting, and each licensee, shall, with respect to each State in which any program of such corporation or licensee will be heard or seen—

"(1) (A) Designate an agent who is a resident of such State for service of process in all civil or criminal proceedings for slander, libel, or defamation which may be instituted in such State, whether in a State or Federal court, as a result of the radio broadcasting activities after the effective date of this section of such corporation or licensee, and (B) file with the Commission the name and address of such agent; and

"(2) Post with the Commission a bond containing such terms and conditions, and in such amount, as the Commission shall determine to be adequate to ensure that such corporation or licensee will appear, where required, in any such civil or criminal proceeding, and will satisfy any judgment or fine which may result from such proceeding.

"(b) It shall be unlawful for any individual using the broadcasting facilities of any licensee for the dissemination of any program for which such individual receives compensation to announce, discuss, or comment upon the news or current events, unless, prior to such program, such individual shall have, with respect to each State in which such program will be seen or heard—

"(1) (A) Designated an agent who is a resident of such State for service of process in all civil or criminal proceedings for slander, libel, or defamation which may be instituted in such State, whether in a State or Federal court, as a result of such program, and (B) filed with the Commission the name and address of such agent; and

"(2) Posted with the Commission a bond containing such terms and conditions, and in such amount, as the Commission shall determine to be adequate to ensure that such individual will appear, where required, in any such civil or criminal proceeding, and will satisfy any judgment or fine which may result from any such proceeding."

SEC. 2. The amendment made by the first section of this act shall take effect 30 days after the date of enactment of this act.

Protection Against Defamation Over the Radio

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. RANKIN. Mr. Speaker, last night Walter Winchell, that persistent little slime monger of the air, attacked the bill which I have introduced in the House to protect the American people from just such impositions as he and Drew Pearson have been perpetrating.

You remember they acted as tools of the Anti-Defamation League, a Communist outfit that has for its object the persecuting of white gentile Americans.

They went on the air and attacked General Patton right in the heat of the war when that great hero was leading our men to victory. By these attacks they disturbed the American people and the administration to such an extent that General Patton was called out, and the war was slowed down with a cost to us of the lives of 70,000 of the finest, bravest men who ever lived.

In any other country in the world they would both have been shot at sunrise.

Last night this little impostor, Winchell, attacked my bill, H. R. 4206, which I have introduced to protect the American people from just such slime mongering as he and Drew Pearson and others have been carrying on.

The time has come when the American people are going to demand that the Congress protect them from just such abuses.

If this measure is not perfect, the committee can amend it. But some such measure should pass now, so as to protect the American people against these unjust attacks.

The bill to which I refer reads as follows:

A bill to amend the Communications Act of 1934 so as to assist individuals who are defamed over the radio or television in recovering damages therefor, and for other purposes

Be it enacted, etc., That part I of title III of the Communications Act of 1934, as amended, is hereby amended by inserting at the end thereof the following new section:

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. DINGELL. Mr. Speaker, the eminent columnist Lowell Mellett with the usual discernment of his analytical mind portrays lucidly the basic reason for labor's demand for repeal of the Taft-Hartley law. Even if I tried I could do nothing to express my feelings more forcefully or ably on this subject which I desire to preserve in the RECORD. Mr. Mellett's comments were published in the Washington Star under date of May 7, 1949.

ON THE OTHER HAND—BASIC REASON FOR LABOR'S DEMAND FOR REPEAL OF TAFT-HARTLEY ACT

(By Lowell Mellett)

The opposing forces in the battle over labor legislation in Congress still seem as far apart as East and West and it may be that never the twain shall meet. This can be said despite a remarkable development

during the week that might appear to indicate the contrary.

Three of the authors of the Taft-Hartley Act, including Senator TAFT himself, introduced a bill designed to make that bone of bitter contention a little more palatable to labor. The new bill would retain 22 provisions of the present act, while making 29 changes in it. Some of these changes meet, in part, some of the particular protests of labor's spokesmen. But the new bill as a whole is certain to prove as offensive as the bill for which repeal is being demanded. This is because of its underlying philosophy, its general approach to the subject of labor relations.

BAN ON CLOSED SHOP

It is important to understand this, if one wishes to understand labor's grim determination to have the Taft-Hartley Act wiped off the books. The Taft-Hartley law supplanted the Wagner Act, beloved by labor—beloved and perhaps abused on occasion. The Wagner Act had one simple purpose: To protect labor in its right of collective bargaining, its right to make any kind of bargain it could make with employers.

The law now taking its place does something else. It undertakes to say what the bargains shall be, or, at least, what some important parts of any bargain may or may not be. For example, it banned the closed shop. It did this, notwithstanding that important employers had testified they were happy to have the closed shop and others had testified they considered it a legitimate subject for bargaining. The authors of Taft-Hartley thought they knew best and Senator TAFT apparently still thinks that way.

In the revision now offered by Senator TAFT, the ban on the closed shop would be retained, but employers would be "permitted" to notify a union that it needed some men and give the union a "reasonable opportunity" to offer some qualified applicants for the jobs. Presumably, that is the only kind of a bargain on the point that Senator TAFT would make if he were an employer and he sees no reason why any employer should be allowed to do anything he wouldn't do.

WELFARE FUND APPROACH

The same approach is revealed in the matter of welfare funds. Very large employers told the Senate Labor Committee they preferred to have their welfare funds administered entirely by the unions; they wanted none of the headaches that went with the operation. They based their attitude on long and satisfactory experience. Mine operators, confronted with a demand from John L. Lewis for a welfare fund, thought differently; they wanted to help handle the money. So the T-H law decreed joint administration—which, incidentally, appears to be working out badly in the case of the miners. Senator TAFT'S new proposal is that joint control shall not be required if the employer does not wish it.

The point made by labor is that the law should not attempt to regulate the terms or conditions under which welfare funds are set up; that this is something for the employer and his hired hands to work out between themselves—in other words, collective bargaining.

So the evil, or the error, in the Taft-Hartley Act, as labor sees it, is basic, in that Congress has given itself a seat at the bargaining table and, not only that, but a seat for the most part on the employer's side of the table. That is why labor—or the spokesmen for labor—will not be satisfied until the law is rubbed out.

When, and if, that is done, the labor leaders say, it will be time to take up legislation concerning national emergencies, political activities, and other matters not related to collective bargaining.

Address by Hon. John Davis Lodge, of Connecticut

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include an address given by our distinguished colleague from Connecticut, the Honorable JOHN DAVIS LODGE, at a large public rally on "Peace Without Appeasement" sponsored by Common Cause, Inc., at Carnegie Hall on Thursday, May 15. It is a most forthright and realistic appraisal of the exceedingly serious peril which the free peoples of the world face today as the result of Soviet actions in Europe and Asia and of our own Government's incredible folly in refusing for so long to recognize the facts of life regarding the nature of world communism and its leaders and their unchanging determination to achieve subjugation of the whole world:

Ladies and gentlemen, as we gather here tonight as free Americans, millions of people are huddled together in silent, fearful masses in the countries which have fallen under the cruel oppression of Russian communism. We are gathered in the cause of freedom. We desire peace. But we know from bitter experience that peace is a product of strength and unity, that war is a derivative of weakness, and that appeasement multiplies the hazards of war. We know that American freedom is in jeopardy when the freedom of other countries is threatened. We have given somewhat belated but none the less welcome recognition to the indivisibility of freedom in the Marshall plan and in the Atlantic Pact. But we have failed in China and we have failed in those countries of eastern Europe whose ancient civilizations are enslaved by a godless Communist dictatorship. We know that there is no safety for us, that there is no secure freedom for us, and that our peace is at best a precarious interlude between wars as long as this barbaric force is allowed to expand. We know that there is no freedom behind the iron curtain.

Gathered with us here tonight are eminent statesmen, leading members of the clergy, military men, professors, and others who managed somehow to escape from the iron jaws of the modern political monster which threatens the world with another war. We know from them and from countless others that the vaunted Communist paradise is in fact a red hell. We know, in this spring of 1949, while we Americans are privileged to enjoy the manifold pleasures and satisfactions so generously provided by our own blessed America, that in these shattered countries there is neither light nor joy nor love nor certitude nor peace nor help for pain. We know that these suffering human beings look to us for help. They look to us to be steadfast in our faith in freedom. They count on us to discharge the heavy responsibilities which are inseparable from freedom. We can take comfort from the knowledge that our opportunities for useful service, for dynamic leadership are equal to these grave responsibilities.

We can take heart from the success achieved to date by the Marshall plan. We can take heart from the Atlantic Pact as a portent of strength and unity in a dangerous world. We can take heart from the growing power of our national-defense establishment. We can take heart from the diminishing number of Communists in the countries of western Europe. We can take heart from such inspiring events as the Italian election of a year ago. We can be encouraged by the Benelux agreement, by the Scandinavian trade agreements, by the Franco-Italian customs union. We can be encouraged by the growing determination of all free peoples to resist the onward tide of communism.

But essentially we are engaged in a holding action—a holding action which, since the rape of Czechoslovakia over a year ago, has achieved some successes in Europe and particularly in Berlin. It has certainly been a lamentable failure in China.

For the fact is that we cannot win the cold war by a holding action. No war was ever won by holding. Victories, whether in peace or war, are achieved by pressing forward with patience, with imagination, and with courage. The further fact is that if we do not win the cold war, we shall inevitably have war.

Accordingly, it is appropriate that we think deeply about the plight of those millions of people for whom freedom is but a poignant memory and who at this very moment are languishing in the stygian horror of the torture chambers, in the fetid squalor of the prisons, and in the indecent stench of the concentration camps created by our former comrades in arms. It is fitting that we think of them not simply for humanitarian reasons, not just because we are a generous and friendly people, not merely because many of our most talented and loyal citizens came from these countries, but because the capture of the governments of these nations by the Soviet Union is one more step in the determination of the Kremlin to capture the Government of the United States.

The fate of Latvia, Estonia, and Lithuania, of Albania, Czechoslovakia, Bulgaria, and Rumania, of Yugoslavia, Hungary, and Poland, the fate of the people of Byelorussia, the Ukraine, and Russia itself will be our fate unless we wake up and wake up now. Had we only known it, our own survival as a Nation was threatened when our leaders participated in the betrayal of Poland at Yalta; our own national security was jeopardized at Tehran and Potsdam; our own safety was compromised in the Hungarian, Rumanian, Bulgarian, and Italian peace treaties.

In all these countries there is but a small minority of Communists. Indeed, there are more Communists outside than behind the iron curtain. In these countries there are also groups of brave men and women who, in the face of almost unbelievable obstacles, are striving with all the meager means at their command to keep vibrant and vital the faith in freedom for which America preeminently stands. These brave people are entitled to our encouragement and to our assistance.

While it is true that the Berlin blockade has been a set-back for the Kremlin, it is most interesting to note that signs of an agreement regarding Berlin appeared on the diplomatic horizon at the time that the Chinese Communist armies were reaping their greatest victories. Let us not become overoptimistic by the turn of events in Berlin. The rumored end of the Berlin blockade may be followed by a Russian suggestion that all troops be withdrawn from Germany.

Let us rather turn our eyes toward China in an effort to grasp the whole cataclysmic significance of that disastrous defeat. For this defeat will, I fear, postpone the day of deliverance of the people of eastern Europe. The State Department's announced policy with regard to China has been to "wait until the dust has settled." Well, ladies and gentlemen, the dust is settling pretty fast in

China and, intermingled with that dust are the ashes of our great Pacific victories. Crumbled with that dust are the heartbreaking, the irreparable sacrifices by which we won the war in the Pacific, sacrifices which involved the lives of 108,000 Americans. Surely, in the face of these sad sacrifices and the stake which we have in this fateful game, we cannot afford to throw up our hands in despair and say that nothing can be done. These victories are essentially a greater threat to us than to the Chinese. China's historic civilization will vomit up the virus communism even if it takes 100 or 150 years. But western civilization is not geared to such long-term tests.

Make no mistake about it, the evil tentacles of communism are reaching around the world in an effort to strangle the United States. We are at this very moment engaged in a gigantic world-wide life and death struggle for survival and for the preservation of freedom. There is no sharp dividing line between war and peace. Wars are but extensions of peacetime conflicts, the final confession of men's inability to agree. We need friends to win the cold war. And if, God forbid, we should lose the cold war, we shall need friends to win the war which, in that dire event, would be hard upon us.

We have many friends in the countries of eastern Europe, people of tested courage—people who are ready to devote their time, their energy, and their lives if necessary for the preservation of that freedom for which so many Americans have died. They need our effective assistance and we need their wholehearted collaboration.

While in the larger sense we are engaged in a grim battle for men's minds, communism as an idea has not been contagious. The Communists have never won control in a free, open, fair election. They conquered Latvia, Lithuania, and Estonia by sheer force of arms. Their armies invaded Bulgaria, Rumania, and Poland. They captured Albania, Czechoslovakia, Yugoslavia, and Hungary by outside pressure, by internal force, and by intimidation, bribery, and corruption.

What are we going to do about it? We used flame throwers in World War II; we used atomic bombs; and yet we are reluctant today to use the methods which might bring us victory in the cold war, thereby avoiding World War III. We must learn to operate in that twilight zone of action in which communism makes its greatest gains.

We must learn how to neutralize and defeat internal aggression.

Ladies and gentlemen, we resisted the attempts of Adolf Hitler to conquer Europe by force of arms. We must prevent the spread of the Communist terror. We must roll back the iron curtain. Our actions must be related to the terrible reality of the threat which is charging down upon us. The fact is that we are now, and for some time have been, involved in a subversive war. But we are not ourselves engaging sufficiently in effective countersubversive activities. The members of the Politburo are handicapped by no such restraints as those which we have imposed upon ourselves. They are waging this conflict by every means short of what we recognize as war. We must do likewise. Such action in no way diminishes the moral quality of our leadership. It enables us to deal effectively with the challenge. The new postwar weapon is not the atom bomb, of which we have made no postwar use, but internal force which the Russians have used with terrible effect.

We must also fight the ideological battle by constant and convincing reaffirmations of our faith in freedom. We must meet the totality of the challenge which totalitarianism has thrust upon us. Our problem is to achieve victory short of a shooting war.

Let us not forget the people who, having recently experienced the brutality of Nazi oppression, are now suffering the cruelty and horror of the Soviet nightmare.

Let us say to ourselves "There but for the grace of God go I."

Let us sound the clarion call of freedom.

And then, mighty in our faith, sure of our sacred objectives, we shall lead the freedom-loving people of this prostrate planet out of the wilderness of doubt, defeatism, and despair and onto the broad sunlit plain of liberty and peace.

Advantages to Employees of the Proposed Columbia Valley Administration

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks, I wish to include a letter from C. Girard Davidson, Assistant Secretary of the Interior, to Mr. Ed Weston, president of the Washington State Federation of Labor, outlining the advantages to employees of the proposed Columbia Valley Administration contained in the personnel provisions of the CVA bill, H. R. 4827, which I have introduced:

Mr. EDWARD WESTON,
President, Washington State Federation of Labor, Seattle, Wash.

MY DEAR MR. WESTON: My understanding is that very recently Representative THOR C. TOLLEFSON has released for publication a statement which expresses the view that personnel provisions in the pending legislation to establish a Columbia Valley Administration are unfavorable to organized labor.

There is utterly no basis for such allegations. On the contrary, the rights of labor are more effectively protected in the CVA legislation than they are in the operations of the existing Federal agencies now carrying out resources development in the Pacific Northwest. Previously on March 19, when the legislation was being drafted, Mr. TOLLEFSON submitted to Secretary Krug a list of eight points with relation to personnel. These points were carefully considered in the drafting of the CVA legislation. Let me now restate these points and indicate how they are provided for in specific sections of the CVA bills (S. 1645, H. R. 4286, and H. R. 4287) now pending in Congress.

1. "That all the employees of a Columbia Valley corporation shall have rights with respect to security of tenure as provided by the civil-service laws." Section 15 (b) of the CVA bill provides "employees of the Administration shall have rights with regard to security of tenure reasonably comparable to those provided by the civil-service laws." Thus employees of the Administration in having such security of tenure cannot be removed without cause and the usual procedure of justification and appeal.

2. "That all the employees of the Columbia Valley corporation who are subsequently transferred to other positions under the civil-service laws shall be credited for the purpose of seniority for the time spent as an employee of the corporation." Section 15 (b) of the CVA bill also states that "employees acquired by transfer from other establishments or agencies of the United States shall retain all pay, leave, and retirement credits which they held at the time of such transfer, and in case they subsequently are retransferred to positions under the civil-service laws, shall be credited for the purpose of seniority with the time spent as an employee of the Administration." Persons who might be employed by CVA could not obtain civil-service status without complying with civil-service rules. Therefore, CVA could not comply with this suggested point for all its employees. I am certain that labor prefers the language in the CVA bill because it leaves labor unions free to seek the incorporation in their collective-bargaining agreements of provisions which are overlooked in civil-service regulations. You and other labor leaders who have negotiated with Bonneville Power Administration, particularly before the Bonneville Power Act was amended, are familiar with the need for flexibility in this provision.

3. "That all employees of the Columbia Valley Corporation be included under the provisions of appropriate Federal injured workmen's compensation laws." This point is specifically covered in the CVA bill. Section 15 (d) provides in part that "the benefits of the act of September 7, 1916 (39 Stat. 743), as amended, relating to compensation for employees of the United States suffering injuries, shall extend to persons given employment under the provision of this act." The act of September 7, 1916, is the appropriate Federal injured workmen's compensation law which relates to compensation of Federal employees for injuries suffered in performance of their duties.

4. "That the Columbia Valley Corporation be authorized and directed to bargain collectively with its employees through representatives of their own choosing and that the Corporation be authorized to enter into written collective-bargaining agreements which shall be binding and enforceable in the courts of the United States." Section 15 (a) of the CVA bill provides in part that "the Administration is authorized to deal collectively with its employees through representatives of their own choosing and is authorized to enter into written or oral contracts with such employee representatives." Any contract entered into by the Administration, including a labor contract, is binding and enforceable in the courts of the United States under section 6 (a) of the CVA bill.

It is appropriate here to answer an unsupported allegation against the labor provision of the CVA bill which is apparently being given wide circulation. Opponents have pointed out that the Jackson and Mitchell bills (H. R. 4286 and H. R. 4287) contained the statement that "Any employee of the Administration may be removed in the discretion of the Board." This statement appears in section 15. Through a printer's failure to strike out language crossed off on the draft, the above sentence appeared accidentally in the first print of the two House bills. The bill clerk of the House, when the error was brought to his attention, ordered an official-corrected second printing of the bill which is just now being distributed. The error was caught before printing S. 1645, which was introduced several days following the House bills, and so the Senate bill does not contain this language.

5. "That, so far as is legally possible, all pertinent Federal laws relating to labor-management relations shall apply to the Columbia Valley Corporation or to any contractor holding contracts under the Corporation and all employees of the Corporation and such contractors." Section 15 (h) of the CVA bill provides in part that "the provisions of the act of March 3, 1931 (46 Stat. 1494), as amended, shall apply to all contracts in excess of $2,000 to which the Administration is a party and which require

the employment of laborers or mechanics in the construction, alteration, maintenance, or repair of its buildings, dams, locks, or other structures or facilities * * * in the determination of such prevailing rate or rates, due regard shall be given to those rates which have been secured through collective agreement by representatives of employers and employees." Generally speaking, the act of March 3, 1931, provides for the rate of wages for laborers and mechanics on public-building projects. These rates shall be the locally prevailing wage rates and shall be paid weekly at the site of work. The scale of such wages must be posted. Violations by contractors result in withholding of payments, cancellation of contracts, and an inability for 3 years thereafter to obtain the awarding of a Government contract. In addition to the provisions of this act, all pertinent Federal laws relating to labor-management relations will apply to any contractor with CVA as well as his employees, in the same fashion as these laws apply to contractors with other Government agencies. You are familiar, of course, with the provisions in section 6 (e) of the CVA bill which direct the CVA to carry out its construction work by contract, except in emergencies or unusual circumstances.

6. "That the legislatures of the various States located in the region affected by the Columbia Valley corporation be authorized to require the corporation to include its employees in the unemployment compensation program of that State and to make contributions to an unemployment fund as required by the State."

7. "That the employees of the Columbia Valley corporation be included under the provisions of the social-security laws."

8. "That the corporation be required to perform all the necessary functions to comply with the provisions of the internal revenue laws in the collecting of withholding taxes and the forwarding of same to the Department of Internal Revenue."

These three points are specifically covered in the CVA bill, and the provisions are copied after the relevant sections of the Bonneville Power Administration Act, as amended.

Section 15 (e), (f), and (g) of the CVA bill extends the retirement protection of the Social Security Act to any employees of CVA employed in connection with construction work or the operation and maintenance of facilities, who are not subject to the Civil Service Retirement Act. It also makes the unemployment compensation tax provisions of the Internal Revenue Code applicable to all such employees, and grants the States permission to extend their unemployment compensation acts to include such employees. This would, of course, authorize CVA to make the contributions to State unemployment funds. These sections also require CVA to comply with the provisions of the internal revenue laws and the collecting of withholding taxes and forwarding of same to the Bureau of Internal Revenue.

The personnel provisions of the CVA introduced in both the House and the Senate embody and, in fact, go far beyond legislation in connection with the Tennessee Valley Authority and the Bonneville Power Administration. Yet it is common knowledge that organized labor has fared very well in its relations with both of these Government organizations.

Using the Tennessee Valley Authority as an example, it can be said that its freedom from disagreement with labor throughout its 15 years of existence has been notable. From its very inception the TVA recognized union labor and entered into collective-bargaining agreements with unions representing various crafts in the trades of the labor field. Since 1937 the American Federation of Labor has set up the Tennessee Valley Trades and Labor Council to coordinate the activities of all the local trade-unions in the federation, and in 1940 this Trades and Labor Council negotiated a written agreement with TVA. As you probably know, this agreement affirmatively provides for the encouragement of employees to participate in employee-management relationships through membership in the unions affiliated with the council.

I will not set forth in detail the various labor welfare programs that have been jointly conducted and administered by the Tennessee Valley Authority and the Trades and Labor Council. For a better bill of particulars I bring to your attention an article in the February 25, 1949, issue of the Union Register of Portland, Oreg., the official publication of the lumber and sawmill workers, AFL, entitled "Labor Fares Well Under the TVA Plan."

Labor in the Pacific Northwest has had experience working with the Bonneville Power Administration under laws which did not specifically provide for all of the points noted in this letter. None the less, this experience has proved to be mutually satisfactory, both to the unions involved and to the officials of the Bonneville Power Administration. Consequently, labor through experience has come to trust both the Tennessee Valley Authority and the Bonneville Power Administration. I am convinced that labor will be even more satisfied with the strong safeguards for their rights which the proposed CVA will provide by law and not by administrative ruling.

Sincerely yours,

C. GIRARD DAVIDSON,
Assistant Secretary.

Lt. Col. Winfield W. Scott

EXTENSION OF REMARKS
OF

HON. GEORGE H. WILSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, last Friday, May 6, 1949, it was my privilege to witness the reburial of Lt. Col. Winfield W. Scott with full military honors at Arlington Cemetery. Colonel Scott, a native of Enid, Okla., and the son of my friend and fellow attorney Winfield Scott, graduated from the United States Naval Academy in 1924. He transferred to the Army and went to the Philippine Islands in 1939. He died of wounds inflicted upon him in a Japanese prison camp on July 30, 1942. The heroism of this fine American officer can best be summarized by referring to the posthumous citations which he received for the Legion of Merit and the Bronze Star.

CITATION FOR THE LEGION OF MERIT
(POSTHUMOUS)

Lt. Col. Winfield W. Scott, while serving on Luzon, Philippine Islands, as commanding officer, Eighty-sixth Field Artillery Battalion (155-millimeter guns) from December 8, 1941, to April 9, 1942, distinguished himself through the performance of outstanding services. Colonel Scott displayed exceptional professional ability in furnishing prompt, accurate, and efficient counter-battery fire, and in delivering harassing concentrations on enemy rear areas and installations. His aggressive leadership, sound judgment, ready initiative, and dynamic force contributed a great deal to the defense of Bataan. His loyalty and unfailing devotion to duty under the most trying conditions and circumstances were in keeping with the highest traditions of the Army of the United States.

CITATION FOR THE BRONZE STAR MEDAL
(POSTHUMOUS)

Lt. Col. Winfield W. Scott, O15916, Field Artillery, United States Army, on April 16, 1942, distinguished himself near Lamao, Bataan, Philippine Islands. On the Bataan "Death March," with men weakened by hunger, plagued by thirst, disheartened by their defeat, he moved back and forth along the column, encouraging them to keep moving to avoid death or injury at the hands of the enemy. When two soldiers, seriously ill, finally had to stop, he saw the Japanese guard rush up furiously, bayonet in hand. Immediately, he rushed to the assistance of the sick men, the Japanese guard lunged fiercely, but Colonel Scott successfully deflected the bayonet thrust. Despite a severe wound he sustained by his action, Colonel Scott carried on with the column and continued to encourage and inspire the men by his own courageous example.

The gallant and courageous conduct of this brave son of Oklahoma and his sacrifice on behalf of his country are a challenge to all of us. He left to take up his work in the defense of his country his son, Winfield Scott, Jr., now a cadet at the United States Military Academy at West Point. I am sure that Cadet Scott will ever treasure the memories of his father and be stimulated thereby and that he will ever maintain the high trust placed in him in the defense of his country. You and I and the family of our departed hero can join with the poet in saying:

Some other world is glad to see
Our star that's gone away;
The light whose going makes our night
Makes somewhere else a day.

Taft-Hartley Act

EXTENSION OF REMARKS
OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the New York Times of May 5, 1949, pertaining to the Taft-Hartley repeal legislation which was recently before the House for consideration:

TIME FOR A FRESH START

As a result of a successful last-ditch parliamentary maneuver the administration has succeeded in achieving at least a temporary stalemate in the bitter contest over labor legislation. On Tuesday the House first rejected a compromise bill offered by the majority leadership, then voted, 217 to 203, in favor of the rival Wood bill, sponsored by a coalition of Republicans and southern Democrats. However, administration forces were able to put off a final vote on that measure for 24 hours, and in the interval succeeded in swinging enough votes at least to postpone its adoption. By the narrow margin of 212–209 the bill has been returned to committee.

It is expected to remain there pending action by the Senate on a measure of its own.

The move by the House in recommitting the Wood bill takes some of the sting out of the administration's failure either to obtain passage of its own minimal legislative program or to defeat the rival coalition bill by frontal attack. It also provides it, somewhat unexpectedly, with an opportunity to consider afresh its whole approach to the promised revision of the labor law. If it uses this hard-won breathing space wisely, then there is every reason to hope that a moderate and workable labor measure may still emerge from this congressional session. On the contrary, if it insists upon employing the borrowed time to carry the ball, legislatively, for uncompromising labor leaders, then there is nothing, in our opinion, that can save it from the major political disaster which it so narrowly averted on Tuesday.

In reorienting its strategy the administration, we suggest, might profitably begin by dropping, once and for all, the thoroughly fictional theme that Members of Congress whose sense of public responsibility will not permit them to vote for a revival of the Wagner Act in lieu of a modern labor-management bill are guilty of "repudiating the 1948 Democratic platform." It was on the basis of this frequently reiterated argument that the President threatened a week ago to withhold patronage from Democratic Members of the House who opposed the Lesinski (administration) bill.

In view of all the talk that has been heard about the labor plank of the Democratic platform, it is high time, it seems to us, to check back on that document and see precisely what commitments it imposes upon Democratic Party members. The labor plank contains just two proposals bearing directly upon the present legislative controversy. Only the first of these is specific and unequivocal. That is the proposal which says: "We advocate the repeal of the Taft-Hartley Act."

Every one of the bills that have been introduced in the House during the last fortnight—the two majority bills and the opposition bill—has called for "repeal of the Taft-Hartley Act."

One will look in vain for any mention in the Democratic platform of the Wagner Act or for anything that might conceivably be interpreted as suggesting the desirability of substituting that outworn measure for the present law. What the platform advocates is:

"Such legislation as is desirable to establish a just body of rules to assure free and effective collective bargaining; to determine, in the public interest, the rights of employers and employees to reduce to a minimum their conflict of interests, and to enable unions to keep their membership free from communistic influences."

Since the administration has been the one to invoke the issue of loyalty to the party platform, it is certainly not unfair to ask how its own approach to the problem has conformed to the latter's terms. The answer is, it seems to us, that it has conformed only in its negative proposal to repeal the Taft-Hartley Act. Aside from this, it has plainly been less interested in achieving legislation which would secure the legitimate rights of both employers and employees than legislation which would be pleasing to the labor unions.

First, it was proposed to combine repeal of the Taft-Hartley Act and reinstatement of the outmoded and one-sided Wagner Act of 1935 in one package, letting the question of amendments remain to be taken care of, presumably at some time in the indefinite future. When it finally became apparent that Congress would not stand for such procedure, it produced the Lesinski bill, which was little more than a thinly veneered version of the Wagner Act. That measure's conception of safeguarding the public interest was to scrap the injunction instrument provided for in the present law for use in national-emergency disputes; its idea of securing the legitimate rights of both employers and employees was to provide that the former, but not the latter, must bargain collectively in good faith, and, while the platform proposed to keep (union) membership free from communistic influences, the administration bill dropped all references to the anticommunistic oath demanded under the present law.

The House Democratic leadership subsequently moved to correct five of the more obvious shortcomings of the Lesinski bill. But, welcome as these changes were, it should be noted in all frankness that they were adopted belatedly and for a purely strategic reason. That reason was that a strong combination of Republicans and Southern Democrats had produced a rival measure that was manifestly not only sounder than the administration bill but much more in keeping with the philosophy of the Democratic Party platform.

Whatever ultimate form the pending labor legislation takes, no Democratic Member of Congress should be made to feel, or permitted to feel, that his party loyalty is in question so long as he abides by the spirit of the Democratic platform. To the extent that the final bills presented by both sides—the Wood bill and the Sims bill—conformed to the precepts laid down in that document, the preponderance of credit for that accomplishment belongs clearly to the House membership and not to the administration.

Berlin for China—a Poor Trade

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown from the Washington Star of May 5, 1949:

COMMUNIST ADVANCES IN SOUTH CHINA STRENGTHEN RED HAND IN GERMANY

(By Constantine Brown)

The relentless and unopposed march of Communist forces toward South China and the borders of Indochina, Malaya and Burma has had powerful repercussions not only in Asia but also in Europe, and particularly Germany.

While our State Department ignores the Far East and considers China a poor relation, the U. S. S. R. is taking full advantage of the situation, which both the Europeans and Asiatics seem to understand far better than we do.

Moscow now is smiling broadly at the United States. That this is not a sincere smile is apparent to most policy-makers in Washington and other western capitals.

VICTORY ON PAPER ONLY

The Berlin blockade, which has been spectacular but unimportant insofar as overall military and political strategy was concerned—is expected to be lifted next week, possibly Monday. This will be pictured by the interested officials—who need diplomatic victories, even if they are only on paper—as a great success for western diplomacy.

The conversations between the Big Four for the settlement of the German question will follow in a short time.

The Kremlin now is reported to be willing to accept the new Bonn constitution, which establishes the Western German republic, as a basis for discussion and is willing to have it apply, with certain modifications, to a unified German republic in which the Eastern zone occupied by the Union of Soviet Socialist Republics will be integrated. This would be accompanied by an agreement to withdraw the armies of occupation, under which Russia would withdraw her forces 50 miles from the German border while we would pull our troops back 4,000 miles.

The Soviet has shown keener interest than formerly in having the economic—and particularly the industrial—life of Germany restored as soon as possible after the German republic is reestablished. The politburo expects that rejuvenated state to be associated as closely as possible with the Union of Soviet Socialist Republics. This hope is based on the economic advantages it can offer the German people, rather than on the establishment of Communist ideology in that country.

REDS OFFER MARKETS

While the Western Powers can make but scant promises, such as temporary benefits from the European Recovery Program, Moscow is able to tell the Germans even now that they can have—if they follow an intelligent cooperative policy with the East—the vast Far Eastern markets which Russia is not in a position to satisfy.

These markets in the past were dominated by the Western Powers, which now are being rapidly and effectively expelled. The Germans, who long competed for Far Eastern trade—exports of cheap manufactured products and imports of vital raw materials—feel that with Russia's help they may get almost a monopoly on that vast portion of the world, provided they follow a policy of cooperation with Moscow rather than with the West.

The estimates of the policymakers in the State Department, who believed that America could do business with the "agrarian reformers" headed by Mao Tzetung, have missed fire. Regardless of what the feelings of some Chinese Communist leaders may be, Russia now is the dominant power in the Far East and controls not only the various governments, which are mushrooming in the "liberated" areas, but also their armies.

United States Merchant Marine Academy

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the superintendent of the United States Merchant Marine Academy:

Gentlemen, it gives us great pleasure to welcome the Sixth Congressional Board of Visitors to Kings Point. The advice and assistance of the Members of Congress are essential to the continued well-being and development of the Federal Merchant Marine Officers' educational program. We trust that your visit to Kings Point will prove to be informative and pleasant. In turn, we look forward to your support and guidance during the coming year, so that our problems may be resolved in such a manner that we may continue to play an important part in

upholding the position and power of the United States Merchant Marine.

PART I. INTRODUCTION

Following the First World War, American shipping entered into a progressive decline. Quickly built under a wartime construction program, these ships grew old together, and by 1936 we were in sore need of rehabilitating our tonnage with modern designs. After an exhaustive survey of the needs of our merchant marine, the Government set up the United States Maritime Commission and embarked on a strong new program to regain our rightful eminence in ocean shipping. Fortunately for the country, the Merchant Marine Act of 1936 commenced to build strength into the merchant marine when it was most needed, for no sooner were fine, newly designed vessels laid down than we were faced with the growing threat of war.

"No material improvement," according to Senate Report 776, "can take the place of a well-instructed, disciplined, and properly organized personnel. While a poor ship may be operated safely by a well-disciplined crew, the best ship can easily come to grief with a poor crew."

The Maritime Commission, recognizing the truth of this statement, carefully laid the groundwork for Government training of officers. The United States had lagged far behind other maritime powers, which for years have had strong officer-training systems in operation. The Merchant Marine Act of 1936, as amended, authorized the establishment of the United States Merchant Marine Cadet Corps on a permanent basis. Talented young men from every State and Territory could thus for the first time study under a Federal merchant marine officer-training program. Congress authorized the location and building of the United States Merchant Marine Academy at Kings Point, L. I., N. Y., to carry on a strong educational program for the merchant marine on a permanent, national scale. The cadet corps was established March 15, 1938. Prior to the location of its academy at Kings Point in 1942 (after several months of negotiations before Pearl Harbor), shore training of cadet-midshipmen was carried on in the vicinity of San Francisco, New Orleans, and New York. Private facilities were leased for a time in New London, Conn. In these locations relatively small numbers of cadet-midshipmen were educated, but, coincidentally with the permanent location of the academy at Kings Point, the enrollment grew sharply to meet the abnormal wartime need for officers. The site at Kings Point was occupied by the academy in January 1942, and when the academy's permanent buildings were completed, dedication ceremonies were held on September 30, 1943. There were then over 7,700 cadet-midshipment in various stages of their training. Some were in cadet schools in Pass Christian, Miss., and San Mateo, Calif.; others were at sea in the combat zones all over the world, studying their profession at first hand on merchant vessels, and still others were at Kings Point undergoing advanced studies before being examined for their merchant marine licenses as third mates or third assistant engineers.

During the war, 6,634 officers were graduated from the abridged wartime courses. Even before the end of the war, however, plans were being made to improve the curriculum and to work toward the reestablishment of the 4-year course at the college level originally planned for the Cadet Corps before the war. This meant that the studies would embrace a wider field, and cover more of the important general education which could not be done during the war. In 1946, courses and laboratories for physics, chemistry and electronics were set up; the students commenced the study of cultural subjects, including foreign languages, and the curriculum approached the ideal of a well-rounded 4-year engineering program. The original and highly essential feature of 1 year's time spent in practical studies afloat was, of course, retained, and it today represents one of the most important features by which the Cadet Corps graduates competent ship's officers.

In 1947 and 1948 the curriculum was further modified. The Academy had progressed far toward its goal of awarding the Bachelor's degree to those completing the prescribed 4-year course of study. The total number of graduates at this day stands at 8,881 exclusive of the 216 in the class graduating in June 1949. Not only are graduates licensed for service in the merchant marine, and enrolled as ensigns in the United States Maritime Service, but they are also commissioned with rank of ensign in the United States Naval Reserve. Of the more than 14,000 Merchant Marine Officers holding commissions in the Naval Reserve, over 60 percent are graduates of Kings Point. As a group, they represent a strong force for a better merchant marine and a most valuable asset in the armed strength of the country in time of war. The number of cadet-midshipmen in training to become officers has been consistently reduced since the end of the war to fit the needs of a peacetime merchant marine.

PART II. OPERATION

The conduct of the United States Merchant Marine Academy has been carried forward on a progressive basis during the past year. Definite advances have been made in improving the efficiency of the general program. Budget allowances, while below the optimum figure for maximum efficiency, nonetheless have permitted the operation of Kings Point with a reduced complement of cadet-midshipmen.

The Academy has continued to acquire substantial amounts of new equipment and apparatus, much of it at no cost through transfer from other governmental agencies and from manufacturers. In this respect, it may be said that Kings Point is better equipped for its purposes than the average technical college elsewhere in the country. In particular, the United States Navy has been extremely cooperative in making available surplus material for educational purposes.

In June 1948 the graduating class numbered 90 deck officers and 146 engineering officers. Eighty-five percent of this class, according to a survey made by headquarters, were serving as ship's officers or were attached to the shore staffs of shipping companies as of September 1, 1948. The class of December 1948 numbered 5 deck officers and 45 engineering officers, practically all of whom went to sea as officers. The next class, that of June 1949, will graduate shortly with a total of 65 deck officers and 131 engineering officers.

The Academy, at this time, is just completing the transition from the group of cadet-midshipmen, who originally enrolled under wartime conditions to the peacetime group who applied for admission after the cessation of hostilities. It is mainly on this account that our total of graduates has not remained at a steady level each year over the past several years. The number of graduates from Kings Point in the fiscal year 1950 will be approximately 234. Of these, about one-half will be deck officers and about one-half will be engineer officers. A detailed study of the merchant marine has shown that the peacetime total of 1,200 merchant ships will call for the replacement of approximately 1,200 officers each year. It has been found that this proportion represents a normal factor by which the turn-over in the merchant marine may be judged. A total of 250 graduates a year from Kings Point still leaves ample room for other officers graduating from the State maritime academies and from those who have risen to officers' positions at sea through upgrading courses supplied by the United States maritime service schools and in other ways. This relatively small number of graduates from Kings Point may be expected to compete freely with all others for officer positions on board vessels; the Kings Point graduates will by no means prevent officers from other sources from securing positions on board our ships.

The report of the first academic advisory board stressed the necessity of providing a more stable basis for employment for instructors and Academy personnel. The Academy is still lacking in a proper plan for the establishment of tenure and retirement for its staff as is provided for other government and non-government employees. The Chief, Bureau of Maritime Services, has plans for these important measures in process of development, but their official adoption depends in large measure upon the extent of annual appropriations.

It is felt that the size of the staff should be commensurate with that of other similar institutions so that the work load can be properly spread for efficient operation.

The allowance to cadet-midshipmen for the payment by them for their uniforms, other clothing, textbooks, laundry, fees, taxes, travel, and other school necessities remains at $65 per month, whereas the allowance for similar items for the midshipmen at Annapolis and the cadets at West Point and the Coast Guard Academy is fixed by law at $78 per month. This allowance should be equalized.

PART III. ACADEMICS

During the past year the Academy has undertaken many measures to improve the academic program both at Kings Point and during the third class year which the cadet-midshipmen spend at sea on merchant vessels. During this period the Academy has been twice visited by the Academic Advisory Board, which was authorized by Public Law 214, Eightieth Congress, and which is composed of seven prominent educators. This board contributed many highly valuable suggestions and recommendations for the betterment of the academic program, and it is felt that the members of the congressional Board of Visitors will find a review of the measures recommended by these educators to be highly interesting and worthy of close study. It has been recognized by this board that Kings Point has an unusually specific mission, one which embraces many complex problems in giving cadet-midshipmen sufficient training and education in diversified maritime fields such as nautical science, seamanship, engineering and naval science as well as in general education, pure science and ship's business, all a part of the proper education of the present day Merchant Marine and Naval Reserve officer. The curriculum by which the Academy endeavors to carry out its mission is admittedly a very full one and requires further study; yet so important is each constituent part that revision must be undertaken slowly and only after the most thorough diliberation. It may be said that as a general principle the curriculum will be lightened somewhat for the cadet-midshipmen. As a result it is expected that the efficiency of study will be increased owing to the provision of greater amounts of time for study.

The Academic Advisory Board, and the administrators of the Academy and the United States Merchant Marine Cadet Corps, of which Kings Point is a unit, recognize the need of providing more stable working conditions for the faculty and other members of the staff, lighter teaching loads in those departments where instructors carry excessive loads at the present time, and continuance of the Academy's present program for the improvement of faculty member's qualifications.

This is done through courses at other universities taken on the instructors' own time.

This academic year saw the appointment of the Academy's first academic dean, Dr. William M. Randall, who came to the Academy from the University of Chicago and University of Georgia. He has had military service in both World Wars; in the last war he was a colonel in the Army Air Force and served for more than 3 years overseas. The Academy is making every effort to raise the level of academies. It is significant to note that the second Academic Advisory Board's report contained these words: "It is the unqualified opinion of the members of the Academic Advisory Board that in quality and amount of work the Academy meets any reasonable standards for the conferring of the bachelor's degree." This is encouraging support for these distinguished educators. The Academy, nonetheless, is continuing to improve the academic program in many ways, chiefly with respect to increasing the internal efficiency of the academic routine.

The month of March 1949 was also high lighted by the visit of the inspection committee from the commission on higher education of the Middle States Association of Colleges and Secondary Schools. This is the authority to which the academy has made application for its accreditation in order to be enabled to award the bachelor's degree to cadet-midshipmen after completion of the prescribed course of study. Composed of persons prominent in the educational field, this committee exhaustively investigated every detail of the operation of the United States Merchant Marine Academy. Their findings will be made known in due course. It is significant to note, however, that the Academy is to be judged to a very large extent upon its mission and its success in fulfilling this mission, and inasmuch as the entire activity of the Academy is directed toward the purpose of graduating well-educated and well-trained merchant marine and Naval Reserve officers, it is hoped that the recommendation of the committee will be a favorable one. The committee itself will present its recommendations to the Middle States Association of Colleges and Secondary Schools, and if the latter body acts favorably upon the matter the Academy will then be in a position to carry out the desires of Congress relating to the awarding of degrees by the United States Merchant Marine Academy. This step is looked forward to with anticipation; the authority to award the accredited bachelor's degree, if granted, will mark an important milestone in the Academy's steady growth from its inception up to the present time.

PART IV. CURRENT PROBLEMS

In the final analysis, the outcome of every progressive measure for the United States Merchant Marine Cadet Corps and its Academy depends upon the adequacy and stability of the budget structure. Authorized and established as a permanent national academy, on a basis of equal importance with the Military, Naval, and Coast Guard Academies, the United States Merchant Marine Academy needs broad congressional support in order to carry out its mission. In order to resolve the problems of continuing the proper development of the Academy, it is essential that not just the bare operating expenses be met, but that sufficient money be provided for the enrollment of sufficient staff, as well as provision for promotions of personnel, and for a proper retirement plan. We earnestly solicit your support in order that these problems may be solved in the proper manner.

It is important for the efficiency of teaching that the Academic Departments be allotted sufficient funds for the purchase of necessary educational equipment, apparatus, and supplemental items. It is felt that over the past 2 years there has been too little allotted for these purposes; again, the problem is one resolved only by an adequate annual budget.

It is important to note that the nonacademic departments and their activities are also of key importance in supporting the educational program. Thus, the department of public works, department of finance and supply, commissary department and others must have their needs met, and again the degree to which this can be done depends upon the annual budget. The physical plant of the Academy is growing older and the necessary maintenance is increasing in amount each year not only from the increasing age of the plant, but from the fact that a considerable amount of substitute materials went into its rapid construction in a period of scarcity. Thus, ordinary steel pipe was used instead of wrought iron pipe for many services, and the renewals from natural corrosion are proportionately higher.

The departments at large have been most fortunate in securing much surplus equipment—at no cost for the most part—but a tapering off of this method of supplying the necessary departmental stores, supplies, and equipment may be foreseen owing to the natural decline of various surplus stocks from which the Academy has been drawing.

The chapel and library, the construction of which have been authorized by Public Law 485 of the Eightieth Congress, are being planned. An active program for the solicitation of funds for the chapel is under way. For this purpose it has been found essential to separate the two buildings. A national committee, composed of persons of public prominence, will be appointed soon to carry out the active raising of a substantial portion of the necessary funds for the chapel. It will at the appropriate time be necessary for the Congress to provide funds to supplement the private contributions that are obtained as was contemplated by the act authorizing the construction of the chapel and the library.

PART V. PLANNING

The Academy is planning ahead in the academic and administrative fields. The Congressional Board of Visitors may be assured that every effort is being made to anticipate our needs, to match our activities with the needs of the marine industry, and to keep fully abreast of technical developments in seamanship, engineering, the business of shipping, and naval affairs. As an example of the latter, very close relations with the United States Navy are maintained; the Academy is now experimenting jointly with the Navy in giving instruction in naval science from a naval technological center by television to whole classes of cadet-midshipmen.

A major part of the academic planning is in the consideration of the measures recommended by the second meeting of the Academic Advisory Board. The curriculum as a whole is being studied by the academic dean, the academic department heads, and the faculty at Kings Point and the cadet school at Pass Christian.

Teaching methods, examination procedures, grading practices, and similar problems common to all educational institutions are under constant review.

In the field of budget and finance, the United States Merchant Marine Cadet Corps and its Academy at Kings Point and its cadet school at Pass Christian seek to gain stability of annual budget and sufficiency of funds. As discussed in earlier parts of this report, many important improvements now being planned will ultimately hinge upon the all-important question of finance.

In summary, the administration of the Academy is actively reviewing its major problems, and the support of the Sixth Congressional Board of Visitors is sought with deep sincerity, to the end that Kings Point may fulfill its mission in merchant marine and Naval Reserve education.

Major War Crimes Trials in Nuremberg

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 9 (legislative day of Monday, April 11), 1949

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Major War Crimes Trials in Nuremberg," written by the Honorable James Morris and published in the April issue of the North Dakota Bar Briefs.

Judge Morris is an associate justice of the North Dakota supreme court, and in 1947 he was called upon to serve as a judge at the I. G. Farben Nuremberg war crimes trials. Participation in the trials has assuredly qualified Judge Morris to make these observations, and his article holds more than passing interest for many thoughtful citizens.

In addition to the foregoing positions of high judicial place, Judge Morris has ably served the State of North Dakota as attorney general, and also as chairman of the Selective Service Board of Appeals. His other public service includes active participation in many civic organizations, all of which have earned for him recognition as one of North Dakota's most outstanding citizens.

I have received an estimate of the cost of printing this article, which is $206.25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAJOR WAR CRIMES TRIALS IN NUREMBERG

(By James Morris, Associate Justice, North Dakota Supreme Court)

In early July of 1947 at the instance of the War Department, I left Bismarck for Germany to act as a judge in the trial of major war criminals at Nuremberg, and thus became a participant in a judicial experiment that will long remain a subject of discussion and comment by scholars and students of international affairs. I was accompanied by Mrs. Morris, who had a strenuous time maintaining a household in a foreign land surrounded by strange customs of the Germans and enmeshed in constantly changing regulations of the Americans. Her energy, patience, and devotion to the exhausting task of securing the necessities and some of the comforts of a home made it possible for me to endure the labor of hearing a case and participating in the preparation of its judgment, that occupied over 11 months.

The Nuremberg war crimes trials were the result of a number of conferences between representatives of the United States and some of our allies in the struggle against the Axis powers. These conferences may be considered basic authority for the trials.

In October 1943 representatives of the governments of the United States, China, the Soviet Union, and the United Kingdom pledged their united action for the organization and maintenance of peace and security, and further stated that they would confer and cooperate with one another and other members of the United Nations to bring about a practical general agreement with respect to the regulation of armaments in the postwar period. The representatives of the three European powers then made a separate declaration regarding Italy in which it was stated that "Fascist chiefs and army generals known

or suspected to be war criminals shall be arrested and handed over to justice."

On October 30, 1943, a statement on atrocities was signed by President Roosevelt, Prime Minister Churchill, and Premier Stalin warning the guilty of approaching punishment. This is known as the Moscow Declaration.

At the Crimean Conference (Yalta) in February 1945, Roosevelt, Churchill, and Stalin declared that they were determined to bring all war criminals to justice. The surrender of the German Army on May 8, 1945, was followed on June 5 by a declaration of Allied representatives regarding the defeat of Germany and the assumption of supreme authority by the Allies including the provisional government of the French Republic. This declaration provided for the surrender to Allied representatives of those suspected of having committed, ordered, or abetted war crimes or analogous offenses.

In the spring of 1945 Mr. Justice Jackson went to London as a United States representative, in order to start high-level governmental discussions on the establishment of procedure for the trial of major war criminals. These discussions resulted in the London Agreement of August 8, 1945, providing for the establishment of an International Military Tribunal for the trial of war criminals in Germany. Attached to this agreement was a document known as the Charter which set forth in a general way the powers of the tribunal, the procedure to be followed, and definitions of crimes coming within its jurisdiction. These were denominated crimes against peace, war crimes, and crimes against humanity.

One trial was held under the Charter. The indictment presented 24 names. One of the defendants was not tried because of ill health. One committed suicide during the trial. One, Martin Bormann, was tried and sentenced to death in absentia. Twenty-one were present at the trial and offered their defenses. The indictment presented against most, but not all, of the defendants charged the crimes heretofore enumerated and the additional crime of participating in a common plan or conspiracy. The trial began November 20, 1945, and the judgment was rendered on September 30 and October 1, 1946.

On December 20, 1945, while the IMT trial was in progress, the military governors of the four occupying powers in Berlin promulgated and enacted Control Council Law No. 10 in order to give effect to the terms of the Moscow declaration, the London agreement, and the Charter of the IMT, and to establish a uniform basis for the prosecution of German war criminals other than those dealt with by the International Military Tribunal. This law included, by reference, the Moscow declaration, the London agreement, and the charter and authorized the occupying authorities to set up tribunals within their respective zones. It defined the following crimes in substantially the same terms as those used in the charter:

"ARTICLE II

"1. Each of the following acts is recognized as a crime:

"(a) Crimes against peace. Initiation of invasions of other countries and wars of aggression in violation of international laws and treaties, including, but not limited to, planning, preparation, initiation, or waging a war of aggression, or a war of violation of international treaties, agreements, or assurances, or participation in a common plan or conspiracy for the accomplishment of any of the foregoing.

"(b) War crimes. Atrocities or offenses against persons or property constituting violations of the laws or customs of war, including, but not limited to, murder, ill treatment, or deportation to slave labor or for any other purpose, of civilian population from occupied territory, murder or ill treatment of prisoners of war or persons on the seas, killing of hostages, plunder of public or private property, wanton destruction of cities, towns, or villages, or devastation not justified by military necessity.

"(c) Crimes against humanity. Atrocities and offenses, including, but not limited to, murder, extermination, enslavement, deportation, imprisonment, torture, rape, or other inhumane acts committed against any civilian population, or persecutions on political, racial, or religious grounds whether or not in violation of the domestic laws of the country where perpetrated.

"(d) Membership in categories of a criminal group or organization declared criminal by the International Military Tribunal."

Among the offenses enumerated as crimes against humanity is membership in a group or organization declared criminal by the International Military Tribunal. The charter provided that the IMT might determine and declare, in connection with the conviction of an individual, that the group or organization of which the individual was a member was a criminal organization, and that in subsequent trials based on membership, the criminal nature of the group or organization would be considered proved and should not be questioned. The argument that the Nuremberg trials violated the principle of nullen crimen sine lege, nulla poena sine lege, finds its greatest support with reference to this provision. Most of the tribunals, however, in actual practice softened the impact of this criticism by holding that guilt is personal and that mere membership in an organization declared to be criminal is not sufficient to warrant a conviction. Thus the dangers of embracing the principle of collective guilt and the consequent inhumanity of mass punishment were largely avoided.

The four-power enactment, Control Council Law No. 10, was supplemented in the American zone by a decree of the American Military Government known as Ordinance No. 7 which provided for the establishment of military tribunals within the zone, and made further provisions concerning their powers and procedure. These tribunals consisted of three judges. In some instances an alternate was also appointed who did not participate in the decision unless he succeeded to regular membership upon the disability of one of the regular members. I served on such a tribunal. It was designated as military tribunal No. VI and tried the case of The United States of America v. Karl Krauch, et al., which was popularly known as the I. G. Farben case. This tribunal consisted of Hon. Curtis G. Shake of Vincennes, Ind., presiding judge, Hon. Paul M. Hebert of Baton Rouge, La., and myself. The alternate was Hon. Clarence F. Merrell of Indianapolis, Ind.

The defendants were business, professional men and chemists, who were top officials of the I. G. Farben Industries. Twenty-four were indicted. One of them was gravely ill and unable to attend the trial. He was severed from the case and ordered held subject to subsequent proceedings. The other 23 pleaded not guilty and the case proceeded against them. The trial opened August 27, 1947, and the judgment was rendered on July 29 and 30, 1948. The case was prosecuted by a staff of twelve American attorneys headed by the Chief Counsel of War Crimes. Each defendant was represented by a chief counsel and an assistant. The defense attorneys were all German nationals selected by the respective defendants from a list approved by the American military government. The defendants were also represented by a specialist in international law who was a professor at Heidelberg University. The proceedings were conducted by simultaneous interpretation into English and German and were recorded on a sound track and also stenographically reported.

During the trial 6,384 documents were submitted, 189 witnesses testified, and the transcript covered 15,638 pages of legal cap paper. The testimony was transcribed into both German and English and was made available to the tribunal and the attorneys on both sides during the progress of the trial. An interval of about 3 days elapsed between the testimony and the availability of the transcript. A law library was maintained in Berlin but distance and difficulties of travel rendered it of little value to the tribunal. The trial was held in the main courtroom of the Nuremberg Palace of Justice, a huge, rambling, four-story stone structure consisting of over 600 rooms. In that courtroom a few months before, modern justice had overtaken and brought to trial and judgment the surviving political and military leaders of Nazi Germany. Spectators were permitted to occupy a large gallery and balcony, after being carefully screened and checked by the Army Security Office. Admittance was by pass only, and armed guards were in attendance at all times at entrances to the building and doors of the courtroom. No incident of disorder or rudeness occurred throughout the entire proceeding.

The indictment consisted of five counts. Count 1 charged that the defendants committed crimes against peace by planning, preparing, initiating, and waging wars of aggression and invasions of other countries. Count 5 charged a conspiracy to commit the crimes set forth in count 1. Count 2 charged war crimes and crimes against humanity in the plunder of public and private property, in countries and territories which came under the belligerent occupation of Germany in the course of its invasions and aggressive wars. Count 3 charged the defendants with war crimes and crimes against humanity through participation in the enslavement and deportation of members of civilian populations, the enslavement of concentration camp inmates, including German nationals, the illegal use of prisoners of war, and the mistreatment and murder of enslaved persons. Counts 1, 2, and 3 also said that the defendants were members of organizations or groups, including Farben, connected with the commission of the crimes charged in those counts under which all of the defendants were indicated. Count 4 charged four of the defendants with membership in the SS, an organization which had been declared criminal by the International Military Tribunal.

The defendants denied generally their commission of or participation in the crimes charged against them. They further interposed the defense of necessity. They took the position that such acts which they performed that might otherwise fall within the terms of the indictment were performed under the compulsion of the Reich dictatorship which left to the defendants no moral choice.

All defendants were acquitted of crimes against peace under counts 1 and 5. Eight were convicted under count 2. Four were convicted under count 3. One was convicted under counts 2 and 3, and 10 were acquitted on all counts. There were no convictions under count 4. Thus the trial resulted in 13 convictions and 10 acquittals.

The decision of the tribunal was unanimous in result with respect to all counts, except part of count 3.

In 1941 the Farben organization at the instance of the Reich undertook the construction of a plant for the manufacture of synthetic rubber, gasoline, and oil at Auschwitz, in western Poland near the German border. Forced foreign workers and concentration camp labor was utilized to a considerable extent in construction work and in nearby mines. This labor was obtained from the SS, the organization in exclusive control of the concentration camps at Auschwitz. Farben's control over and treatment

of these workers were hotly contested issues in the case.

Among the defendants were 19 members of the Farben Vorstand, a body roughly comparable to the Board of Directors of an American corporation. A reading of the judgment will disclose that the members of the tribunal were unable to agree upon the inferences of guilt to be drawn from the fact of Vorstand membership and authority. It will also indicate that we were not able to agree whether necessity and the lack of opportunity to exercise moral choice was available as a defense or could only be considered in mitigation of the use of slave labor. The result with respect to count 3 was the unanimous conviction of five defendants, including four members of the Vorstand, the unanimous acquittal of three defendants, and the acquittal of fifteen members of the Vorstand by a vote of 2 to 1, Judge Hebert dissenting.

Under count 2 the defendants were charged with the plunder of private and public property. They took the position that plunder, while it may be illegal, is not a crime under international law, and that as a matter of fact, the acts which the defendants committed did not constitute plunder in any event.

The codification of the laws and customs of war by The Hague Convention of 1907 and the annex to this code is known as The Hague Regulations. Under articles 46, 47, 52, and 53 of these regulations private property must be respected and cannot be confiscated. Pillage is formally prohibited. The right of requisition is limited to the necessities of the occupying force, must not be out of proportion to the resources of the country, and may not involve the inhabitants in the obligation to take part in military operations against their country. The prohibitions contained in these regulations and the definition of war crimes in the Charter and Control Council Law No. 10 form a legal basis for the sufficiency of the charges made in count 2 of the indictment.

There was no evidence of direct participation by any of the defendants in the physical acts commonly known as plunder. On the other hand, it was clearly established that, through the action of some of the defendants, Farben promptly acquired properties in France that had been confiscated by the Reich, and took permanent title thereto. In other instances, acting in the shadow of the German military forces and by capitalizing upon the ever present threat of German military power, they acquired without adequate compensation, substantial or controlling interests in private property in France and Norway contrary to the wishes of the owners. Such acts we determined could be differentiated only in degree from direct acts of plunder committed by the Army or the officials of the German Reich. We therefore determined the participants therein to be guilty under count 2.

A study of counts 2 and 3 and the definitions of the crimes involved therein will disclose that they actually charged crimes which have long been recognized as such in the more simple definitions of the common law and the codes of civilized nations. Murder, mayhem, slavery, kidnaping, plunder, robbery, and theft are not new crimes, though new terms are devised for them. Hundreds of Germans of lesser note were tried for similar crimes in various places throughout western Germany by tribunals composed of Army officers.

The issues involved in the trial of counts 1 and 5 transcend all other issues in the case in both interest and importance. They were predicated on the same facts and involved the same evidence. They were considered together in the judgment. Count 1 consisted of 85 paragraphs. The general criminal charge was contained in paragraphs 1, 2, and 85. The others were in the nature of a bill of particulars. The charging paragraphs read as follows:

"1. All of the defendants, acting through the instrumentality of Farben and otherwise, with divers other persons during a period of years preceding May 8, 1945, participated in the planning, preparation, initiation, and waging of wars of aggression and invasions of other countries, which wars of aggression and invasions were also in violation of international laws and treaties. All of the defendants held high positions in the financial, industrial, and economic life of Germany and committed these crimes against peace, as defined by article II of Control Council Law No. 10, in that they were principals in, accessories to, ordered, abetted, took a consenting part in, were connected with plans and enterprises involving, and were members of organizations or groups, including Farben, which were connected with the commission of said crimes.

"2. The invasions and wars of aggression referred to in the preceding paragraph were as follows: Against Austria, March 12, 1937; against Czechoslovakia, October 1, 1938, and March 15, 1939; against Poland, September 1, 1939; against the United Kingdom and France, September 3, 1939; against Denmark and Norway, April 9, 1940; against Belgium, the Netherlands and Luxemburg, May 10, 1940; against Yugoslavia and Greece, April 6, 1941; against the Union of Soviet Socialist Republics, June 22, 1941; and against the United States of America, December 11, 1941.

"85. The acts and conduct set forth in this count were committed by the defendants unlawfully, willfully, and knowingly, and constitute violations of international laws, treaties, agreements, and assurances, and of article II of Control Council Law No. 10."

Count 5 charged a conspiracy to commit the crimes set forth in count 1.

In the IMT indictment, count 1 charged a conspiracy to wage aggressive war. Under it the 22 defendants upon whom the tribunal passed judgment were indicted; 8 were convicted and 14 acquitted. Count 2 of that indictment alleged the commission of crimes against peace by planning, initiating, and waging wars of aggression. Of the 22 defendants 6 were not indicted under this count. Twelve were found guilty and four acquitted. It will be noted that the first two counts charged substantially the same crimes as those set out in counts 1 and 5 of the Farben case. The Farben tribunal looked upon the IMT judgment with great respect and regarded it as persuasive precedent.

Tribunal No. VI decided unanimously that all of the defendants should be acquitted under counts 1 and 5, Judge Hebert in a special concurrence based his decision almost exclusively upon what he regarded to be the binding precedent of the IMT judgment. The majority of the tribunal found little difficulty in determining, on the facts, that none of the defendants knowingly participated in the planning, preparation, and initiation of wars of aggression in view of the obviously correct declaration of the IMT in connection with the acquittal of Hjalmar Schacht that "Rearmament of itself is not criminal under the charter. To be a crime against peace under article 6 of the Charter it must be shown that Schacht carried out this rearmament as part of the Nazi plans to wage aggressive wars."

Various Farben enterprises produced large quantities of synthetic gasoline and synthetic rubber by means of processes developed by their chemists. Large quantities of nitrogen, the base for most explosives, were also produced. Most defendants were direct participants in these activities. Thus they contributed in a large measure to the ability of Germany to wage aggressive war. Laying aside the question of the effect of the dominating dictatorship and the fact that the Nazi party maintained a supervisor or observer in each Farben plant, the majority of the tribunal considered, as decisive, the general responsibility of the citizens of a nation at war, in the following passages quoted from the judgment:

"There remains the question as to whether the evidence establishes that any of the defendants are guilty of waging a war of aggression within the meaning of article II, 1, (a) of Control Council Law No. 10. This calls for an interpretation of the quoted clause. Is it an offense under international law for a citizen of a state that has launched an aggressive attack on another country to support and aid such war efforts of his government, or is liability to be limited to those who are responsible for the formulation and execution of the policies that result in the carrying on of such a war?

"It is to be noted in this connection that the express purpose of Control Council Law No. 10, as declared in its preamble, was to give effect to the terms of the Moscow declaration of October 30, 1943, and the London agreement of August 8, 1945, and the charter issued pursuant thereto. The Moscow declaration gave warning that the German officers and men and members of the Nazi party who were responsible for atrocities, massacres, and cold-blooded mass executions would be prosecuted for such offenses. Nothing was said in that declaration about criminal liability for waging a war of aggression. The London agreement is entitled 'An Agreement for the Prosecution and Punishment of the Major War Criminals of the European Axis.' There is nothing in that agreement or in the attached charter to indicate that the words 'waging a war of aggression,' as used in article II, 1 (a) of the latter, were intended to apply to any and all persons who aided, supported, or contributed to the carrying on of an aggressive war; and it may be added that the persons indicted and tried before the IMT may fairly be classified as major war criminals insofar as their activities were concerned. Consistent with the express purpose of the London agreement to reach the major war criminals, the judgment of the IMT declared that mass punishments should be avoided.

"To depart from the concept that only major war criminals—that is, those persons in the political, military, and industrial fields, for example, who were responsible for the formulation and execution of policies—may be held liable for waging wars of aggression would lead far afield. Under such circumstances there could be no practical limitation on criminal responsibility that would not include, on principle, the private soldier on the battlefield, the farmer who increased his production of foodstuffs to sustain the armed forces, or the housewife who conserved fats for the making of munitions. Under such a construction the entire manpower of Germany could, at the uncontrolled discretion of the indicting authorities, be held to answer for waging wars of aggression. That would, indeed, result in the possibility of mass punishments.

"There is another aspect of this problem that may not be overlooked. It was urged before the IMT that international law had theretofore concerned itself with the actions of sovereign states and that to apply the Charter to individuals would amount to the application to ex post facto law. After observing that the offenses with which it was concerned had long been regarded as criminal by civilized peoples, the high tribunal said: 'Crimes against international law are committed by men, not by abstract entities, and only by punishing individuals who commit such crimes can the provisions of international law be enforced.' The extension of punishment for crimes against peace

by the IMT to the leaders of the Nazi military and government was, therefore, a logical step. The acts of a government and its military power are determined by the individuals who are in control and who fix the policies that result in those acts. To say that the Government of Germany was guilty of waging aggressive war but not the men who were in fact the Government and whose minds conceived the plan and perfected its execution would be an absurdity. The IMT, having accepted the principle that the individual could be punished, then proceeded to the more difficult task of deciding which of the defendants before it were responsible in fact.

"In this case we are faced with the problem of determining the guilt or innocence with respect to the waging of aggressive war on the part of men of industry who were not makers of policy but who supported their Government during its period of rearmament and who continued to serve that Government in the waging of war, the initiation of which has been established as an act of aggression committed against a neighboring nation. Hitler launched his war against Poland on September 1, 1939. The following day France and Britain declared war on Germany. The IMT did not determine whether the latter were waged as aggressive wars on the part of Germany. Neither must we determine that question in this case. We seek only the answer to the ultimate question: Are the defendants guilty of crimes against peace by waging aggressive war or wars? Of necessity, the great majority of the population of Germany supported the waging of war in some degree. They contributed to Germany's power to resist, as well as to attack. Some reasonable standard must, therefore, be found by which to measure the degree of participation necessary to constitute a crime against peace in the waging of aggressive war. The IMT fixed that standard of participation high among those who lead their country into war.

"The defendants now before us were neither high public officials in the civil government nor high military officers. Their participation was that of followers and not leaders. If we lower the standard of participation to include them, it is difficult to find a logical place to draw the line between the guilty and the innocent among the great mass of German people. It is, of course, unthinkable that the majority of Germans should be condemned as guilty of committing crimes against peace. This would amount to a determination of collective guilt to which the corollary of mass punishment is the logical result for which there is no precedent in international law and no justification in human relations. We cannot say that a private citizen shall be placed in the position of being compelled to determine in the heat of war whether his government is right or wrong, or, if it starts right, when it turns wrong. We would not require the citizen, at the risk of becoming a criminal under the rules of international justice, to decide that his country has become an aggressor and that he must lay aside his patriotism, the loyalty to his homeland, and the defense of his own fireside at the risk of being adjudged guilty of crimes against peace on the one hand, or of becoming a traitor to his country on the other, if he makes an erroneous decision based upon facts of which he has but vague knowledge. To require this of him would be to assign to him a task of decision which the leading statesmen of the world and the learned men of international law have been unable to perform in their search for a precise definition of aggression.

"Strive as we may, we are unable to find, once we have passed below those who have led a country into a war of aggression, a rational mark dividing the guilty from the innocent. Lest it be said that the difficulty of the task alone should not deter us from its performance, if justice should so require, here let it be said that the mark has already been set by that honorable tribunal in the trial of the international criminals. It was set below the planners and leaders, such as Goering, Hess, von Ribbentrop, Rosenberg, Keitel, Frick, Funk, Doenitz, Raeder, Jodl, Seyss-Inquart, and von Neurath, who were found guilty of waging aggressive war, and above those whose participation was less and whose activity took the form of neither planning nor guiding the nation in its aggressive ambitions. To find the defendants guilty of waging aggressive war would require us to move the mark without finding a firm place in which to reset it. We leave the mark where we find it, well satisfied that individuals who plan and lead a nation into and in an aggressive war should be held guilty of crimes against peace, but not those who merely follow the leaders and whose participations, like those of Speer, 'were in aid of the war effort in the same way that other productive enterprises aid in the waging of war.' (IMT Judgment, vol. 1, p. 330.)"

Tribunal No. VI was an American tribunal. The case tried before it was instituted by the chief counsel for war crimes pursuant to the authority of Executive Order No. 9547 issued by President Truman January 16, 1946, which authorized the chief counsel to proceed against Axis adherents, other than those tried by the IMT, before United States military or occupational tribunals. The members of the tribunal were appointed as war-crimes judges by the President of the United States and assigned to the trial of the Farben case by Gen. Lucius D. Clay, American military governor. The chief counsel was a brigadier general in the United States Army. His assistants, though not all American citizens, were employed and paid by the War Department. The marshal of the court and his assistants were American Army officers. No other nation had a voice in who should be tried. Military Government Ordinance No. 7 vested in the chief counsel the exclusive power to determine the persons to be tried by the tribunals. As a courtesy to our allies the chief counsel invited other governments to send observers to the trials. Of a number of observers who appeared from time to time, the Russians were most constant in their attendance. They made copious notes and took photographs of the tribunal in action as well as defendants, witnesses, and court attendants.

Broad rules of procedure were set forth in Control Council Law No. 10 and Military Government Ordinance No. 7. The tribunal sought to apply those rules in a manner consistent with the basic principles of a fair trial within the concept of Anglo-American criminal law. These principles, the majority of the tribunal felt, included the burden of proof of the prosecution, the rule of reasonable doubt, immunity from compulsory self-incrimination, and the right of a defendant to interrogate witnesses who testified against him either from the witness stand or through ex parte affidavits, the use of which was provided by Military Government Ordinance No. 7. Cross-examination was lengthy and consumed much time. Our burden in this regard was somewhat lightened by referring the cross-examination of a number of affiants to commissioners who certified the transcripts to us to be read and considered in connection with the affidavits.

In this article, it has been possible to touch upon only the major issues of the trial. These I believe will have some significance in the future development of international criminal law. Hon. Francis Biddle, the American judge on the International Military Tribunal has said, "War is now no longer seen as a romantic adventure, but as a degrading crime, a crime which cannot be permitted if life itself is to continue. And the only alternative to war is the acceptance and development of a universal law based on the necessity of living together in peace." He proposed the codification of an international criminal law. I urged a similar step in a press interview before leaving Nuremberg. I repeat it here.

The growth of law is the result of calm and deliberate codification and the precedent of judicial decisions. It is a process of development and interpretation. The General Assembly of the United Nations has adopted a resolution directing a codification of offenses against peace and the security of mankind. The success of that effort will have a marked effect on the prospects of peace throughout the world. The greatest stumbling blocks to the just administration of international criminal law are the desire of the victor to sit in judgment on the vanquished and the temptation to tarnish justice with vengeance. The hand that holds the scales of justice can be steadied by an international code that not only defines crimes against peace and humanity but also outlines the basic principles of a fair trial and just punishment, and the procedure by which these may be accomplished.

I Knew a Saint

EXTENSION OF REMARKS
OF
HON. THOMAS J. O'BRIEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. O'BRIEN of Illinois. Mr. Speaker, I am pleased to submit a splendid article written by a distinguished citizen-soldier of Jewish faith concerning a stalwart citizen of the United States, a gallant officer and beloved chaplain in our military forces, a hero who shall ever be revered and honored and remembered wherever freemen dwell.

Rev. Father (Chaplain) Lawrence E. Lynch was killed in fighting not only for maintenance of America's "four freedoms," but also to assure the world of tolerance and understanding on the battlefield, on the farm, in the factory, in the school, and in the home.

I commend General Klein's article concerning the martyr, Father Lawrence Lynch, which appeared in the November 1948 issue of Guideposts under the title of "I Knew a Saint."

Father Larry's hallowed body was recently brought back from the battlefield to his own beloved America where he was set to eternal rest and vigilance—to guide us and serve as an inspiration for all Americans and freedom-loving people all over the world.

A few weeks ago, thousands of people paid final tribute to Father Lynch, Catholic Redemptorist. Among those present were Protestants and Jews. Men of every faith gathered to pay homage to this great American.

Following is General Klein's article:

I KNEW A SAINT

(By Brig. Gen. Julius Klein, former commanding officer, Five Hundred and Twenty-third Quartermaster Group, Pacific Theater.)

To have known Father Lawrence Lynch, as thousands of servicemen of all faiths will

agree, was to have contacted divinity in man. If Father Lynch is not a saint in heaven, I'd just as soon not go there. GI Joe, GI Pat, and GI Abe—all of them would feel the same.

I am proud that I was asked to deliver his memorial address, because I was his Commanding Officer in the Pacific, but most of all because I loved him as a friend and recognized him as God's fightingman—true priest and true soldier.

The first time I met him we battled. He strode into my office on Noumea Island in 1944 with fire in his eye and volcanic lava in his voice. As handsome a big husky as I've ever seen, I decided. Successor to the great Father Duffy as Chaplain of the 69th, he would often introduce himself as "Brooklyn's gift to the regiment."

Now he was fretting and fuming with me, his colonel, at what he claimed was foul injustice in not promoting a certain buck private, and he was so outspoken and so vehement that I heard myself threaten to court-martial him!

"All right!" he flared. "But I'm a priest before I'm a soldier, and I'll fight injustice anywhere."

I leaned back. The man's earnestness outweighed the criticism that was downright insulting.

"Go and bring the GI in," I snapped, "and we'll settle the matter right now."

In less than half an hour Father Lynch was back with—a Jew. There was a boy of my own race and creed, and a Catholic priest was fighting for his promotion. What's more, I knew—you can't be fooled on such a matter—that Father Lynch was quite unaware of the point. It never mattered to him whether a soul was white or black, Jew, Christian, or unbeliever. To him each human being was simply a child of God.

I'm wrong. It mattered once to Father Lynch.

It wasn't when he ambled through the barracks in the middle of one of our spirit-straining rainy spells and yanked every pin-up picture off the walls. He didn't stop to mark a man's faith then, but he left for all a picture of Mary, the mother of Christ. It was a lovely and inspiring picture, and with it Father Lynch left a note: "Here's a pin-up picture of the world's most beautiful lady. She loves you, and if you ask her, she'll never refuse your help."

I went to see Mrs. Lynch in Brooklyn when I came home from the war to tell her of Father Larry as I knew him—and I found a rabbi of the neighborhood having a dish of tea with her. The mother who raised 10 children listened to me describe the funeral services of the priestly son killed in action, when 50 priests in 50 jeeps said 50 masses in unison over his Pacific grave—and every sect and creed held memorial services.

She said to me in her thick brogue, "Larry told me if he didn't return from war that I'd hear from him every day. And I do, General. Visitors like yourself, men and boys, letters and gifts—not one day has gone by without a message."

He had a knack for making religion mean something exciting and personal and all-important. His battered old paint box, his typewriter, all were mediums of golden bridges for other men to cross over through his paintings, his writings, his unforgettable sermons and prayers.

I was with him the night a man's creed made a difference, the night of one of the Pacific's most heart rending tragedies—when the Liberty ship *Elihu Thompson* struck a mine off Noumea harbor. I had to supervise the rescue work. Within minutes after the explosion, Father Larry was on the dock. We went out to the crippled boat together in a small crash boat. One by one as they were brought aboard, Father Lynch asked the victim his religion—or looked on the dog tag when the man was too far gone to see what faith he professed.

"Ego te absolvo," he administered the last rites to his Catholic men. And my heart leaped when I heard him half whisper to a Jewish boy, "Sh'mai, Israel, Adonai, Elohenu Adonai echad."

And once when he put his hand over the mouth of a young hysterical kid, he made the sign of the cross on the lad's head, smacked his cheek, and said, "Now you're blessed; all you need is a mug of coffee."

I turned to the doctor beside me and shrugged.

"He's my favorite Irish rabbi," I said.

And he is.

Policies and Principles of the Democratic Party

EXTENSION OF REMARKS

OF

HON. EDWARD BREEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. BREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to invite the attention of the Democratic membership of the House to the following address by Mr. Vincent M. Gaughan, executive secretary of the Young Democratic Clubs of America, at Democrat Day, Ohio Wesleyan University, Delaware, Ohio, on April 28.

Mr. Gaughan's address was given as part of a project to acquaint our young men and women with the background and principles of the Democratic Party.

No consideration of the policies of the Democratic Party today would be complete or worth while without some preliminary observations as to its origin, and to the philosophy of its founder, Thomas Jefferson—for the very principles which Jefferson laid down in the early years of the Republic, principles fortified and expanded through a century and a half of our common political experience, dominate the thinking of Democrats today.

Jefferson and his friends organized a political party in opposition to the Federalists of Alexander Hamilton, the moneyed aristocrats of the day who sought to utilize the new Government for their own enrichment—who believed with sincerity that the stability of government rested on the support of the privileged classes, and could be secured by making government profitable for them.

Jefferson named his party the Republican Party, but in time the Jeffersonians came to be known as Democrats. The Democratic Party, as we know it today, is thus the oldest political organization in the world. One hundred and forty-eight years have passed since the Democratic Party was born, and the principles which gave it birth were these:

The Jeffersonians stood for equal rights to all and special privileges for none.

They believed that governments are not the masters of the people, but their servants.

They believed that the interests of the majority must not be submerged to the greed of a minority.

They believed that the protection of property in its legitimate rights is essential, but that in any conflict between property and men the rights of men come first.

This philosophy prompted Lincoln to say that "the principles of Jefferson are the definitions and axioms of a free society."

Historically the Democratic Party has been known as the liberal party in American political life.

There is no term in our political lexicon which has been subjected to more misinterpretation, more manipulation, or more abuse than the word "liberal."

The word liberal almost defies definition, for Herbert Hoover is a liberal in his fashion, and Henry Wallace claims to be one too.

That liberalism which has distinguished the Democratic Party is a liberalism of the mind and of the heart.

The bedrock of the Democratic Party faith is the set of principles enunciated time and time again by Jefferson, but Democrats have ever brought an imaginative application of these principles to bear upon the realities of the particular era of history in which they have lived.

Democrats have ever insisted that government must be adapted to the needs of the time. If bold action is necessary to make government responsive to the will of the people or to protect them in their basic rights, the Democratic Party has dared to take such action. If new techniques are essential to strengthen and preserve our free enterprise system, the Democratic Party has dared to experiment. The Democratic Party has never committed the cardinal political sin of repudiating imagination as a component of the art of government.

Coupled with this liberalism of the mind—this broad-minded approach to the problems of government—is the liberalism of the heart manifest in the party's determination that government must serve all the people, and not the favored few. The Democratic Party has never turned a deaf ear to the plight of any segment of our citizenship who need the intervention of government to assure a minimum of human dignity.

Today our Government is called upon for action, experimentation, and for service to the cause of human dignity in a sphere beyond that of the wildest dreams of the founding fathers. The United States is the last great bastion of free enterprise and representative government. With us lies the dual responsibility of rallying the freedom-loving nations of the world to thwart the ruthless expansion of communism; and of preventing an atomic holocaust which would destroy civilization as we have known it.

The Democratic administration has assumed the task of developing a broad strategy to win the peace and to establish favorable conditions for the rebirth of democratic institutions throughout the world. Under our bipartisan foreign policy the United States took the lead in organizing the United Nations; we laid the ground work for economic recovery in Europe through the Economic Cooperation Administration—the Marshall plan—which is turning the tide against Communist political infiltration; under the North Atlantic Pact we hope to deter military aggression upon the nations of western Europe; and we shall soon turn our attention to the bold new program for economic development of the backward areas of the world which was advanced by President Truman in his inaugural address. Here are significant examples of imaginative action by Government to meet challenges imposed by new conditions and events.

No less momentous decisions must be made in the field of domestic policy. It is apparent to all that our free-enterprise system is the keystone in the arch of world peace. The cost of aid to Europe and of military preparedness cannot be permitted to tax our system too heavily, for the entire structure of international order will collapse if our economy should fail. Thus we come to the

basic distinction between the Democratic Party and the Republican Party today.

The Democratic Party believes that the American people must have assurance against economic insecurity and chaos; that they must have adequate health, housing, and educational facilities, and greater protection of civil rights to enlist our full moral and material resources in the cause of peace.

The Democratic Party believes that attainment of these objectives is essential to the preservation of a productive free-enterprise system.

The Democratic Party believes that it is the duty of Government to lead the way toward these goals.

To judge from present-day Republican oratory—such as that which Chairman SCOTT offered you last month—the Republican Party has no affirmative program by which social welfare can be advanced within a free-enterprise framework. It resorts solely to bitter denunciation, hysterical attacks, gloomy predictions of the variety which have cost the Republicans every national election, save one, in 17 years.

A preeminent dogma of the Republican Party, and one which finds its way into the average Republican oration with astonishing frequency, is that a monstrous bureaucracy in Washington, a veritable colossus, is enclosing its vast tentacles about the American economy and squeezing the lifeblood therefrom. This frightening creature, to hear the Republicans tell it, was not spawned until the spring of 1933 when the Democrats moved into Washington. Every dogma should have its day, and this ancient chestnut is effectively disposed of when we consider that after 16 years of Democratic administrations, the American enterprise system has reached record levels of production, income, and employment.

The truth of the matter, of course, is that big government is here to stay—regardless of which party is in power—and it was on its way long before 1933. I say "big government" in the sense that the Federal Government has served, and will continue to serve, as an umpire in our competitive system. This has become inevitable with the growing complexities of our civilization, with new production techniques, new methods of communication and transportation which require Government regulation in the public interest.

Laissez-faire is dead, but no political party perpetrated its demise. The trend toward Government intervention, which began well before the turn of the century with the Interstate Commerce Act and the Sherman Antitrust Act, flourished primarily with the general popular realization that only the Federal Government could halt the growing concentrations of private economic power which themselves endangered free enterprise. It is interesting to note that the constitutional validity of much New Deal legislation was upheld because the Supreme Court relied on decisions handed down by the conservative Courts of an earlier day.

Another fertile source of Republican oratory is the enormity of the national debt, which is justifiably of concern to all the American people. However, contrary to the time-worn Republican charge, the Democratic Party has not saddled the American people with this burden because of any insidious designs upon the national economic system or because of any spendthrift theory of Government. About 89 percent of the national debt directly reflects the cost of World Wars I and II, and the debt could have been reduced somewhat last year if the Republicans in the Eightieth Congress had not preferred to pay off its party's big contributors with a tax-reduction bill heavily weighted in favor of the wealthy.

A third component in the concentrated volley of vitriol which Republican orators constantly unleash at the Democratic administration is that free enterprise is surely doomed if the Democratic Party remains in power. In a recent verbal blast, a GOP spokesman predicted that the United States would have a Socialist government, like that of Britain's labor government, in three more years of Democratic leadership. These ominous warnings have been sounded consistently since the early days of the New Deal, and all have proved as grossly inaccurate as certain prognostications about last fall's election.

If the United States had ever been ripe for a radical alteration in its form of government, 1933 was the year; and in the hands of less scrupulous men, we might then have seen the United States embark down the primrose path of state socialism. But out of the chaos and despair of that era, with millions of our people homeless and jobless, our factories shut down, with hunger and discontent rampant throughout the land, we saw our free-enterprise system, revitalized, invigorated by the curative measures of the New Deal, emerge 8 years later to challenge vast war machines unrivaled in world history. In 4 years, backed by American industrial might, the Allies brought Germany and Japan to their knees.

The New Deal put our Nation on the road to recovery in 8 years because its fundamental philosophy was sound and workable. The theory of the New Deal was that the vitality of the free-enterprise system depends upon the welfare of the workers and farmers who produce and consume its goods and services, and that Government must act to assure a steady flow of purchasing power. If restraints upon the mechanics of the system and upon its entrepreneurs are necessary to this end, they are justified. The opponents of the New Deal adhered to the belief that if the mechanics of the system are left free from all controls, the people who live under it can take care of themselves, and devil take the hindmost.

The American people, in four presidential elections, and in seven of eight congressional elections since 1932, have rejected the trickle-down theory of economic benefits. They have placed their stamp of approval on Government efforts to oversee a fair division of our income, goods, and services among all Americans. A majority of them have come to believe that the Democratic Party program offers the greatest opportunity for individual and national prosperity and well-being in a free society.

This stern political reality has penetrated Republican thinking—both Wendell Willkie and Thomas E. Dewey endorsed the New Deal in effect, but asserted that "we can do it better." Two platforms adopted by the Republican Party promised action by Government in the fields of economic and social life staked out by the New Deal. Yet when the pressure of campaigning is over, most Republicans withdraw into their 1929-model shells, forget their glib promises of progressive action, and pick up their cudgels to renew the battle with the Democratic Party.

There could be no more lucid example of Republican hypocrisy than the GOP stand on civil rights legislation in the Senate of the Eighty-first Congress. Twice by unanimous vote in convention the Republican Party has solemnly pledged its efforts to assure the minimum protection of equal rights for our Nation's largest minority group. Yet when the opportunity arose to revise the Senate rules to permit early consideration of civil rights measures, the Republican leadership was in there pitching—for all it was worth—to block an anti-filibuster rule. Its motive was the mere political expedient of embarrassing President Truman's administration, but this was cloaked in high-sounding phrases about the sanctity of the Senate rules. The American people are quite capable of distinguishing such cynical maneuvers as these, and they will neither forget—nor forgive—the Republican elephant on election day.

Even to those few Republicans who do insist that their party steer the liberal course it has promised, the Republican leadership turns a deaf ear.

I can say without equivocation that if the Republican Party does not come to grips with the political realities, if it does not cease to be the party of obstruction, if it does not lay aside its moth-eaten rhetoric and begin to live up to its pledges to the American people, it will cease to be a significant factor in our political life within ten years' time.

I do not anticipate this prospect with any sense of pleasure or rejoicing. America has become great under a two-party system of government. We need a strong, effective Republican Party—but we need a Republican Party which is in step with the times. The Republican Party can keep in step without sacrificing the principles to which it claims to be devoted. If it cannot break the shackles which bind it to every organized pressure group for special privilege, the Republican Party will surely loose its grassroots supporters to the Democratic Party or to some new coalition group—and we shall witness splinter-party government in the United States.

Today, as in the time of Jefferson, democratic government must be responsive to the needs of the people, and to their will as expressed at the ballot box.

The people spoke November 2. They elected a Democratic President and a Democratic Congress which had pledged them action on issues which not only concern the welfare of our people as individuals, but the future vitality of the Nation as a whole: Issues such as economic stabilization, housing, national health insurance, expanded social security, a fair labor-management relations act, aid to education, development of national resources and electric power.

President Truman's program to enact these pledges into law has come to be known as the Fair Deal.

The Fair Deal is not a revolutionary program. It is not a radical departure from previously-accepted techniques of Government action. It seeks simply to provide what its name implies—a fair deal for every American, whether he or she be investor, businessman, worker, farmer, or housewife. It was not devised in hostility to the interests of any groups of our people, but to advance the prosperity and security of all. The Fair Deal concept is that the economic interests of all our people are interdependent—that the businessman cannot sell his product unless the consumer can buy at a reasonable price, that the farmer will suffer if the workingman's wages are cut, and that the social consequences of inadequate housing, or inadequate distribution of medical care, or failure to utilize our natural resources properly must be suffered by all in equal measure.

No sooner had the Fair Deal program been presented to the Congress than the vast propaganda machines of privilege began to roll.

The lobbyists descended on Washington.

The bogey-man of "socialism" was again created to frighten the people and their Representatives in Congress.

Supposedly responsible Republican leaders, such as Senator ROBERT A. TAFT, were heard to charge that the Fair Deal points to a complete totalitarian system in the United States.

It is easy to loose a flood of distorted propaganda about any legislative issue, a flood limited only by the imagination of the author, the slush funds at the disposal of the lobby which employs him, the durability of its mimeograph machines, and the receptiveness of the Nation's newspaper and magazine outlets to such handouts.

It is even easier to examine the facts.

There is no phase of the Fair Deal which has not been devised to provide a maximum amount of local governmental responsibility, a maximum amount of freedom for private enterprise, a minimum of Federal regulation in view of the task to be accomplished. Time will not permit a close scrutiny of the subtle manner in which the hosts of special privilege have sought to twist the Fair Deal completely out of its context.

However, a notable example is the Nationwide whispering campaign against the Fair Deal's health provisions—a campaign which has been underway for some months now although the administration's health bill was not released until last week.

We Americans can boast of the best medical care in the world, but it is readily attainable by only two groups of people—the very rich, for whom medical expenses impose no financial strain, and the very poor who can pay nothing, and thus are eligible for charity. We need to expand the medical services which are available, by securing more doctors and nurses and by construction of more hospitals, clinics, and research laboratories. We need, furthermore, to make sure that everyone, regardless of income, can benefit from these services without throwing the family budget out the window when serious illness strikes.

How does the administration propose to meet these needs?

The most hotly disputed features of the President's health program is national health insurance.

Contrary to the assertion of Republican Chairman HUGH SCOTT, made with his customary myopic interpretation of political events, the administration does not propose to let your ward leader select your doctor for you. Under the health insurance plan, the patient is still free to choose his physician, and the physician is still free to accept or reject patients. The actual mechanics of the plan, such as the selection of standards of payment, are to be left to local committees of physicians. Both doctor and patient can make private arrangements if they do not choose to use the insurance plan.

In addition to health insurance, the Fair Deal plan calls for Federal aid to medical schools and medical students, and expansion of teaching facilities through Federal funds; for increased Federal aid for hospital construction; for expansion of preventive medicine and public-health services.

Where is the money for physicians' fees to come from? These costs, as well as those for other phases of the health program, are to be borne by a 1½-percent pay-roll tax, similar to that levied for social security—which latter tax has not seemingly disturbed our economy in the 13 years since it was first levied. In the long run the total costs will not exceed the percentage of our annual income which is now spent for medical services and facilities. The increased dollar values and enriched human values to be derived from a comprehensive program such as that envisioned here can hardly be calculated.

These are the facts about the Fair Deal health plan—and they are a far cry from the hysterical shrieks of "socialized medicine," "government compulsion," "totalitarian methods" which are now wafted over the soft spring breezes by those who detect in the Fair Deal some sinister intent to destroy the American way of life.

I am confident that the Members of the Eighty-first Congress will cast aside the veil of half-truths and distortion about all phases of the Fair Deal and will enact substantially the program called for by the mandate of November 2.

The American people have asked for action from the Democratic Party—and they are going to get it.

I have assumed it to be my task here today to offer you a background of the philosophy and the policy of the Democratic Party, and an understanding of the national and international necessities which have shaped the program it offers today—a program which will unleash the vast creative energies of a democratic society in the service of world peace. I have sought also to point out the nature of the sometimes fanatical charges brought against the Democratic Party by its sometimes desperate opponents in the hope that you will be able to distinguish fact from fiction.

I would not consider this task completed without an expression of gratification at the programs arranged here by Professor Arnesom, both for the Democrats and the Republicans. Such special events as these indicate a growing awareness, on the part of our colleges and our students today, of the importance of study and understanding of public affairs by college men and women. With the significant role now played by Government in the lives of us all, it is imperative that Democrats and Republicans alike—particularly Young Democrats and Young Republicans whose future is at stake—insist that our government at every level be managed by competent public servants devoted to the public good.

This presupposes active participation by young people in the game of politics. Active participation, at the minimum, means exercise of the right to vote; and an intelligent understanding of the issues involved. But as far as young people are concerned, political activity means considerably more.

We young people must interest ourselves in the representatives for whom we vote. Candidates for public office are usually selected from a group of men or women who have been identified with political organizations at precinct, county, or State level. Consequently, the young person who may not desire public office himself, but who wants to have a hand in the selection of those who do serve, should begin at an early date to take part in the local affairs of his party.

The highest plane of active political participation is service in public office. There is no finer career to which a young man or woman can aspire. It is essential that we have young men and women in the city halls, the State capitols, in the Halls of Congress today. Youth understands, more readily perhaps than its elders, that government must constantly adapt itself to meet ever-changing conditions; youth is more bold to act if action is needed to provide all the people with the benefits and privilliges which our society offers them; young people bring to the political scene a refreshing vigor and idealism which have sustained our American Government since its inception.

Many of you may be discouraged from entering political life because of the popular notion that a politician is automatically incompetent, if not even corrupt. As Ambassador Claude Bowers points out, "It may be possible to lift the average in political life, but it can never be done so long as able young men, intellectually and temperamentally fit for public service, are led to believe there is something rather shameful about it."

Certainly there are some incompetent politicians; certainly there are some corrupt politicians. But there are some corrupt bankers, doctors, lawyers, and industrialists as well—yet none of these professions are heaped with the abuse and the wisecracks which are often showered on the politician.

Politics is, indeed, an honorable profession, and if there be unwholesome practitioners of the political arts, it is solely because the people themselves do not choose to fulfill their obligations of citizenship by working in party organizations.

There is no profession today which has greater need of an infusion of new blood, new ideas from young people with high and consecrated ideals of service to humankind than politics—for the members of no other profession shoulder such an awesome responsibility for the lives, security, and well-being of their fellow men.

So I invite you to accept your share of this responsibility—no matter what the party. The political life offers no financial reward, and politics is a hard taskmaster. It is a demanding life, yet a challenging experience—challenging because we ever seek to make Government a more effective instrument for realization of the aspirations of our people and the magnificent potentialities of our society—challenging because the hopes of men the world over for a new era of freedom and justice lie in the full fruition of our American dream.

The Press Is the Last Bulwark of Your Freedom

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. CHURCH. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the CONGRESSIONAL RECORD the speech delivered by Mr. John S. Knight, editor and publisher of the Chicago Daily News, upon the occasion of receiving the honor award from the University of Missouri School of Journalism for his distinguished service in journalism.

This speech should be read by everyone. He points out that while journalism as it is practiced in the United States may not be perfect, it is the last bulwark of freedom in this country. He emphasizes what cannot be too often emphasized and that is, when the day comes that the press is under Government control the liberties and the freedom of the people will perish forever.

I have often said that the success of our form of government, founded upon the will of the people, depends on an informed public opinion. To give the people the facts and to stimulate public thinking is the responsibility of the press. And the American press has courageously met that responsibility.

The speech follows:

What is "the function of a newspaper publisher?" And more important, what are his responsibilities?

Since all newspaper publishers do not fall into a common pattern, Mr. Philip M. Wagner, editor of the Baltimore Sun, has divided them, rather inadequately, I think, into these five categories:

1. The publisher to whom the nature of his business is a matter of indifference—who would as soon be running a grain or feed business, the prospects of profit being equal.

2. The "dominating, know-it-all publisher, czar alike of business management and editorial page," under whom the editorial staff members are reduced to hacks.

3. The publisher who realizes his limitations on the editorial side but who can't resist asserting his final authority in crucial editorial decisions.

4. The small-town editor-publisher who * * * is best situated to give scope to his talents.

5. The publisher who is primarily a businessman but realizes that the newspaper business carries special obligations, and who deliberately reposes the matter of editorial policy on his editor or editorial writer.

As newspapermen and students of journalism, you will recognize each of these types. There are others, of course.

RESPONSIBLE OWNERS

For the purposes of this discussion, however, I shall confine my remarks to the type of publisher I believe Dean Mott had in mind when he invited me to address this audience.

I refer to the owner-publisher who must stand responsible, in the eyes of the public and his own conscience, for the policies—business, editorial, or both—which in the long run determine whether his newspaper fails or succeeds.

As I have said before, the average newspaper publisher falling into this category, is usually no genius. On the contrary, he is more likely to be a typical hard-working, law-abiding American citizen with a sense of responsibility and a passion for solvency.

Some of them came, as did my father, from the writing ranks. More often, they started in newspaper work as office boys, advertising salesmen, accountants, and circulation solicitors.

Within the last decade, a number of editors have been shifted to the publisher's chair without imposing too much strain upon their indefectibility.

Whatever their origins, the functional tasks before them are well defined.

The owner-publisher is the master of his own destiny. He can, and should, determine whether his newspaper is to be Republican, Democratic, independent, liberal, or conservative.

He must decide what sort of product is produced in his plant. It is wholly within his province to sell his wares on the streets with flamboyant headlines or to concentrate upon home delivered circulation.

He may be constructive, or destructive. He can color the news or insist upon accurate, factual, and unbiased reporting from his staff.

He can be an inveterate crusader for the right as he sees it, or a Casper Milquetoast who is never quite sure about anything.

A publisher can be a nasty, petty, mental pygmy who injects his personal prejudices into the columns of his newspaper, or he may stand for the best in constructive leadership and place his faith in the judgment of his readers to recognize integrity and purpose, and honor it.

Since the days of the pamphleteer, no limitation upon absolute freedom of the press has been permitted under our Constitution. To say that this freedom has never been abused would be short of the truth, but even the abuse of such a priceless privilege is a thousand times less evil than placing shackles upon the right of free speech.

THE READER IS JUDGE

In short, to use a term employed at the recent meeting of the American Society of Newspaper Editors, the owner-publisher can be a "journalistic stinker" or uphold and practice the finest traditions of his profession.

Whether he be blatherskite or angel, mendacious or truthful, rogue or gentleman, the fact remains that he will be judged in the final analysis by his readers, and his readers alone.

In the larger cities where two or more newspapers are in competition, the public can vote its preference every day of the week. Unlike politics, intelligent newspaper competition has been known to exert a restraining influence upon the eccentricities, or shall we say, the baser instincts of many a newspaper proprietor.

At least in these competitive cities, the reader can simply refuse to buy the newspaper which, for one reason or another, does not suit his tastes.

In the so-called singleton cities where only one newspaper is published, no such choice is offered. Still, it is interesting to note that where an owner-publisher has the field to himself, he is usually so cognizant of the responsibilities of his position that reader confidence is seldom abused.

I have known several fire-eating editor-publishers who, in the competitive days, fired their blasts and asked questions later. In one-newspaper towns today, these same men are cautioning their editorial writers to be sure of all the facts before taking the mayor for an editorial ride.

In the main, I would say there is a greater awareness of public responsibility by the newspaper which has no competition than in cities where competitive zeal often influences editorial judgment in the wrong direction.

The chief bugbear of the singleton newspaper is the tendency to lose the zest of the game, a tendency which is followed by a gradual deterioration in editorial quality.

CHOOSING A TEAM

The chief task of the newspaper publisher is that of choosing competent department heads and demanding that they work together as an effective team.

Too many newspapers have been ruined by highly priced executives fighting to win departmental, rather than institutional, victories.

Theoretically, the editorial department should have nothing to do with those mighty men of the business office who challenge expense accounts and wage an unrelenting war against waste.

Actually, cooperation between the two is essential and can be accomplished without making the editorial department an annex of the business office.

The publisher's first responsibility is to see that his newspaper has wide reader acceptance. This can be accomplished in only one way: By producing a good newspaper.

There are no short cuts; no promotional gimmicks by which a circulation staff can build circulation over a long period of time with an inferior newspaper.

By a good newspaper, I mean one that presents the news fairly and accurately; has editorial courage and integrity and is aware of its obligation to the community, State, and Nation.

If a publisher begins with that concept of journalism and can couple with it a high degree of managerial "know-how," his newspaper should exert wide influence and be commercially successful.

I mention the profit motive because a newspaper must be profitable in order to maintain its independence and freedom of action.

The critics of the press talk glibly about the influence of advertisers upon newspaper policy. Once or twice, I have experienced such attempts to make us "see the light." Occasionally, we have lost advertising accounts because of our refusal to suppress news.

I am glad to say, however, that such incidents have been rare indeed as most advertisers have an abiding respect for newspapers with editorial integrity.

THIS PUBLISHER IS ALSO EDITOR

In our own organization, the publisher is also the editor. That is because my training has largely been on the editorial side. I have served as reporter, desk man, make-up editor, editorial writer, managing editor, and editor.

I still devote the majority of my time to purely editorial work. This is a rather unique situation in American journalism. The arrangement has its defects, to be sure. No single individual can be an expert on business administration, circulation, advertising, production, labor negotiations, promotion, typography, editorial writing, features, news treatment, and general policy.

Still, it has the advantage of balancing the scales in favor of the editors who produce our newspapers. I am committed to the theory that successful newspaper publishing begins and ends with the quality of the product. No greater assistance can be given to the circulation and advertising departments than the day-by-day insistence of the publisher that the newspaper be first class in every respect.

Our department heads are selected with care and are given the widest authority. Usually, they are men who have come up through the ranks and have been with our organization long enough to grasp our fundamental publishing theories.

In the Knight organization, the publisher works with all department heads and strives to keep an enthusiastic and well-balanced team on the field at all times. We have no favorites, no special pets. A man is judged solely by his ability to produce.

Unlike some other multiple-ownership groups, our editors are under no requirement to follow standardized procedures.

The newspapers are dissimilar in appearance. Each newspaper is tailored for the needs of the city in which it is produced. We have no rigid editorial formula to which every editor must adhere.

Ideas which are found useful in one city are brought to the attention of editors in other cities but they may accept or reject them as they choose.

In the matter of editorial policy, my associate editors find some guidance on national and international questions through "The Editors' Notebook" which appears unchanged in every city.

They are free to disagree with its conclusions, and often do. Just as often, I am persuaded to change my own viewpoint after discussion with the editor who took exception to my conclusions.

In all local matters, each associate editor has absolute freedom of action. Editorial endorsement of candidates is determined in conferences in which the publisher is joined by half a dozen editors and reporters who are most familiar with their qualifications, or the lack of them.

I think my attitude on editorial policy can best be set forth by restating the essence of a memorandum I wrote to A. T. Burch, associate editor of the Chicago Daily News, several years ago. It went something like this:

I hope that in the conduct of the Chicago Daily News editorial page, you and your colleagues will always remember that it is primarily our duty to inform, rather than instruct.

I am not implying that we should be without positive opinions, because it is our duty to cause people to think, and very often this can best be accomplished by stating our views so cogently that no reader of the Daily News can possibly be in doubt as to our position.

Nevertheless, I like the phrase which precedes our editorials, "As We See It—." By its use we indicate that we do have definite views on the subjects of the day but are not completely obsessed with a sense of our own infallibility.

It is unnecessary, I know, to remind you that we must be scrupulously fair to all sides in the presentation of our editorial policies. This does not mean the dilution of our opinions but rather that editorials must be based upon facts that are well documented.

Above all, avoid the use of watered-down, please-everybody editorials which might bet-

ter be consigned to the waste basket. There is no room on our editorial page for verbose "essays" which come to no very firm conclusions.

Remember at all times that you have full freedom to approach every subject with an open mind. We are not obligated to any political party or special interest. The Chicago Daily News has long been renowned for unbiased, factual reporting and the independence of its editorial page.

Let us adhere to that tradition and improve it, if we can, with simple and pungent writing.

THE BASIC OBJECTIVES

That memorandum to Editor Burch of the Chicago Daily News is equally applicable to the Akron Beacon Journal, the Detroit Free Press, and the Miami Herald.

All of our editors fully understand our basic objectives, as my father delineated them so well years ago:

"We are ourselves free, and our paper shall be free—free as the Constitution we enjoy—free to truth, good manners, and good sense. We shall be for whatever measure is best adopted to defending the rights and liberties of the people and advancing useful knowledge. We shall labor at all times to inspire the people with a just and proper sense of their own condition, to point out to them their true interest and rouse them to pursue it."

MEANING OF RESPONSIBILITY

Naturally, serious editors and publishers are disturbed, as I am, by the growing criticism of the press.

It has been charged that we have failed in our responsibility and, in some instances, that we do not fully understand the meaning of responsibility.

It has been charged that we are out of step with the people, and the victories of Roosevelt and Truman are regularly cited as examples of our editorial blindness.

Henry Luce's commission on freedom of the press undertook a study of newspaper behavior. Editor and Publisher has more recently summoned a panel of editors, publishers, and educators to make a joint appraisal of the self-improvement possibilities of American newspapers through studies of specific problems.

Ralph D. Casey, director of the University of Minnesota School of Journalism, believes that the sound, factual, and unemotional analysis of press behavior in relation to public questions and a scientific analysis of the content of the press, unencumbered by political restraint or Government fiat, would exert influence.

"It should have a salutary effect," says Mr. Casey, "on publishers who need to reform both their outlook and journalistic practices. It would strengthen the hands of responsible editors who have a studied concern for a newspaper's character and public service."

Newspapers are also fair game for politicians, labor unions, business leaders, second guessers, grandstand editors, radio commentators, well-meaning clubwomen who believe the comic page is tearing down the character of American youth, and other do-gooders who utter a great deal of child labor nonsense about the poor little carrier boy who delivers the paper to your home.

Individually, I welcome this criticism. There is just as much room for improvement in the newspaper profession as in medicine, law, teaching, and the ministry.

But, in all fairness, it must be admitted that journalism has made comparable advances with the other professions.

In the era preceding my entrance into newspaper work, the country was dotted with personal organs appearing in the form of newspapers which represented political parties, railroad or banking interests, or purely the personal prejudices of the owner without thought for the public good.

Fortunately, in those days of low costs, there were enough newspapers in each community to satisfy the political inclinations of every potential reader and no one had any delusions about the particular ax his preferred newspaper was trying to grind.

Yet, as newspapers, they were sorry examples of journalism as we know it today. So-called news stories, either favoring or attacking a candidate for public office, were twisted without the slightest regard for the facts. Usually, any newspaper's candidate for sheriff was the man who would promise to give it the county printing.

Thundering editorials in the so-called days of personal journalism generated a great deal of heat, but every little light.

Foreign news, except in a few metropolitan newspapers, was virtually ignored.

It was indeed a colorful era in which rival editors smote each other's hip and thigh but judged by present-day standards, the reader who was looking for information and enlightenment had to read all of the newspapers in town to get even a semblance of the truth, and even then he couldn't be too sure.

I started my newspaper career in the fading days of the personal journalists and can testify from experience that ethics, morals, codes of honor, and truth were all thrown into the hellbox whenever demanded by expediency and the ring of the cash register.

Newspaper morals were on a par with the loose ethics of the medical and legal professions of that period, to say nothing of the psalm-singing businessmen who freed their consciences by attending church one day a week. It was a colorful, robust era but the editors of that day would have snorted contemptuously at any such "impertinence" as the Hutchins report.

WHO IS A "STINKER"?

The American press today, served by the great news agencies of the world and competent local staffs, is infinitely superior to the press of any other era or of any other country.

It is increasingly less biased and more informative. With conspicuous exceptions, it endeavors to chronicle the news of its community and the world with objectivity and fairness.

Its editorial objectives spring from the laudable desire of conscientious editors to serve the public welfare.

At no time in the history of journalism have professional standards been so high. The pride of good craftsmanship has not been lost.

Of course, the press needs criticism, provided it is constructive rather than maliciously inspired.

I am disturbed, however, by the members of newspaper panels who serve as self-appointed guardians of press "responsibility" and advocate throwing the "stinkers" out of such organizations as the American Society of Newspaper Editors.

Who can define "responsibility" and brand the "stinkers"?

Is your competitor a "stinker," or is it a fellow who lives 2,000 miles away? By what standards can they be judged? Your standards, the public's preference, or their standards?

For one, I should hate to see press responsibility fall into the sort of pattern that determines which real estate man is a realtor and which is not.

Editors would then be nothing but glorified Rotarians, all wearing the same buttons and bows and getting good attendance records by never missing a convention in Washington.

A code of ethics in journalism may serve as a guide, but in the final analysis every individual editor and publisher can observe it only to the extent that his conscience and rectitude of character permit.

God forbid the day when the ASNE or any other newspaper group attempts to disguise thought control as responsibility, or to discipline individual editors on ethical grounds.

I sincerely hope too, that we will never be faced in America as in the Netherlands today, with government advocacy of a measure which attempts to restrain the right of the press to be wrong.

The Dutch, like us, have a constitution guaranteeing freedom of the press. But they now propose to create a jury which would try editors, and reporters deliberately giving false and irresponsible information. Penalties range from fines to suspension for life from journalistic work. Administration of the act would mean licensing of all journalists since no one could follow the profession if the press bureau decreed otherwise.

In comparing the Netherlands measure with the panels which have been discussing press responsibility in this country, the Miami Daily News says quite appropriately:

"There is nothing to prevent any number of 'juries' from being set up by voluntary action in America to point out the errors and offenses of any part of the press. Indictment by the facts can be made freely by anyone. The penalty for the offense, in the long run, has been enough if the offender be exposed.

"To put the force and penalty of law behind such decision as to the truth, that is another matter, a serious one."

LOOSE CHARGES

That brings me, finally, to the observation that the American press is not fully appreciated in our own country.

It is a responsible press as was demonstrated during the war when our newspapers joined in a voluntary code of censorship to divulge nothing of a military or security nature that would jeopardize the all-out war effort.

No laws were passed; there were no penalties for nonobservance except the scorn of public opinion. Not a single newspaper violated that code nor did a single newspaper relinquish its right to criticize the Government or the conduct of our military affairs with all of the vigor at its command.

When charges are made of "press irresponsibility," it is well to examine the source. For instance, President Truman thought Nat Finney of the Minneapolis Star was "irresponsible" when he wrote a series of articles exposing a Government plan to bottle up news in the various departments of Government.

But Finney was awarded the Pulitzer prize for national reporting by the advisory board and the trustees of Columbia University, hardly a group of "irresponsible" men.

William H. Grimes, editor of the Wall Street Journal, recalls one of his earliest newspaper experiences when the editor came to the managing editor and said: "Frank, the safety director just called and said the city hall story is irresponsible." And the managing editor said, "I had a hunch I was underplaying it."

"Every newspaperman," said Grimes, "who ever dug up something that someone else was trying to hide, each one who has stressed a fact someone did not want to face, has been accused of being 'irresponsible.'"

That is a point to remember when loose charges are made about "press irresponsibility." Only in Russia is the press 100-percent "responsible." Joe Stalin sees to it that no editor ever has the chance to be "irresponsible" twice.

FREE IN BEST SENSE

I wonder how many of you will agree with me that the American press is your last bulwark of freedom in this country.

Unlike the radio and television, it is not subject to Government license.

Unlike the motion-picture producers, it does not turn out Mission to Moscow propaganda for the Government disguised as "historical" entertainment.

The press alone, and by the press I mean all printed media, can and does resist the growing encroachments of Government upon individual rights.

Your daily newspaper not only mirrors the news of the world but strives to stimulate public thinking on the questions which affect our daily lives.

It is a free press in the best sense of the word. No censors hover over American editorial desks as they do in nearly every other country in the world. Even in the nations of Western Europe, censorship is very much alive.

Journalism as it is practiced in the United States is far from perfect. But it is a vital press, a courageous press and, I believe, a responsible press.

Disagree with it if you will, indict it for its sins, but never let its voice be stilled for on the day it comes under governmental control, your liberties and freedom will perish forever.

Leadership Necessary To Prevent Sowing of the Seeds of Communism

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at a luncheon held by the Chamber of Commerce of the United States, May 2, 1949, in Washington, D. C., in connection with its thirty-seventh annual meeting:

Mr. Chairman, in early December of 1941, I was scheduled to address a luncheon in Boston, of the Boston Chamber of Commerce, and while home, I received a call from our late beloved president, informing me of the Pearl Harbor attack, as a result of which I immediately returned to Washington. The next day, I introduced the resolution declaring war on Germany, Japan, and the Government of Italy.

In early January of 1942, the postponed luncheon took place.

At that time, I predicted we would ultimately defeat the enemy, and I made observations about conditions which would probably exist after the war. Even then, as most of you could do, I could look ahead and see and visualize the destructiveness of the war we were then facing, and which we have since undergone, and that it would leave behind it a world in pain and in distress. It has certainly left in its wake terrible conditions, and trying problems to solve.

And, in passing, might I express the observation, that if the world undergoes another war, with its terrible destructiveness of life and property, and dissipation of the wealth of the world, the winner will also be the loser.

The leaders, who are few in number, of the Soviet Union, should also take notice of this probability. For it is their deliberate policy of misunderstanding, thereby creating fear, uncertainty, and if possible, chaos, to extend their imperialistic and ideological designs, that prevent that international understanding which is so essential for peace. They must not overlook the fact that while the American people are a tolerant people, there is a point in our national interest beyond which we cannot tolerate.

The emphasis I made in my speech to the Boston Chamber, was the necessity for respect and understanding, and that after the war was over, there would be a greater necessity for dynamic democracy than ever before. I mentioned strongly that there will be need for forward-looking, dynamic, constructive leadership in the field of religion, of government, of business, finance, agriculture, labor, and in all walks of human activity.

Certainly, existing conditions call for such leadership in the world of today. Any organization of businessmen, and this observation could particularly apply to your organization because of its Nation-wide sphere of activity, could exert great influence on world and domestic affairs, as well as in other respects. If, for example, instead of responding to fears, and adopting a position of opposition, and inquiring, forward-looking and constructive positions on public questions and matters were taken.

Mere or blind opposition, instead of one of constructive support, or constructive criticism and proposal, result in a loss of confidence and influence in the minds of the people generally. Cooperative and understanding efforts result in confidence and respect.

In the international field, there is a strong recognition of the necessity of our Government, in our own national interest, taking affirmative and effective steps in cooperation with other free countries, in preventing Red nazism or communism from carrying out its attempts to impose its vicious ideology on the world, and thereby to dominate the people of all the nations of the world.

It is most unfortunate that this world challenge to our way of life exists, but it does. We must face and meet it realistically.

Under President Truman's leadership, supported in the Congress in a bipartisan manner, highly commendable, we have taken affirmative action in Europe, and it is having its favorable effects. As long as the Soviet Union persists in its present policies and efforts, we must continue to do so within our means.

The Eighty-first Congress has recently enacted into law an extension of aid to certain nations in Europe to help in their economic and moral rehabilitation. This is necessary as it is a means of stopping international communism, and as we succeed, toward ultimate peace. I might say that conditions in Europe in this conflict are at least 10 times better now than they were a year and a half ago.

In our own national interest, and in the interest of future peace, the North Atlantic Pact should be ratified by the Senate.

As conditions now exist, we should also pass legislation implementing the pact, providing for assistance to the signatory nations to the pact in strengthening their national defenses against any future acts of aggression by the Soviet Union. For, we must remember, the present world situation is due to one basic factor, the deliberate policy of misunderstanding on the part of the Soviet Union.

There is no problem, where differences exist, small or large, that can be solved where even one party to the negotiations fails or refuses to approach its solution with an understanding mind. Where motives are not impugned, where understanding exists, the most serious differences can be finally adjusted. In considering world and domestic problems and legislation relating to them, we should not fail to give full significance to the fact that the anti-God ideology of communism spreads only where widespread poverty and distress exists. It is under such conditions that the false seeds of communism are planted and spread. And, in connection with this fact, it is important that we have enlightened, forward-looking leadership in our own country in the consideration and solution of our domestic questions.

Among many other problems, in our own country, we must give serious consideration to the problem of economic insecurity and its solution. While we can proudly boast of the American standard of living, and properly so, we cannot overlook the fact that millions during their lifetime of productivity, and in old age in our country, are faced with economic insecurity.

I can well remember only 14 years ago when President Roosevelt recommended social-security legislation, that there were those who loudly called it socialism. Such legislation is now accepted by nearly everyone.

This program should be extended to include groups now excluded, and I am confident that this will be done during this session of the Congres. Old age is a condition, if we live long enough, that comes to all persons. I also expect that the earned annuity now paid on old-age and survivors insurance will be substantially increased. An enlightened leadership should support such legislation.

I expect the present Congress will pass an effective housing bill providing for public housing and low-cost housing projects. This bill has already passed the Senate. It is now being considered by the House committee and will be acted upon in the House in the near future. Like social-security legislation of 14 years ago, there are some persons who hurl the charge of socialism against such legislation. It is not socialistic. In these days of an intense economic system operating on all of us, it is simply government exercising and extending its secondary powers and functions to meet an acute problem of great public interest and concern.

The development of our natural resources is now a definite policy of our Government. Whether or not you like it, it is here. I like it. This policy is strongly supported by public opinion. The late President Roosevelt put it into real operation, and President Truman has courageously carried it through to its present completion. Only the other day, in the Interior Department appropriation bill, the final step was taken.

This being so, it seems to me, that certain private interests would exercise common sense as well as good business judgment if instead of following the policy of blind opposition, and engaging in other questionable actions, they would cooperate. I know of no political party that wants to destroy or impair business, but I do know there is a general recognition of the wisdom of marshaling and using our natural resources in the public interest that are being wasted.

There is also a general recognition that abuses in business or finance or elsewhere should not be permitted to exist. That is the basic Roosevelt theory. It is also the basic Truman theory. It is my theory.

I have always felt that there was little difference between a sound conservative and a sound progressive. You will note, however, the use of the word "sound." I have always felt in principle and in policy they are in close agreement with each other, and any differences were more or less of detail and expression.

I have often hoped that persons within both groups could get together often for an exchange of views. In my opinion, such meetings would be productive of excellent results.

The Eighty-first Congress, as you know, is now in session. I have already referred to some of the bills which it has acted upon and bills now before it. You must keep in mind my observation on the necessity for

dynamic democracy. That is what Franklin D. Roosevelt stood for; that is what President Truman stands for. That is what the great majority of the people of America stand for. The latter is very important, because public opinion is a powerful influence in a democracy or a republic. The spirit of Franklin D. Roosevelt and the personality and recommendations of President Truman are the basis for action in this Congress.

It is my opinion that the greater part of President Truman's recommendations, in major form, will be enacted into law before the Eighty-first Congress is over. Already a substantial part of his recommendations are in the process of being enacted into law.

In the Congress, the House of Representatives is far ahead of its schedule. It has already passed all departmental appropriation bills, which is an all-time record.

The Congress has enacted into law the bill authorizing the appropriation of money for the second year of the 4-year financing of the European Recovery Program under the Marshall plan.

The House has also passed several important bills, including the appropriation bill, relating to our national defense. An important bill relating to the strengthening of the Central Intelligence Agency has passed the House of Representatives. A bill relating to the nature, scope, and composition of the Army and Air Force, and authorizing a 70-group Air Force, has passed the House.

The extension of the reciprocal trade agreements law, for 3 years, with the crippling amendments of the last Congress eliminated, has passed the House.

Important recommendations of the President relating to appropriations to extend rural electrification, as well as flood-control and power projects, irrigation and reclamation projects have passed the House.

The Commodity Credit Corporation bill, with authority therein to provide adequate storage space for crops has passed the Senate and will be voted upon in the House and passed this week.

A bill to expand the crop insurance program has been reported out of a House committee, as well as several other bills of import to agriculture and to our farmers.

The House Committee on Agriculture is now considering new basic farm legislation.

The extension of rent control is now a law.

A bill extending time for the making of voluntary agreements affecting transportation, inventory control, and speculative trading in commodities, which basically affect the cost of living has been enacted into law.

The repeal of the Taft-Hartley Act and the reenactment of the Wagner Act with amendments is now being considered by the House of Representatives. This bill has also been reported out of the Senate Committee.

The increase of the minimum wage from 40 cents to 75 cents per hour with extended coverage has been reported out of a House committee.

A bill establishing a new Department of Public Welfare has been reported out of a House committee.

The Senate recently passed a bill providing for certain medical examinations to school children. The general Federal aid to education bill is now being considered by the Senate.

A House committee has reported out a bill authorizing a survey to be made of a number of federally owned buildings and post offices.

A bill liberalizing the Displaced Persons Act of last year has been reported out of subcommittee, and is now being considered by the full committee of the House Committee on the Judiciary.

A House committee is conducting hearings now on an omnibus rivers and harbors and flood-control bill.

The House Committee on Banking and Currency is now holding hearings on the housing bill passed by the Senate, as well as its own bill.

The appropriate committees of the House and Senate have or will shortly schedule hearings on civil-rights legislation.

The House has passed the most effective executive branch reorganization bill in history. A bill has been reported out of the Senate committee. I am frank in stating the Senate bill is ineffective and meaningless. It will only be through a good basic reorganization bill that the most of the Hoover Commission's recommendations, which in its over-all picture has done a real job, and a difficult one, can or will be carried into effect. The Senate bill will enable any plan submitted by the President to be defeated by the adverse vote of only one branch of Congress. The House bill calls for an adverse vote of both branches.

The success, in my opinion, of the major part of the Hoover report and the President's recommendations being carried into effect, will depend upon this particular provision of the House bill being retained. We might just as well pass no bill at all, as to have this provision of the Senate bill enacted into law.

To summarize my remarks: Forward-looking and constructive leadership in all walks of human activity is essential at this time. Negative or mere opposition leadership, with its attempt to scare everyone with name calling and wild charges that appeal to emotions and not to reason get the headline news. But such leadership has lost its influence with the people, and properly so.

The House of Representatives has done remarkable work, it will continue to do so.

The filibuster in the Senate has brought delay and has held up consideration of important legislation in that body, but in recent weeks a marked improvement has taken place, and I look for further improvement. The Senate can act quickly when it wants to do so.

A substantial part of the President's recommendations in his state of the Union message of last January will be enacted into law during the present session. In my opinion, the major part of it will be enacted before the termination of the present Congress in early January 1951.

I conclude with this affirmative statement. The American people want and will support forward-looking, affirmative, constructive leadership, not only in the field of Government, but in all other fields of human activity.

Turning Back the Clock

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a guest editorial which appeared in the most recent issue of Hoard's Dairyman, the national dairy farm magazine which is published at Fort Atkinson, Wis. This editorial, entitled "Turning Back the Clock," should cause a thoughtful pause in the pell-mell rush to oleoize the American diet.

TURNING BACK THE CLOCK

(A guest editorial from the Northeast Farm Foundation)

It is doubtful if the American people realize just what they are doing to themselves in the matter of butter. The metropolitan newspapers damn the butter lobby and shout for untaxed margarine as though they were engaged in some kind of a crusade. And so they are, more or less, unknowingly—a crusade to degrade the American diet for all time; ably assisted by a margarine lobby that has, at the moment, great political power.

This is no brief for special taxes on margarine. We see no economic reason for taxing cottonseed oil, though the attempt to make it into imitation butter is a fraud, against which consumers once sought to be protected. But in the long run, taxation will not stop the public from mixing sawdust with its cornflakes, if the people prefer it.

The American people for a hundred years have been able to take butter for granted, which is something that only a pioneer people, reveling in the lush resources of a virgin continent, could do. In the long history of civilization that has never before been possible for any race. Butter has always been a luxury, reserved solely for the rich and fortunate.

No one knows when that original desert nomad, with a skin bag of sheep's milk slung across his jolting camel's back, first discovered, at journey's end, the peculiar conglomerate which we call butter. Men have known about it for at least 4,000 years, but over practically all of that long span they have reserved it for medicinal use, for a beauty aid, for anointment after the bath, and other luxury uses. Only in the last century has mankind had enough butter to be able to use it as a real food, and then only in a few countries and very sparingly.

Butter is, in our time, the world-wide symbol of earth's highest standard of living. Hitler, when he led the German people down the road to war, had to confront them with the grim modern alternative, "guns or butter." Throughout the world today nations are most readily classified in respect to their economic affluence by the tell-tale blessing or absence of butter on their tables. Even the proud British, one of the most truly civilized peoples on earth, have scarcely tasted it for 10 years and just about the first remark of every Englishman visiting our land is, how wonderful to have milk and butter.

Yes, America has had butter—so bountifully that it has graced virtually every man's table here for a 100 years. Four generations have simply taken it as a matter of course.

We still have plenty of milk and butter, thanks to the most efficient dairy industry in the world. Butter is still reasonably cheap, too. The average wage earner here can buy a pound of butter with fewer minutes of labor than he could 20 years ago.

But now a certain body of consumer sentiment seems to want to turn the clock back permanently toward those cheaper substitutes that less fortunate peoples have always had to use; vegetable oils and byproduct greases. Whipped up together we call it margarine.

There is nothing the matter with margarine. It is undoubtedly wholesome enough, as made now, and will supply the human craving for fat in spreads and cookery. But no masquerade that cotton oil and carcass grease can be put through will ever make them the princely food that is butter.

Cheap imitation butter, a byproduct that can be produced at a fourth of the cost of butter—in other words, yellow-colored margarine—thrown into open competition with butter, can have but one effect on the dairy industry and that is to hurt it. To be sure, our dairy industry will not perish because of this competition but it will gradually dwindle to a smaller output. Insofar as margarine displaces it, butter will gradually become scarcer. Fewer and fewer children in average families will know the taste of it. More and more, butter will become a luxury

for the well-to-do. In a couple of generations we shall, perhaps, be largely a nation of oil eaters, like our poorer cousins in the Old World. Perhaps our patriotic slogan, when we tighten belts for the next war, will be "guns or margarine."

The political fight for imitation butter, so far as it is successful, will move us one long turn around that historic cycle which long ago brought the Orient and part of Europe down to the drab level of a subsistence diet. For a century we have enjoyed the abundance from a highly developed animal agriculture, the richest fruits of this most blessed of all lands. We have lived on the fat of the land, and butter typifies it. Butter is part of that food bounty which includes meat, milk, eggs, cheese, and other livestock products—the rich, protective foods that have lifted the American diet up out of that age-old cereal-and-turnip level of the Old World. These products of animal agriculture are the backbone of the American dinner table, the things that distinguish it.

The descent back toward the cereal and vegetable diet, the loss of those rich animal foods (and once reduced, the animal industry is permanently reduced) is a process that most nations in this day and age would resist to the last ditch. Far older peoples than we would give much to have great livestock industries such as we have, especially the dairy. Those who have been mostly without meats, milk, butter, and eggs are the people who really prize them. Ask the British or German people what they would pay to have butter and eggs once more.

But some American consumers, who over long years have been surfeited to the point of unappreciativeness, seem to regard our incomparable butter industry as a sort of dog in the manger. Some of them seem to have set up dyed cotton or bean oil as a kind of fetish, a cause to champion, a symbol of thwarted privilege.

Well, assume that their cause will triumph; that before the year is out these good folks will be able to spread their bread and shorten their cake with untaxed, ersatz butter. Assume that the deed is done. Then what? Why, then future generations will, perhaps, be able to record that in the year 1949 the American people took steps to rid themselves of one of their most precious foods, to revert to the sardine oils of the poor and backward countries; in short, that they took steps to guide their children's diet once and for all into the torpid orientalism of cheap grease.

All in the name of economic progress.

Uniform Code of Military Justice

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. ELLIOTT. Mr. Speaker, I speak in support of the bill now before the House, commonly known as the military justice bill.

During the recent war I was called upon from time to time to aid and assist in Army court-martial cases. I served on general and special courts, as trial judge advocate on general and special courts, and as defense counsel representing those accused before general and special courts. Also, for a few weeks, though an infantry officer, I was detailed as an assistant judge advocate of an infantry training center.

Since acquiring this background of experience, I have been extremely interested in the efforts that have been made to bring more justice into our system of military justice.

I recognize the fact that an Army or any other military unit has the stern objective of winning wars; that discipline and authority are essential. But I have seen military courts all too often used to mete out harsh and unjust punishments for minor offenses.

I was detailed once as a trial judge advocate to prosecute some 25 soldiers for minor breaches of discipline before a special court martial. There was appointed at the same time as defense counsel a young officer who had no legal training and whose legal services to the accused were not in my judgment very valuable. His services consisted primarily in advising each accused that the best way to get through a court martial was to plead guilty. When I saw what was happening I continued to do my full duty, but did it less strenuously than I otherwise would have done in order to prevent these soldiers from being punished out of all proportion to the offenses which they were charged with committing.

I believe that this bill, if passed, will have a good effect on the morale of the members of the armed services, and that in the system which it sets up they will recognize that justice is the intent of the system.

I am particularly impressed with the fact that enlisted men, if this bill becomes law, may serve on general and special courts. I have long felt that the service of enlisted men on military courts would have a most beneficial effect. The enlisted man will feel that he is a part of the system of military justice. He is due the respect which this bill attempts to give him.

Likewise, I commend this committee for writing into the law the provision that both prosecution and defense counsel shall be trained lawyers. Many of us have argued for this provision a long time.

I am also happy to see that this bill provides for a single law to apply to all the armed services.

Mr. Speaker and colleagues, this bill also provides for a court of military appeals. A review may be had in this court of appeals by any accused who has been sentenced to confinement for 1 year or more. As I understand it this court of appeals has the power to review both the law and the facts in cases that come before it.

This bill is something new in miiitary justice. There is opposition to it. Undoubtedly, time and experience will point out its defects. The Committee on Armed Services does not claim that it is perfect. They do claim it is a great improvement over the present system.

This bill will not damage discipline in the armed forces. In the long run it will improve discipline. The American soldier, sailor, marine, or airman will appreciate and respond to the fair treatment in matters of military justice which this bill gives him.

Petition of Residents of State College, Pa., Supports Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to enclose the copy of a petition signed by residents of State College, Pa., and presented to me, supporting the admission of Hawaii to the Union as a State.

The petition and the signature of those supporting it follow:

We, the undersigned, believe that the Territory of Hawaii has qualified for statehood politically, economically, industrially, educationally, socially, and culturally. We wish to record our considered opinion that the Congress of the United States should initiate such action as is necessary to change the political status of Hawaii from that of a Territory to that of a State of the Union. We request that you present this petition to the proper congressional representatives.

Mrs. Geo. E. Lemmon, Mrs. D. S. Cryder, Mrs. R. E. Marker, Mrs. H. R. McCulloch, Miss Eva C. Van Tries, Mrs. B. F. Hutchins, Mrs. Geo. F. Johnson, Mrs. Kenneth Manning, Mrs. David B. Pugh, Mrs. E. C. Henry, Mrs. C. A. Morgan, Mrs. T. S. Spicer, Mrs. D. W. Carruthers, Mrs. Kirkpatrick, Mary Elizabeth St. John, Mrs. W. H. Gray, Mrs. F. P. Weaver, Mrs. Randolph Thompson, Mrs. S. Benjamin Swanson, Mrs. C. R. Krister, Elizabeth Morrow, Mrs. Wm. C. Thompson, Mrs. Wm. L. Mudge, Miss Rebecca M. Buck, Mrs. C. A. Lamm, Mrs. H. R. Kinley, Mrs. T. J. Gater, Mrs. Laura G. Davey, Mrs. Frank A. Butler, Mrs. L. R. Parks, Mrs. George Wurfl, Mrs. J. A. Arbuckle, Mrs. John Eliot Allen, Mrs. Thomas Hammonds, Mrs. Paul Bixby, Mrs. W. B. Nissley, Mrs. T. S. Patterson, Mrs. E. R. Bordner, Mrs. Esther N. Hay, Mrs. Kyle M. Alexander, Mrs. Carl M. Furst, Mrs. Vernon M. Albers, Mrs. W. Conard Fernilius, Mrs. Mason Long, Mrs. Harry H. Kauffman, Mrs. Esther Denniston, Mrs. H. W. Knerr, Mrs. E. J. Anderson, Mrs. Chas. W. Reed, Mrs. Donald G. Hay, Mrs. Paul Edinger, State College, Pa.; Mrs. R. E. Woods, Shippensburg, Pa.; Mrs. Geo. L. Porter, Chao-Ying Yuan, Mrs. Clarence E. Furst, Mrs. Charles F. Reese, Mrs. M. J. Reese, Mrs. D. C. Duncan, Mrs. C. A. Burge, Mrs. Norman M. Eberly, Mrs. W. E. Drake, Mrs. V. G. Sprague, Clarise Seeman, Frances Ford Forbes, Mrs. Samuel F. Crabtree, Mrs. A. L. Beam, State College, Pa.; Mrs. V. A. Houston, Lemont, Pa.; Belle H. Lindsay, Mrs. Russell C. Miller, Mrs. Merrill Wood, Mrs. Miriam S. Whitacre, Lillian I. Garbrick, Ione B. Garbrick, Mrs. Thelma M. Betts, A. Jean Doan, Helen S. Battorf, Alice Bright, Mrs. Andrew E. Newcomer, Jr., Ching-Sing Miao, Mrs. Fred G. Merkle, Mrs. Walter T. McCormick, Mrs. I. H. Egolf, Mrs. J. B. R. Dickey, Mrs. J. F. Fuese, Mrs. Harry M. Miller, Mrs. W. R. Shenk, Mrs. Thomas I. Mairs, Mrs. Paul Griggs, Mrs. W. H. Button, Mrs. Margaret M. Beach, Mrs. R. E. Mirshall, Mrs. George R. J. Combs, Mrs. James C. Anderson, Mrs. Christiana W. Appleby, Mrs. Lula Bloom, Mrs. Fred Lininger, Mrs. C. E. Barb, Mrs. D. W. Carruthers, Nora C. Noll, Irene M. McHugh, Sarah

G. Crockett, Cora R. Pearce, Henrietta N. Willard, Christina Odgers, Mary Martin Moss, Nannie Gast, Carrie Gast, Mary Webb, Mrs. S. C. Miller, Mrs. T. E. Holmes, Mrs. Harry G. Huber, Mrs. William Frear, Mrs. John B. Wallace, S. Elizabeth Young, Mary W. Fratse, Ethel D. Bottorf, Margaret G. Glenn, Adelene H. Keeler, State College, Pa.

Watershed Management

EXTENSION OF REMARKS
OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. HILL. Mr. Speaker, a few days ago I made an address by radio on the value of watershed management. I am sure I am not understating this matter when I say that many of us have no idea of what we mean when we speak of watershed management. Watershed management is a very new program. First, we should know what we mean by watershed. A watershed is an area of land drained by small creeks or rivulets sloping the same general direction and finally culminating into large streams, and the land all draining in a general direction, thus finally forming a river basin.

Irrigation companies, municipalities, and industries using water from watersheds are vitally interested in how the watershed is protected—yes, even policed. And of course for the purpose of regulating the flow of the water and directing the use of the water there would be developed lakes and reservoirs. The control of underbrush, the grass, and the trees are all a part of a range-management program.

Today I wish to discuss with you a subject which is close to the hearts of all Coloradoans—water. It is a big subject and too involved to discuss in all its phases during this broadcast, so I'm going to talk about a little-known phase—a phase which will become more and more important as time goes on—watershed management. What is it? How do you go about doing it? Why is it so important?

Water delivered to the farm, to the city, or to the drinking glass must be clear and dirt-free. Water is our most prized possession, but it can be and often is our worst enemy when unregulated floods occur, destroying homes, lives, and property. Watershed management means using and developing those lands and small streams on which water is collected from rain and snow, and delivering it in regular flows.

The process of water delivery, though simply spoken, is very complex. It involves careful study of the weather, particularly rain and snowfall; of stream behavior, especially now that we have built cities on and along flood plains; of soils and plant cover, particularly as these have been altered by erosion, cultivation, logging, and grazing. Each of these factors has a bearing on the other. Change one and you change the character of the other. How far can we change one factor before another will become detrimental to us? Watershed management is a young science. Right now we have to experiment on a watershed basis in order to become acquainted with all the factors governing water delivery. We go about it by experimentation and research later by application and general practice on a watershed.

To get some of the answers to watershed management problems I have conferred with the men at the Rocky Mountain Forest and Range Experiment Station. This is a regional research organization supported by the Federal Government. The headquarters for this station is on the Colorado A. and M. College campus at Fort Collins, Colo. This helps to provide for close cooperation between State and Federal programs.

How important is watershed management? If we had unlimited water supplies, it would not be too important other than to find ways and means of keeping sediment out of streams and reservoirs. But each year we are finding more and more use for water by irrigating more land, by building more homes, and by developing more industries. Each year our water supply becomes more limited in relation to needs. Each year the time draws nearer and nearer when we shall have to guard our supplies in the same manner that we husband our soil. How limited will our water supplies become? Is there a relation between the various uses within the watershed—logging, mining, grazing, recreation—to the use of water outside the watershed—farming, industries, cities? There is a very definite relation, as I shall point out. More and more evidence points toward the production of water as being the most important use of a watershed.

Let us look at a few of the things that happen within a watershed. A logger cuts a virgin stand of lodgepole pine in the high mountains. Have you thought what this might mean in terms of snow storage during the winter and spring? Where the trees have been cut there are fewer trees to catch the snow and more of it reaches the ground. In fact where trees have not been cut up to 30 percent more snow is stored to become available for stream flow. You note I say "available." Results of studies of the effect of logging on snow storage are not yet complete on a watershed basis. They are under way and should they demonstrate that more water will be available for use, an important field of watershed management will begin to unfold.

Most of our watersheds are grazed by livestock and game animals. This brings up the question as to what is the best use when the needs of all the people are considered. We need livestock and game and we need good water. Fortunately for all of us, experiments show that under most conditions watersheds in reasonably good condition can be moderately grazed without any harm to the watershed. If grazing is too close, the cover of living plants and litter is reduced to a point where it no longer gives needed protection to the soil.

The heavier the grazing the less water from rain and snow will be absorbed by the soil, but the loss of water absorption by the soil is not serious so long as no erosion of the soil occurs. As soon as that happens we know that the grass and weed cover is not effectively checking erosion and we are putting sediment in the streams to fill up irrigation canals and reservoirs. The water-absorption rate by the soil may be reduced by as much as one-half inch per hour and the plant cover will still be able to hold the soil in place, but if this rate is reduced by one inch or more per hour, the soil will erode and cause much damage. You see, if the water cannot get into the soil, it will flow on the surface and carry soil particles with it. Often a point is reached where this run-off does more harm than good, for once it becomes silt laden, it makes irrigation difficult and domestic water expensive to clear.

A stream that carries too much silt in it—and by too much I mean when you cannot see your hand after you have put your arm up to the elbow in the water—prevents the sunlight from entering the water. Sunlight is necessary for the growth of small plants which produce fish food, thus a muddy stream has no fish and such a stream is no fun for a Sunday picnic either.

Well, those are just a few examples of the kind of information that is now being gathered—information which will give us the know-how of handling and using our watersheds for the greatest number of people in the long run.

There is another point about watersheds to which I should like to call your attention. You have all heard—and many of you have been in—the heavy snows this past winter, in many places the heaviest on record. We hope the snows have passed. Now, let us look in a general way at how the snow is melting. Already, floods have occurred in the Middle West along the Missouri River, the water coming from melting snow at the lower elevations where much of the land is cultivated. Snow melt has not yet started in the mountains where much of the land is covered with native trees and grass. To be sure, when it starts, we will have high water, but no floods unless we get a heavy rain on the snow. It occurs to me that there must be some relation between plant cover and the speed with which water from rain or snow will fill our stream channels and overflow their banks.

As you can see, this phase of our general problem of water—watershed management—is both complex and interesting. So interesting, in fact, that I have received several recent publications and bulletins on the subject. All Coloradans are interested in the subject, for upon it our future welfare rests. Colorado is an agricultural State dependent upon water for its existence. Watershed management is the youthful science designed to perpetuate that existence, a science which studies the relationship of the several watershed uses to one another and how we can make best use of them.

This discussion of watershed management has been very brief. I found it to be a big subject, after all. Let me hear from you if you should like to see and read some of the more recent bulletins and publications on watershed management. I am sure you will find them interesting and informative.

Compulsory Health Insurance

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution against compulsory health insurance:

AMERICAN ASSOCIATION OF INDUSTRIAL PHYSICIANS AND SURGEONS,
Chicago, Ill., April 25, 1949.

The Honorable WALTER H. JUDD,
House of Representatives,
Washington, D. C.

MY DEAR SIR: At the thirty-fourth annual meeting of this association assembled in the Hotel Book Cadillac, Detroit, Mich., April 7, 1949, the following resolution was presented and passed relative to compulsory health insurance legislation:

"Whereas under a system of free enterprise the American medical profession has established the world's highest standard of medical care, thereby helping the United States to become the healthiest major Nation in the world; and

"Whereas the benefits of American medicine now are available to the majority of the people of this country and can be extended to every American through budget-basis voluntary health insurance; and

"Whereas the experience of all countries where government has assumed control of medical services has shown that there has been a gradual erosion of free enterprise and a progressive deterioration of medical standards and medical care to the detriment of the health of the people; and

"Whereas the great advances which have been made in our own specialty under the stimulus of private enterprise would be impeded by any form of Federal control of medicine: Now, therefore, be it

"*Resolved,* That the American Association of Industrial Physicians and Surgeons does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for bureaucratic control; and

"That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative now in the Congress of the United States, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation."

Thanking you for due consideration of this resolution, I am

Yours very truly,
EDWARD C. HOLMBLAD, M. D.,
Managing Director.

A Republican Call to Arms

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the National Broadcasting System, Friday, May 6, 1949:

A REPUBLICAN CALL TO ARMS

Good evening, my fellow Americans. In the very beginning I wish to pay my respects to the leader of a political party not my own.

I am sorry I cannot remember his name, but he has long whiskers and clear-cut principles. I refer to the gentleman who ran for President last November on the vegetarian ticket. He was both for something and against something. He was for vegetables and against meat. If it blooms, you eat it; if it wiggles, you leave it alone. Just as simple as that.

My Republican principles are equally clear and simple. When my party was born, it was born for freedom, and it was against slavery. Good Republicans have never wavered from that position. We are today still for freedom and against slavery, regardless of its form; and there are many forms of slavery.

As an example of what I mean, the difference between a peasant in Communist or class-riddled Europe and a farmer in America has been the difference between slavery and freedom, for the American has always been free. He might possibly be a rich farmer, or he might be dog poor. He might be bright and able, or dumb and clumsy. He might be lucky or unlucky. But always the American farmer has maintained his freedom, even despite the traps the New Deal set for him under Henry Wallace.

The New Dealers have never understood or practiced the principles of liberty and of freedom. While they have recognized, as we has been based on devising ways and means problems which demand the attention of the Government, every New Deal effort to help the farmer out of his economic troubles has been based on devising ways and means to regiment him, to enslave him to his Government. For instance, the New Deal administration just recently came up with a new plan to entice to its support not only the farmers, but the consuming public as well, by promising high prices to the farmer for the foodstuffs he raises and low prices to the city housewife for the food she buys.

There is, of course, a hook hidden in this New Deal proposal. To enjoy the high prices promised, the farmer must permit the Government to tell him what to plant, and when to sell his crops—a Pendergast form of farm relief, which in the end can only result in making an enslaved peasant out of him.

The city consumer may be able to buy food across the store counter at lower prices, but later he and other Americans will be called upon to pay more than the difference in higher taxes.

Remember, high taxes also can enslave you. Already the average American has from 1 to 2 days' wages taken out of each week's earnings to pay the cost of Government. Just try next week to take home all of your own pay. You will find you cannot, for much of your earnings is withheld by a beneficent government to pay your income taxes, or under a promise to take care of you in your old age. And, if the Truman administration has its way, more will be withheld to pay for your lumbago, your grocery bill, or what have you.

A slave produces wealth and earns money, but the master takes both under the guise of knowing what is best for the slave. Thus the master makes certain the slave is helpless and easily kept under control. Such policies are exactly the same as those of the Stalins, the Hitlers, and the Mussolinis.

During the coming fiscal year, it will cost $45,000,000,000 to operate the Federal Government—five times as much as was spent in any peacetime year under Roosevelt. If the social-State programs proposed by President Truman are put into effect, it will require an additional $20,000,000,000 annually—or a total of $65,000,000,000—to run the Government. Yes, my friends, Americans can lose their freedom and become enslaved by costly Government and a huge public debt.

Freedom is an indivisible thing. A man cannot lose a part of his freedom and still remain free. He cannot lose the freedom of choice and still call his life his own. The freedom to choose how he will worship, speak, write, rear his children, and work out his own destiny—that is freedom. It was the burning desire for freedom which guided the every move of our founding fathers—freedom of action and freedom of opportunity.

Freemen are usually brave and unafraid; but many brave men have lost their freedom—some through force and others through the subtle growth of governmental waste and bureaucracy. The cancerous cells of communism have been planted here, and we have been moving along the road which inevitably leads to state socialism. The time has come when we should make certain that all our fences are tight.

The true liberal—distinguished from the radical—is one who would liberate. He believes so much in liberty he wishes to share it with every human being. Certainly he is not one who so mistrusts his fellowmen that he pleads, from Moscow to Missouri, to be given stand-by controls or special emergency powers over them.

I have no quarrel with the Democratic Party. It has had a long and honorable life, but in recent years it has been taken over by the New Dealers, the corrupt city bosses, the racketeers of labor, and the fellow travelers of communism. It has, both in deed and in fact, become the radical party.

There is no room in America for two major radical parties. Victory for the Republican cause cannot be won by "me too" candidates or "me too" campaigns. There is no future in attempting to outpromise or outbid the New Deal for votes. The time has come when the Republican Party must have the courage to fight for the principles upon which it was founded—the principles which made this country great and strong, happy and prosperous—the envy of all the world.

Like the vegetarian candidate, the Republican Party must be for something and against something. It must take these positions openly and courageously. We must not be afraid to be against those things which we know are wrong—even if they are, for the moment, popular.

The New Dealers engage in wild spending sprees with public money and charge that the Republicans are against them. We answer: We are. At the same time, we are also for good and efficient government, economically operated.

They propose to give back to union bosses the power to control the working people of this country, and charge that we Republicans are against it. We are. Instead, we are for freedom for the individual worker.

They propose the Government go into competition with private business by building and operating industrial plants, and charge we Republicans are against it. Again I answer, we are. We are also for the opportunity for both the individual citizen and the Nation to grow and prosper under the free enterprise system.

They now propose, under the Brannan plan, to chain the farmer to the wheel of bureaucracy. Undoubtedly they will charge later the Republicans are against that. We will be—unless we again weakly say: "Me, too." Instead, we are for real aid to the farmer under a system which will help him solve his problems but will leave him free to run his own farm as he chooses.

When we insist that Mr. Truman kick the Communists out of the Government in Washington and stop playing footsie with the fellow travelers, we are certainly against some-

thing. We are against the Communists, but we are also for America.

We must have the courage to be against many of the things which Mr. Truman's advisers have talked him into being for—things which, to be charitable, Mr. Truman does not understand. With equal courage we must also be for many things the New Dealers are against.

For instance, we are for economical government, administered without corruption—without the help of the Pendergasts, the Hagues, or the Tammany Halls.

We are for the right of every citizen to earn a decent living under decent conditions, without being subjected to the coercive yoke of either employer or labor boss.

We are for Federal aid to the underprivileged, when necessary, but we are for the administration of such aid by State and local authorities, rather than by the bureaucrats of Washington.

We are for encouraging and helping every man in making provision for his old age, medical care, and housing—each in his own way. But, we believe it is the first duty of each citizen to take care of himself and his own family whenever possible, with the Government stepping in only to prevent hardship and suffering.

We are for the American private enterprise system which has given our people the highest plane of living in the world—benefits which those of other lands can only dream about.

We are for cleansing the political blood stream of America and for kicking the Communists and all other subversives out of our Government.

These simple principles are firmly based on the American system, for which the Republican Party stands. There are others. It is difficult to believe that the Truman administration is opposed to them. Yet, both words and actions prove that it is.

As a great Midwestern editor said a short time ago, "God hates a coward." The Republican Party must have the courage to stand and fight for fundamental principles. The Republican Party cannot just go along. Instead, it must be the strong right arm and the stout shield which protect and guard the rights of each and every individual American. Only by keeping America sound and solvent, strong and free, can we guarantee the fulfillment of our national destiny and the peace of the world.

The American Politburo

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the Economic Council Letter for May 1, 1949. We may not agree with all that is contained therein but certainly it is a challenge to this Congress and an investigation, as suggested, could well be made to ascertain what group, if any, is the power behind the scene.

Intelligent men can see the world is in a mess. More particularly, Americans can see they are being rushed to the destruction of their liberties.

There should be no mystery as to how all this has happened—and we believe there is none. Like any other problem it yields to dispassionate analysis.

But is what is happening accidental or by design? And if by design, who are the architects? And why are we being rushed in this direction?

Why have the one-hundred-and-forty-million-odd American people been transformed in 17 years from a free people of incomparable strength, into a people whose liberties have been impaired and are in danger of being destroyed within the next 2 or 3 years?

WHAT HAS HAPPENED

First, just what is it that has happened?

Clearly, we Americans have passed under the control, still temporary but well-defined, of an alien-minded force. Our material savings and our natural resources are being dissipated. Our country has been caused to betray other peoples who trusted in us. America was founded upon Christian tradition; and yet well nigh every Christian tradition has been violated, as well as every important and long-established American tradition.

Much of our means of livelihood, as well as our means of self-defense, has been destroyed. A huge government bureaucracy has been built up. The country has been committed to wasteful schemes that tend to destroy rights of property and discourage individual initiative. The principles of hard work and thrift have been undermined. Morality and religion are at a low ebb. The alien element has infiltrated most of our education and many of our churches.

Laws have been passed that constantly make more difficult the conduct of private enterprise. Through long neglect of the teaching of history in our schools and colleges, few Americans under 40 have any conception of how or why America became great.

No part of the last 17 years has been so filled with attacks by this alien force as during the less than 4½ years since the beginning of the Yalta Conference.

TREACHERY AT YALTA

At Yalta a dying President, incapable of clear thought and prompted by a dying adviser who was ignorant of the affairs at stake and equally incapable of clear thought and who for years had been surrounded by and under the influence of these alien elements—this unhappy, beclouded, dying President was persuaded to sign an agreement which was to betray China to communism and Soviet Russia.

Today, 4 years later, the completion of this betrayal is being consummated before the gaze of a forgetful world, whose attention is being diverted from the tragedy by the well-timed talks of peace in Berlin. And almost certainly with China will eventually go all the rest of Asia, including Japan. Our betrayal of China marked the end of our long-time policy of the open door in China, which, together with the Monroe Doctrine, had long been the cornerstone of American foreign policy.

If it had been in our vital interest to betray China, some argument, however ignominious, might have been raised by some in its favor. But it was not in any sense in our interest. It was in disregard of every American interest.

The same alien element forced us to adopt the policy of unconditional surrender toward both Germany and Japan, although such unconditional surrender resulted in the practical annihilation of Germany and such horrible destruction as at Hiroshima and Nagasaki. This policy removed both Germany and Japan, which otherwise could have been reconstructed and made effective barriers to communism.

It ordered the American Army to retire over 100 miles over land taken by our troops from the Germans, in order that Soviet Russia might occupy Berlin and much of the best of Germany. This, like other travesties and treacheries, has never been explained.

This alien element fathered the Nuremberg trials, vehement and vindictive in their inception and in their carrying out, and which, should the United States ever be defeated in war, will be the precedent for the hanging of every important American official, from the President down. It led to the betrayal by us of the leaders of a huge Russian military force who surrendered to American troops and who were turned over by us to certain punishment at the hands of Soviet Russia.

This same influence led to the setting up of the United Nations—an utter failure so far as any interest of the American people is concerned, but entirely understandable as the tool of the internationalists.

AMERICA, A PUPPET OF STALIN IN REGARD TO SPAIN

This same alien influence persuaded the United Nations, this time at the instance of Stalin himself, to call upon the United States and other governments to withdraw ambassadors from Spain. Yet Spain is the one large country on continental Europe that has defeated communism and held it under complete control. She would be the strongest ally the United States could have in Europe.

This same alien influence permitted or ordered the destruction by ruthless force of literally billions of dollars of American military matériel, including airplane engines, precision instruments, and even watches. It sold at the merest fraction of value or gave away other billions of matériel. And much of this matériel clearly found its way into the hands of Soviet Russia. Some of this matériel is at this moment being used by the Soviets to conquer China.

Ex-President Hoover in his report on the military budget said:

"The question of what became of the tanks is only a part of the broader question of what became of the vast quantities of war material on hand at the end of hostilities. The Army has stated that it has material sufficient to equip only 18 divisions, although at the end of the war it had some 89 fully equipped divisions and great additional quantities of material in the pipe line. Disposition of easily replaceable material is readily understood; but loss of complicated, difficult-to-produce military equipment is another matter, especially as the military were put on notice 6 months after the end of the war as to the seriousness of the international situation."

Frank Hanighen in the weekly supplement entitled "Not Merely Gossip" indicates that the scandal of the disappearance of this matériel may exceed that of Pearl Harbor.

Who but treasonable conspirators against America could have ordered it destroyed?

UNRRA

This same alien influence was back of UNRRA, $600,000,000 of whose funds were given to the Communist Government of Yugoslavia, and other funds used to build up Soviet Russia herself. It was back of the surreptitious and illegal admission into the United States of refugees estimated to be at least a million and a half, and possibly as many as three and a half millions. It was back of the fatuous scheme known as ERP and ECA, whereby we are giving seventeen billions of the savings and natural resources of the United States to bolster up Socialist governments in Britain and elsewhere.

As a result of 16 years of this alien influence in the United States, we have today a Federal debt of two hundred and fifty billions and a Federal budget of nearly forty-two billions, but which may reach fifty billions before the present session of Congress is over. We have laws without

number to regiment the people and to supply soft, useless jobs for hundreds of thousands of bureaucrats. And we find representatives of this alien-minded element in vital and cushy jobs in every department of Government, in numbers far out of proportions to their part of the population.

AND NOW

And now this same alien force is demanding—

That we extend social security to 20,000,000 more people at an added cost of several billions a year; that we adopt socialized medicine, though Britain's socialized medicine seems a failure from the standpoint both of physician and patient. That we extend the so-called reciprocal trade treaties, which in somewhat similar form have been on our statute books for 15 years and have largely destroyed the American watch industry, and have weakened others and have been one of the principal causes of this present recession.

That we restore the iniquitous Wagner Act in place of the Taft-Hartley Act, though under the former we had a continual succession of strikes and sabotage, and under the latter we have had vastly improved conditions.

And Congress has already authorized $5,500,000,000 for ECA (authorized but not yet appropriated), although Spain, whose friendship and good will would do more for us than any other country on continental Europe, is still left out; and although Britain and France, the two principal beneficiaries of ECA appropriations, have not only socialized governments and tremendous numbers of Communist Party members, but treaties of alliance and mutual assistance with Soviet Russia which, if they mean anything, would preclude them from joining with the United States against Soviet Russia. Moreover both Britain and France and other beneficiary nations are constantly shipping war matériel, paid for by the American taxpayers, to the U. S. S. R.

THE ITO AND THE ILO

Beyond all this, the Congress is to be asked to ratify the International Trade Organization Charter which would take away from the Congress of the United States all future power over both internal and foreign commerce of the United States, so far as the ITO should decide to exercise that power itself.

The Senate is to be asked to ratify the right-to-organize "convention" of the ILO—the International Labor Organization.

And in both the ITO and the ILO the United States would have one vote out of about 50. Indeed, the ILO pact would by its own terms become binding on the United States even though no other nation should adopt it.

The ITO and ILO are only two of a dozen international alphabetical organizations set up by or affiliated with the United Nations and which, largely by aid of former American New Dealers and other left-wingers from countries of Continental Europe, have been busily engaged in drafting so-called conventions of agreements to be submitted to the various countries for ratification.

If any of these agreements is ratified by the Senate, then under the terms of the Constitution it becomes the supreme law of the land. All Federal statutes and all State statutes inconsistent therewith are thereby wiped out and become of no effect.

Here is an astounding situation. While the great mass of the brain and brawn of America is engaged under private enterprise in carrying on the thousand and one activities that make up American production, industrial, agricultural and otherwise, a few thousand alien-minded busybodies, most of them foreigners, are plotting to take the American Republic apart. And most Americans who are working with them are alien-minded. These people are engaged in cooking up schemes which, if ratified (and they will be ratified unless the American people wake up), will completely transform the Government of the United States.

In fact, they will transform the lives of all the people of the United States. We will have scrapped the Declaration of Independence and our Constitution. We will have abandoned the century-and-a-half example the United States has given the world. We will have permitted alien schemers to seize all that we have and all that we are and throw it into the common pot with the rest of the world. America will have surrendered. Politicians willing to appease this alien element, together with the left-minded newswriters and alien-subsidized newspapers, will have betrayed the American people.

AUXILIARY GROUPS ARE AT WORK

The alien interest we speak of, like a well-organized army, have long had auxiliary groups that play a heavy part in conditioning or molding opinion, in propaganda of all kinds and in various schemes to punish their enemies.

Thus there is the Foreign Policy Association, always promoting foreign interests, notably those of Soviet Russia, and which is largely guided by the clever Russian-born Vera Micheles Dean.

There is the World Federalists, backed with plenty of money and by nearly all left-wingers, and whose success would end American independence and American liberty. This has as its moving spirit the former New York banker and left-winger, James P. Warburg. Incidentally the bible of the World Federalists is a book by one Emery Reves, which, on the jacket of the book, was endorsed by Albert Einstein, Senator Claude Pepper, Dr. Louis Finkelstein, Thomas Mann, and by leading American churchmen. Perhaps they did not know that Emery Reves was born a Hungarian who changes his name from Reves Imri.

There is also the American Association for the United Nations, headed by that perpetual internationalist who also, as chairman of the Committee to Defend America by Aiding the Allies did much to involve this country in World War II—Clark M. Eichelberger.

There is the League of Women Voters which so often is back of left-wing legislation and was a powerful factor last fall in the defeat of many conservative Congressmen of both parties. The league, headed by Anna Lord Strauss, was recently exposed by Lucille Crain and Anne Hamilton in Packaged Thinking for Women, as a result of which a serious split is threatened in the ranks of the league.

And bearing on activities, official and unofficial, designed to punish dissenters and enemies, Judge Edward L. Von Roden, of Pennsylvania, who served on a special commission appointed by Secretary Royall to investigate military justice in Germany, is quoted in the CONGRESSIONAL RECORD of March 10, 1949, as saying all but two of the Germans in the 139 cases we investigated had been kicked in the testicles beyond repair. This was standard operating procedure with American investigators.

It is clear that this element can be as cruel and ruthless toward individual human beings as it is toward this country in trying to sell it out to international socialism or communism.

AND THERE IS UNESCO

One of the agreements worked out by the so-called UNESCO is an international bill of rights. This will likewise presently come up for ratification.

Does this international bill of rights improve on the Bill of Rights in the Constitution of the United States? It does not. In fact, it destroys many of these existing rights. For instance, it says nothing about any rights of property. And knowing the sources of these proposals, it requires no effort to see that this international bill of rights is just one of the many attempts now being made from various directions and in all sorts of ways to destroy the American Republic.

THE ATLANTIC PACT

Then there is the Atlantic Pact which has just been submitted to the Congress and which we discussed in letter 213. The ratification of this pact will contribute vastly to the dismantling of the free government our ancestors set up.

The Atlantic Pact, if ratified, will be implemented by a new lend-lease bill, to rearm certain European nations. Secretary of State Acheson on April 27 admitted as much to the Senate committee.

The first lend-lease bill was enacted by the Congress in 1941. It was falsely offered to the Congress and the country as a measure to avoid war. It was precisely the opposite, as we and others predicted at the time. It was tantamount to a declaration of war. That lend-lease cost the United States $47,000,000,000.

What did this investment purchase for the American people? First of all, it financed Soviet Russia in building up the most threatening, most powerful nation that has ever appeared on the Eurasian Continent. It purchased the destruction of Germany, the only European country that could have stood up against Soviet Russia. It purchased the socialization of Great Britain and has led to the astounding situation of today where we free Americans, still retaining our private enterprise, are paying to complete the socialization of Britain and other European countries.

And that first lend-lease purchased the destruction of China. We went to war against Japan in order to maintain the open door and protect China. No nation ever went to war and more completely lost what it was fighting for than the United States in its war against Japan. Regretfully, we say that every man who died in our Pacific campaign died in vain.

Not only this, but we have thrown away all Asia, including Japan and the Philippines. For certainly the 80,000,000 Japanese cannot live without food from the China mainland. And they will not get that food now—unless Japan makes terms with Russian-ruled Communist China. And, of course, the Philippines could hardly last overnight.

And, cravenly moved by the Marxist slogan "Imperialism," we are at this moment seeking to compel the Dutch Government to give in to communism in Indonesia.

Hence the first lend-lease, costing us $47,000,000,000, purchased the greatest disaster in history. Is there reason to suppose that the second lend-lease will bring any better result?

Then there is the pending Economic Mobilization Act. This is designed for emergencies. It would give the President of the United States the right in his discretion to declare an emergency and to take over the absolute control of every man, woman, and child in the United States. That control could be as absolute as the control of the Politburo in Soviet Russia for of course the right would be exercised in the discretion of his advisers. And before we were through, that control might be exercised just as ruthlessly as the Russian Politburo ever exercised its control over 170,000,000 Soviet slaves.

For would it not be in the hands of the internationalists that have disrupted the world the past 15 years?

ZIONIST DOMINATION OF AMERICAN POLICY

In November 1947 the Assembly of the United Nations voted to recommend the partition of Palestine between Jews and Arabs.

It was purely a recommendation (the Assembly of UN has power only to recommend). But the Zionists and the American Government chose to treat it as a final determination. As everybody knows, events followed rapidly. The UN and the United States Government backed the Zionists at every point. When American Zionists failed by 100 millions to raise the $250,000,000 they sought in 1948, the Export-Import Bank, under the thumb of our administration, extended a $100,000,000 loan to Palestine. At every turn the new state of Israel has been treated as the first interest of the American administration.

Over a period of 100 years American missionaries, educators, and businessmen had built up in Mohammedan countries a vast good will toward America. America's attitude toward the Zionists who ruthlessly overran the Arabs in Palestine has brooked no opposition from any source. When the British, naturally smarting under the outrageous cruelties practiced by Zionists against the British, showed their resentment, the Washington administration promptly sided with the Zionists and against the British. The systematic campaign to boycott British goods received, so far as we could observe, not the slightest censure from Washington nor in such supposedly American newspapers as the New York Times and New York Herald Tribune. Everything was subordinated to the Zionists.

LET'S HAVE A CONGRESSIONAL INVESTIGATION

The American Politburo, behind the scenes, acts with extraordinary cunning, complete selfishness, and ruthless determination to secure absolute control of America. It has been operating at a growing pace ever since Roosevelt came to power in 1933.

In all the history of the United States, until Roosevelt, no alien element has had more than a passing influence on events. But the alien element now ruling commands huge public funds and the presence in vital Government positions of members of its group. It has the ready services of such smear outfits as the Antidefamation League, and such voices on the radio as Walter Winchell and Drew Pearson serve it well. Through intimidation it terrorizes officeholders, businessmen, and other citizens alike.

To no other force can possibly be attributed the conception and execution of the tragic moves of the Roosevelt and Truman administrations—including the proposals advanced today.

It was alien-minded influence that persuaded Roosevelt to scrap the 1932 Democratic platform and substitute the socialistic New Deal. It was alien influence that involved us in World War II, the most disastrous commitment the United States has ever made. It was alien influence that dominated much of our war policy.

Practically every major decision made with respect both to our domestic policy and practically all our foreign policy has been through the influence of men like Harold Laski and Felix Frankfurter and many others, either aliens today or alien-born or of recent alien descent. A court could well-nigh take judicial notice of the fact that for more than a quarter of a century Frankfurter, in the Harvard Law School, was training his students for future jobs in Washington and succeeded in placing an astonishing number of them in office.

The Congress could perform no greater service toward preserving the foundations of our Republic than to turn the searchlight of fearless investigation on the methods and the identity of this American Politburo.

No other investigation by Congress could throw such light on what has happened to America in the last 17 years, or on how to meet the threats that confront America today.

MERVIN K. HART,
President, National Economic Council, Inc.

Education Down South

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial on Federal aid to education from the Minneapolis Morning Tribune of April 7, 1949:

EDUCATION DOWN SOUTH

Georgia voters have just turned down a proposition which would have raised $45,000,000 for education, roads, and other State services.

This is not surprising, since Georgia is one of the States which would benefit most under Federal aid to education measures now before Congress.

Why, the average Georgia voter must have asked himself, should I raise my local taxes to improve public schools when there's a good chance taxpayers in other States can be persuaded to help foot the bill?

Using the administration-backed Federal aid formula Georgia is due to receive $17,745,000 in school aid while paying out some $4,476,000.

This is the equalization principle by means of which it is proposed to bring schools of the "poor" States up to the level of those in the wealthier States.

Friends of Federal aid say that Georgia and the other Southern States simply lack the resources to support their schools adequately. Even so they are spending proportionately more of their income for education than the other States.

This argument looked pretty good before the war. At that time it was possible to show that the Southern States were spending as much as 3 percent of their incomes for education. In the war years, however, the Southern States enjoyed a larger percentage increase in income than the country as a whole. Last year only 11 of the 48 States spent as much as 2 percent for education. Only one of those 11—North Carolina—was a Southern State.

Mississippi's income climbed so rapidly that its score of educational effort dropped from 3.7 percent in 1940 to 1.7 percent last year. Georgia, whose income rose from $901,000,000 in 1939 to $2,778,000,000 in 1947, was spending only 1.5 percent for education in 1947.

From this it would seem that the South's problem is not so much inability to pay for better public schools as its unwillingness to dig into its own pockets to raise the money.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Cleveland Plain Dealer of May 4, 1949, pertaining to the Taft-Hartley repeal legislation which was recently before the House for consideration:

A CONSPIRACY COLLAPSES

The approval by the House of the Wood bill, which embodies most of the salient features of the Taft-Hartley Act, and the refusal of the House to accept even a compromise alternative to the administration's Thomas-Lesinski bill, marks the collapse of a brazen conspiracy to restore the dictatorial powers of labor leaders over business and the members of their own unions, contrary to the public interest and the desires of the American people.

It is apparent now that in its final form, regardless of whose names appear on the title, the Labor-Management Relations Act of 1949 will retain many of the major reforms brought about by the Taft-Hartley Act.

These will include the use of the injunction to curb strikes threatening the national health or safety, the requirement for non-Communist affidavits, which probably will be extended to cover employers as well as union officials, assurance of free speech to employers and the requirement that unions as well as employers must bargain in good faith.

There is a possibility also that the new bill will continue the restrictions against jurisdictional strikes and secondary boycotts, the prohibition against the assessment or expenditure of funds by unions, as well as corporations, for political purposes, and limitations on the closed shop. These provisions may be added to the bill in the Senate if the House does not adopt them.

The Truman administration, conniving with the labor politicians, sought to abolish these reforms and to foist on the American people the one-sided and discredited Wagner Act, under the guise of carrying out its interpretation of the mandate of the voters as expressed at the November election.

But the same voters who elected President Truman also elected a Congress, a majority of whose Members had voted to enact the Taft-Hartley law over the President's veto. They also had a mandate from the people.

Nevertheless, in conformity with his campaign promise to bring about repeal of the Taft-Hartley Act, President Truman insisted that Congress accept the old Wagner Act virtually unchanged.

Thus, the President was willing to restore to John L. Lewis, A. F. Whitney, and other leaders of industry-wide unions the power to "pull the switch" on the American economy.

He was willing to abolish the non-Communist affidavit requirement, which gave unions the incentive and the power to oust Communists from responsible union positions.

He was willing to muzzle employers by denying them the right of free speech in their relations with their employees.

He was willing to permit unions to conceal their financial transactions from their members, to refuse to bargain in good faith when it served their purposes so to refuse to engage in jurisdictional strikes and secondary boycotts and to spend union dues and assessments for political purposes.

The labor leaders cannot complain that President Truman failed to carry out his part of the conspiracy. With unprecedented candor he brandished the patronage club over Congress, promising to reward those Members who supported the administration's labor bill and threatening to punish those who opposed it. He even attempted to disassociate himself from the concessions which Speaker RAYBURN and other House leaders were forced to make, although everyone on Capitol Hill was aware that such a compromise could not be spelled out without someone consulting the White House.

Nevertheless, the American people are not ready to embrace a labor government nor to look kindly on the spectacle of labor organizations attempting to dictate to the White

House or to the Congress. In spite of evidence that the White House is willing to accept such dictation, Congress will not do so.

Correct Decisions Necessary—What Are They?

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Carroll County Independent, published in Center Ossipee, N. H., of May 6, 1949, entitled "Correct Decisions Necessary—What Are They?":

CORRECT DECISIONS NECESSARY—WHAT ARE THEY?

And now realization is slowly coming to the United States that the forces of communism are still marching ahead in their program of expansion.

For all practical purposes China has gone. There will be fighting and last stands but the Communists have been rolling so steadily that it does not seem possible that any force the Nationalists can organize will stop them.

This all adds up to a most discouraging world picture for us. During the First World War, Russia, England, and France held the Germans, receiving and inflicting millions of casualties while we were preparing to send men overseas. During the Second World War, although France folded quickly under the German impact, Russia and England held and held, while we trained and equipped our men.

But now we have no one to act as a shield for us. Russia, who was an ally, is now an enemy. England is bled white financially and since 1945 has survived only through our aid. France is just beginning to recover, but it will be years before she again becomes a real power. Italy cannot be counted on. Belgium and Holland must be rearmed before they are again effective.

That leaves us, the United States, as the one great power to oppose communism.

The decisions to be made in Washington, during the next few weeks, may easily determine the course of world history during the next few decades.

If we do not give enough military and financial aid to the democratic nations of Europe, then their value as a buffer against the Russians becomes nothing. If we give too much help, then we place too great a burden on our Nation and we will run ourselves into a major depression. And that is exactly what the Russians hope that we will do.

If we give aid to China, chances are that the Communists will capture the equipment and then turn it on the Nationalists. If we do not give aid, we turn our faces against the last hope of even a semidemocracy in China.

If we rearm Japan and allow her to rebuild her commercial empire, we are giving aid and comfort to our former bitter enemies. But if we do not do this, we are discarding a most valuable potential ally.

This is no time for the utterance of pious platitudes and expressions of hope that the Communists will become reasonable. Their record shows that the only type of international politics they understand or respect are those based on sheer power.

Today we must make our moves wisely. Whether or not the men in Washington, or any group of men in the whole world, have the wisdom and foresight to make the correct decisions is very much of a question.

Historic Flight Retraced, Faster

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. CLEMENTE. Mr. Speaker, under consent to extend my remarks in the RECORD, I include herewith an article appearing in the New York Times under date of May 9, 1949, headed "Historic Flight Retraced, Faster." I think it only proper to have it inserted in commemoration of the thirtieth anniversary of the first flight across the Atlantic.

HISTORIC FLIGHT RETRACED, FASTER—NAVY MEN SPANNING ATLANTIC IN 15 HOURS, BUT FIRST TRIP REQUIRED 19 DAYS

(By John Stuart)

At 2:10 p. m. yesterday two iron men of the wooden airplane Navy-Curtiss 4 began at Floyd Bennett Naval Air Station to retrace the first flight ever made across the Atlantic, on which they set out 30 years and 8 minutes before.

They were Rear Adm. A. C. Read (retired) and Chief Aviation Pilot Eugene Saytor Rhoades, now a Navy inspector at the Lockheed Aircraft Corp's plant at Burbank, Calif., who were commander and mechanic of the only one of the three starting planes to complete the 1919 flight. The others were forced down at the Azores.

The two men boarded another Navy record holder, the Lockheed Neptune P2V-2, which will land them in Lisbon this morning a little more than 15 hours after their departure, in contrast to the 19 days their first flight required.

The Naval Air Station at Floyd Bennett announced last night that at 10 p. m. the plane was 1,553 miles out from the airfield on its way toward the Azores. A radio message said the plane was traveling at 186 miles an hour ground speed at an altitude of 4,900 feet. It passed over Cape Race, Newfoundland at 8:23 p. m. (d. s. t.).

The plane they are flying is the *Truculent Turtle* that flew from Perth, Australia, to Columbus, Ohio, on October 1, 1946, setting a still unbeaten world's record for range at 11,236 miles. Its pilot is Commander Thomas D. Davies, who helped design the plane to carry the atom bomb and who flew it on its long-distance record.

WILL DIP OVER TROUBLE SPOTS

The *Turtle* weighed 61,000 pounds at takeoff. The plane planned to dip low and circle over Chatham, Mass., Halifax, Trepassey Bay, Newfoundland, and the Azores so that the passengers can see the places where they encountered engine trouble and other difficulties on the first flight.

They would have taken off exactly 30 years later except for the delay of speechmaking on the ramp that looked out from the rear of the officers' club over Rockaway Inlet, close to the former Rockaway Naval Air Station, where they had prepared for the flight of 1919.

Three other survivors of the historic flight were absent from yesterday's ceremonies. They were Admiral John H. Towers, now a vice president of Pan American Airways, who was chief planner and flight commander for the 1919 flight; Lt. Walter Hinton, of Manhasset, Long Island, who is in the Far East, and Admiral P. N. L. Bellinger (retired), of Washington.

Rear Adm. Walter S. DeLany, commandant of the Third Naval District here, in opening the ceremonies, said that he, too, had a small part in the first flight. He was executive officer of the U. S. S. *Craven*, one of the fifty destroyers that the Navy had strung along the course as weather stations, course markers, and possible rescue vessels.

Rear Adm. Alfred N. Pride, now Chief of the Bureau of Aeronautics in the Navy Department, who also had a part as a junior officer on the escort vessels, said that new interceptor fighter planes and other types were being developed by the Navy to protect the sea lanes from possible attack.

Robert L. Earle, vice president of the Curtiss-Wright Corp., successor to Curtiss Airplane Corp., which built the NC planes used in the first flight, paid tribute to the advance the Navy had made. The two engines of the *Truculent Turtle*, he pointed out, deliver almost four times the horsepower possible from the four Liberty engines in the NC-4.

Kenneth P. Behr, of the department of marine and aviation, represented Mayor O'Dwyer at the ceremonies.

The *Turtle* took off under an umbrella of 200 Navy fighter and patrol planes.

The *Truculent Turtle* is due to leave Lisbon Wednesday, circle over Plymouth where the NC-4 ended her voyage, and go on to Hortholt, near London.

On Friday the *Turtle* will go to Paris for 2 days at the international air show there.

Is the Marshall Plan Backfiring?

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, disturbing reports have been issued out of Geneva, Switzerland, concerning the effect of our so-called European recovery plan. Michael L. Hoffman, writing in the New York Times, states that national economic planning is driving Europe toward increased autarchy and less efficient use of the natural resources of those countries. If this is true, it is our responsibility to act. Under leave to extend my remarks, I am including the article from the New York Times:

EUROPE IS WARNED OF AUTARCHY DRIFT—UN ECONOMIC BOARD CITES NATIONAL PLANNING DANGER—AIMS SAID TO MISFIRE

(By Michael L. Hoffman)

GENEVA, May 6.—National economic planning is driving Europe toward increased autarchy and less efficient use of its resources, according to the economic survey of Europe in 1948 issued by the United Nations Economic Commission for Europe.

In a warning to governments of both eastern and western Europe, the commission economists cite the contrast between the professed aims of international cooperation and actual investment programs as evidence of a dangerous trend.

"The avowed aim of much of the current economic planning is to bring about a higher degree of integration of European economy," the report says. "Yet the observable tendencies appear to move in the opposite direction. This is true, not only in relations between the two great complementary regions, the west and east of Europe, where political cleavages hamper the development of economic cooperation. It also appears to be true within these two regions owing to the rigid trading framework within which economic controls necessarily operate and owing to the absence so far of any satisfactory mechanism for expanding long-range planning to the field of international trade."

In a detailed study of national plans the survey finds that on the whole they have

been fairly well fulfilled. Looking at the longer-range prospects, however, it finds that continued development along the lines designed to bring increased self-sufficiency for each country will lead to decreased self-sufficiency for Europe as a whole.

Production programs of the various countries reveal the trend clearly. For nearly every important group of industrial commodities the western European countries are planning to import less proportionately than before the war to produce more at home.

Whereas 71 percent of petroleum products were imported in 1938, by 1950 the percentage will be only 30 if plans are fulfilled. For rolled steel products, the fall in the share of imports over the same period is from 11.7 to 7.9. For cotton and wool yarn a drop of over 30 percent is contemplated, while for rayon yarn, production plans call for reducing dependence on imports to one-fifth of the prewar figure.

"The test of effective international cooperation will be the extent to which these tendencies can be counteracted by a conscious effort to introduce closer integration into the separate plans and policies," the survey says. "So far little has been accomplished in this direction."

It is implicit in the data assembled by the ECA that the Marshall plan has so far had as its principal long-run effect the encouragement in Europe of this nationalistic trend. The survey points out that both investment programs and supplies of raw materials to western European industry would be impossible of attainment without United States aid in meeting the overseas trade deficit.

Commenting on the survey's revelations of an autarchic trend in planning, Nicholas Kaldor, ECA research director and one of the principal authors of the survey, said:

"This is perhaps the most disturbing feature of the entire economic situation in Europe."

New National Capital

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith for information only a letter and statement by John M. Barnes, of Oakland, Calif., concerning a second capital of the United States. They are self-explanatory and are as follows:

OAKLAND, CALIF., *April 13, 1949.*
Representative WRIGHT PATMAN,
Texas Representative,
Washington, D. C.

DEAR REPRESENTATIVE PATMAN: Attached herewith is data and recommendations relative to establishing a second capital of the United States. This is in conjunction with your ideas as set forth in a news article by Correspondent Othman. Copies of this recommendation have previously been submitted to President Truman and Senators WAYNE MORSE, WILLIAM KNOWLAND, GLEN TAYLOR, and ALEXANDER WILEY.

I am a general contractor and will submit an informal bid for supervising construction of facilities in accordance with the attached plan. My antecedence include residence in Alameda or Contra Costa Counties since 1926. I am a licensed general contractor with over 20 years' construction engineering and administration experience in development of the East Bay area and the Pacific Northwest. I also spent a number of years with the United States Army on many assignments including post engineer during the construction of Hunter Liggett Military Reservation, executive officer during design of Camp Beale, Marysville, Calif., executive assistant to the commanding general, Ninth Service Command, and also commanding officer of Salt Lake City Army Air Base.

I feel akin toward your people of eastern Texas, having been hospitalized during 1943–44 at the Army hospital, Longview, Tex., and can recall the treatment accorded me by the people there.

Yours sincerely,

JOHN M. BARNES.

Break-down of approximate cost of auxiliary or cultural capital with underground facilities to be located at heart of United States, probably in the Ozark Mountains near Springfield, Mo.

Land	$3,000,000
Airport	8,000,000
Utilities (water, sewer, gas, electricity, etc)	1,000,000
Railroad facilities	1,000,000
Streets, grading, landscaping	2,000,000
Capitol building (with 1 large and 2 small auditoriums, conference rooms, etc.)	18,000,000
Office buildings (15-dispersed)	15,000,000
Housing (Government employees and officials)	10,000,000
Underground facilities (storage facilities for archives, secret files, technical information, etc., necessary facilities for operation of vital Government agencies)	38,000,000
Individual State building (donation of land and not more than half of cost facilities for each State to be used by State agencies for cultural and liaison purposes)	4,000,000
Total	100,000,000

Location should be in moderate climate, near a mountainous area near center of United States and fairly near large urban area.

These facilities will be used during peacetime by various departments of the Federal Government, for storage of records and scientific data, special congressional committees, special sessions of the Congress during extreme heat or cold weather in Washington. Also shall be a cultural center of the country, and for the enjoyment and educational purposes of all individuals, and for the preservation of State and human rights.

This cultural or auxiliary capital would be accessible to all the people of the United States for their education, welfare, and enjoyment, and for the purpose of giving a western as well as an eastern outlook on national and international affairs. It would also be of obvious advantage should we get involved in another war.

Cost of $100,000,000 is small in comparison with annual cost of military, and Marshall plan. This estimate of cost should be sufficient for at least 10 years, and provide necescary facilities for operation of vital Federal agencies. It is for the purpose of preserving and improving the know-how so vital to the future of not only the United States but the whole world.

RESOLUTION TO BE OFFERED

It is my plan to introduce a resolution calling for the appointment of a committee by the Speaker of the House to consider and make recommendations to the Congress on the following:

First. Whether consideration should be given to the establishment of another National Capital, either to entirely take the place of our present National Capital or to supplement it to be used when desired.

Second. Determine the governmental functions that are now being administered in Washington, D. C., that could just as well be administered in other sections of the United States far removed from the present National Capital.

Third. Consider and submit to Congress plans submitted by architects, engineers and civic or other public-spirited and patriotic persons and organizations on this proposal.

Organized Veterans of Michigan Protest Ilse Koch Commutation

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. SADOWSKI. Mr. Speaker, the organized veterans of Michigan, through the Consolidated War Veterans Councils of Michigan, Inc., and the Allied Veterans Council of Wayne County, Inc., have adopted the following resolution protesting the release of Ilse Koch. The Allied Veterans Council, Inc., of Michigan, is a united group representing the United Spanish War Veterans, Veterans of Foreign Wars of the United States, American Legion, Disabled American Veterans, Red Arrow, Polish Legion of American Veterans, Jewish War Veterans of the United States, Military Order of the Purple Heart, Canadian Legion of Wayne County, Yankee Division Veterans Association, Canadian Corps Association, Polish Army Veterans Association, District No. 6, Marine Corps League, Regular Veterans, Polar Bears Association, Rainbow Division, AMVETS, Catholic War Veterans, Army of the Philippines, R. Schneidewind.

Whereas the 21 veteran organizations of Michigan, representing some 900,000 veterans; and

Whereas the Michigan Legislature, both house and senate; and

Whereas the common council of the city of Detroit; and

Whereas the Honorable G. Mennen Williams, Governor of Michigan, have all joined with the citizens of our State in protesting the pending release of Ilse Koch from her confinement in a German prison for her inhuman treatment of her fellowmen; and

Whereas former prisoners of Buchenwald, together with officials who attended her trial are also protesting her release; and

Whereas her absolute disregard of the rules of war as well as the concepts and precepts of man and God; and

Whereas she has, by her inhuman actions, definitely forfeited her right to ever again mingle with free people: Therefore be it

Resolved, That the veterans of the State of Michigan, in the name of our constituted authorities and the people, urge that Congress take definite and positive action against the release of Ilse Koch in the interest of upholding the principles of democracy and justice.

(This resolution was adopted by the organized veterans of Michigan through the consolidated War Veterans Councils of Michigan, Inc., and the Allied Veterans Council of Wayne County, Inc.)

Mr. Speaker, the people in Michigan are much incensed over the release of

this bestial woman. The Michigan State Legislature, the house and senate, and the common council of Detroit, and the Governor of Michigan, together with the 21 veteran organizations, also thousands of other individuals, active in both public and private life, have protested Frau Koch's release.

Al Atkins, an RCAF flier, has brought the Ilse Koch case strongly to public attention. He has already enlisted 600,000 Michigan war veterans in the crusade to keep Ilse Koch behind the bars. At this point, I wish to include an article that appeared in the Detroit Free Press:

BUCHENWALD VICTIM IN PURSUIT OF JUSTICE—AMASSES EVIDENCE IN ATTEMPT TO KEEP ILSE KOCH BEHIND BARS

(By Sam Petok)

Remember Al Atkins?

He's the fiery RCAF flier whose impassioned outburst against the "Bitch of Buchenwald" was published in the Free Press last month.

His lone voice of indignation against the atrocities committed at the Nazi extermination factory has stirred Gen. Lucius D. Clay to examine the possibility of trying Ilse Koch again.

He now is working at rounding up affidavits from the prisoners, like himself, who were imprisoned there.

"I'll take the evidence to General Clay even if I have to swim across the ocean to get there," he promised.

Is Al mad? That's mild understatement. His twinkling gray eyes turn steel and he squares the jaw when he talks about the woman who, he says, made lamp shades out of human flesh.

He's sore enough to make soapbox speeches about the relaxing of Frau Koch's life sentence to 4 years.

"I don't have a plugged nickel and I'm not a public speaker," he said. "But, brother, I'm boiling inside. I keep waking up from the nightmare of Buchenwald in a cold sweat. It was hell."

Al, who lives at 15653 Crescentwood, East Detroit, spent 3 months at the concentration camp as a prisoner of war.

"I was there with 164 other soldiers," he added. "Ask any of those guys. They can tell you Al Atkins wants no mercy for the 'bitch of Buchenwald.'"

He wants the 164 prisoners of war who were in the concentration camp with him to join in a protest against the reduced sentence which will see her out of prison in a year.

For to Atkins, who now lives at 15653 Crescentwood, she was a part of "the terror and horror over the camp that went through you like an electric shock."

No; he never saw Ilse Koch, the red-haired widow of a commandant of the concentration camp, order the tattooed flesh removed from prisoners for lamp shades.

But Atkins says he saw two men from whom the skin was removed and other unforgettable horrors.

"Those other 164 guys who were with me could tell the same thing," Atkins relates.

How did Arizona-born Atkins land at Buchenwald? He joined the RCAF. On July 4, 1944, he was shot down near Chartres.

Some of the crew of the bomber were killed, two got back to England safely, he wandered in a daze for 10 days. He was picked up by the gestapo, who turned him over to the SS.

For a few days he was in Fresne Prison, near Paris, but word came the American Armies were near.

"So the SS put 70 of us in a boxcar, threw in some bread, and locked the doors," Atkins said.

"The 70, without any sanitary facilities, unable to sit except in relays, were locked in the boxcar for 5 days."

"Some men escaped through the floor of the car the third night," Atkins related. "So then they took our clothes away. They shot through the car several times but didn't hit anybody."

Then on the fifth day, the boxcar was unlocked. Instead of being at a prisoner-of-war camp they were at Buchenwald—and its designed terror struck them at once.

A lion on a long leash circled the camp entrance. The guards had man-killing dogs which they sicked on any inmate sluggish at lifting his cap in respect.

"For the first 7 days there were 165 of us prisoners sleeping on rock piles, without even a blanket," Atkins recalled. One of the boys—named Beck—died of pneumonia shortly after.

Then they moved them inside—750 men to a hut—sleeping four to a 4-foot wide shelf. There had been gypsy children, 8 to 12, there before the war prisoners were moved in.

"We heard that they had all been taken away and killed," he said.

Some days they were fed. On others, they weren't. A 12th of a loaf of bread was a man's ration for a day.

In 3 months Atkins' weight went from 196 to 118 pounds at Buchenwald. His mind wavers from terrible memory to terrible memory.

"There were 1,400 Jews in a fenced-off area near us," he said. "Kept like cattle. No buildings there at all. They just threw food over the fence to them."

He remembered a boy, Gurth, and another, who could get under the fence and come over to the Americans.

"They both spoke English. And then one Monday afternoon they took the 1,400 away, Gurth, the other boy, and all the rest, and gassed them."

In October the Nazis forced all the prisoners out to watch the hanging of 18 Englishmen they said were spies, Atkins remembered.

There was personal brutality.

While Frau Koch was informed of her nearing freedom immediately, the information was not released to the press for 3 months.

"Being a woman made her participation more unnatural and more deliberate," the committee said.

"The error in the Koch case is an isolated blemish on the vigilance of our democratic principles of justice."

Ferguson's group discovered that General Clay is bound by no written regulation denying him the power to reconsider his decision.

The special military court he created to try Frau Koch has no precedents—it is governed only by his rules.

That's why Atkins is crying out across an ocean in hopes of being heard.

A medical aide was trying to pry military information out of Atkins as he was dressing deep wounds in his leg. Atkins wanted to know how long it would take his wounds to heal.

"I told him any answers to his questions would be military secrets," Atkins recalled.

"So he jabbed deep into the wounds, breaking them open again and said, 'That's a military secret, too.'"

Through all the terror of the camp ran the whispers of the inhuman woman they called "the bitch of Buchenwald."

"I met two men who had tattooed flesh removed for those purses and lamp shades she was said to make," Atkins insisted.

"They're probably dead now, but what testimony they would have been before that Army board reduced her sentence. The dead make poor witnesses, I suppose."

He brooded a minute and added, "I suppose they think those four crematoriums at Buchenwald were for frying bacon."

"I'm not a violent man," Atkins says, "but if I ran into one of the monsters who ran that camp I'd kill them with my own hands."

Mr. Speaker, not only are the veterans of Michigan aroused and angered at this commutation of sentence, but already veterans in 12 States have joined this crusade against Ilse Koch this past week. Up to this date no satisfactory reply has been received from the military authorities or from General Clay as to why the life sentence was set aside, and why this commutation to a 4-month imprisonment was kept a dark secret from the public.

Verdict of History—Paternalism Greatest Internal Menace to Progress and Security

---

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting the following excerpt from a New England letter of the First National Bank of Boston, dated February 28, 1949:

The administration has proposed a Fair Deal program that, if adopted, would impose intolerable burdens and speed the Nation down the road of socialism. It is estimated that this program would raise the total budget to $60,000,000,000 annually within a 5-year period.

On the surface it would appear that providing security from the cradle to the grave for all people is in keeping with an advancing civilization. But irrefutable historical evidence down the ages clearly shows that the protective spirit of government is the greatest internal menace to general welfare, as it undermines the very foundation of security that it designs to establish.

It is held by the proponents of such a program that a nation cannot prosper unless the government watches over its people, protects them against want, and directs social and economic activities through an ever-expanding bureaucracy. But when a government loses confidence in the capacity of its people to rule and to provide for themselves, and proceeds to coddle and pamper them and to shield them against the storms of life, the wealth-creating power of the people is undermined, personal initiative is smothered, and incentives seriously impaired or destroyed. The end result is that the nation becomes impoverished, while free enterprise and self-government are engulfed in some form of regimentation. This is the verdict of history.

Let us call the roll of a few countries that have tried the experiment of doing everything for the people, and soberly note the baneful consequences. There was Greece, the mother of art and culture, that reached the climax of her glory in the Golden Age of Pericles. Under this benevolent dictator the government embarked upon a huge spending program to provide for the wants and entertainment of its people, a large proportion of whom were on the government pay roll. But as the burdens accumulated, and with bankruptcy imminent, Pericles led his people into a disastrous war, and that was the end of Greek leadership.

As Greece fell, the torch was handed to the Romans, who extended civilization over Europe and formed the basis of modern society. But the Roman Empire was destroyed because its citizens became flabby and too weak to defend themselves against the barbarians.

In stating the causes of the decline and fall of the Roman Empire one authority has said: "The pressure of public burdens was an increasing disability that ate the very heart out of the capitalist and the laborer alike; there was no hope to inspire energy or encourage enterprise and the gradual decay culminated in an utter collapse."

When Rome fell, the world was plunged into darkness for 500 years. The torch of learning was burning very low and would have been extinguished if it had not been for the knights and their friends, the monks. As governments became weak, daring and resourceful men rose to the occasion and broadened the horizons, lifted the spirits, and stimulated the energies of the people. Then came the Crusades, accompanied by the flourishing of international commerce with its riches and leisure. This paved the way for the Renaissance, the rebuilding of civilization and the rapid development of learning and culture. Then followed the great discoveries of the New World, and during the reign of Queen Elizabeth Great Britain emerged as the leader of civilization, which leadership she retained until fairly recent times.

In the meantime Spain, too, had her day of glory and at one time was mistress of the world. But as she rose in power her government extended its protective wings so that "* * * everything being done for the people, nothing was done by the people." The nation tottered into stagnation from which it has not been able to emerge.

So in Spain, as in Rome, and in Greece, "* * * it was when things were the most prosperous on the surface that they were the most rotten at the foundation," according to the noted historian, Henry Thomas Buckle.

Then let us skip a few decades to more modern times and see whether the extension of paternalism and government planning has had the same consequences as in earlier times.

Before the war, the Fascist countries abroad held out to their people a utopian plan of full employment, security, and better homes. This was to be achieved by a planned economy financed by government borrowing and spending, while a totalitarian government was to regulate all activities. But after surrendering their freedom for illusory security and military pageantry, the Italian and German people were led into a war of aggression that ended in humiliation and misery. The tragic experience of the Fascist countries should be a stark warning to us of the dangerous course plotted by those who are so anxious to rebuild our society. In the face of indisputable evidence that we are following the same economic and financial pattern, and are drifting along under the same forces, we cannot afford to harbor the illustration that it "cannot happen here."

Before turning our backs upon a system that has served us so well over the decades, we should ponder now, before time has run out, on the price that must be paid should we heed the siren voices of those who would lead us down the road to serfdom. We should be warned that government planning through the ages invariably shows that one step leads to another until finally the entire economy and all institutions are brought under the iron rule of bureaucracy.

At this crucial stage we should also be mindful that it is a recognized part of the Communist strategy to have this country spend itself into bankruptcy in order that we may be softened for easy conquest.

The tragic irony of it all is that after spending $400,000,000,000, sacrificing the lives of 300,000 of our best youth to defeat the Fascist powers, and now spending around $20,000,000,000 to combat communism, we should be pursuing a domestic policy that will inevitably lead to some form of totalitarianism.

So with red lights flashing and fog horns blaring, the American people should be heedful of the danger signals that the many chapters in world history grimly and soberly remind us are warnings of the treacherous reefs upon which have been wrecked so many so-called liberal governments down through the ages.

It should be apparent to all that income and wealth are not created by Government but by the productive efforts of the people. The Government merely siphons the money by means of taxes and borrowings, and then distributes the money through the spending channels.

The government providing for the people is not a novel experiment but can be traced back to dim antiquity. It is atavistic and has a blighting influence on the recipients. What might appear like "manna from heaven" would in reality be a drug that in the course of time would make the people submissive and subservient to those in power. As has been said:

"Thus runs the law, and the law shall run till
the earth in its course is still
That whose eateth another's bread shall do
that other's will."

Portland Veterans' Hospital

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a letter written by Seward P. Reese, dean of the school of law of Willamette University, giving his observations on the operation of the United States veterans' hospital at Portland, Oreg. As there is so much controversy over the conduct of the Veterans' Administration, I commend this letter to the attention of all Members of Congress:

COLLEGE OF LAW,
WILLAMETTE UNIVERSITY,
Salem, Oreg., April 21, 1949.

WALTER A. NORBLAD,
House Office Building,
Washington, D. C.

DEAR WALTER: This letter is to say a good word for the Veterans' Administration.

Recently I had occasion to be a patient in the veterans' hospital in Portland, Oreg. I am confident that the diagnosis (laboratory work and analysis by the physicians) and treatment was as good as I could have gotten anywhere. The organization and management of the hospital seemed to be of a very high order.

Incidentally, I do not see how a hospital of that kind could possibly render adequate service if located in a small or medium-size community. In the Portland hospital they have the advantage of the consultation with both the faculty of the University of Oregon Medical College and the leading members of the medical profession in Portland in addition to a very excellently trained staff in the Veterans' Administration hospital.

This letter is, of course, unsolicited and is being written you because I know at times the Veterans' Administration has been criticized and I merely want to put a good word in for an organization when I think it is deserved. This is not intended as a lobby letter but I thought you might be interested in my reactions.

With all good wishes, I am,
Yours sincerely,
SEWARD P. REESE, *Dean.*

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Washington Post of May 5, 1949, pertaining to the Taft-Hartley repeal legislation which was recently before the House for consideration:

BUNGLING STRATEGY

The defeat that the administration has sustained is not diminished by the House recommittal of the Wood bill to the Labor Committee. For the action of the House the previous day in rejecting the Lesinski bill in favor of this substitute measure is proof positive that the administration will either have to accept a labor bill modeled along Taft-Hartley lines or else make up its mind to live with the Taft-Hartley Act.

Responsibility for this political debacle rests squarely upon the shoulders of House leaders who refused until too late to consider reasonable amendments to the defective administration bill. A good share of the blame for their strategic defeat is attributable to the short-sighted tactics of labor leaders who fought retention of various protective features of the Taft-Hartley Act that have proved their worth, especially provisions for injunctive relief in case of strikes constituting a threat to the national welfare. Finally, the President himself seriously impaired the chances of passage of the administration bill, first by presenting his lieutenants in Congress with a ready-made bill tailored to fit the specifications of labor leaders, and more recently by trying to coerce Congress into accepting that bill by threatening to deny patronage perquisites to Democrats who voted against it.

The political bungling that led to the rout of the administration has served at least one good purpose. It has shown that Congress cannot be bullied into passing a one-sided labor bill that fails to protect the interests of management and the public as well as labor. Although the Wood bill failed of passage, the House rejection of the Lesinski bill, even in its hastily amended form, demonstrated beyond the shadow of a doubt that Congress will not approve any labor bill that does not embody most of the safeguards against abuse embodied in existing legislation. If there is to be any new labor legislation at this session of Congress, the administration forces will either have to make further concessions to the demands of opponents or risk the possibility of a legislative revolt that might result in passage of a measure quite as stiff as, or even stiffer, than the Wood bill.

The choice, therefore, appears to lie between retention of the Taft-Hartley Act in unamended form or acceptance of a compromise measure that would eliminate or modify those provisions of the law that have proved undesirable or oppressive without destroying essential safeguards against the abuses that prevailed under the old Wagner Act. Unless a reasonable compromise is reached, the Taft-Hartley Act will remain a political issue, and labor unions and anti-labor groups will continue to put pressure on Members of Congress and candidates for office to indorse or oppose changes in the law that may not be in the public interest.

Labor legislation should, of course, be judged solely on its merits as an instrumentality for insuring a system of collective bargaining fair to employers, employees, and the

public at large. It is essentially a nonpartisan type of lawmaking, as evidenced by the split party votes in the House. If the administration had proceeded on that assumption it would not have lost political face by making repeal of the Taft-Hartley Act a partisan issue.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Washington Post of May 7, 1949, pertaining to the Taft-Hartley repeal legislation which was recently before the House for consideration:

MR. TRUMAN'S HINT

It is amusing to note President Truman's comment to the effect that defeat of his labor-management bill in the House gives the administration a chance to start over again. Reports of the President's press conference do not make clear whether he sees in this new situation a chance to get the sort of bill he wants or a chance to get an acceptable bill. But in either event the President's remark appears to reflect a subconscious recognition of the blunder of trying to force down the throat of Congress a measure that was drafted in the Labor Department and merely rubber-stamped in the House and Senate Labor Committees.

What the House has said more emphatically than anything else is that it does not like this kind of procedure. Certainly it does not approve of the Taft-Hartley Act in its present form, although it turned down Representative Wood's milder reincarnation of the Taft-Hartley law by only a shaky 3-vote margin. But it is not going to accept a ready-made substitute dictated from the outside with little consideration of the public interest. That is a healthy attitude. If it had been adopted by the administration in the first place, labor legislation to replace the Taft-Hartley Act might be well on its way toward enactment.

The question of immediate importance is whether the Senate Committee on Labor and Public Welfare will see the handwriting on the wall. We suspect that the administration's bill which the committee railroaded through, without even giving its members a chance to offer amendments or call a vote on specific provisions, stands less of a chance in the Senate than it did in the House. The Senate does not like to be a cipher in the legislative process. And, since the task of writing a law of such a complicated nature cannot satisfactorily be undertaken on the floor, it will probably send the bill back to committee as did the House.

Will the committee wait for a rebuke of this kind? Or will it recall the measure of its own volition and write an acceptable bill dealing fairly with both unions and employers? All members of the committee know that this intricate economic problem was handled as a mere political football. They would gain in stature if they would take the President's hint and work out a bill of their own in the good old democratic fashion.

Basing-Point Return By Way of Moratorium Predicted by Steel Trust—Basing Point and Monopoly Boys Expectantly Anticipate Action of Congress—Word "Go" Is Eagerly Awaited—Supreme Court Described Basing Point As a Handy Instrument to Eliminate Competition

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. PATMAN. Mr. Speaker, the Wall Street Journal for Saturday, May 7, 1949, in a leading article sounds the keynote of the eager expectancy of the Cement Trust, the Steel Trust, and other monopolies with which the moratorium is awaited. As I have said often and earnestly, the basing-point system is what the basing point and monopoly boys want by way of a moratorium. It may not be the intent to sponsor a moratorium which will legalize the basing-point system and other similar systems, but that is what is expected by big business and that is what will happen if a moratorium is passed.

ONLY WORD "GO" AWAITED TO SCAMPER BACK TO BASING-POINT SYSTEM

The article states succinctly "only the word 'Go' from Congress is awaited." The article supports the basing-point system on the ground that it is advantageous to consumers. It states that the basing-point system enables consumers to avoid a bill for freight all the way from the point of production. The article says:

While a returning buyers' market in metal has brought some freight cost absorption among smaller steel companies in recent weeks, the major producers have continued to steer clear of it. But Wall Street Journal talks with steel men this week make clear-cut the prospect that the entire industry will scamper back to freight bill paying if the congressional green light flashes.

SUPREME COURT DECIDES BASING POINT AS HANDY INSTRUMENT

The Wall Street Journal article throughout is skillfully worded and undoubtedly was designed for the purpose of creating in the minds of its readers the false impression that the basing-point system was good rather than evil. The record in the courts is all to the contrary. The Supreme Court in the Cement case, decided April 26, 1948, said in part referring to the Federal Trade Commission decision:

When the Commission rendered its decision there were about 80 cement manufacturing companies in the United States operating about 150 mills. Ten companies controlled more than half of the mills and there were substantial corporate affiliations among many of the others. This concentration of productive capacity made concerted action far less difficult than it would otherwise have been. The belief is prevalent in the industry that because of the standardized nature of cement, among other reasons, price competition is wholly unsuited to it. That belief is historic. It has resulted in concerted activities to devise means and measures to do away with competition in the industry. Out of those activities came the multiple-basing point delivered price system. Evidence shows it to be a handy instrument to bring about elimination of any kind of price competition. The use of the multiple-basing point delivered price system by the cement producers has been coincident with a situation whereby for many years, with rare exceptions, cement has been offered for sale in every given locality at identical prices and terms by all producers. Thousands of secret sealed bids have been received by public agencies which corresponded in prices of cement down to a fractional part of a penny.

A footnote to the foregoing statement by the Supreme Court included the following table:

The following is one among many of the Commission's findings as to the identity of sealed bids:

An abstract of the bids for 6,000 barrels of cement to the United States Engineer Office at Tucumcari, N. Mex., opened April 23, 1936, shows the following:

Name of bidder:	*Price per barrel*
Monarch	$3.286854
Ash Grove	3.286854
Lehigh	3.286854
Southwestern	3.286854
United States Portland Cement Co.	3.286854
Oklahoma	3.286854
Consolidated	3.286854
Trinity	3.286854
Lone Star	3.286854
Universal	3.286854
Colorado	3.286854

All bids subject to 10 cents per barrel discount for payment in 15 days. (Com. Ex. 175–A.) See 157 F. 2d at 576.

STEEL SPOKESMAN CLAIMS CUSTOMERS RESTLESS BECAUSE THEY PAY ACTUAL INSTEAD OF PHANTOM FREIGHT

It will be noted that the Supreme Court described the multiple-basing-point system as a handy instrument. This is the handy instrument which the Cement Trust, and the Steel Trust, and many others used a sthe punitive weapon as charged by the Federal Trade Commission to restrain and hinder competition by means of a mutual understanding and agreement in the employment of the basing-point system. The Wall Street Journal article states:

"Customers," says one Pittsburgh steel man, "are getting terribly restless over having to pay freight. And they are placing their business elsewhere when they can buy from close-by mills."

In other words, this Pittsburgh steel man claims customers are complaining because they have to pay actual freight instead of phantom freight. This statement is very hard to believe because customers long complained of the Pittsburgh-plus and afterward complained of the few arbitrary basing points the steel industry used to extract phantom freight charges from its customers and to control the steel markets.

STEEL INDUSTRY DID NOT AND NEVER WILL PAY FREIGHT CHARGES

The Wall Street Journal article headlines, "All steel industry will pay freight bills if Congress approves." This state-

ment infers that under the basing-point system, steel mills were in the habit of paying customers' freight bills. This headline is erroneous and misleading because it has never been a practice of steel producers to prepay freight shipments of steel to customers. Moreover, the steel industry does not operate on such a basis and, I predict, never will operate on a prepaid-freight basis. Steel consumers and dealers will understand this statement, which, in my opinion, is made solely for the purpose of aiding the passage of a moratorium bill by Congress.

PITTSBURGH STEEL, LEHIGH VALLEY CEMENT MOST AFFECTED BY ABOLITION OF BASING-POINT SYSTEM

The Wall Street Journal says:

A continuation of f. o. b. mill pricing into a period of stiff competition would probably hurt the Pittsburgh district more than any other steel-producing center. Pittsburgh produces more steel than it normally consumes. This means that unless its mills can sell their steel in distant markets, they will face curtailment of operations.

The concentration of steel production in the Pittsburgh district and the concentration of cement mills in the Lehigh Valley district of Pennsylvania created an overproduction of these two basic commodities in the areas mentioned, so it is not any wonder that the basing-point system had its origin in these districts. It will be recalled that a single basing point for steel originated as the Pittsburgh plus and a single basing point for cement originated as the Lehigh Valley plus.

MOTIVES OF SPONSORS NOT QUESTIONED

I desire to reemphasize that in opposing a moratorium I do not in any way question the high principles which undoubtedly motivated the sponsors of the moratorium bills. That is not my purpose nor will it ever be my purpose. I have the very highest regard for the sponsors of these bills and I know they are actuated by motives which are statesmanlike in their inception as well as in their conclusion. However, I have often said and I say it again, that any moratorium which may be adopted will be used for the purpose of furthering the interests of the basing-point and monopoly boys and to the detriment of our entire economy. The article from the Wall Street Journal follows:

ALL STEEL INDUSTRY WILL AGAIN PAY FREIGHT BILLS IF CONGRESS APPROVES—SOME SMALL MAKERS ALREADY ABSORB SHIPPING COSTS, BUT BIG ONES HOLD OFF—SHARPER COMPETITION AHEAD

Steel makers are ready to return in droves to the practice of helping pay the cost of freighting their wares from their mills to distant customers.

Only the word "go" from Congress is awaited. If the legislators sound the signal it will mean, for factories distant from steel centers, lower costs in making metal products.

Late last year the Supreme Court turned thumbs down on the basing point distribution system as practiced in the cement industry. Under this system, producers pay freight costs on their products to scattered key cities (basing points)—thus enabling consumers to avoid a bill for freight all the way from the point of production. The steel industry used this system. It dropped it after the high-court ruling on cement.

BIG ONES ARE SHY

While a returning buyers' market in metal has brought some freight cost absorption among smaller steel companies in recent weeks, the major producers have continued to steer clear of it. But Wall Street Journal talks with steel men this week make clear-cut the prospect that the entire industry will scamper back to freight-bill paying if the congressional green light flashes.

Congress now ponders a bill to provide a 15-month moratorium on new Government antitrust suits against individual good-faith delivered-price systems and freight-absorption practices. Word in Washington is that the bill has good chances of passing.

Motivating the anticipated swing-back to freight-cost absorption, say metal men, will be a steel mill scramble to get business. People who buy steel already find themselves increasingly able to pick and choose among suppliers. Sharply cost conscious, they are taking the offers that call for the fewest dollars.

CUSTOMERS ARE RESTLESS

"Customers," says one Pittsburgh steel man, "are getting terribly restless over having to pay freight. And they are placing their business elsewhere when they can buy from close-by mills."

At least two basic producers in Pittsburgh report they are losing business to other steel firms because of their unwillingness to absorb freight costs and risk the chance of being prosecuted.

E. T. Weir, chairman of National Steel, says the day is near when customers in such big consuming areas as New York, Philadelphia, and Chicago are not going to pay more for steel bought from National than for steel bought from nearby suppliers.

The two biggest producers, United States Steel and Bethlehem, are said to be in the best position to compete under an at-the-mill pricing system—United States Steel because of its widely scattered plants and Bethlehem because of its excellent locations along the Atlantic seaboard. But they, too, are expected to start absorbing freight if the moratorium is approved.

TOUGH ON PITTSBURGH

A continuation of f. o. b. mill pricing into a period of stiff competition would probably hurt the Pittsburgh district more than any other steel-producing center. Pittsburgh produces more steel than it normally consumes. This means that, unless its mills can sell their steel in distant markets, they will face curtailment of operations.

The kingpin metal already approaches the overplentiful stage within the steel capital's immediate orbit. One Pittsburgh fabricator of steel forgings was told this week by a steel producer that the supply of steel scheduled to be delivered to him in June is ready for shipment now if he desires it. The same fabricator was also informed recently that additional tonnages of steel are now available and that he "should not feel bashful about asking for it."

Nor are reports like this coming exclusively from big steel-producing centers. Says a manufacturer in Los Angeles:

"Our business is off considerably and I have had to turn down our July steel allotment. I asked the mill people if my doing so would jeopardize our August shipments. Their reply was that what I was doing was a common occurrence these days and that it was O. K."

GLANCE AT THE RECORD

Metal men emphasize that demand for steel is still huge, with the industry's ingot production clipping along at 97 to 98 percent of theoretical capacity. But they also note that the production rate has slipped from the 102 percent of theoretical capacity level reached in March, and they add that, in the past, steel demand has often shriveled rapidly once it started contracting.

In 1921 iron and steel output tumbled 53 percent from the 1920 level. The production of 1930 was 27 percent below 1929, and that of 1932 was 47 percent below 1931. Shortly before the war, in 1938, iron and steel making plunged 45 percent from the level of the preceding year.

During and since the war America's steel mills have been on the biggest production spree in history. This year's output, if the current pace continues, is expected to be around 95,000,000 tons of ingots and castings. The loftiest level of the 1930's was a bit over 56,000,000 tons. The high point of the 1920's was 63,000,000 tons made in 1929.

The Nation's mills poured out more than half the entire world's production of steel last year. Russia's estimated 1948 output was less than one-fourth (20,000,000 tons) that of this country. Great Britain's 1949 production was about a fifth (16,000,000 tons) as large as United States output.

Mother's Day Address

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Mother's Day address made by me on Sunday, May 8, to the Washington-Lewis Chapter of the Daughters of the American Revolution at Fredericksburg, Va., at the home of Mary Ball Washington, the mother of the immortal George Washington:

Mayor Rome, reverend clergy, ladies, and gentlemen of the visible and invisible audience, it is a pleasure for me to join with you on this occasion and particularly as a result of the invitation extended by you through my very close and valued friend and your outstanding Representative in the National House of Representatives, Congressman SCHUYLER OTIS BLAND. In Congressman BLAND you have one of the outstanding Members of Congress as your Representative and one of our great Americans.

It is with a deep sense of personal gratification that I come before you today to join in expressing honor and tribute to an American ideal and symbol. Concerned as we are with the many problems of daily existence, our perspective unwittingly becomes narrowed, and there is a tendency to overlook or to take for granted important realities which deserve better attention and respect from most of us.

The ideal and the symbol of motherhood—American motherhood—is one of those realities, and it is, therefore, altogether fitting that this day should be set aside to give us the opportunity to pause for a moment, and with a humility as great as their devotion, tender deserving tribute to the mothers of America.

The setting which you have chosen as the scene for the expression of your tribute is particularly appropriate. The home of the mother of Washington is a shrine which harbors all the sentiments which we are wont to feel upon contemplation of the picture

of a loving mother and a devoted son. Regardless of the fame of the characters themselves, the picture which we are able to conjure up in these circumstances is one which graphically portrays the ideals of maternal excellence and filial affection. It is the portrayal of the uncomplaining mother and the warrior son, and in such a picture we have the personification of the American ideal of motherhood.

No class of our citizens is more worthy of honor than the mothers of America. This is so because of what each member of the class has done and for what each mother in it symbolizes. Collectively, the mothers of America comprise the soul of our beloved Nation—the spiritual entity whose love is all embracing, whose anguish is borne in silence, and whose measure of sacrifice knows no bounds. Yet individually, they are women—human women—endowed with all human frailties and emotions—proud of their country, thinking constantly of their loved ones, and hateful to war, the strength of the family life and of the home—the basis of society—is the wife and the mother.

The actions and feelings of mothers are motivated by a reason and an understanding which they alone can comprehend. They know by bitter experience the soul-sickening gruesomeness of war. To them the blare of trumpets, the roll of drums, and the color and pageantry of war are but hollow trappings because in time of war the mothers of America are made unwilling actors in a devastating tragedy whose lines they take no part in writing. Yet in the enactment of which they are assigned the roles most difficult of performance. And yet, in America, when war comes, they make the greatest sacrifices, doing so willingly that our country might live. To them war means the melancholy sadness of parting, the gnawing pain of anxiety and fearful waiting, and the despair of death.

Having but recently brought to victorious conclusion the greatest war in the history of man, we are today living in an atmosphere of rumors of war. China is a Far Eastern tinder box. Guerrilla warfare is the order of the day in Greece. Tension between Jew and Arab makes the truce in the Near East a precarious reed which may at any time be bent by violence. A militant, aggressive, and atheistic communism is on the march and has absorbed one small nation after another in the maws of iron-clad militaristic dictatorships.

What then must be the thoughts uppermost in the minds of the mothers of America on this day dedicated to their maternity?

In those countries I have mentioned there are mothers today bearing the burden of grief, and in their agony of suffering they cry out to Heaven and the civilized world for nothing more than the blessings of peace. Their cries, I know, are echoed in your minds and in the minds of all American mothers. In answer to those cries, I should like to here record the fact that your Government is determined to preserve and guarantee those blessings by every means consistent with its national dignity and honor.

That is the course to which the present administration, under the able leadership of our Chief Executive, has committed the United States in the field of international affairs.

Marshall-plan aid and economic recovery assistance for Europe might well be compared to the fire-insurance policies which we take out on our own personal property and real estate. Your Government deems it wiser to pay now the premiums on insurance of peace in Europe than to pay later in the medium of blood and American manhood.

It is far more discreet to engage firmly and patiently in a cold war—especially when you are winning it—that it would be to plunge headlong into a reckless course of conduct which would precipitate the chaos of a shooting war.

Ordinary prudence dictates that it is the better part of women to utilize to the fullest extent the machinery of the United Nations for the solution of international problems because we now know that the isolationism which kept us out of the old League of Nations hastened a conflagration instead of preventing one.

In the Atlantic Pact, we have devised a scheme of coinsurance which complements the nature of our participation in the United Nations, and which declares to the Communist coalition that we are ready to back our determination that the democracies will have peace with unity, strength, and common effort.

Underlying all of these tremendous efforts to solve our international difficulties with patient reason and by orderly, rational processes, there is the forward-looking policy which has committed our Government to the doctrine of the "good neighbor." In fact, in view of the generosity with which we have shared our substance with the other nations of the world, it might even be said that we have adopted the doctrine of the good Samaritan.

Our Government, then, and every loyal citizen who owes allegiance to it, ardently desires and earnestly favors the absolute independence, the unimpaired sovereignty, the utmost equality, and the political integrity of every nation, large and small, and by the same token, they wholeheartedly oppose every form of aggression.

This is the true philosophy of enlightened liberalism, and the United States is determined that it shall be recognized and respected by the entire world—even our potential enemies, Russia.

After two devastating world wars, and with all the agencies at hand for the peaceful settlement of disputes between nations, war is unnecessary even as a last resort, and any attempt or desire to engage in one is repulsive and odious. Moreover, if we have not learned the lesson of peace by this time, we will be unworthy of our dignity as men and unfit as custodians of the civilization which has been transmitted to us.

The mothers of America remember too well the lessons learned in the last two wars.

Gatherings such as this one here today bear testimony to the impress which those lessons have left upon our national consciousness. We are gathered together in peace for a noble purpose, and we propose to be able to continue to do so.

Our whole national policy has become imbued with a passion and a zeal for peace—but not to the point where we will accept peace at any price. We will achieve it and retain it with dignity and honor.

The late beloved President Franklin Delano Roosevelt defined the good neighbor as one who "resolutely respects himself and, because he does so, respects the rights of others." There are many parts of the world wherein that definition needs learning and memorization.

Our duty is to breathe and live the broad spirit of this policy, and to make the travail of the present day the beginning of a new era which will witness the triumph of the American cooperative effort to promote the economic, social, and humanitarian welfare of the world, and to erect a solid structure of peace which shall endure forever.

In pursuance of this policy, we are dedicated to the resolve that not only must we stay out of war, but we must lead the way in actually preventing war. All of the acts of our Government leading to this end are eminently praiseworthy, but to make them effective instruments of peace the peoples of the world must be educated to the necessity and desirability of rational and sane settlement of international disputes.

Public opinion should be guided to a "peace preserving and promoting," rather than to a "war avoiding" frame of mind. Upon achievement of such an attitude, peace will be assured to the family of nations, and the common aspiration for its preservation will draw people together in closer bonds of international amity and good will.

Thus while some rampant ideologies foster the burdens of militarism and cling to ideas of "class struggles" and the inevitability of war, we in America stand ready to advance in the spirit of the Golden Rule, and ask for nothing more than the display of the true good will of the true good neighbor.

Peace founded upon morality and justice, and economic rehabilitation, must be our objectives.

The availability of the processes of democracy and the opportunity to foster them abroad present to the people of this Nation the means to spread the doctrine of peace and the occasion to insist upon its enforcement. Our individual and combined efforts are needed for the attainment of these objectives, and if our material resources can help their achievement, we can spend them for no better purposes.

The Old World looks longingly and hopefully in our direction. Our common ties with its peoples strengthen our desire to do our utmost in the molding and construction of a new world order. Thus we have both the opportunity and the duty to persevere in our efforts to build a permanent and enduring peace.

The course has been charted for us. We are well advanced upon it. In the light of the bitter and expensive experience of the past, we would be more than foolish if we permitted any attempts at frustration or annoyance to cause us to deviate from it.

We are agreed that war is a blot upon civilization, and that it is an outworn relic of barbarism. We are convinced that it is wholly unjustifiable in the presence of adequate machinery to promote concord among nations and to prevent aggression.

I cannot stress too strongly the need of constant, vigilant, and concerted efforts on the part of all serious-minded people to avoid our past mistakes. If we fail again, future generations shall indict ours as the one which forfeited our heritage and theirs by default.

The atomic age need not be the age of destruction. It can be the age of realization. The choice is ours.

I can think of no more effective mouthpieces for the propagation of the gospel of peace than the mothers of America. History records no instance of a war started by women or by mothers. Perhaps we will be witness to the fact that their tremendous moral influence is the greatest force which can be exercised to prevent one.

I urge you, therefore, to hold yourselves forth to the world not only with the righteous pride of mothers who have given the greatest gifts at your disposal to your country, but also as living examples of self-sacrificing heroines who will brook no outrage to your abiding sense of the futility of war. None are better qualified than you and the other mothers of America to give to the world the message which your Government has preached since the conclusion of hostilities a few years ago. Moreover, if the hearts of men have not altogether turned to stone, you will be heard.

If through your apostolate of peace you can bring home to the hearts and minds of men your own sense of the uselessness of war, all of your brave sacrifices of the past will not have been in vain, and future generations of American mothers will call you blessed.

Policy on Postal Rates

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an editorial written by Mr. J. H. Van Winkle of the Oregon City Banner-Courier on the background and intent of Congress in originally establishing second class mailing rates.

POLICY ON POSTAL RATES

Before Congress acts on the Postoffice Department's demands for higher postage rates on newspapers and magazines, it would seem proper for the solons to go back and get the intent of the law which established second class rates for publications.

With a revaluation and brighter understanding of this intent, a firm policy could be adopted by Congress to guide its actions along a determined line. This would not only provide measurements to correlate legislation, but it would give the publication industry assurance that laws affecting it would follow a certain pattern.

The original intent of the second class rate law was to help publishers serve their communities with news and information.

In those days, communications are not what they are now. The country newspaper was the one principal means by which the folks could learn what was going on, how their public servants were handling affairs, what new developments in living and progress were coming along, and various other informative and educational affairs.

The intent of that law is clear. And it was not intended that mass circulation publications, with a policy of entertainment rather than information, should take advantage of the low mailing rate.

We believe that Congress could comply with the Postoffice Department's request for more revenue and yet follow the real and honest intent and purpose of the second class rate regulation. This could be done by establishing a higher rate for publications that merely entertain, and leave present second class rates as an exclusive advantage of the publications that inform.

Ode to Kathy at San Marino

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 27, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to insert the following Ode to Kathy at San Marino by Howard Thomas Mitchell in response to the author's request.

This elegy was occasioned by the recent death of little Kathy Fiscus, the result of a fall into a weed-covered, long-abandoned well in a vacant lot at San Marino, Calif.

The poem was first published in the official Assembly Daily Journal, California Legislature, the State Capitol, Sacramento, Calif., page 1940, April 12, 1949. This Ode to Kathy at San Marino is Mr. Mitchell's way of commending the spontaneous emulation of the American spirit as demonstrated by the millions of Americans who offered assistance and prayer for the child's deliverance. It follows:

ODE TO KATHY AT SAN MARINO
(By Howard Thomas Mitchell)

O Master, on high, see Thy child below
Entombed, helpless in this grasping hold;
Holy Christians, toiling at life's release
The love of fellow men shall now increase.

O California, hail thy heroes' souls
More precious than your stately mountains' gold;
Promote not wealth or earthly vanity
Ever hold high this loving humanity.

O America, to valiant hearts in faith
On Palm Sunday, grant thine own kindly grace;
O Saviour, Thy servants emulate well
To merit life eternal, with Thee dwell.

O world, turn thine eyes to San Marino
See this devotion mankind here bestows;
Now shines like stars and beaming sun above
Glows for God and Kathy in divine love.

Resolutions Adopted by the Thirty-ninth Annual Convention of the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I enclose certain resolutions passed by the recent annual convention of the National Congress of Rivers and Harbors here in the city of Washington on April 8–9, 1949. These resolutions are very important and will be of great interest to all persons who read the CONGRESSIONAL RECORD:

On this the occasion of our thirty-ninth annual convention, the National Rivers and Harbors Congress, conscious of its obligation to disseminate to its members, and through them to the American people, adequate information and guidance with respect to the development, improvement, conservation, and utilization of our water resources to serve the increasing needs of navigation, power development, flood control, irrigation, and related uses, adopts the following resolutions:

APPROPRIATIONS

Our Nation continues great because it continues to grow and its growth always has been and will continue to be in direct proportion to the benefits derived from its vast store of natural land and water resources. The rate of development of our water resources and the removal of flood threats which hamper the people in their efforts to develop the latent wealth of our Nation are, in turn, contingent upon Federal appropriations. We believe that now is the time when a program to promote this source of income and national welfare should be prosecuted at a vigorous rate consistent with our national economy. Flood control and improvements for navigation, irrigation, power development, soil erosion, and allied purposes are not matters to be put off pending a recession or depression. On the contrary, such improvements should be made as rapidly as possible so as to contribute their part toward continued prosperity and a high standard of living in America. Moreover, at a time when our people are being called upon to support large-scale foreign improvements they are justified in expecting that their improvements at home should continue at the maximum practical rate. For these reasons we urge that the Bureau of the Budget and the Congress give full and careful consideration to the recommendations of the agencies charged with the development of our water resources, and that they approve and appropriate adequate funds to prosecute these improvements at an optimum rate.

SOIL CONSERVATION

We restate our belief that the prevention of soil erosion as a responsibility of the Department of Agriculture and the closely related major drainage and channel improvement program now conducted by the Corps of Engineers should be accelerated as a beneficial and most important feature in the development and preservation of our natural resources. These programs must outpace the devastation now visiting our fertile slopes and the resulting detrimental effect on the efficiency of our commerce-laden streams. Only then can we be assured of maximum returns from the soil which helped to create a nation.

DEPARTMENT OF THE INTERIOR

We commend the Bureau of Reclamation of the Department of the Interior for the progress it has made in reclaiming the arid and semiarid land in the 17 Western States and emphasize the necessity for continued effort. There is increasing need there for additional Federal projects for irrigation to bring all cultivable lands for which water is available into production for the increasing population of the Western States and to meet our extensive commitments broad. Adequate funds to provide the many facilities for the varied irrigation needs must be available in consistent annual amounts to enable rapid progress to be made and we urge that the Congress provide them.

HYDROELECTRIC POWER

In promoting the orderly development of our land and water resources the National Rivers and Harbors Congress has been steadfast in its position that hydroelectric power development at Federal dams should be economically justified and consistent with the necessity for such power. Our position is and has been that such development should be confined however to projects located in shortage areas and then only when feasible and as a supplement to existing private supply. Supplemental power from steam plants is questioned as being inconsistent with the policy adhered to by this congress as is the construction and operation by the Government of transmission and distribution systems. Unrestricted and unwarranted competition with private power facilities will continue to be opposed.

STREAM POLLUTION

The National Rivers and Harbors Congress recognizes the Water Pollution Control Act of 1948 to be an important factor in the relief of its concern of many years with the pollution of our streams. Therein is contained provisions for the elimination of many of the complications heretofore involved in the division of State and Federal jurisdiction which have been a retarding factor in reaching a satisfactory solution of the matter and in promulgating enforceable regulations. We urge the Congress to provide the authorized funds as rapidly as economically required by the existing agencies for the elimination of this menace to our health and the wildlife population of our country.

FEDERAL BARGE LINE

The pioneer work of the Federal Barge Line in developing inland water transportation has been of great benefit to private operators and can continue to be of inestimable value for some time to come. Much remains to be done, however, in the development of carload and smaller shipments and modern terminals available to all shippers. We strongly urge that no part of its operations be discontinued or disposed of until private operators are able to carry on their own pioneering and are equipped to provide service identical to that now provided by the Federal Barge Line. We commend these important needs to the Congress and urge an increase in the capitalization of the Inland Waterway Corporation so as to provide sufficient modern equipment and terminals.

TIDELANDS

The title to the submerged lands of our Nation should be vested in the States through adequate legislation designed to reserve such submerged lands and the resources therein to the respective States and their people. However, any legislation for this purpose should preserve to the United States the paramount right to continue with improvements for national defense, navigation, flood control, and allied purposes as now authorized and as may be authorized in the future.

REGIONAL OR VALLEY AUTHORITIES

The National Rivers and Harbors Congress has repeatedly expressed its opposition to legislation creating Federal regional or valley authorities and has supported the programs of the Corps of Engineers, Department of the Army; Bureau of Reclamation, Department of the Interior; and Department of Agriculture for the development of our water and land resources.

We again register and reaffirm our opposition to the creation of Federal regional or valley authorities either by legislative act or Executive order.

We urge the extension of comprehensive basin-wide research and planning similar to the Pick-Sloan plan now operating in the Missouri Basin to other major basins which present similar problems and opportunities, respecting at all times the rights and desires of each State located in such a basin as they may appear.

REORGANIZATION

Economy and efficiency in government are desirable. However we do not believe that grouping the major construction activities of our Nation, including the civil functions of the Corps of Engineers, in one agency will accomplish this. On the contrary we believe that the recommendation of the Hoover Commission to consolidate these functions in the Department of Interior would produce the opposite effect. This agency under this proposal could have as its head an officer with an abundance of power, almost dictatorial. His influence could extend throughout the excutive branch and unchallenged could possibly extend even to the Congress itself. The potential patronage and favoritism in one large group, such as the one contemplated, could easily sway the people in all of our States to make demands on Congress far in excess of their requirements for orderly development of our civil works programs. Such a situation would certainly create costly bureaucracy and could not result in saving money. We reiterate our position that the present system produces results without waste and gives to the public the efficiency and economy to which they are entitled. Our public works should not become the basis for an experiment, even if noble in purpose, which is unnecessary.

AMERICAN MERCHANT MARINE

Our national security and a strong national defense require a modern, efficient merchant marine, built and operated by private enterprise with Government aid to the extent necessary, and supported by public patronage. A progressive shipbuilding program is needed to provide a modern, well-balanced merchant fleet of vessels of all types.

To induce private capital to undertake these responsibilities, favorable economic conditions must exist. It is in the best interest of all sections of the Nation, and particularly the seacoast communities and ports, to actively support such a merchant marine as a continuing national policy so as to avoid dependence upon foreign controlled shipping in our foreign trade, and expensive sporadic wartime construction. We endorse such a continuing long-range merchant marine policy.

THE NEW CHIEF OF ENGINEERS

Like his predecessors, Maj. Gen. Lewis A. Pick has been selected from a group of experienced engineer officers to direct the activities of the Corps of Engineers for the next 4 years. His ability to get things done every time and on time has been amply demonstrated in the pages of military history and in the records of emergencies at home. His ability to organize so as to obtain immediate results was recently illustrated in the widely publicized "operation snowbound" in which he directed prompt relief to the blizzard-stricken areas of the West. Into this emergency went the same know-how and determination that made the Ledo Road a reality and that conceived the comprehensive Missouri Basin project that is now under construction. Knowing these things we are happy to have General Pick carry on the century-old traditions of the Corps of Engineers and we are confident that he will continue in the splendid manner in which those who have served before him have done.

Cornelius Cole, Distinguished Alumnus of the House of Representatives and Noted Centenarian

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. JOHNSON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a short statement about Cornelius Cole, one of California's most interesting and distinguished citizens. This interesting article is written by Dr. Rockwell D. Hunt, one of the most noted historians in California. While it is sometimes difficult and perhaps not fair to pick any particular man out as the most distinguished in his field, I think it is fair to say that I have frequently heard Dr. Hunt referred to as the man who is the "foremost historian on California history." I note in reading the short article on Cornelius Cole that he once served in the House of Representatives. I had never known that he was a Member of the House. He did serve in the House from March 4, 1863, to March 3, 1865—Thirty-eighth Congress—and in the Senate from March 4, 1867, to March 7, 1873. He rode on the train with Lincoln from Washington to Gettysburg and heard our martyred President make the immortal Gettysburg Address.

In August 1922, the American Bar Association held its convention in San Francisco. Jurists from all over the Anglo-Saxon world were present. At the final banquet, Chief Justice Taft was the toastmaster. The most interesting character of all the persons who were at the banquet, including such great legal lights as John W. Davis, George Wickersham, and others, was Cornelius Cole who at that time was approaching his one-hundredth birthday. The Chief Justice, who I consider one of the most interesting characters in American history, introduced Cornelius Cole and he made a remarkable address for a man of his age. When he talked everyone in the audience was perfectly silent. The purport of his talk was that if the nations of the world would follow the ideals of Lincoln, his idol, we would have world peace. Upon the conclusion of his address he was given a tremendous ovation. The Chief Justice complimented him highly on his excellent speech. He then told Senator Cole that he hoped that he would have many more happy birthdays. Chief Justice Taft said that he knew Senator Cole would, and illustrated his prediction by the following story:

After I had been President of the United States I was elevated to a professorship in the Yale Law School. While Mrs. Taft and I were living in New Haven, one of our neighbors had a ninetieth birthday. To honor Mr. Smith on his ninetieth birthday a reception was held in his honor. As Mrs. Taft and I were standing in line, the couple ahead of us, Mr. and Mrs. Jones, shook hands with Mr. Smith. When Mr. Jones clasped his hand, he said to Mr. Smith, "Mr. Smith, I hope that you will have many more happy birthdays." Mr. Smith's eyes flashed and he looked Mr. Jones squarely in the face and said, "I know I will have more happy birthdays because I have been studying statistics. I find that damn few men die after they are 90."

It is interesting and inspiring for us to know that men like Cornelius Cole preceded us in the House of Representatives. The problems in those days were different than they are today. Our problems are undoubtedly more serious in their future implications, considering the small and shrinking world in which we live and the ghastly powers of armaments today, but he in his day, as I hope we in our day, will meet the issues that face us and do our level best to formulate policies that will be of enduring value to posterity. The interesting article by Dr. Hunt follows:

It was one of the proudest moments of my academic life when in the spring of 1922, before a great, enthusiastic audience, I was permitted to present Cornelius Cole to the president of the University of Southern California for the honorary degree of doctor of laws. The oldest living graduate of the oldest American Methodist college, surviving Member of the United States Senate in the days of reconstruction, for many years our distinguished fellow citizen in Los Angeles—when Senator Cole, then in his one hundredth year, of the class of '47 of Wesleyan University, stepped forward the vast audience

instantly responded by rising to its feet and cheering lustily and long this living incarnation of American history.

Cornelius Cole was born in western New York, September 17, 1822. He died at his Hollywood home November 3, 1924. He saw the light before the promulgation of the Monroe Doctrine and lived during the lifetime of every President of the United States save only Washington. His visits to Congress 60 years after he had taken his own seat in the House proved to be a remarkable ovation. Shortly after that visit he was describing his experience to me as we sat in his beautiful home. "That was surely a fine reception the House gave you," I remarked. "I broke it up," he almost shouted in glee. Congressmen gathered about the centenarian—a recess was quickly taken, following which, by unanimous consent, the venerable Californian addressed the House, and his remarks were ordered printed in the CONGRESSIONAL RECORD.

The Memoirs of Cornelius Cole is among my most treasured volumes of Californiana. On the flyleaf of my autographed copy the author wrote: "Should you deign to cut the leaves you may observe some errata of the printer, and a few oversights of the author."

He was typical of the best of the California pioneers. His mining operations were brief, likewise his career as a young lawyer in San Francisco; but his political career was long and illustrious. Meanwhile he became editor and publisher of the Sacramento Times in association with James McClatchy. From its very inception in California he identified himself with the Republican Party. He actively assisted in the organization of the Central Pacific Railroad Co. in Sacramento and was intimately acquainted with each of the Big Four—Stanford, Huntington, Crocker, and Hopkins. But because he opposed the plan of the directors to possess themselves of Goat Island, in San Francisco Bay, he incurred their hot displeasure and later averred that they thenceforth ignored the many and valuable services he had rendered.

Cornelius Cole truly earned the right, when contemplating in the sunset of life the wonderful achievements of his State and his Nation, to say, "Et quorum pars fui." And what a privilege it has been for me, a native Californian of a later generation, to enjoy the acquaintanceship and personal friendship of this grand old man. He was the embodiment of the California pioneer spirit at its best.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two resolutions in opposition to compulsory health insurance or any system of political medicine designed for national bureaucratic control. These resolutions were forwarded to me by the New Hampshire Hospital Association and the Fredonwarell Post, No. 17, American Legion, of Groveton, N. H. They follow:

Whereas the American people today lead the world in standards of health, medical care, scientific research, hospital and nursing facilities; and

Whereas this high degree of public health care is a product of free enterprise; and

Whereas compulsory health insurance, wherever tried, has led to deterioration of medical care and hospital and other medical facilities, with resulting decline in national health: Now, therefore, be it

Resolved, That the New Hampshire Hospital Association does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative from the State of New Hampshire, and the chairman of the Senate Committee on Labor and Public Welfare. That said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

LOIS A. BLISS,
President.
MYRON S. BURTON,
Secretary.

WOLFEBORO, N. H., *April 27, 1949.*

Whereas the American veteran in two world wars has defended the American free enterprise system, which has made possible the development in this country of the highest standards of medical care and the finest medical institutions attained by any major country in the world; and

Whereas having experienced the shortcomings of impersonal, assembly-line medical care inherent in the form of government-controlled medicine necessary in time of war, the veteran understands the dangers of imposing such a system permanently on the entire population; and

Whereas compulsory health insurance would impose an unjust tax on the veteran's paycheck for medical care to which he is now entitled free of charge as a reward for his service to his country; and

Whereas compulsory health insurance would force a tax of 3 percent on the income of the employed veteran, rising to a tax of at least 6 percent within a few years, creating new financial burdens which would increase the costs of necessities of life and lower the standard of living for veterans and other citizens: Now, therefore, be it

Resolved, That the Fredonwarell Post, No. 17, American Legion, of Groveton, N. H., does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative from the State of New Hampshire, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

Unanimously passed April 28, 1949.

ARNOLD S. TREMOSE,
Commander.
RALPH E. CALKINS,
Adjutant.

Address of Hon. Glenn R. Davis, of Wisconsin

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. GLENN R. DAVIS, Member of Congress, Second Wisconsin District, keynoting State Young Republican convention at Portage, Wis., May 7, 1949:

Mr. Chairman, fellow Young Republicans, Republican friends, it is more than a pleasantry for me to tell you that I am happy to be here with you today. It is, rather, a true statement of feelings based on the inspiration and encouragement that comes from appearing before this fine gathering of Young Wisconsin Republicans.

I am proud to be able to come here as one of you, for this permits me to talk to you directly and frankly as a Young Republican to Young Republicans. There is need for frank talk among Republicans, young and old, in 1949. I say that not in criticism nor in discouragement, but rather in recognition of the importance and the significance of our position, as acknowledged youthful leaders of the Republican Party of Wisconsin. I say it because of a conviction that our State and Nation need a strong Republican Party and further that the Republican Party needs us Young Republicans perhaps as has never before been realized.

The Young Republicans of Wisconsin must continue to grow in leadership, in numbers, in organization, in strength, in activity so as to fulfill our share of this need to our country and to our party. Our record in recent years speaks well for the future.

PROGRESS IN WISCONSIN

In 1945, the Young Republican organization of Wisconsin was listed among the casualties of the recent war. In December of that year, the work of reorganization was begun. There are today more working Young Republican county organizations than ever before. There are represented here so far today delegates from 23 counties and 3 college organizations. Coming, as this convention does, on the morrow of a discouraging national election, the attendance here today speaks well for the vitality and resurgent spirit of the Young Republican movement in this State. It speaks well for the spirit, the faith, the enterprise of our State chairman, Dick Smith, and the other members of our executive committee.

With knowledge that we are, organizationally speaking, on a sound basis, and with determination that tomorrow we shall do a workmanlike job of conducting the business of this convention, including the election of competent officers to carry on the work which Dick and his fellow officers have done in the months behind us, let us, as is the habit of youth, look to our hopes and aspirations for the future—our hopes and aspirations as Young Republicans and as Americans.

As young men and women of high ideals of citizenship, we need to recognize that our ideals can be realized only through the practical application of our rights and privileges of citizens—in other words through practical politics. We need to realize that every good citizen is a politician—for politics, while not an exact science, is nevertheless the science of government. In this republican form of government every citizen ought to be a student of that science. Let's recognize frankly that politics is to be the aim, and the objective, and the practice of the Young Republican movement of Wisconsin. Our job is to sell practical politics to other young people as a part of their responsibility of citizenship and to interest youth in working within the framework of the Republican Party. To be successful in this we must offer not only a year-round program of activity, we must be able to demonstrate that the hopes and ideals of young people are best expressed in

the principles and programs of our party. While thus serving as a rallying point for youth we can well serve our party for we must not overlook the fact that we, as individual Young Republicans, are also members of the Republican Party.

NOT JUNIOR APPRENTICES

We have a dual membership just as we have a dual citizenship in our State and Nation. Nor should we forget that the Wisconsin Federation of Young Republicans is an integral part of the Republican Party of Wisconsin. Your chairman is a vice chairman of the party and sits as a member of the party's executive committee. It has never been intended that Young Republicans shall serve as apprentices before active participation in party and governmental affairs. It has never been intended that Young Republican meetings shall be polite debating societies for the discussion of academic or moot questions. Young people—Young Republicans—are, and ought to be, primarily interested in a program of recognized action.

Specifically, the Wisconsin Young Republicans can:

First, have a lasting effect on our party and its program by taking leadership in a year-round program of political education and discussion. Youth can best sustain necessary party activity in the period after one election is over and before another election is hard upon us again. A youthful group of Republican workers with the initiative and the public spiritedness to make theirs a year-round program will soon find that they are the leaders of their party and that their party has become the leading party in their community. By knowing more, by doing more, we can give meaning to our viewpoints. Knowledge will forever govern ignorance, and by year-round discussion programs in our local communities we can achieve the knowledge and know-how to be effective in politics and effective in government.

Second, we must make ourselves heard in party councils. Our success as Young Republicans is not measured alone by the size of our membership rolls or the fact that we have live, working organizations in a great many counties in the State. It must be measured also by the number of Young Republicans who are members of county Republican committees, are precinct committeemen or committeewomen, and are in attendance and take active parts in county, district, or State Republican conventions. Again I repeat—we are an integral part of the Republican organization. Our identity as Young Republicans is significant as a meeting ground and as a training school for our work in the senior councils of the party. It is gratifying to note that two of the county Republican chairmen in the Second Congressional District, one of them the chairman of our host county today, are Young Republicans both in years and in activities.

To be specific regarding our part in party councils: Next month the 1949 State Republican convention will be held at La Crosse. Some county meetings for the selection of delegates and alternates to this convention have already been held, others have not. If such a meeting has been held in your county, go back home to your county chairman and ask for a position as alternate to fill any vacancy among the delegates which may exist at La Crosse. If your county meeting has not been held, attend this meeting. Let the Republicans there know that you believe in our party and that you want to be a delegate and can attend the State convention. By this means you will take the first practical step in becoming, as individuals, influential members of the Republican Party of our State.

ENDORSEMENT OF CANDIDATES

There are two important problems which will be brought before the La Crosse convention. One of them will be the question of mandatory endorsement for candidates for United States Senator and the State constitutional offices. I hope your voices will be heard in favor of that resolution. Some of us have had differences of opinion on that measure in years past, but the lessons of 1948 and 1949, it seems to me, are clear. If the Republican Party in Wisconsin is to be a policy-making instrument, if it is to stand for certain principles, we must assume the responsibility, as Republican leaders, of recommending to the rank and file of Republicans, those candidates for State-wide offices who are Republicans in fact, in principle, and in practice as well as Republicans in name. This is the studied judgment of a Young Republican who in 1946 opposed the endorsement of candidates at Oshkosh. There is still room, of course, for honest differences of opinion on this point, as there will always be in all matters within the Republican Party.

I know the bugaboo of bossism will be raised, but I believe this to be true, that the people who will raise the greatest fuss about endorsement of candidates are those outside our party who in 1948 loudly hailed the slate of hand-picked candidates which emerged by long-distance telephone after a huddle of Democratic Party bosses in a coke-filled (so the newspapers said), smoke-filled hotel room a thousand miles away in Philadelphia, Pa. I trust that we Young Republicans will be practical enough to know the true situation, and will not be so naive as to think for a moment that the criticism these people will continue to offer will be in the nature of constructive criticism for the Republican Party.

FEWER DELEGATES SUGGESTED

A second important proposal which I now understand may or may not be presented at La Crosse, is a suggestion for revision of the constitution of the party regarding the allotment of delegates to State conventions. At the present time each county is allotted one delegate absolute, plus one delegate for each 250 votes or major fraction thereof, cast for the Republican candidate for governor in the preceding general election. The suggestion has been made that the number of delegates be cut approximately in half with one delegate for each 500 votes for governor instead of the existing 250. There is sound reason for proposing this change. No one will deny that our recent conventions, to which between two and three thousand delegates have been certified, have been unwieldy and have not lent themselves to the orderly conduct of convention business. On the other hand, in those cases where ample lodging is readily available, or where the business of the convention can be easily and efficiently handled within the course of 1 day, it might be well to keep the broad base of convention attendance which now exists. The site, the lodging, the business, might well determine, within certain reasonable limits, the size of the convention to be desired. For your consideration as integral members of the Republican Party, I should like to submit for your consideration the following proposal for delegate allotment:

"Each county shall be entitled to one delegate absolute, plus a number of additional delegates to be uniformly fixed for all counties by the State executive committee on the basis of the votes cast for the Republican candidate for Governor in the immediately preceding general election; provided, however, there shall be not more than one such additional delegate for each 250 Republican votes (or major fraction thereof) for Governor, and not less than one such additional delegate for each 500 Republican votes (or major fraction thereof) for Governor."

There is a third matter to which I believe we should give our serious attention at La Crosse, and that is the preparation of a tentative State platform of the Republican Party to be prepared by a competent committee in time for dissemination as the basis for thorough debate and discussion by the delegates at the 1950 State Republican convention. Too well do I recall my futile efforts to maintain a semblance of order while the chairman of the platform committee, in the closing minutes of the 1948 convention, presented the report of the platform committee—a recital to which few of the delegates listened, yet that platform was approved unanimously—unseen, unheard. I hope that a resolution can be adopted at La Crosse to provide for the drafting of a tentative party platform by a committee of the representatives of labor, of agriculture, of business, of white-collar workers, of public employees, and of organizational and legislative leaders of our party; that tentative platform for presentation, discussion, amendment, and adoption at the 1950 convention is an order of business prior to taking up the matter of endorsement of candidates.

I believe these three—endorsement, allotment of delegates, preparation for our 1950 platform, are matters in which we as individuals, though not as an organization, can legitimately make ourselves heard at La Crosse to the benefit of our party and the people of our State.

Third, we Young Republicans must be active in government. It is not enough that we shall demonstrate our effectiveness as practical political workers in behalf of Republican candidates, we must furnish some of the candidates of the Republican Party at local, State, and national levels. How many of you have ever sought or ever held political office? All of us cannot be office holders, but many of us who could be competent Republican servants of our Government have never offered ourselves for public service.

Political campaigning and political office holding is a hard lot, discouraging at times and often unappreciated, but they are functions that young people are admirably fitted by youth, energy, and spirit to perform. I know from experience, from having worked with them, that some of the outstanding present and future leaders of the House of Representatives are to be found in the ranks of the Young Republicans. To list a few whose names are familiar to you, DICK NIXON and DON JACKSON of California, the latter of whom addressed our State convention last year; JERRY FORD and CHARLIE POTTER of Michigan; CAL BOGGS of Delaware, and our own JOHN BYRNES of Green Bay, who was the keynote speaker at our National Young Republican Convention at Milwaukee 2 years ago. These are the kind of men that should make us proud that we too, are Young Republicans.

These are the kind of men to whom politics, public service, is a career. Robert Louis Stevenson once said that politics is perhaps the only profession for which no preparation is thought necessary. Robert Louis Stevenson, of course, was strictly a writer of fiction. It must be true that few people think preparation is necessary, but that, too, is fiction.

At the National Republican Convention at Philadelphia last June, former President Hoover told the delegates: "If you follow the counsel of those who believe that politics is only a game to be played for personal advantage, you are wasting your time and effort."

Young Republicans must be active in government, but it must be a responsible stewardship.

CONSCIENCE OF OUR PARTY

Fourthly and finally, Young Republicans—and youth has always furnished the idealism of all generations—must instill within our party a fundamental honesty in political

principle and political practice. We must be the conscience of our party as well as the guardian of its principles. Some of our older brethren who sweated through the misrepresentation and vilification which characterized the campaign of the opposition in 1948 may well wonder whether a conscience pays off in practical politics. As Young Republicans we must prove to them and to the American people that honesty and forthrightness are as important in politics as in any field of endeavor and that there is still enough respect for those virtues in this America to eventually bring down scorn and repudiation upon the heads of those who believe and practice otherwise. Sooner or later the time will come, and the more we Young Republicans do about it the sooner it will come, when the American people will repudiate those who seek to maintain or obtain the control of government on the basis of misrepresentation, half-truths, vilification, and trick phrases. We must be sure that we stand clean and ready when that time arrives.

We must prove to our elders that we are immune to the virus of "gimmeism" which has infected millions of our elders in both parties. We must convince our elders of this generation in all parties that there is but one source of all true and perfect gifts and that that source is not the Government of the United States.

Surely there is a better and a more honest substitute for the New Deal-Fair Deal game of playing one group against the other for political gain, of promising economic advantage through legislative action or executive decree. For surely there is one special-interest group who have been long and sorely neglected—the group who have an unselfish special interest in maintaining the traditions, the institutions, and the practices which have preserved our society of incentive, competition, and individual responsibility.

Today these traditions, institutions, and practices are in grave danger. To hear some of the current mouthings of those who would substitute the methods and practices of the welfare state, you would almost think that the result of November 2 was a mandate to repeal the principles in which we always have believed. Thus, are we always endangered when principles, however briefly, are sacrificed for immediate tangible or material motives.

BIG BUSINESS, BIG LABOR, BIG GOVERNMENT

Yesterday under the New Deal, today under the Fair Deal, our society of initiative, competition, and individual responsibility is endangered by the concentration of three enveloping forces: big centralized business, big centralized labor, and big centralized government.

The Dealers—Fair—indifferent, incompetent, have shown lack of will or inability to control these forces, which, if they continue to expand, will—like a cancerous growth—defile, crowd out, and destroy the sinews, the tissues, and the framework of a society of enterprise, individual freedom, and personal responsibility.

This unselfish group, the great central body of American citizenry, who believe in our society of incentive, competition, and individual responsibility, who believe in our traditions, our institutions, and practices which have heretofore given us moral, political, and economic world leadership—actually the majority of Americans—finds itself outspoken, outmaneuvered, outcampaigned by the noisy champions of the welfare state, and sometimes finds itself compromised and seduced by the economic and political power of a free-spending government.

CHAMPIONS OF SILENT MAJORITY

Who shall champion the cause of this silent majority? Who else but those of us who believe as they believe, who are young enough to fight for what we believe in, who are interested enough to train ourselves, to practice the methods and skills of effective practical politics? Who else can better qualify than we—we young Republicans.

If we accept this challenge, then we shall say to the apologists of big centralized business:

One and one-half percent of the Nation's employers employed 56 percent of the workers of this country in 1946.

Three hundred and sixteen corporations held 40 percent of the total working capital of the United States in 1929 and by 1947 (according to Federal Trade Commission figures) 113 corporations owned 50 percent of the net capital assets of our Nation's industry. In the same year three steel firms accounted for 60 percent of the Nation's basic steel capacities, three business organizations produced 80 percent of our automobiles, three firms made 65 percent of our farm machinery and equipment, three companies accounted for 82½ percent of the tobacco which Americans smoked.

Too many small business concerns have been swallowed up or have disappeared. We suspect you, centralized business, of economic homicide. We don't want to pick on you simply because you're big, but neither do we want you to get the idea that you can throw your weight around to the detriment of the majority of Americans of which we ar acting as self-appointed guardians. Our Republican forebears enacted the basic Federal antitrust legislation, the Republican Eightieth Congress appropriated more money for the Antitrust Division in the Department of Justice than any other Congress. We Republicans stand guard against concentration of power in your hands as we shall stand guard against the concentration of power in the hands of big labor or big government.

If we accept this challenge, then we shall say to the apologists of big centralized labor:

In 1933, you had 3,000,000 members. Today you have over 14,000,000. These 14,000,000 members are organized into some 70,000 locals and concentrated into less than 200 organizations. You control over two-thirds of the industrial working force of the Nation. In several basic industries, your organized membership approaches 100 percent. Thirty-two major labor organizations control over 8,000,000 workers.

YOUNG REPUBLICANS ON LABOR

We don't want to pick on you either, big centralized labor, but we don't like the idea of your throwing your weight around to the detriment of the public interest any better than we like the idea of big business doing so. That's why the Republican Eightieth Congress enacted, and a majority of Democrats supported, the Labor-Management Relations Act of 1947. You called that a slave-labor act, but you were very evasive and indefinite as to how come your membership and wages increased, your working conditions improved, and your involvement in strikes decreased at the same time you were supposedly barred from collective bargaining and enslaved. But, big centralized labor, we believe in a healthy organized labor movement. We shall support your right to collective bargaining. We want you to be treated fairly but in return we want you to recognize the rights of the public, for whom we speak. That's why every Republican in the House of Representatives under 40, every Young Republican, voted for the modified Wood bill, after a number of amendments offered by Young Republicans had been accepted, this past week.

If we accept the challenge of leadership in the public interest, we shall say to the apologists of big centralized government:

This year you will absorb six and one-half billion dollars in salaries, eight times as much as in 1933. You have three and one-half times as many bureaus, four times as many employees. You have 530 Federal offices in the city of Chicago alone, more than there were in the entire Nation in 1933. You have 1,500 tax-paid, full-time press agents in Washington alone. You have a million cars and trucks, nearly one for every two civilian employees. You have 93 different agencies which lend money, 75 which handle transportation problems, 44 which deal directly with agriculture.

You have taken powers unto yourself which traditionally have been, and properly should be, the province of the States. You have made us dependent upon the whim or fancy of your bureaucrats. You have weakened our desire and our capacity to accept local and individual responsibility. You have weakened our will to resist your schemes for a planned society.

But, big centralized Government, we who are young and strong of will are determined to stand against concentration of powers in your hands. We shall, through the instrument of our political party, restore civic functions and civic responsibilities to our State and local governments. We will work for strong and progressive State governments to justify the decentralization of power into their hands. We shall oppose the Federal hand-outs which form the excuse for the existence of many of your bureaus. We applaud the economy efforts of the Eightieth Congress, the only Congress which has given us surplus Federal Government financing in our adult lifetimes. We shall insist on removal of duplication and overlapping agencies. We shall support the reorganization plans of the Republican-sponsored Hoover Commission on Reorganization of the Executive Departments, and we shall stand firm against the shameless campaign of opposition which has already begun.

CONCENTRATION UNDER NEW AND FAIR DEALERS

These forces of concentration in business, in labor, in Government, have all achieved their zenith under the protective wing of the Dealers—New and Fair. How strange that the self-styled apostles of "the common man" and "the little fellow" should have nurtured the centralization of the forces which can destroy a free society in which we little people, we young people, shall have a chance through our incentive and on our own responsibility, to carve our own career, to achieve a place commensurate with our skills, our industry, and our ambition.

The fight against the forces of concentration is indeed a challenge to young Republicanism.

In summary, then, I have attempted to outline these four objectives for the Young Republicans of Wisconsin:

1. A year-round program of political education and discussion.

2. Effective participation in the councils of our party.

3. Active participation and responsible stewardship in government.

4. Championship and guardianship of the conscience, the forthrightness, the sound traditional principles of our party and of our Government.

Personally, I believe in these objectives, I believe in the Young Republican movement. I hope that you—my fellow Young Republicans of Wisconsin—can share in the faith, in the determination, that we shall offer to youth—a political vehicle for the achievement of our aims—the continuation of sound government in Wisconsin and a change in Washington to a government

which shall restore a free society in which the enthusiasm, the ambition, the ability of youth shall have an opportunity for recognition—a society in which free men and women shall escape the threatening chains which the concentration of economic and political forces have forged around us. For this, Young Republicans, we must hope, and work, and pray. This is the challenge that we must meet.

The Common Council of the City of Detroit Protests Commutation of Ilse Koch Sentence

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a resolution adopted by the Common Council of the city of Detroit, Mich.:

Resolution by Councilman Garlick:

Whereas voices of protest in strong indignation are being heard against the impending release of Ilse Koch of Buchenwald from imprisonment and against the action of General Lucius D. Clay in commuting her life sentence to a 4-year term of imprisonment; and

Whereas the revolting atrocities of which Ilse Koch is accused have shocked the civilized world: Now therefore be it

Resolved by the Common Council of the city of Detroit, That we protest the action of General Lucius D. Clay in commuting the life sentence of Ilse Koch to a 4-year term of imprisonment, and request the proper authorities in Washington to have the matter reviewed in order that the ends of justice may be well served; and be it further

Resolved, That copies of this resolution be transmitted to President Harry S. Truman, to the Chief of Staff of the United States Army, to Gen. Omar Bradley, and the President of the Senate and Speaker of the House of Representatives of Congress, and to the Michigan Members in the Senate and House of Representatives with the urgent request that action be taken in memory of those World War citizens of the United States who made the supreme sacrifice on the battlefields in defense of their country and in prison camps.

Adopted as follows:

Yeas: Councilmen Connor, Edgecomb, Garlick, Kronk, Miriani, Oakman, Smith, and the President—8.

Nays: None.

Social Security Program

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. FORAND. Mr. Speaker, under leave granted me to extend my remarks, I include the following statement by John J. Corson submitted to the House Ways and Means Committee on proposed changes in the Federal old-age and survivors insurance program and on H. R. 2893. The statement follows:

For 6 years, beginning in 1938, I was Director of the Bureau of Old-Age and Survivors Insurance. Since then, after a short period with UNRRA, I have been with the Washington Post. While I have been away from the Federal Security Agency, I have followed the developments in social security with keen interest. My experience as a businessman has strengthened my belief in the social insurances. They constitute a good business-like method of preventing poverty and want. I appear before this committee today because many of the problems raised in extending the old-age and survivors insurance system are like the problems we tackled when Congress first established it. I hope that my experience in the early years of the program will be helpful now as you consider H. R. 2893.

All that I will have to say can be boiled down into two major points:

First. I can see no administrative reasons for postponing the extension of old-age and survivors insurance to farm workers, domestic servants, and self-employed workers. Anyone who has had substantial experience in the workings of the present system will agree it can be done.

Second. It is urgently necessary that the old-age insurance system be expanded and its benefits liberalized immediately. If Congress does not extend old-age and survivors insurance coverage and raise benefits, either (a) the veterans and the Townsendites will force through a pension for everyone at 65 and a better one for veterans with staggering costs for the national economy, or (b) the stronger unions will win relatively high pensions for a favored group of employees, and more money will be poured into the relief methods of caring for the aged and dependent children.

At the beginning of the program we had to develop a satisfactory way to get social-insurance contributions paid by every covered worker and his employer. We also had to find a way to keep a record of each worker's wages. Then, as in the case of the present proposal to cover new groups of workers, some people thought the task impossible. They said that it was impossible because—

1. Many small employers were not in the habit of making reports and keeping records of the wages they paid;

2. Many people don't hold steady jobs, they shift from one thing to another and are seldom employed for long at any one job;

3. The country was too big—the workers and employers were too widely scattered geographically to operate under one insurance program.

It was argued that no plan could keep records for workers and employers who were here today and gone tomorrow to goodness knows where—in a few days they would show up anywhere from Maine to California, or Minnesota to Texas.

Now, 13 years later, it is hard to recall these early doubts and even harder to justify them. They have been overcome effectively by an administrative system that now seems simple. Once every calendar quarter each employer lists the name, social-security account number, and amount of wages paid during the quarter to each of his employees. The employer sends this list and the social-security contributions to the collector of internal revenue. The Treasury Department is responsible for the contributions collected, but sends the Bureau of Old Age and Survivors Insurance the list of workers and their wages. That Bureau maintains a record of all the wages reported for each employee. Wages for Jim Brown, for example, all are combined into one record even though they were earned in several States and were paid by a number of different employers.

The early doubts as to whether the insurance system could be administered are significant now only to help us evaluate the doubts that it is feasible to extend the system to cover domestic servants, farm workers, and others.

Today some contend it is not feasible to include domestic servants and workers in agriculture under the insurance program. They argue that many housewives and farmers are not in the habit of keeping records of the wages they pay. But under the present system, we now cover approximately 700,000 employers who have only one employee and 700,000 more employers who have only two or three employees. Many of these employers send in simple reports that are perfectly satisfactory, even though written in longhand.

American farmers and housewives who hire workers would have no more difficulty than these employers in reporting the wages of their workers and paying the contributions required. They undoubtedly would be able to operate under either of the two plans that Dr. Altmeyer described. The choice between a stamp-book plan or a simplified pay-roll plan is less important than the fact that, in the recent past, American farmers and housewives proved their ability to cooperate under various stamp systems and programs that required record keeping and reports.

For housewives who managed 10 or more different ration stamps whose value shifted from time to time, social-security stamps of fixed value would be a simple proposition. I recall asking the wife of one of my friends who lived for a while in Uruguay whether she had any difficulty with the social-security payments required for her maid. "Oh, no," she replied. "I always kept a few social-security stamps in the little tin box where I kept postage stamps. Then when I paid my maid, I pasted them in her stamp book."

Keeping a simple record of the wages that he paid would look easy to the hundreds of thousands of farmers who made out reports for agricultural conservation and adjustment programs. Modern farmers are businessmen who make crop loans under the Commodity Credit Corporation. They finance their businesses through the Federal land banks or the production credit associations. They insure their crops with the crop-insurance programs. They prevent waste and increase their efficiency through Government aid for soil and water conservation. Many of these activities require detailed and accurate information about various aspects of their farming. As a matter of fact, many farmers keep a record of the wages they pay because they are deductible as an operating cost under the income tax.

If farmers and housewives can keep such simple records as may be essential, it may still be asked: Does the existence of casual and intermittent employment make it impossible to cover workers in agriculture and domestic service under the insurance program? I think not. In the first place, H. R. 2893 does not propose to cover the most casual jobs. It excludes from coverage wages of less than $25 in a calendar quarter if paid on a "farm" or "not in the course of an employer's trade or business," which would include domestic service. The bill would also prevent a great deal of nuisance reporting by excluding from coverage the earnings of an employer's spouse, parents, or children under age 21. These two exclusions prevent many administrative problems from arising. They should, however, greatly affect the social-insurance rights of persons who earn their living in covered jobs. Many of the persons excluded by these provisions would

be irregularly employed homemakers, students, or retired persons.

Concern over casual jobs in the newly covered areas should not make us forget and neglect the many regular workers who work full-time in these employments. The employment in agriculture and domestic service that is covered by H. R. 2893 probably would cause little, if any, greater administrative difficulty than is met in employments now covered by the program. All jobs in commerce and industry are under old-age and survivors insurance, yet failure to report intermittent, or other short-time work, has not been a major problem.

Take, for example, a typical mover of household goods. Only recently I observed the vans that moved the household goods of a new arrival into a house neighboring my own. Within an hour after finding the house, the driver picked up four men from the streets to unload the goods. A few hours later the job was done and the men were paid off. I watched the transaction; the driver as he paid each worker, wrote down their names and social security numbers on a simple form his company provided. He deducted social-security contributions from the wages, paid each helper and had the helper sign this form as a receipt for his company.

The records of the Bureau of Old Age and Survivors Insurance show a considerable amount of such short-term employment in presently covered jobs. Indeed, the volume of such employment is an important reason for extending the system, to protect more of the people who now work only temporarily in covered jobs.

The great majority of the farmers and housewives who hire workers do so regularly. A housewife may have a cleaning woman or a laundress only one day a week, for example, but it is every week. One of my secretaries says that she has had the same wash woman for 6 years and she has never missed her regular day. Some housewives and farmers, of course, hire help only from time to time—they may be called intermittent employers. When workers understand the program and have their stamp books, I do not believe that these employers will fail to make the necessary contributions. Like the other problems I have discussed, this one is not new to the insurance program. In commerce and industry there are businessmen who at present only occasionally have hired helpers for whom they report social-security contributions.

Will the widely scattered geographic distribution of agricultural work make its coverage impractical? Again, I think the answer is "No." The widespread geographic distribution of commerce and industry has not prevented the coverage of these types of employment. Many workers now covered by the program live in agricultural and rural areas, and it should not be more difficult to cover other workers in these areas. Nearly half of all farm workers have worked at one time or another in jobs covered by the program and would easily understand its operation in agricultural employment.

As compared with the beginning of the program when we had no administrative organization, the problem of covering a wide geographic area seems simple at present. Today we can build on a smoothly functioning system of almost 500 field offices spread over the entire country. Practically all employers in agriculture and domestic service can be reached by mail carriers and all rural areas have schools, churches, newspapers, and radios. The Extension Service of the United States Department of Agriculture and the agricultural colleges reach most farm communities with their educational programs. There are few farm communities without farm organizations such as the Grange, the Farm Bureau and the Farmer's Union. Thus, even in remote areas people can be informed of their rights and duties under the program.

Furthermore, the advantages of coverage under the social-insurance program aid in its enforcement. Most persons become informed quickly about programs from which they derive a benefit. Workers will make every effort to secure the protection and benefits of the insurance system. Most employers will get considerable satisfaction in cooperating to provide these benefits.

In respect to the self-employed, the chief administrative problems connected with their coverage are, first, how to determine who is self-employed and secondly, how to determine what self-employed persons have earned from their trades or businesses. Linking the social-insurance reports of self-employed persons to their income-tax reports seems to solve both of these questions satisfactorily.

The doubts as to whether the social-insurance system can grow are the same as the doubts that once existed about its establishment. We overcome these problems with comparative ease, even though they seemed difficult then. I know that similar problems will arise in covering farm workers, domestics, and the self-employed. But they too can be solved. There is no longer any reason to postpone this step in the logical developments of our social-security program on the grounds that it is administratively impracticable.

In my opinion, the coverage of new groups of workers is not only practicable, but I believe such action is urgently needed to preserve the insurance program. In 1935–39, Congress planned to deal with destitution resulting from inability to earn in two ways: To prevent it as much as possible by a contributory social-insurance program which would supplement personal savings, and to care for persons in special need by an assistance program.

Years of operation have proved that this approach is sound. The contributory insurance principle on which it is based was adopted because the desire for self-reliance is fundamental and important to Americans. It was planned that the public assistance program for persons in need would be reduced to a minimum as the insurance program matured.

Yet during the 14 years since the Social Security Act was enacted, the number receiving old-age assistance has more than doubled, the amounts being paid each year by Federal and State Governments to needy aged persons has increased almost tenfold, and the average payment per recipient has more than doubled. The number receiving old-age insurance is still relatively small and the average benefit payment is comparatively low.

Consequently, in spite of the almost universal approval of old-age and survivors insurance and its notably successful administration, this contributory insurance is in grave danger today. When John Q. Citizen can no longer work, it is income he needs to help meet current high living costs. I don't believe the average American likes the prospect of asking for relief. But if he will receive twice as much by swallowing his pride and if the State governments make the needs test more and more palatable, he can be brought to prefer assistance rather than insurance. Yet security for this country's aged can still be put on a basis which guarantees the self-respect of each aged person, a limit to the cost of benefits for the aged, and a source of income from which the bill can be paid. All that can be accomplished by extending and liberalizing old-age and survivors insurance.

And this, it seems to me, is the time for decision. To reiterate what I said at the start—if Congress does not extend old-age and survivors insurance coverage and raise benefits, either (a) the veterans and the Townsendites will force through a free pension for everyone at 65 and a higher one for veterans with staggering costs for the national economy, or (b) the stronger unions will win relatively high pensions for a favored group of employees, and more money will be poured into the relief methods of caring for the aged and the dependent children.

The risks covered by the contributory insurance programs are faced by all gainfully employed persons. Loss of earning power in old age, illness, disability, and death are not limited to persons in commerce and industry. Persons in all walks of life should be given an equal opportunity to provide themselves with protection against these risks within a program of social insurance. My experience in helping to establish the existing system convinces me that it is practicable to extend this protection. I urge that Congress take such action while it is still possible to establish the contributory insurance benefits (rather than free pensions paid for out of general revenues) as the basis for providing security for all aged Americans.

Washington Scenes

EXTENSION OF REMARKS
OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include the following article entitled "Washington Scenes," by Edward T. Folliard, which appeared in the May issue of Nation's Business:

WASHINGTON SCENES

(By Edward T. Folliard)

The running battle between President Truman and Congress promises to go on for a long time.

Far from being novel, this kind of conflict is familiar in American political history. It is inherent in our form of Government. The founding fathers, having experienced tyranny, were afraid above all of arbitrary power; hence the division of powers and the system of checks and balances. The result, over the years, has been a good deal of thunder along the Potomac, especially when the man in the White House has sought to lead those on Capitol Hill.

John Sherman, who served in the House, the Senate, and the Cabinet, and who was boomed for the Presidency, wrote in 1895:

"The executive department of a republic like ours should be subordinate to the legislative department. The President should obey and enforce the laws, leaving to the people the duty of correcting any errors committed by their representatives in Congress."

Theodore Roosevelt revolted at the notion that he should be a mere instrument of Congress. Woodrow Wilson, in his turn, shared T. R.'s view.

"The President," said Wilson, "is expected to be the leader of his party, as well as the chief executive officer of the Government, and the country will take no excuses from him. He must play the part, and play it successfully, or lose the country's confidence. He must be prime minister, as much concerned with the guidance of legislation as with the just and orderly execution of law."

In their last years in the White House, both Roosevelt and Wilson found themselves stymied by Congress.

What is extraordinary, even startling, about the struggle between President Truman and the Eighty-first Congress is that it should have come so early. Echoes of his 1948 tirade against the "mossbacks" of the Republican-dominated Eightieth Congress had hardly died away when he was feuding with its successor, this one controlled by his own Democratic Party.

What is the explanation for this situation, aside from the traditional strain between the executive and legislative branches? Why is this Democratic Congress, in the case of many issues, refusing to go along with the President?

The answer, in part, is to be found in the 1948 election returns, which were widely misread.

Some exultant Democrats let their imagination run wild after the great upset. Thinking perhaps of the first New Deal victory of 1932, and of the rubber-stamp Congress of the famous "100 days," they expected, apparently, that there would be a clear road ahead for the Truman program.

They were wrong, for two reasons. First, the Democrats, while having nominal control of the Senate and House, do not have majorities large enough to offset the occasional alliance between conservative Democrats from the South and the Republican minority. Second, no emergency exists; and it is only in an emergency—or in the face of an overwhelming public sentiment for a particular policy—that Congress readily yields to White House leadership.

The explanation also is to be found in part in what seems to be a misapprehension about the 1948 Democratic platform.

This is illustrated by the fight over labor legislation. The platform, it is true, called for repeal of the Taft-Hartley Act. But did it necessarily follow that Mr. Truman's election was a mandate for the kind of labor law the administration afterwards proposed? Undoubtedly, many union members and others voted for the President because of that repeal plank. But it is also pretty certain that a good many people voted for him, not because of that plank, but in spite of it.

It is generally agreed now that Mr. Truman owes his victory to the farmers of the Midwest. Would anybody argue that these farmers are now clamoring for the administration's new labor bill?

The Eighty-first Congress, it would appear, feels that what the American people want is a true balance as between management and labor. And it seems to be a good bet that the labor legislation that is eventually sent to the White House will have a lot of Taft-Hartley in it.

Party platforms, which hardly anybody reads, often are deceitful documents. Designed to bind together various elements of the party and to catch votes, they are rammed through a national convention in the space of a few days. A delegate from the Corn Belt, let us say, will have no sympathy for a labor plank. However, if he thinks it will help his party in the big cities, he will keep his peace—provided, of course, that there is also a plank looking out for his farmers.

Mr. Truman's request for $4,000,000,000 in new taxes may be thoroughly justified in view of the enlargement of our armed forces and our overseas commitments. However, there was no hint of such a request in the 1948 platform. On the contrary, the platform held out the promise of a tax cut whenever that was possible without unbalancing the Nation's economy.

There is almost no sentiment for a tax increase in Congress at this time. Higher taxes, of course, are never popular with the lawmakers; besides, many think that an increase now would be harmful to the economy. If, later on, the Government gets deeply in the red and business is reasonably good, the story may be different.

The successful filibuster of the southern Democrats against a change in the Senate rules, a change designed to clear the way for the administration's civil-rights program, needs no explanation. As the legislators from Dixie saw it, they were being asked to slit their throats, politically.

Some of the interpretations put on this defeat for Mr. Truman were altogether too grim. Perhaps this was because it was coupled with another set-back—the action of a Senate committee in blackballing his good friend, Mon Wallgren. Anyway, one viewer-with-alarm hauled off and said that Mr. Truman's whole program was in ruins.

This was mistaking a battle for a full-scale war. The Eighty-first Congress, it should be kept in mind, is still young. Besides, Mr. Truman's lease on the White House still has 3½ years to go.

Impartial observers at the Capitol believe that Mr. Truman will get a large part of his program through Congress, maybe as much as 60 percent. They don't expect that he will get it just as he wants it; few Presidents ever do. Allowing for the usual give and take, such as made the new rent-control bill possible, they look for action on housing, Federal aid to education, extension of the reciprocal-trade program, and some broadening of social security—all this, of course, in addition to action on the regular appropriation bills and the North Atlantic treaty and the arms program.

They don't look for any action on stand-by controls over prices and wages; at least, not so long as deflation is on. Neither do they expect anything to be done at this session about national health insurance, barring a spectacular compromise.

If Mr. Truman does get 60 percent of his program through this session, it won't be because of any significant change in his relationship with Congress. The fact is, there has always been room for agreement on much of the pending legislation—not only as between the President and the Democrats, but also as between him and the Republicans. The GOP, it should be remembered, also made some campaign pledges.

An election is coming up in 1950, one that will involve a third of the Senate and all of the House Members. As yet it has not been shown that the best way for a candidate to win is to tell the voters he fought Mr. Truman all along the line.

As for the President himself, he seems not too unhappy about the way things are going. Having served as a Senator and also as Vice President, he has a better understanding of the situation down there than had most of his predecessors. He says he bears the lawmakers no ill, and he acts as if he means it.

What about their attitude toward him? Some of the southern Democrats, while not actually disliking him, are bitter.

As for the Republicans, one hears talk among them that Mr. Truman has become cocky.

That is correct, only the phrasing is off. He is cocky, very much so, but he has been for a long time. He was that way even when his political stock was at rock bottom. He's the man who, just about a year ago, stood up before a gathering in the Hotel Mayflower and said: "There's going to be a Democrat in the White House for the next 4 years—and you're looking at him."

The biggest change in Mr. Truman came, not after his election, but in his first year in the White House. At the outset, he complained about the fates that had landed him there, and referred to the mansion as a jail. His embarrassed aides used to call this his "hair-shirt talk." Somewhere along the line—it was about the time that Russia got rambunctious and strikes began to plague the land—he decided that it was time for him to start acting like a President.

Although he is the hardest-working man in Washington, Mr. Truman still manages to get in some reading—much of it dealing with American history and the experiences of his predecessors in the White House. He is, therefore, thoroughly familiar with the long-drawn-out struggle between the Chief Executive and Congress.

If he is tempted to chafe at times, he can console himself with the thought that Lord Bryce, back in the 1870's, found that a Presidential message to Congress had no more effect "than an article in a prominent party newspaper."

Mr. Truman was recently talking about his differences with Congress and the conflicting remarks of newspaper columnists thereon.

"It's a wonderful country," he concluded.

Two Hundred and Forty-seven Firms Charged With Price Fixing in 1 Year—1948

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. PATMAN. Mr. Speaker, price-fixing seems to be the order of the day. Two hundred and forty-seven firms have had formal charges of illegal price fixing brought against them in 1948 by the Department of Justice, according to a list published in the Machinist for May 5, 1949. Herbert A. Bergson, Assistant Attorney General, is quoted as stating that only once before in history have so many business corporations been apprehended in a single year for illegal price fixing. With price fixing so prevalent, it is obvious that laws to prevent this practice must be maintained and strengthened.

KEEP ANTITRUST LAWS STRONG

How will a report on price fixing convictions for 1949 and 1950 read if either H. R. 2222 or S. 1008—to provide a 2-year moratorium on prosecutions for certain pricing practices—is passed by the Congress? The prosecutors of the Department of Justice will, I am afraid, find it difficult to equal their record for 1948 if we weaken the laws under which they operate. I am convinced that the moratorium bills will provide the basis for a clever defense by corporation lawyers in cases involving pricing practices. The test of purpose or intent will replace the test of effect in determining the legality of pricing practices. And it does not require legal training to recognize the difficulty of proving the illegality of purpose or intent.

The Machinist states in its article:

In the 12 months of 1948, the United States Department of Justice brought charges against 314 business corporations, including some of the Nation's largest. Each of them has been charged with illegal activity—in

most cases, price fixing in violation of the anti-trust laws. A survey just completed by the Machinist shows that the Justice Department last year filed civil suits against 186 business firms seeking court orders to halt illegal price fixing and other unlawful practices, while criminal action was taken against 152 corporations. In some cases the same firm was named in both civil and criminal actions. In the criminal cases, the United States Government is, for the first time in history, seeking jail sentences for flagrant violations of the anti-trust laws.

For more than 50 years the United States Government has been trying to curb the economic crime of overcharging the American people through illegal trust agreement. It was back in 1890 when Benjamin Harrison was President, that Congress passed the first antitrust law, the Sherman Act. This law is still on the statute books, but it has never been very effective in halting the growth of monopoly.

Herbert A. Bergson, Assistant Attorney General in charge of the Antitrust Division, says one difficulty is that the law is too lenient. In criminal cases the maximum fine that can be levied is $5,000 on each count—a penalty about equivalent to a slap on the wrist to a corporation with millions of dollars in assets.

The Department of Justice is asking Congress to strengthen the antitrust laws by providing stiffer penalties in criminal cases. It proposes that the maximum fine be increased from $5,000 to $50,000 for each criminal violation. If Congress will agree to such a change, Bergson believes the antitrust laws will then have real teeth.

Listed below are some of the firms charged last year with illegal price fixing or other violations of the antitrust laws:

ABRASIVES

Six corporations have been charged with illegal price fixing in the coated abrasives field: Armour & Co., Behr-Manning Corp., Carborundum Co., Durex Abrasives Corp., Durex Corp., and Minnesota Mining & Mfg. Co.

BANKING

Thirty-five corporations have been charged with conspiracy to fix minimum commissions, service fees and interest rates in connection with the purchase of homes in the Chicago area: Beesley Realty & Mortgage Co., Inc.; Charles H. Brandt & Co., Inc.; Robert E. L. Brooks, Inc.; Central National Bank in Chicago; Chicago City Bank & Trust Co.; Chicago Federal Savings & Loan Association; Chicago Mortgage Investment Co.; Dovenmuehle, Inc.; Draper & Kramer Inc.; First Federal Savings & Loan Association of Chicago; First National Bank & Trust Co. of Evanston; General Mortgage Investment, Inc.; Great Lakes Mortgage Corp.; Greenebaum Investment Co.; Home Federal Savings & Loan Association of Chicago; Henry P. Kransz Co.; Washington National Insurance Co.; Western National Bank, of Cicero; Percy Wilson Mortgage & Finance Corp.; Merchants National Bank in Chicago; Midwestern Mortgage Co.; The Mutual National Bank of Chicago; National Bank of Commerce of Chicago; National Boulevard Bank of Chicago; Oak Park Trust & Savings Bank; H. F. Philipsborn & Co.; F. C. Pilgrim & Co.; Quinlan & Tyson Mortgage Co.; Republic Realty Mortgage Corp.; Charles Ringer Co.; The South East National Bank of Chicago; South Side Bank & Trust Co.; State Bank & Trust Co.; and Uptown Federal Savings & Loan Association of Chicago.

CHEMICALS

Five corporations are charged with eliminating competition by price fixing, pooling of patents, conducting price wars against competitors, allocating markets and customers, and acquiring the plans and properties of competitors: Air Reduction Co., Inc.; International Carbonic Engineering Co.; Liquid Carbonic Corp.; Pure Carbonic, Inc.; and Wyandotte Chemicals Corp.

CULVERT PIPE

Seventeen corporations have been charged with restrictive practices in the manufacture and sale of metal culvert pipe: Beall Pipe & Tank Corp.; Berger Metal Culvert Co., Inc.; the Boardman Co.; Central Culvert Corp.; Choctaw, Inc.; Dominion Metal & Culvert Corp.; Eaton Metal Products Corp.; Eaton Metal Products Co. of Montana; Empire State Culvert Corp.; Illinois Culvert & Tank Co.; H. V. Johnston Culvert Co.; M & M Hiway Materials Co.; Republic Steel Corp.; Thompson Pipe & Steel Co.; Tri-State Culvert & Manufacturing Co.; Wisconsin Culvert Co.; and Wyatt Metal & Boiler Works.

DAIRIES

Forty dairies have been indicted on charges of illegal price fixing on milk sold in Washington, D. C.; Chattanooga, Tenn.; Louisville, Ky.; St. Louis; Cincinnati; and Chicago: Alexandria Dairy Products Co., Inc.; American Processing and Sales Co.; Associated Dairies, Inc.; Beloit Dairy Co.; G. H. Berling, Inc.; The J. H. Berling's Dairy Products Co.; The Borden Co.; Bowman Dairy Co.; Capitol Dairy Co.; Carrithers Creamery, Inc.; Cedar Hill Farms, Inc.; Cherokee Sanitary Milk Co., Inc.; Chestnut Farms-Chevy Chase Dairy Co.; The Cooperative Pure Milk Association; The Coors Bros. Co.; Oscar Ewing, Inc.; The J. H. Fielman Dairy Co.; Ewing-Von Allmen Dairy Co., Inc.; Grant Patten Milk Co.; Happy Valley Farms, Inc.; Harvey Dairy, Inc.; The Hyde Park Dairy Co.; Hunding Dairy Co.; The Matthres Frechtling Dairy Co.; Meadow Brook Farms, Inc.; Meadowmoor Dairies, Inc.; Mellwood Dairy, Inc.; H. Miller Dairy Co., Inc.; Pevely Dairy Co.; Richfield Dairy Corp.; Safeway Stores, Inc.; St. Louis Dairy Co.; Simpson Bros., Inc.; Sure Pure Milk Co.; Thompson's Dairy, Inc.; Bon Allmen Bros., Inc.; United-Morning Star Dairy, Inc.; The J. Weber Dairy Co.; Western United Dairy Co.; and H. Woebkenberg Dairy Co.

ELECTRICAL CONTRACTORS

Nine corporations have been indicted on charges of illegal price fixing in installing electrical equipment in housing: Becket Electric Co.; O. A. Carlson Electric Co., Inc.; City Electric & Fixture Co.; General Electric Supply Corp.; Van S. McKenney Co.; Meletio Electric Supply Co.; Northwest Electric Co., Inc.; Puget Sound Electric, Inc.; and Westinghouse Electrical Supply Co.

EXPRESS

The Railway Express Agency has been charged with making illegal contracts with railroads for the exclusive business of railroad lines.

FARM IMPLEMENTS

Twelve corporations have been charged with tending to create monopoly by restricting dealers, through written or oral contracts, to purchase and sell machinery manufactured by them to the exclusion of other manufacturers: J. I. Case Co.; Deere & Co.; Deere & Webber Co.; John Deere Plow Co.; John Deere Plow Co., Baltimore; John Deere Plow Co., Columbus, Ohio; John Deere Plow Co., Indianapolis; John Deere Plow Co., Lansing, Mich.; John Deere Plow Co., Moline, Ill.; John Deere Plow Co., St. Louis; John Deere Plow Co., Syracuse; and International Harvester Co.

MEAT PACKING

Five corporations are charged with price fixing by using uniform cost formulas for arriving at selling prices: Armour & Co., Swift & Co., the Cudahy Packing Co., and Wilson & Co., Inc.

PAINT

Seventeen corporations have been indicted on charges of price fixing in the sale of paint, varnish, enamels, lacquers, stains, and water-thinned paints: American Marietta Co.; Columbus Varnish Co.; Cook Paint & Varnish Co.; Devoe & Reynolds Co., Inc.; E. I. du Pont de Nemours & Co.; General Paint Corp.; the Glidden Co.; Grand Rapids Varnish Co.; Interchemical Corp.; the Lilly Co.; Lilly Varnish Co.; the Muralo Co.; Pittsburgh Plate Glass Co.; the Reardon Co.; Sherwin-Williams Co.; Southern Varnish Corp.; and Wesco Waterpaints, Inc.

PHOTOGRAPHY

Eight corporations have been indicted on charges of conspiracy illegally to control prices on the sale of photomounts: The Chilcote Co.; J. S. Graham Co., Inc.; The Gross Photo Supply Co.; George L. Kohne, Inc.; Emil Loudelka, Inc.; The Medick-Barrows Co.; Sprague-Hathaway Studios, Inc.; and A. Sussman & Co., Inc.

PLASTICS

Seven corporations have been indicted on charges of illegal price fixing on the sale of laminated plastics: Continental-Diamond Fibre Co.; Formica Insulation Co.; Mica Insulator Co.; National Vulcanized Fibre Co.; St. Regis Paper Co.; Synthane Corp.; and Taylor Fibre Co.

Rohm & Hass Corp. has been charged with attempting to suppress competition in the plastics industry.

RUBBER

Three corporations have been charged with illegal patent pooling and allocation or world marketing in late products: Consolidated Rubber Manufacturers, Ltd.; Dunlop Rubber Co., Ltd., and United States Rubber Co.

SPECTACLES

Seven corporations have been charged with price fixing on spectacles through the device of rebating to optometrists

approximately one-half of the total price paid by their patients for eye glasses: N. P. Benson Optical Co.; House of Vision-Belgard-Spero, Inc.; Uhlemann Optical Co., Illinois; Uhlemann Optical Co., Michigan; White-Haines Optical Co., Delaware; White-Haines Optical Co., Michigan; White-Haines Optical Co., Ohio.

STEAMSHIP LINES

Twenty-five corporations are charged with conspiracy to restrain interstate and foreign trade by agreement which requires shippers to patronize certain lines, and creating a monopoly through a system of contract rates: United States Lines Co.; States Marine Corp.; M. V. Nonsuco, Inc.; Lancashire Shipping Co., Ltd.: Skibsaktieselskapet Igadi; A. F. Klaveness & Co. A/S; the De La Rama Steamship Co., Inc.; Waterman Steamship Corp.; Prince Line, Ltd.; Lykes Bros. Steamship Co., Inc.; American President Lines, Ltd.; Swedish East Asiatic Company, Ltd.; Nederlandsche Stoomvaart; Maatschappij "Oceaan" N. V.; Aktieselskapet Ivarans Rederi; Isthmian Steamship Co.; Ellerman & Bucknall Steamship Co., Ltd.; Fearnley & Eger; Wilhelmsens Dampskibsakiteselshab; Dampskibsselskabet AF 1912 A/S; The Bank Line, Ltd.; The China Mutual Steam Navigation Co., Ltd.; Silver Line, Ltd.; the Ocean Steamship Co., Ltd.; A/S Besco; and A/S Dampskibsselskabet Svendberg.

STREET LIGHTING

Six corporations have been indicted on charges of price fixing in the street-lighting industry: General Electric Co.; Westinghouse Electric Co., Inc.; Line Material Co.; Union Metal Manufacturing Co.; Pacific Union Metal Co.; and Holophane Co., Inc.

TELEPHONES

Two corporations have been charged with monopolizing the manufacture and sale of telephones and telephone equipment: Western Electric Co., Inc., and American Telephone & Telegraph Co.

TRANSPORTATION

Two corporations have been charged with monopoly of inter-island transportation in violation of the anti-trust laws: Hawaiian Airlines, Ltd., and Inter-Island Steam Navigation Co. Ltd.

Two corporations have been indicted on charges of conspiracy in restraint of trade in the shipment of household goods in Washington, Oregon, and California: National Carloading Corp. and Universal Carloading & Distributing Co.

WALLPAPER

Eighteen corporations have been indicted on charges of illegal price fixing on the sale of wallpaper: Asam Wallpapers, Inc.; Atlas Wall Mills, Inc.; H. Blonder Co.; B. & D. Wallpaper Co.; The Birge Co., Inc.; Cook Paint & Varnish Co.; James Davis, Inc.; J. C. Eisenhart Wall Paper Co.; Enterprise Wall Paper Manufacturing Co.; Fisher Wallpaper & Paint Co.; The Globe Mills Inc.; Imperial Paper & Color Corp.; Isgo Wall Paper Corp.; The Prager Co., Inc.; D. Schultz, Inc.; Richard E. Thibaut, Inc.; United Wallpaper, Inc.; and York Wall Paper Co.

PRESIDENT TRUMAN'S ADMINISTRATION PRAISED

Capital Comments published by the Democratic National Committee in its May 7, 1949 issue, stated the following:

While big business propagandists were busy blaming labor unions, Government taxes and just about everything but sun spots for 1948 high prices, the Justice Department was very busy trying to protect the public from business price-fixers.

The facts are reported in the current issue of the Machinist, energetic weekly published by the International Association of Machinists. The Machinist set out to find out how business was behaving in the price-fixing field and what the Justice Department was doing about it.

The publication found that the Justice Department filed anti-trust charges against 314 firms last year, and that 247 of these were for price-fixing.

Price-fixing was charged in 19 different industries.

The Machinist survey shows that the Democratic administration has been on the ball in protecting the consumer and the small business man by enforcing the antitrust laws.

Not Enough Insurance

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 4, 1949

Mr. BIEMILLER. Mr. Speaker, a letter which appeared in the Milwaukee Journal for May 2, 1949, seems to me to give evidence of the need for a national health program. The writer, like so many others, has turned to voluntary health insurance for the solution of his problems in medical costs and has turned in vain. Every day letters come to my desk proving the desperate need of the self-respecting, self-supporting people of this country for a way to meet the costs of the medical care they must have. They do not want charity—they want to pay their way. But no plan has been advanced by the medical profession or any private group which will help them to pay their way. Only Government-sponsored health insurance can do that. Under leave to extend my remarks, I include the letter:

NOT ENOUGH INSURANCE

To the Journal:

In two editorials April 23 the Journal argued the advantages of voluntary prepaid health insurance plans over the proposed Government program. Please tell me where, outside of welfare plans available to members of some unions or employees of a few corporations, can I buy health insurance which will protect me in case one of the following is required:

1. Extensive dental repairs, caused by accident or infection.

2. Prolonged medical treatment which does not require surgery or hospitalization, but which may necessitate costly medicines administered over a long period of time. Such treatment can wipe out a family's savings and force them deeply into debt.

3. Psychiatric treatment, which could prevent hospitalization in any of our institutions so graphically described in the Journal as to make one greatly prefer to be dead than incarcerated in one.

4. Any obscure ailment requiring prolonged laboratory tests and skilled diagnosis, now highly expensive.

At present I am paying out over 3½ percent of my income for insurance covering none of the above. I have Blue Cross for my spouse and myself, which covers part of possible hospital bills and such tests as are done by the hospital, not by the physician. I have private insurance for myself only which covers a limited list of possible operations to which the insurance company contributes part of the fee, and in case of disability from illness or accident not occurring at work pays a small weekly income, less than the one provided by workmen's compensation for those injured at work. For ailments not common to both men and women nothing is paid. If, as proposed, for 3 percent of my income I could get some of the things not now obtainable, I would be very much in favor of it.

A doctor, franker than most, once told us that only the very rich or the very poor get really good medical attention. The present system of medical care presents nightmare problems to those not in either class. I have known too many people whose savings have been wiped out by a lingering or obscure illness in the family or who have not only lost their life's savings but have been plunged hopelessly in debt for doctor's, nurses', and hospital bills.

NEITHER RICH NOR POOR.

RIPON, WIS.

Mother's Day Address by Hon. Alexander Wiley, of Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, on Sunday, May 8, it was my pleasure to deliver an address at St. Gerard's congregation in Milwaukee on the occasion of Mother's Day. I ask unanimous consent that the text of this address be printed in the Appendix of the CONGRESSIONAL RECORD and that, following it, there be printed a brief statement on the same theme by Rev. C. E. B. Ward, executive secretary of the League for the American Home which is located in Carnegie Hall in New York. I am grateful to my able colleague, the Honorable John PHILLIPS of California, for calling my attention to the statement of the Reverend C. E. B. Ward.

There being no objection, the address and statement were ordered to be printed in the RECORD, as follows:

A TRIBUTE TO MOTHERHOOD

Mr. Chairman, Reverend Father, and friends, it is indeed a great pleasure to address this fine audience, and it seems particularly fitting to speak on Mother's Day here in St. Gerard's Church. St. Gerard, as you well know, is a great favorite with mothers,

and he is the unofficial patron of Catholic motherhood.

THE DEAR NAME OF "MOTHER"

Why do we gather on Mother's Day? What is there about such a gathering which causes us to set aside each year a day to commemorate motherhood? I shall try to state briefly the answer.

The greatest word, of course, is God. The dearest word in any language is mother. There is no human name so enshrined in humanity's affection as this name.

Everything, for most of us which is sweet, beautiful, lovely, and holy, clusters about that name. It brings up pictures of home—babyhood, boyhood, manhood, and mother. It brings up our faith—the Bible—and the teachings of the Master, which she inculcated in us. And she whom we called wife, became not only the mother of children, but our "second mother"—shaping, guiding, and guarding our life.

When we think of mother, even though we are thousands of miles away, it has almost the value of religion, pure and undefiled, because it brings up a living personality that is enshrined in our hearts. Mother and home are the tenderest notes on the keyboard of the human heart.

THE STORY OF CHRISTIAN MOTHERHOOD

Do you remember what Lincoln said: "All that I am or hope to be I owe to my angel mother"?

From early childhood, we followed her advice, we built for her a place in our heart of hearts. The story of Christian motherhood has been the brightest thing on the page of history.

MOTHER'S INFLUENCE IN THE HOME

You and I know that the greatest school of life is the home. Here in the kindergarten class of infancy and childhood she taught us. Here were made the first impressions on this human mind of the child. Here were found fatherhood and motherhood, and we know that here we found the greatest teacher in the world—the mother. And she knew that the most sensitive thing in the universe was the soul of her little child. Accordingly the first impressions are the most important, because they are then made on the memory of childhood, and those impressions—those made by the mother—are the most significant influence in the life of the individual.

A MOTHER'S PRAYERS

I believe the mightiest prayers ever offered come from the lips of mother. Prayers filled with light, aflame with love, winged with faith, and vibrating with spiritual force. The prayer of a mother is the thought of love passing through the universal heart of God, and on its way from soul to soul.

EVERY MOTHER'S PRAYER: PRESERVATION OF PEACE

I could not refer to Mother's Day without saying just a word or two about the subject which is dearest to the hearts of mothers throughout the world—namely, the preservation of peace. Yes, if I may be permitted just a word apart from our main spiritual theme, it is the fondest hope of mothers throughout the globe that never again may any mother's son have to go to war. If we are to keep out of war, we may have to reappraise our entire foreign policy in terms of its true effectiveness.

WHY NOT RESUME FULL RELATIONS WITH MADRID GOVERNMENT?

Not long ago in line with that thought, I asked certain questions in the United States Senate. I asked, for example, why we do not resume full diplomatic relations with Spain. We know the Communists would not want these diplomatic relations resumed. However, we are concerned not with what the Communists want, but with a program that will bring true peace. And so I am hoping that all of my brother Senators will reappraise the Spanish question and will find the path that will lead to true peace.

This is not just a matter for the United States to reconsider. It is a matter for the United Nations to reevaluate. And I know that in your hearts, as in mine, is the prayer that the United Nations, our great instrument for peace, will indeed fulfill the prayers of mankind and will find a solution to war.

THE COURAGEOUS CHURCHMEN BEHIND THE IRON CURTAIN

Just one other thought in relation to the United Nations. As my listeners know, recently the Senate passed a resolution in protest against the outrageous persecution of courageous Joseph Cardinal Mindszenty, and other churchmen, who have been fighting for the integrity of the human soul behind the iron curtain. And so today, on Mother's Day, we are thinking of the mothers behind the iron curtain who are deeply devoted to their religious creed and who recognize in Cardinal Mindszenty and other persecuted churchmen the champions of human dignity and human freedom for every mother's son.

You know, when we think of influence, you and I can readily agree that there is no influence in the world comparable to the influence of a Christian mother. You remember that the Bishop of Hippo said to his mother: "Depart, good woman, the child of so many prayers cannot be lost."

It has been said that God only made one absolutely unselfish creature. That is Mother. Certainly, mother love is the nearest that we know on earth to God's love. It is the best symbol of our Maker's love. God is love.

THE MOTHER OF JESUS

No Mother's Day talk to all mothers, and particularly mothers of the Catholic faith, is complete without paying tribute to the great mother of Jesus, the Saviour.

John quotes the great Wayshower as saying: "I am the light of the world. He who follows Me does not walk in the darkness, but will have the light of life."

Under the guiding, loving mother-hand, the Babe Jesus grew to boyhood and from boyhood to manhood, and He brought that light—understanding, guidance and faith—to tired, misguided humanity. All honor to Mary. "Blessed art thou among women."

Speaking to the mothers of today, may I leave these suggestions, because I know you are interested in the preservation of our great way of life.

IMPORTANCE OF FAMILY HAPPINESS

1. We know that the best citizenship comes out of homes which are happy and which are taught the values of the Christian faith. The family is the nucleus of society. Unless the spiritual verities are nurtured in the family, we do not get that permanency and continuity which are so significant in a well-ordered society.

Pope Pius XI said:

"Experience has taught that unassailable stability in matrimony is a fruitful source of virtuous living and habits of integrity. Where this order of things obtains, the happiness and wellbeing of the nation are safely guarded; what the families and the individuals are, so also is the state, for a body is determined by its parts."

WE MUST GUARD OUR GREAT VALUES

2. We here in this great country, with its opportunities for spiritual growth, for the acquirement of reasonable material security, for the enjoyment of what has been known as the American way, with its freedoms, privileges and responsibilities—we are indeed blessed. However, we must ever bear in mind that eternal vigilance is the price of maintaining these great values. We have got to stand guard against the insidious impact of foreign isms, like communism and fascism, Yes, against state socialism.

3. From the very earliest days down to the present, it appears that reverence for the Almighty, the practice of brotherhood, and the sanctity of the home, have been the very foundations of our way of life.

RADIATING THE CHRISTIANIZING INFLUENCE

Let me repeat, if I may. To keep intact our way of life, there must radiate out of the four walls of American homes, the christianizing influence. This is particularly true because our life gets less simple, and more complex. While it is true a good mother, if she finds time, will keep abreast of the current complex developments in our society, the most important part, however, for her to play is that of training her children to become good citizens with faith in the Almighty and with love and appreciation in their hearts for this great land of opportunity and liberty.

CONCLUSION

The very peace of the world depends upon the way that the mothers of America will bring up their children. You all know that America has a new role to play in the world—a role calling for vision of the highest type—not only in statesmen and in business leaders and in labor, but particularly in the mothers of men who mold and shape the human clay into dynamic soul-stuff.

MOTHER'S DAY MESSAGE

(By Rev. C. E. B. Ward)

A CODE THAT WORKS BOTH WAYS

Mothers have always shed tears for their children. Tears might even increase rather than diminish as the children grow older.

Many mothers are sensitive when their children, as they grow older, establish their own homes. Husbands may try to fill the void, but no husband will seriously repeat the query "Am I not better to thee than 10 sons?" Motherhood does not cease when children marry. Marriage does not essentially alter their relation to her.

A mother of 10 children, though 2 still remain at home with her, thinks daily of the 8 absent in their newly established homes.

This may be a mother's weakness, but it is also her strength. She is made that way, and would cease to be a mother if it were otherwise.

HER COMPENSATION

Only one cure is known, which worked so well that it was made into a commandment. Honor thy father and thy mother. Whenever and wherever tried it has worked—comfort and cheer to mother, satisfaction to son or daughter. The first commandment with promise.

IT SATISFIES

Thousands have proven it. Four successful metropolitan businessmen illustrate how they make Mothers' Day worth while all year round:

One, a devoted son, drives 140 miles every week end with his wife and children to spend the day with his mother for her sake. He is the head of a large branch of one of America's greatest mercantile houses.

The second lives in the same suburb with his parents. Every evening of the year, at the close of the business day, he visits his aging mother to assure her of her continued place of importance in his life. He is an outstanding lawyer in the nearby city.

A third, after his father's death, and for the last 10 years of her life, wrote a letter daily to his mother—reminiscent of a childhood made happy, recounting her endless sacrifices during his adolescence, gentle consideration for her poignant suffering at separation from him when he established his

own home, and tender reference to her loss and loneliness in declining years. He sent her a letter every day for 10 years. Upon his death, his wife erected to his memory, for the boys of his community, a building as a memorial to his faithfulness as husband and son, to wife and mother.

The fourth, only three of his 70 college classmates voted him likely to succeed. His social pull was too small to get him into a fraternity. He danced too poorly and was too soberly earnest to suit the girls' tastes. He did not dance at all on Sundays. He neither smoked, drank, nor gambled. Automobiles were too expensive for his use; he was a straphanger. He ate at automats. Yet he was surprisingly popular, notwithstanding these simple habits.

One of his old-fashioned virtues is respect for his parents.

"My father is a better man than I am," he says.

"If you knew my mother you would like her.

"My parents are not half so proud of me as I am of them," he says.

The door of his modest office is open to all who want to see him.

Though a successful businessman, he is not too old to honor his father and mother.

Before World War II he was head of the New York Stock Exchange with a salary of $48,000 a year. Until recently he has been president of the Export-Import Bank, Washington, D. C., and is now Assistant Secretary of the United States Treasury.

A CODE THAT WORKS BOTH WAYS

Mothers have longings and yearnings that you can satisfy, which will react for your own happiness and growth and which will redound to your own honor.

The League for the American Home has functioned many years for a more perfect, happy, and useful home life.

Jefferson-Jackson Day Address by Hon. Estes Kefauver, of Tennessee

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the Jefferson-Jackson-Truman day dinner at Tacoma, Wash., on Saturday night, April 30, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, this is not my first visit to the great Pacific Northwest. On four previous occasions I have had the opportunity of visiting the State of Washington and of seeing something of the vast resources of this picturesque area. I have been here in company with Senator MAGNUSON and Congressmen HENRY JACKSON and HUGH MITCHELL. These distinguished legislators are among my best friends in the Congress. I wish to pay high tribute to them personally and I wish to say that they are men of great ability, of high idealism, and of great hopes for the future of the State of Washington. I could deal at length with the many legislative accomplishments of the legislative leaders, but I am sure you fully appreciate their excellent efforts in your behalf.

Since the time of Thomas Jefferson and Andrew Jackson, the West has been gaining in political importance. Population followed in the footprints of the pioneer, and brought in its wake statehood, congressional seats, and recognition at national party conventions.

This trend today is more pronounced than ever before. The opening up of the industrial potentialities of the West has brought an even greater increase in population. The shift has been more pronounced since 1940; it is of greater moment now because of the congressional reapportionment in 1950, when the next census is completed.

I believe that, more and more, the people of the West will find that their best interests lie with the Democratic Party. I can cite two reasons for this belief: one is materialistic; the other has to do with ideas and ideals.

The material reason is reflected by recounting the respective histories of the Republican Party and the Democratic Party in the fields of irrigation, flood control, and power development.

The Republican Party leadership stands for a sort of colonial status for the West. Since Teddy Roosevelt's day, the GOP has attempted in every possible way to hamstring the development of hydroelectric power for the benefit of all the people. This in spite of the fact that the first Federal move toward full river-basin development, including irrigation, hydroelectric power, and development of other water resources, was achieved in the administration of Teddy Roosevelt.

After the long years of GOP obstructionism, it took the progressive objectives of the Franklin D. Roosevelt administration to really start the ball rolling.

Today, under the impact of over 16 years of Democratic tenure in the White House and despite the set-backs of the most devastating war in history and 2 years of Republican control of the Congress, river-basin development is forging ahead with steadily increasing speed.

Throughout the dark days of the Harding-Coolidge-Hoover era, the private utilities and great financial houses kept the lid on public hydroelectric power development. They held back also progress on the whole front of resource conservation.

The only gleam of light in the resource-conservation field, after Theodore Roosevelt, came during the Democratic administration of the late Woodrow Wilson. Although World War I made it impossible for that administration to embark on a full conservation program, President Wilson was able to put through the development of Muscle Shoals. This was accomplished as an emergency war measure over the bitter opposition of the GOP utility monopolists.

Immediately after the war the new GOP administration closed down again on public power and other resource development. Only bitter battling by a small group of progressive men of both parties kept the Harding administration from turning Muscle Shoals over to the private interests for monopolistic exploitation.

The Democratic administration which came into office in 1933 replaced river-basin development and real resource conservation on a smooth track, with the green light for full speed ahead. The TVA provided phenomenal change in the economy of the Tennessee-Alabama-Mississippi area; the great Reclamation and Army dams and power plants, the broad stretches of irrigated farms in the West, the humming river-basin-development program now being pushed forward by the Department of the Interior, the Army Corps of Engineers, and other Federal agencies stand as indisputable evidence as to what is being accomplished.

This program is designed for the fullest possible development of the Nation's river-basin resources. These new policies and laws provide for widespread distribution to the public of the benefits of low-cost hydroelectric power, irrigation water, and the economic opportunities which such basic resource developments open up.

The GOP record, though, remains one of obstruction to Federal development, and is shot through with attempts to throw the lion's share of the benefits of such development to the big landowners and the private Power Trust. Focal points of the fight against accelerating conservation in the people's interests were aimed by the GOP-controlled Eightieth Congress against such programs as Interior's Reclamation, Bonneville Power Administration, Southwestern Power Administration, and the vital Tennessee Valley Authority steam plant in my own State.

A good example is the fiscal 1949 Reclamation appropriation, where the GOP Eightieth Congress pointed with pride at a record-breaking appropriation of $250,000,000. That sounds good, but let's look further. The appropriation was quietly saddled with crippling limitations which made it impossible for Reclamation to put the money to full use. The measure sought to force Reclamation to turn over public power from its dams for sale and exploitation with a big windfall of profits by the private power companies. Neatly omitted from the bill were requested appropriations for such items as transmission lines for the Havre-Shelby unit in Montana, the Central Valley project in California, and the Colorado-Big Thompson project in Colorado.

The appropriation act did permit construction of the Canyon Ferry Dam in Montana, but forbade expenditures for power facilities. An appropriation for a Central Valley project steam plant, needed to give power- and water-short Californians full benefit of the big Central Valley project, was flatly denied. These were just a few of the crippling jokers hung onto the appropriation.

In contrast to this Republican negative approach is the belief of the Democratic Party that we must move forward in reclamation, flood control, and power projects—not only for the good of the West, but for the good of the entire country.

This spirit is exemplified in the President's proposal for legislation to set up the Columbia Valley Administration. As the President has made clear, the entire country needs a Columbia Valley administration—not merely the States of the Pacific Northwest. And the decision to establish this administration should and will be made on the grounds of national interest—not on grounds of local or regional interest. The National Security Resources Board points out that facilities for development of additional power are needed here in the Northwest more critically than in any other region of America.

Let me picture for you our public-power experience in the South. When the Tennessee Valley Authority was established, it met the needs of the entire country. The whole Nation had paid for years for the cost of floods on the Tennessee River; had paid the consequences of the lower incomes of people in the valley; had felt the impact of smaller crop output because of depleted soils in the Tennessee Valley region. The lower income of the valley meant less business for the rest of the country in selling to the people of the valley electric appliances, housing, food, clothing, and other products. The lower incomes meant malnutrition and disease, and a smaller number of men able to pass the physical tests of the armed services.

Today the valley is more fertile, thanks to the TVA, and, consequently, the entire country is richer. The country saves about $11,000,000 annually because of the flood-control benefits of TVA, which means that much less call for Red Cross contributions or for special appropriations for flood relief by Congress. And, while everybody saves this money, farmers on 6,000,000 acres of the lower Ohio and Mississippi Basins have their crops protected. The power output since TVA was established has increased 10 times. The rest of the Nation is selling to the people in the valley more electric appliances, and is taking from the new industries of the valley chemicals, aluminum, and other products, and is employing on these products more additional workers than the new industries employ in the valley itself.

The rapid growth of river navigation in the valley has saved the rest of the country millions of dollars in transportation costs on the products it sells to and buys from the region. Farmers all over the country produced more crops than otherwise would have been the case, thanks to TVA demonstration and developmental work with phosphate fertilizers on thousands of farms, both inside and outside of the Tennessee Valley. With incomes higher, the health of valley residents is much better; malaria has decreased. The rest of the country found the valley better able to provide men for the armed services in World War II.

In the Columbia River area the Nation needs a CVA. Although some problems are different from those of the Tennessee Valley, there are undeveloped opportunities that will be realized sooner and at less cost than if there is no CVA. Floods like that of 1948 have to be controlled. But there should be one agency at work, not a mixture of State and Federal agencies. There are nearly 29,000,000 kilowatts of water power, yet to be converted to electric power, now wasting annually to the sea. This is the equivalent of almost 400,000,000 barrels of oil annually, one one-fifth of what the country now produces. A CVA can develop and sell this power sooner and at less cost than can the three Federal agencies that now separately handle parts of the power problem.

The security of the Nation will be improved when this power is developed. Very important industries are holding back their expansion until they can get power. These industries, which have been turned down for expansion in the past 2 years in the Northwest, include aluminum, phosphates, ferro-alloys, and abrasives. All of these products are important in time of war. The population of the Northwest has increased 35 percent in the past 8 years—three times faster than has been the increase in the rest of the country. Unemployment, although small in actual numbers, has existed at a rate three times as great as that of the rest of the country. A CVA will mean more job opportunities and relatively less unemployment than if there is no CVA. For the whole country, this means more income for people in the Northwest with which to buy goods from other regions.

A CVA will pay off to the Nation in the way that TVA has. We are not interested in just the Tennessee Valley nor the Columbia Valley; we are ambitious for America.

Today the Tennessee Valley supports the TVA and would vote for it if a referendum were held. But back in 1933 the people of the valley would have been confused by the same kind of rumors as are now being spread against CVA. The people of the TVA area were told they were going socialistic, that they would be giving up their local rights to govern themselves. They probably would have voted against a TVA in those days. But, fortunately for them and for the country, the decision for a TVA was made by the Congress and the President on grounds of national interest.

A CVA should be decided on the same grounds of national need. The arguments against CVA from some selfish people in the Northwest are the old arguments of business groups who mask their opposition to social progress with catcalls of socialism.

I am confident that the CVA measure will be passed, because a Democratic Congress will act for the welfare of all the Nation.

I want to talk a little more about how the President and a Democratic Congress are working to better the lot of all Americans. This is a twofold operation. In the field of international relations we are enacting measures to keep our own defenses strong and to encourage the economic recovery of friendly democracies as a bulwark against communism.

At the same time we are moving to better conditions at home, to see to it that all our citizens share fairly in the benefits of our free-enterprise economy. Just a few days ago in the Senate we passed a bill of this type—a long-range housing bill. It took us quite a while to complete action on this bill. There were long and careful committee hearings. There was thorough debate on the floor of the Senate.

Now we had the Democratic votes all along to pass this bill. But we took quite a bit of time. The opposition had its say. This took a lot of time, especially when you consider that in the final vote 24 Republicans voted for the bill and 11 Republicans voted against it. But—and this is a mighty big "but"—Republicans introduced and debated 18 amendments before the final vote on passage of this bill. I bring this up because I know that some Democrats have been discouraged. Not all measures have been moving so rapidly toward enactment as they might have liked. A reason for this slowness is that there are some powerful Republican leaders who feel that the Republican cause is aided by delaying tactics in the Congress.

Thus, they delay passage of a measure as long as they possibly can by dragging out the debate and offering endless amendments; but, if it is a bill they are afraid to oppose on the record of final passage, they go along with the Democrats on the final vote, in order to make a better record for their party. They did this on ECA and on the housing bill.

Of course, if we were to attempt to speed things up, the Republicans would charge gagging of debate and steamrollering. If we hear them out, they seek to charge that we are not moving rapidly enough to do our job.

I don't think this is fair politics nor good strategy; but, if it has you worried, let me give you some really sound ways to judge a Congress—yardsticks by which we invite you to measure the Eighty-first Congress. First of these is the quality of the legislation passed: Is it constructive? Is it part of an over-all program which works for the common good? The Eighty-first Congress can answer, "Yes."

But what of its predecessor, the Republican Eightieth Congress? That Congress had its main success in reversing policies set by Democratic Congresses, in passing measures which the people repudiated at the polls last November—legislation which must be revised or removed by the Eighty-first Congress, adding to its own legislative burdens.

Examples of this are the crippling measures against our reciprocal-trade program, and against the Commodity Credit Corporation (which we are correcting), and the action we are having to take to remove Republican inequalities in labor legislation.

Again, the Eighty-first Congress is moving forward in the fields of health, social security, education, housing, and the other fields where the Eightieth Congress won for itself the "do-nothing" title.

The Eighty-first Congress can meet the test of quality of legislation and of the purpose of its domestic legislation. The Eightieth could not. The Eighty-first Congress is moving forward. The Eightieth moved backward or else stagnated.

I think that, when we finish up this session of the Eighty-first Congress, you will find that we have moved a great stride forward and that we have enacted a large portion of the Truman Fair Deal program.

The CVA is a symbol of the Democratic Party's determination to go forward with the projects that have benefited the economy, not only of the West, but of the entire country.

However, the material gains are far from being the strongest of the ties which should bind the Democratic Party to the ever-growing West. The West will not give its political allegiance merely as a pawn for Federal moneys. Mutual beliefs and convictions are a far more powerful factor. The men who settled the West and those who have moved west in the intervening years since have a firm faith that America is still growing.

The Democratic Party has always believed that America must grow not only bigger, but better, as well. It was Thomas Jefferson who had the courage to seize the opportunity to acquire what was then the vast wilderness of the West. Where would we be today if a Democrat had not had the wisdom to start us on the policy of expanding our Nation from the shores of the Atlantic to the shores of the Pacific?

And where would we have been during the last war if Democratic wisdom had not developed croplands from wasteland and begun the industrial development of the West, so that all sections of our Nation were able to contribute their share to our defense effort?

The Democratic Party today stands firm in its conviction that the continued development of the West builds economic assets which benefit every American in every section of the Nation.

So long as all of us in the East, and the West, and the North, and the South, believe in continuing to build up our economy and share mutual concern for each other's welfare, we will continue to have the highest standard of living of any nation in the world.

We shall continue to show to the world that our free American way of life is better than any form of Communist or Fascist totalitarianism. We shall continue to work for real opportunity for every citizen. This same strength in our economy will provide us both a powerful defense against the infiltration of ideas hostile to our way of life, and an equally strong defense against any group which might make the mistake of trying to change American thinking by military might.

The plow, the irrigation ditch which feeds the soil, and the dam which brings electric power to the farm and to the factory—all these are powerful tools in peace or in war if—God forbid—war should ever come again.

All of these are part of our arsenal of democracy, built by free Americans who feared neither man nor the future, but who were deathly afraid of idle stagnation.

The West believes in this great American tradition. So does the Democratic Party. We share the pioneer spirit. There is no longer a geographical frontier to be conquered. But there is another frontier—the frontier of making better use of what we have only half-used, or have wasted, or even, perhaps, have ignored. It's the kind of pioneering that created the power here in

the West and in the Tennessee Valley which enabled other pioneers to develop atomic power.

With God's help we shall see to it that America is always a Nation where the spirit of the pioneer spurs freemen to build a bigger and better America.

Address by Hon. Henry Cabot Lodge, Jr., of Massachusetts, at First Anniversary Celebration of Declaration of the State of Israel

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from Massachusetts [Mr. LODGE] on the occasion of the first anniversary celebration of the declaration of the State of Israel, held in Carnegie Hall, New York City, on May 4, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Rabbi ABBA HILLEL SILVER. A generation ago, dear friends, a name was written large into the annals of the Zionist Movement, that name was that of Senator HENRY CABOT LODGE. [Applause.] It was under his leadership, and by his political guidance and sagacity, that the first revolution favoring the establishment of the Jewish National Home in Palestine was adopted by the Congress of the United States, in 1922. [Applause.]

We are privileged tonight to have the grandson of that Senator here. [Applause.] A Senator in his own right; a distinguished American; one who has been a member of the United States Senate since 1936, with the exception of the years which he spent in war service, Senator HENRY CABOT LODGE, JR., was a man to whom we turned from time to time when we needed guidance, political help in Government. His name is now being written large in the annals of the American Zionist Movement, alongside of his distinguished grandfather.

Ladies and gentlemen, it gives me extreme pleasure to present to you at this time, Senator HENRY CABOT LODGE, JR., of Massachusetts. [Applause.]

Senator HENRY CABOT LODGE, JR. Rabbi Silver, Senator DOUGLAS, Major Eban, ladies and gentlemen, you will have to admit that it is a tough assignment to make a speech after the two speakers you have just heard, but I do welcome this chance to say to you that to be a speaker at this first anniversary of the birth of the State of Israel, is one of the most distinguished honors which could have come to a man [Applause.] A great historian recently said that the birth of Israel was a "millennial event to be measured by the temporal values of thousands of years." To be associated with an occurrence which reaches so far into time is an honor which for me is without precedent.

One need not be a close student of history to feel the importance of the birth of the new State of Israel. Every school child knows of the antiquity of Jewish civilization and of the unique contribution which it has made to human culture. In fact, it is impossible for us to conceive of any culture, non-Jewish or otherwise, if there never had been any Jews. There are, of course, other great peoples who in antiquity contributed to building the foundation of our civilization, but most of them died and disappeared leaving behind them, it is true, a marvelous memory, but nothing more.

The Jews, on the other hand, were not only a great people in the days of antiquity; they have proven themselves to be a great people in this dangerous and rapidly evolving modern world [Applause.] In this respect—as in many others—they have proven themselves to be unique.

Let us look at the facts which speak louder than any eulogies of mine.

Look first at the condition of the Jews at the end of World War II. Six million Jewish people were buried in Europe, and a million Jewish children were deliberately and unbelievably thrown into the furnace. Jewish manpower had been depleted by slaughter as unparalleled as it was vicious. It would have been only human for these dreadful trials to have weakened the fighting spirit of the Jewish people. Others have given up hope with far less cause.

But somehow or other out of its agony, the Jewish people found within itself the force, the faith, and the will to survive. [Applause.]

On the fifth day of Iyar (which is the same as our fourth day of May) Israel proclaimed its independence. [Applause.] It was besieged and blockaded. It had to advance without benefit of international recognition. Its institutions of government were necessarily disintegrating. On its frontiers stood the armies of five Arab states who had manpower, weapons, resources, and military experience which many, if not most, observers believed would surely win the day.

If the Jewish leaders at that time had been shrewd and calculating men, they would have undoubtedly concluded that the odds were too unequal, and that it was the better part of valor to give up the struggle and make some sort of a deal. But to their everlasting credit let it be said that these Jewish leaders were not defeatists. They did not take counsel of their fears. They turned a deaf ear to the voices of despair. Like George Washington at Valley Forge, they felt in their hearts that compromise was impossible, that their cause was right, and that sheer courage on their part would enable it to prevail. [Applause.]

Now you and I all know men whose lives are spent in being shrewd, in making a bet that they will win—in making predictions which come true. Those men don't much care what the nature of their guess may be, just so long as they guess right. That is all they want.

Then there are the other kind of men, the men who never can make a living as crystal gazers or as prophets; men whose predictions are often wrong for the very simple reason that these men are not interested in guessing right, they are interested in making the right thing happen [applause] which is entirely different. They want to make the right thing happen no matter how difficult or how desparate it may appear, and those are the men who throughout history have really influenced the course of human events. It is a quality which every leader in war and in peace must have, or he becomes a speculator, and not a leader. For, if the leaders do not believe in victory, how can the rank and file be expected to advance?

And so the Jewish leaders made their stand in May 1948, and what happened thereafter?

They stood firm against an overwhelming invasion.

They carried the war to the enemy.

They sustained the crushing burdens of mobilization.

They avoided the errors of most newly created nations in that they set up their army on the basis of the highest professional military standards and without flinching carried out a superbly conceived military plan which won the admiration of soldiers everywhere.

So they won through universal recognition.

They established the organs and institutions of democratic administration within sound of the guns.

They brought 220,000 fugitives and wanderers into Israel.

They revived one of mankind's oldest cultures.

They established democracy in that area known as the Near East, or the Middle East, where its ideals and institutions are practically unknown.

They created a home of social and scientific progress in that same sleepy, stagnant area of desperate squalor and degradation.

They made an international judgment of the United Nations into a reality.

And now they are working for a real Arab-Jewish peace which bids fair before long to be an accomplished fact.

Now there is just a bare enumeration. [Applause.]

And I ask: Was there ever in history a more convincing demonstration of vigor, courage, far-seeing intelligence, and lofty idealism?

What was it, in essence, that gave these men the victory? They had, as I have said, a fine plan; but it was not the plan. They had zealous friends abroad; but it was not those friends, greatly helpful as they were, who settled the issue.

The factor that won them their victory was the will to win of the individual soldier. He knew that for which he was fighting, and quietly and soberly, he was willing to die for it if need be. And before he died, he was determined to fight.

This, if I may venture a guess, was the factor which gave the Jewish leaders faith on that memorable May day in 1948 when they made their decision to be brave leaders rather than shrewd calculators. It appears now that almost everyone else was wrong, but that they were not.

The occurrence is similar to events which have taken place in the history of the United States. Before the two world wars the great powers of Europe were correctly informed about our ships and our tanks and our guns and our planes; they had accurate knowledge about our cotton and our wheat, and our oil; they knew exactly the number of men of military age as these were shown in the census reports. But they either had contempt for our manhood or else utterly failed to understand it. On no other basis can their unsuccessful attempts at European and world conquest be explained.

We cannot blame them, for it is indeed hard to understand what it is that makes a man a hero. During World War II, I witnessed unbelievable acts of bravery and saw young Americans advance into almost certain death. I asked myself at that time: "What is it that makes these men so brave?" They were surely not enthused by the tinsel slogans of some fanatical dictator; they were not hypnotized by any politician's words. They were brave because they had grown to manhood in a country in which the individual mattered, in which he was the master and not the servant of the state, a country in which their mothers, and their schools, and their religious leaders had taught them that it mattered greatly whether they behaved themselves or whether they did not; that it was a matter of the utmost importance

whether they were good men or bad men; that it was of the highest moment whether they were brave men or cowards. The thing that won the war for America and confounded all the estimates of these old nations of Europe, was the individual self-respect of the individual young men. What I have said about the United States must also be set down in the case of Israel. It was that individual self-respect, that belief in the dignity of man, that belief in the value of human personality that enabled them to win the day. [Applause.]

Of course it is more than enough to make every Jew feel proud of his heritage, and it is in all truth an event which causes deep satisfaction in the hearts of non-Jews who in whatever way they could, extended their help. In fact, you will, I know, forgive me for thinking at this moment, of my own grandfather who on May 3, 1922, almost exactly 27 years ago tonight, sponsored the Lodge resolution which expressed the support of the United States for the setting up of a Jewish national homeland, and which, we now realize, became the foundation of American policy. [Applause.]

And you will forgive me, perhaps, for saying that the great mobilization of opinion and support and sympathy which occurred here in the United States would not have occurred if it had not been for the man who is modestly sitting here behind me—Rabbi Silver. [Vigorous applause.]

I have seen a good deal in Washington, in the Senate, of people who are advocating causes of one kind or another, and I say to you in all sincerity and not because he is here, that Dr. Silver is in a class by himself! [Applause.] I do not say that simply because he is a dynamo of energy and highly intelligent and very honorable and reliable, because he is all of those things. And I don't just take off my hat to him because he is working 16 to 18 hours a day for this cause—you see him in the Capital, then you see him at the Republican National Convention, at Philadelphia, and probably at the Democratic National Convention too [applause and laughter] although I did not happen to see him there. [Laughter.] And I don't say it because he is working all the time, and he is either on a boat, on a plane, or coming or going. The reason I say that he is so unique is because he never for one second tries to advertise or exploit or in any way aggrandize himself. His mind was always on the cause, and he was constantly thinking of what was going to help the cause, and he is therefore a real illustration of the successful and happy man who submerges himself in something greater than himself. [Applause.]

To change the tone of my remarks a little bit, we may also view with approval, tempered perhaps with a few smiles, the international rush which is now under way to recognize the new Jewish state. Indeed it was not ever thus, but we may charitably say, "better late than never."

We now behold this people who are as old as antiquity and as modern as New York City, looking with its friends and neighbors, ahead into the future.

We look to the negotiations to conclude peace between Israel and Egypt, and Israel and Lebanon, and Israel, and Transjordan, and with all its Arab neighbors.

We look to the day which cannot be far off, when Israel will become the fifty-ninth nation among the members of the United Nations. [Applause.]

Major Eban has said that the State of Israel is the only nation which holds an international birth certificate from the United Nations, and that, he said, is something in the present political world of easy virtue. [Laughter.]

Israel looks forward to the development of its parliamentary democracy and to the perfection of its administration.

It contemplates great schemes of industrial and agricultural development which are absolutely essential if their country, which is not richly endowed by nature, shall be able to support its hard-working population. It looks forward to the fact that the development of Israel itself will have an improving effect on all the nations of the Middle East. The industry and the intelligence of the Jewish people will inevitably raise the standards of health and the standards of well-being for all people in that part of the world. [Applause.] The poverty, disease, illiteracy, and infant mortality which marks life for so many millions of people in the Near East may within the lifetime of us who are here this evening become a thing of the past.

These are a part of the glowing promise which the future holds.

And so I conclude: What has happened in Israel is not only good for the Jews and good for the people of the Near East and good for the United States, it is in all truth good for the whole human race, because in rising from the depths of despair and suffering in which they were flung, to these heights of unbelievable and constructive achievements, the Jews have demonstrated a degree of tough and unbeatable courage which is surely one of the traits which gives man his spiritual dignity and proves the value of human personality. [Applause.]

And so I say that all people, wherever they may be, who believe in the exalted nature of the human spirit will joyously celebrate this first anniversary of the Republic of Israel, and will hail the Jewish achievement as an inspiration and as an example to all of faltering humanity. [Vigorous applause and cheers.]

Proposed Columbia Valley Administration

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a compilation of facts and figures relative to the proposed Columbia Valley Administration.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CVA FACTS

There has been a growing tendency during the past decade to adopt a defeatist attitude toward future development and opportunity. Pessimists say that our frontiers are gone and the old pioneering spirit has vanished from the present generation.

My State of Idaho and the entire Pacific Northwest refutes this philosophy entirely. There we have unlimited possibilities in many fields, awaiting only the decision of man to take advantage of them.

Powerful books by Vogt and Osborne have reemphasized the Malthusian theory of steadily increasing populations to feed and a steadily decreasing acreage of fertile soil to grow our food. They paint a gloomy picture of malnutrition and semistarvation facing the world. We feel that our region can take the lead in overcoming this threat by two forms of land development. First, in the Pacific Northwest we have millions of acres of arid land that can be brought under water, and this irrigated land would produce two or three times that of land dependent upon natural rainfall. Second, use of soil-conservation methods developed in recent years can save additional millions of fertile acres. All that is needed is a comprehensive plan to put these methods into operation.

This vast amount of prospective food production is only one of the resources awaiting development. The waters of the Columbia and its tributaries are capable of producing more than 30,000,000 kilowatts of electric power; we have more than 40 percent of the Nation's saw timber and 60 percent of its phosphate; and we have immense quantities of important minerals, including shale rock capable of producing oil commercially through synthetic methods now being perfected. Truly, this is the land of opportunity awaiting only proper development of these great natural resources. We have the land to provide opportunity for prosperous agriculture. We have the water resources, which can be developed by a system of multipurpose dams so that the enormous quantities of hydroelectric power generated can furnish the financial help needed to irrigate this new land at reasonable cost to the water users. It is no longer economically feasible to build a dam just for irrigation storage or one just for flood control or for power alone. Only by coordination and proper planning can we achieve all these purposes without waste of resources or money, through efficient multipurpose reservoirs combining reclamation, flood control, power, recreation, and countless other benefits.

WHY CVA?

Some people will say, "Why can this be achieved only through a CVA? Why can't it be done under the present system?" Here's why it is not being done, and cannot be done, without a Columbia Valley Administration.

Many different services and functions must be performed to secure this development. Husbanding existing farmland through soil-conservation practices and development of adequate sources of fertilizer, irrigating new lands through building of dams and canals, protection of fish and wildlife, conservation of our forests and range, hydroelectric power generation and transmission—all of these functions must be performed harmoniously and in relationship with each other. Money appropriated by Congress must be balanced among all the present agencies to insure a smooth, steady flow of needed funds. If one agency runs out of money for a particular function, or does not harmonize their activities with the other agencies, a lopsided program results and development is retarded. This is exactly what is happening now. To begin with, major Federal agencies concerned with water and land development in the Pacific Northwest are at odds with one another. The United States Corps of Engineers makes investigations and comes up with certain recommendations. The United States Bureau of Reclamation makes investigations and comes up with different recommendations. The Fish and Wildlife Service makes investigations and comes up with still a different set of recommendations. I need not continue such recital; the Members of

this Congress are not unaware of these conflicts. Thus, to begin with, we can't even get a coordinated plan, reflecting wise and truly comprehensive examination of all pertinent factors, of all values. What we get is a whole number of usually unrelated plans, which we must try to solve in a jigsaw-puzzle manner. Pretty costly jigsaw, I might add. Each time these separate investigations are made they cost hundreds of thousands of dollars. Then, to try to harmonize them, costs more tens of thousands of dollars. And then, all we have are patchwork programs.

Add to this tangled skein of divergent ideas and facts the individual, unrelated reception each program receives from departmental, presidential, and congressional budget and appropriation committees, and you have what can only be called a mess. The result would be ludicrous if it weren't a tragic demonstration of ineptitude and poor management organization. So it isn't surprising to have the Corps of Engineers recommend dams on the lower Columbia River area which run contrary in timing and scheduling with the plans of the Fish and Wildlife Service for the protection of the migratory-fish runs in that area. Or that the Corps of Engineers recommends a dam on the Snake River in the Hell's Canyon area which is quite different in location, costs, and scheduling from that similarly suggested by the Bureau of Reclamation. Or that the Bonneville Power Administration runs headlong into the Bureau of Reclamation on the marketing of power in Montana or southern Idaho.

HOOVER COMMISSION RECOMMENDATIONS

Let me quote from the Hoover Commission report on the Department of the Interior. In this report the Commission recommends consolidation on a national scale of the civil functions of the Corps of Engineers, the Bureau of Reclamation and the Bonneville Power Administration—the same three agencies that are consolidated on a regional basis under the CVA bill.

Here are some of the Hoover Commission findings, quoting directly from their report:

"DEFECTS IN ORGANIZATION OF WATER DEVELOPMENT AND USE

"There are glaring defects in the organization of these services in the Government.

"(a) There is no effective agency for the screening and review of proposed projects to determine their economic and social worth. There is no effective review of the timing of the undertaking of these projects in relation to the economic need or financial ability of the Nation to build them.

"(b) There is duplication and overlap of effort, and policy conflicts exist between the Army engineers and the Bureau of Reclamation in construction of, and jurisdiction over, projects.

"(c) There is an inherent conflict between the most efficient operation of storage dams for the purpose of flood control and of dams used for the generation of hydroelectric power. Flood control requires empty storage space prior to the high-water season, the storage of water during the flood season, and the emptying of the dams during dry spells. The generation of hydroelectric power needs as nearly an even flow of water as is possible the year around. And the irrigation cycle, which requires storage of water in the winter months and its release in the summer, conflicts with the continuous flow of water required for electrical operation. As flood-control concepts are in the hands of one agency of the Government and power concepts in another, there is inevitable conflict of the highest importance in design and operation, which can be solved only by a consolidated administration.

"ELIMINATION OF DISASTROUS CONFLICTS AND OVERLAPS

"One of the major reasons for grouping these agencies into the Department of the Interior is the elimination of disastrously wasteful conflict.

"* * * The function of river development is a multiple purpose one, cutting across many of the unifunctional agencies. Experience has shown that parceling out river-development responsibilities among these functional agencies produces endless confusion and conflict. A plan for the development of a river basin cannot be devised by adding together the special studies and the separate recommendations of unifunctional agencies concerned respectively with navigation, flood control, irrigation, land drainage, pollution abatement, power development, domestic and industrial water supply, fishing, and recreation. These varied and sometimes conflicting purposes must be put together and integrated in a single plan of development. * * *

"Under conflicting laws, rival Federal agencies compete for taxpayer money in what often appear to be premature and unsound river-development projects, duplicating each other's surveys and bidding against each other for local support at national expense. * * *

"Enactment of the Flood Control Act of 1936 marked the beginning of a new era of administrative confusion. In that act primary responsibility for flood protection on the main streams was assigned to the Corps of Engineers, and in the upper watersheds to the Department of Agriculture. The most serious consequence from the standpoint of organization was not the division of flood-control responsibility between the Corps of Engineers and the Department of Agriculture, but the effect on relations between the Corps and the Bureau of Reclamation. As the Corps' original responsibility for navigational improvements was expended to cover flood control and other purposes incidental or related to flood protective works, and the Bureau's original responsibility for irrigation was expanded to include other potential byproducts of irrigation structures, the one agency working upstream met the other coming down. Now we are witnessing the spectacle of both agencies contending for the authorization, construction, and operation of projects in the same river basins, for example in the Central Valley, Columbia, and Missouri Basins. * * *

"Division of responsibility means duplication of surveys and investigations. Elaborate basin-wide surveys and plans have been made in several instances by the Corps of Engineers and the Bureau of Reclamation, in addition to the comprehensive basin surveys made by the Federal Power Commission and the watershed surveys of the Department of Agriculture. * * *

"Jurisdictional jealousy is inevitable, and costly as well, so long as such organization separation is practiced. Friction therefrom operates as a perpetual drag on efficiency and as a stimulator of group and sectional competition for favor and undue influence. Without more inclusive operating units, plans are made which see only parts of the whole situation, and wasteful expenditure of funds results, while the total objective which might have been attained is only partly realized.

"No effective method has been found for reconciling conflicting opinions and programs.

"The interagency committees have failed to solve any important aspects of the problem * * * because the dominant members, the Corps and the Bureau, have been unwilling to permit interagency committees to settle their differences. The result has been neglect or avoidance by the committees of virtually all major areas of interagency conflict, and concentration instead on technical studies and publicity. * * *

"The development agencies sometimes compromise their differences. After sharp clashes over plans for the development of the Missouri Basin, the Corps and the Bureau announced complete agreement on the Pick-Sloan plan. Analysis of that plan reveals the fact that its contains many projects which previously had been subjected to devastating criticism by one or the other agency. The compromise consisted for the most part in a division of projects, each agency agreeing to forego the privilege of criticizing projects assigned by the agreement to the other. The result is in no sense an integrated development plan for the basin, and there is serious question in this case whether agreement between the two agencies is not more costly to the public than disagreement. * * *

"Each of the two major development agencies, the Corps and the Bureau, not unnaturally tries to stake out claims in advance of the other. Each completes its basin surveys as quickly as possible, and proposes its development plans for authorization. The Executive and the Congress are presented with conflicting proposals prepared by agencies with different water-use philosophies. The plans of the Corps of Engineers are built around navigation and flood-protection features, those of the Bureau of Reclamation around irrigation, with power development and other allied purposes given some consideration by both. Desirable though it would be, it is difficult to forestall authorization until thorough analysis has been made * * * once project plans are announced and publicized such powerful local pressures are usually generated that development cannot be postponed. Occasionally, however, interagency disputes have the opposite effect of retarding worth-while developments for many years, as in the case of the Kings River project in the Central Valley of California. * * *

"There is simply no escaping the fact that so long as the present overlapping of functions exists with respect to the Corps of Engineers, the Bureau of Reclamation, and the Federal Power Commission, costly duplication, confusion, and competition are bound to result. It has been demonstrated time and again that neither by voluntary cooperation nor by executive coordination can the major conflicts be ironed out. * * *

"An example of duplication and conflict may be found in the plans for a project at Hell's Canyon, Idaho. These were duplicated at a cost very roughly estimated at about $250,000 each by the Corps of Engineers and the Bureau of Reclamation.

"They differed in essential particulars of construction and by over $75,000,000 in cost of erection.

"We have pointed out the inherent conflict in use of reservoirs for flood control and their use for power or irrigation. The greatest power development requires the most even flow of water possible. The greatest flood prevention use is to empty reservoirs prior to the flood season and soon thereafter. With the Reclamation Service in control of one function of some reservoirs and the Army Corps of Engineers in charge of others, there can be only continued friction. The consolidation of these agencies is the only remedy."

There is a great deal more along the same line but these excerpts should show the need for reorganization. We propose to meet this need with a reorganization bill, and that is exactly what our CVA measure is—a reorganization bill that grants no additional powers but which reorganizes our agencies dealing with water resources and provides a plan for unified development of all resources. That is why we call this an Administration and not an Authority, since it does not have the powers of a TVA.

It takes the experience of the highly successful TVA and applies the regional principle to our Columbia Valley with the modifications necessary to meet the different conditions to be faced there. All the powers and functions essential to development already exist in our area, and we propose not to create any new powers, but only to unify and coordinate operations, as recommended by the Hoover Commission.

CONTINUITY OF CONSTRUCTION

A very important improvement over present procedure is provided for in the bill by assuring continuity of construction. All major projects would have to be authorized by Congress, but the Administration would then have contractual authority to complete the project in the quickest and most economical way. Present costly delays, occasioned by periodical lack of funds, awaiting the next fiscal or deficiency appropriation, will be eliminated. As an example, let's take the Lewiston Orchards project. This is a small project to rehabilitate a combination domestic water and irrigation system near Lewiston, Idaho, planned to be completed this calendar year at a total cost of $2,300,000. My reason for using this as an example is that I have just recently received a letter from the manager of the Lewiston Orchards Irrigation District, Mr. Walter Hereth, who says:

"We are very unhappy to learn that the Ice Harbor Dam program has been delayed, and that the appropriations for the Lewiston Orchards for the next fiscal year have been cut $40,500. The original request for $270,000 was what we needed to finish our small project. If the cut is not reinstated, we will have to ask for another deficiency appropriation. Again, if the $270,000 is not made available during the next fiscal year, we will have to continue paying the overhead of about $6,000 per month to maintain the Bureau of Reclamation office, plus the cost of shutting down the job and starting again. This one delay could cost us $50,000; and since these funds must all be repaid by the water users, you can see why we feel the cut of $40,500 is unnecessary and expensive."

If this one delay on a small project will cost $50,000, you can readily see the waste incurred in the entire construction program. This useless waste will be entirely eliminated under the CVA bill, and much earlier completion of projects at a much smaller cost will be assured.

BENEFITS OF TVA EXPERIENCE

It is extremely important that we profit from TVA experience in those matters that equally affect both valleys.

The New York Times, in a recent editorial entitled "TVA After 15 Years" summed up this experience as follows:

"Now we face the problems of other possible river authorities and they are not simple. What TVA has done is to show that they can be solved in a democratic way, with few or none of the evils of a centralized bureaucracy."

TVA has furnished an outstanding example of cooperation between Federal, State, local, public, and private agencies, organizations, and individuals. The TVA Board has developed and carried out its development programs in cooperation with all groups and people in the valley. We have written many home-rule and local-rights provisions in this bill in order to guarantee such cooperation in the Columbia Valley.

In the past, certain interests have circulated a great deal of misinformation about the TVA designed to make people of the Northwest believe that it supersedes State and local agencies, taking over their functions. Nothing could be further from the truth. We need only refer to statements of the governors of the seven Tennessee Valley States as published in the St. Louis Post-Dispatch:

"Gov. Prentice Cooper, of Tennessee: 'I can say that the rights of this State and its citizens, far from being restricted or violated by activities of this Federal agency, have been enlarged through enriched opportunities.'

"Gov. J. Melville Broughton, of North Carolina: 'I am a strong believer in States' rights, but TVA has done nothing which to my mind embodies any threat to the rights of this State.'

"Gov. Colgate W. Darden, Jr., of Virginia: 'TVA operations in Virginia have not resulted in any encroachment on States' rights.'

"Gov. Simeon S. Willis, of Kentucky: 'There is no reason why TVA should not be able to operate without encroaching on States' rights. The idea underlying the regional valley authority is sound, and it is perfectly reasonable for State and Federal Governments to work together. * * *'

"Gov. Chauncey M. Sparks, of Alabama: 'Conducted as it has been conducted, with vision and regard for local agencies, it has made a tremendous contribution to public welfare.'

"Gov. Thomas L. Bailey, of Mississippi: 'I do not feel that the role played by this Federal agency in Mississippi has constituted any encroachment on our State rights.'

"Gov. Ellis Arnall, of Georgia: 'The only complaint I have regarding TVA is that its influence has not permeated this State further. * * * There has been no encroachment on States' rights.' "

ANTI-CVA PROPAGANDA

Misinformation about both the TVA and the proposed CVA has been spread widely throughout my State of Idaho, with a continuous barrage of slick-paper propaganda, newspaper editorials, out-of-State speakers at meetings presenting only false arguments against CVA with no favorable testimony allowed, and formation of organizations devoted entirely to spreading this misleading and false propaganda. Special interests opposed to development of our region for the benefit of all the people follow shrewd and effective policies in disseminating their falsehoods. Persons in the employ of these corporations, or persons beholden to them through business and financial connections, are placed in key positions in these anti-development organizations. Through the efforts of this key group, many prominent citizens, entirely sincere but misled by the onesided propaganda barrage, are prevailed upon to join these groups and give them an air of respectability. We have no financial backing for a CVA that enables us to compete with this propaganda on even terms, but it is my hope that through the efforts of an expanding group of citizens who want to develop our State, we will gradually be able to present the true facts to the people and gain their full support for this measure.

WATER RIGHTS

I want to mention a few examples of their false propaganda. The main theme, and one which has been very effective among farmers, is that a Columbia Valley Administration would take away farmers' water rights. Anyone who has read the bill knows that this is not true, but we cannot expect busy farmers to secure and study copies of this measure. Consequently, I want to quote the exact words of the bill from the reclamation provisions, section 10 (a), which are as follows:

"SEC. 10. (a) No provision for work of irrigation in or under this act shall be construed as affecting or intended to affect or in any way to interfere with the laws of any State relating to the control, appropriation, use, or distribution of water used for domestic, irrigation, mining, or industrial purposes, or any vested right acquired thereunder, and the Administration, in carrying out the provisions of this act, shall proceed in conformity with such laws, and nothing in this act shall in any way affect any right of any State or of the Federal Government or of any landowner, appropriator, or user of water in, to, or from any interstate stream or the waters thereof: *Provided*, That the right to the use of water acquired for irrigation under the provisions of this act shall be appurtenant to the land irrigated, and beneficial use shall be the basis, the measure, and the limit of the right: *Provided further*, That nothing in this subsection shall limit the authority of the Administration to acquire property for its authorized purposes in the manner specified in section 6, subject to the conditions and limitations therein stated."

The only other reference to water rights is in the portion of section 6, mentioned above. This section contains the power of condemnation, now held by existing Federal agencies, but this power has been reduced and modified to make it entirely plain that water rights will be protected. The condemnation power is exactly the same as given to the Bureau of Reclamation by the Reclamation Act of 1902, with the addition of the following language in section 6 of the CVA bill:

"*Provided, however*, That the Administration shall have no power to condemn any water right except as it may be appurtenant to land acquired incident to the construction of dams, reservoirs, or other projects or facilities."

In other words, the bill says, "Water rights are covered by State law and the CVA will not touch them." If any land is acquired by the Administration for a dam or similar purpose, of course the water right on the land purchased goes with it. This is the only possible way a water right can be purchased, secured, or affected by the CVA. I don't see how a flat guaranty of water rights can be stated any plainer.

MISREPRESENTATION OF FACTS

I have on my desk a pamphlet that has been sent to every organization in Idaho, as well as many individuals, listing the addresses of Idaho's congressional delegation and urging that resolutions opposing CVA be sent to them. Why should they oppose CVA? What reasons are given for justifying this demand? Here are the reasons given in this propaganda hand-out—reasons stated as facts—and I quote:

"Their control over the natural resources of Idaho, including water rights, would be almost unlimited."

This statement is ridiculous on the face of it, since we have already seen that the Administration would possess no more power than is now held by existing Federal agencies and will have no power at all over water rights. The remaining arguments are also devoted to water rights, with the statments being made that CVA can condemn all water rights and it would transfer exclusive jurisdiction over Idaho water rights to the Federal court at Portland. Anyone who has read the bill knows that water rights are declared to be subject only to State laws, and the Administration is specifically bound by this doctrine of the sole jurisdiction on water rights resting with the States. This is a fair sample of the propaganda that is being used to combat a CVA. Our Idaho newspapers in general are following the same path of misinformation. Let me quote why the Twins Falls Times-News urges its readers to oppose a CVA in its issue of April 14, 1949:

"We should bear in mind that the CVA would have the right of eminent domain, could nullify provisions of the Idaho constitution and admission act which give Idaho

control of waters of the State; could condemn a water right; could deny water to a farm; could build and operate competitive lumber mills, fertilizer plants and other factories; could go into any kind of business it deemed necessary; could regulate grazing lands; could take over control and development of the natural resources of the State and the region.

"Or, in the words of Judge Stone of Denver, nationally known authority on reclamation law:

" 'CVA would have full power to claim water for its projects under the broad authority by the bill,' and 'through its power of eminent domain for the condemnation of all types of property, it could acquire any vested rights acquired under State laws.'

"That's a lot of power to be taken out of our hands and turned over to the Federal Government without recourse."

There is no resemblance between these statements and the provisions of this bill. Even the quotation from their "nationally known authority on reclamation law" is absolutely false. Incidentally, who is this Judge Stone, whose words seem to carry more weight with the Times-News than do the facts? This is Clifford F. Stone of Denver, who writes anti-TVA propaganda pieces for the Coordinating Committee of 31 National and Regional Land and Water Organizations. This group is closely connected with the Water Conservation Conference Continuing Committee, and both organizations had, and possibly still have, space in the same Washington office which was also occupied by E. W. Rising, Washington representative for Morrison-Knudsen Co., Inc., a large firm of contractors with headquarters in Boise, Idaho. Incidentally, this firm does practically all of the construction work contracted by the Idaho Power Co. This Coordinating Committee of 31 National and Regional Land and Water Organizations includes such agencies as the Pittsburgh Coal Exchange, a group that obviously is opposed to development of hydroelectric power. This leads us into a very interesting area, one that was thoroughly exposed by Senator HILL of Alabama in the Senate on June 18, 1946. Here is a portion of what the Senior Senator from Alabama said:

"The story of TVA is a story of growth and development of a partnership between the people of a region and their Federal Government. It is a story of which every American can feel proud. By many leaders, both at home and in many foreign lands, it is regarded as an example of the best evidence that a democracy will work, an example of achievement within a framework of freedom.

"This is the story which the Power Trust and its willing henchmen know they must suppress at all costs. To this end their mimeograph machines and presses have been busy—those of the Edison Electric Institute; the Chamber of Commerce of the United States; the National Association of Electric Companies; the Water Conservation Conference Continuing Committee; the 31 national and regional land and water organizations—which includes the Pittsburgh Coal Exchange and the Trinity Improvement Association; the Mississippi Valley Association; the Economic Research and Service Bureau; the National Reclamation Association; the National Tax Equality Association, and even a nationally known publishing firm. From these sources have spewed phony research reports, studies, memoranda, speeches, and even a novel containing undigested and recognizable lumps of Power Trust propaganda.

"All this spew of words professes to discuss the TVA and what it means to the Nation or to various regions. But, when reading this material, one who knows the facts about TVA finds himself in a never-never land of unreality. He learns that TVA multiple purpose dams, which are doing such a marvelous job today, cannot possibly work. He finds that the sole purpose for building them was to drown out farmer Jones' corn crop. He finds page after page of tables, charts, and text in which tax and financial figures are garbled into nonsense. He finds legal contentions solemnly advanced without reference to the fact that they have already been disposed of by the courts. He is told that TVA is a superstate, superstate, superstate, contrary to what the people of the valley know. He finds the smear words 'Communist,' 'Socialist,' 'Fascist,' 'totalitarian,' tossed recklessly about.

"Big money is being spent to prepare, print, and distribute this balderdash. Where does it come from, and why? I propose to find out."

POWER TRUST PROPAGANDA

Senator HILL then tells of the National Electric Light Association, a power-trust propaganda outfit that was replaced by the Edison Electric Institute after its exposé by the Federal Trade Commission. I quote further:

"The EEI itself has taken on some of NELA's discredited activities. For example, let me pick up a current propaganda threat from the EEI. See if it is not reminiscent of NELA days. In February 1944 the EEI put out a 56-page mimeographed tract called An Appraisal of Tennessee Valley Authority, ostensibly only for distribution to EEI members. Of course, it was not an appraisal, but an attack.

"It juggled figures. It discussed flood control in terms of the ancient testimony of power-company engineers, who claimed, in defiance of the records of more than 70 years, that major floods could occur in the Tennessee Valley at any time during the year—testimony which had already been weighed and discarded by the courts. It contained a table attempting to relate TVA payments in lieu of taxes to TVA's total investment, including flood control, navigation, chemical plant, general plant, and even construction in progress, although only its power investment was purportedly under discussion. The computation of the property taxes it claimed TVA should have paid on its facilities included part of the investment in navigation and flood control. To compare TVA taxes with those of utilities, it devised a formula which was based on kilowatt-hour sales, ignoring the fact that almost all TVA power is sold at wholesale. Obviously, it does not produce the same revenues per kilowatt-hour as do the sales of power by private utilities to ultimate consumers at high rates. After inflating TVA power investment by the inclusion of navigation and flood-control facilities, it calculated interest at 4 percent, in spite of the fact that utility companies were then refinancing at much less than that and that the cost of money to the Government was only half that amount. These were the devices EEI stooped to in order to charge TVA with a 'loss' on power operations.

"No two organizations, no two men, could compound so many errors independently. Yet, early in 1945 comes one E. W. Rising, an attorney, of Boise, Idaho, who prepared a 14-page TVA brief, ostensibly on his own initiative, from 'information available to me,' as he expressed it—TVA brief, by Rising. But where did the 'information available' come from? We find that the Rising 'brief' turns out to be based almost entirely upon the EEI tract 'appraising' the TVA, even to the lifting of language verbatim. The same table appears attempting to relate TVA payments in lieu of taxes on power operations to its total fixed assets, including navigation and flood-control facilities, chemical plant, general plant, and construction in progress. The same misleading reference to the flood-control testimony of utility engineers is found in the Rising brief, and again TVA's experimental development and manufacture of high-analysis phosphates is described as a 'loss.' Tens of thousands of farmers and the leading agricultural specialists of the country would call that activity pure gain, but the private utilities have never betrayed any interest in farmers or the Nation's soil.

"With variations, Rising applies the EEI formula for calculating the taxes the utilities would charge against the TVA, again ignoring the fact that TVA's power-generating system is not comparable to the generating and distribution systems of private utilities. And finally, by such means having produced an illusory 'deficit,' Rising indulges in the priceless whimsy of adding to TVA's bill another $10,000,000 as an estimate of Federal income and excess-profits taxes which he says should be paid on an income that he claims does not exist. This rehash of power-trust propaganda was circulated in the West by the opponents of MVA, CVA, and other valley developments, notably by F. O. Hagie, secretary-manager of the National Reclamation Association—Pueblo (Colo.) Chieftain, February 16, 1945—an organization which is reported to be dominated by utility, railroad, and contracting interests.

"Apparently encouraged by his local success, we find Rising packing his propaganda tracts in his brief case and heading east. In Chicago, in September 1944, there had been formed the Water Conservation Conference Continuing Committee, apparently at the suggestion of the National Reclamation Association, managed by Hagie. (Peter Edson, NEA columnist, in Florence (Ala.) Times, July 19, 1945.) In April 1945 another group appeared. A new joint water lobby to oppose creation of more valley authorities like TVA, consisting of 31 national and regional land and water organizations, announced its creation. (Peter Edson, NEA, Washington (D. C.) News, July 16, 1945.) One of the early exploits of this water lobby was to publish the Authority Issue, by Clifford F. Stone in collaboration with other national authorities on land and water subjects, a booklet which, after rehashing much of the propaganda against TVA, attempts to reopen the constitutional issue which was long ago settled by the courts.

"These organizations have moved on Washington now, and here we find E. W. Rising, who got his start rewriting power-trust propaganda. Rising is both finance officer of the Water Conservation Conference Continuing Committee and member of the coordinating committee of the 31 national and regional land and water organizations. (The Authority Issue, by Clifford F. Stone and others, published by 31 national and regional land and water organizations.) Both these organizations are snuggled together in the same offices at 710 Atlantic Building, Washington, D. C. From these offices are distributed all sorts of misleading propaganda documents against TVA. (This Is Your Job, bibliography of anti-TVA propaganda, published by 31 National and Regional Land and Water Organizations, 710 Atlantic Building, Washington, D. C., including Rising's original Power Trust brief, which was in itself a rewrite of the EEI's appraisal.)"

Senator HILL gives a great deal more information on these and associated Power Trust organizations, such as the National Association of Electric Companies, that are actively opposing all development programs. I have quoted only a small portion of the evidence in order to show the nature of the opposition.

As I stated previously, such persons and such organizations are the base of anti-CVA organizations. Their false propaganda wins over respectable, prominent citizens who have been led to believe that their business or their water rights will be taken from them

by a Columbia Valley Administration. I have every confidence that members of this latter group will join with us in advocating passage of this bill. All that is needed is for the true facts to be presented to them, and I am confident that this can be done through volunteer organizations of public-spirited citizens working for development of our great State.

Our National Defense

EXTENSION OF REMARKS
OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. BENNETT of Florida. Mr. Speaker, the most important matter before our National Government today is our national defense. When the House of Representatives approved the construction of the proposed supercarrier for and on the recommendation of the Navy, it seems to me that no branch of the Government should abandon the project without full hearings before Congress and explanations to Congress. No greater mistake could be made than to assume that we can be prepared to fight any possible wars of the future with only the weapons of the past. I take this opportunity to request the House Committee on Armed Services to schedule full hearings on the question of the proposed naval carrier to ascertain whether or not it is in the best interest of our country to complete the construction of this vessel. On the basis of all the facts that I have been able to discover so far, it is my personal present belief that the request of the Navy for this project should be approved and construction speeded. The naval air power and the marines, so valuable to our defense, should not be allowed to wither on the vine. To allow that would be to invite disaster. I wish to include an article from the May 6, 1949, issue of United States News and World Report as follows:

HOW TO LOSE A WAR

(By David Lawrence)

Wars are won or lost at the planning stage—in the years that precede the actual combat.

Hermann Goering insisted on unification of all armed services in Germany and on domination of the whole military establishment by his air force. To the cries of the German Navy for a fleet and for better submarines, he turned a deaf ear.

It was the failure to get control of the seas which defeated Germany. For otherwise the fuel and the supplies needed to support America's huge expeditionary forces could not have been safely transported across the ocean.

It was the inability, in particular, of German seapower to cross the English Channel which saved Britain from invasion in 1940.

In the Pacific, it was Japanese carrier aviation that swept down through the Philippines and on to Singapore almost unresisted.

Naval carriers swept down on Pearl Harbor.

Japanese naval aviation had full control for nearly 2 years thereafter, and the American flag came down in many outposts in a series of heartrending defeats.

It was not until naval aviation was built up that the American Navy won back the whole Pacific and carried the fight to the shores of Japan itself. It was a costly campaign—thousands of American boys were sacrificed because of a blunder in our naval policy in the twenties and early thirties.

Without bases at Guam and Saipan and Iwo Jima and Okinawa—taken primarily by United States Navy carriers and the Marines—the big land-based bombers of the Army Air Force could not have dropped a bomb on Hiroshima.

BRITAIN'S LESSON

Great Britain likewise suffered because she neglected carrier aviation. Thinking only in terms of land defense, the British gave the Royal Air Force complete command of air power, and it didn't develop naval aviation. As a result, serious losses were incurred. The Royal Air Force had no training in operations above the seas against naval vessels. It had no effective training in antisubmarine warfare. It allowed the two German battleships, *Gneisenau* and *Scharnhorst*, to steal through the English Channel at a critical moment because the Royal Air Force was not trained to ward off such operations.

The British Government finally admitted neglect and gave its navy the air arm it had clamored for. The British Navy then had to go to school in the Pacific. In 1945 its first carrier task force was made a part of our carrier fleet. Only during wartime could the British naval arm learn what had been neglected before 1939. This was too late.

SCUTTLING THE CARRIER NAVY

Today history is repeating itself. Advocates of a concentration of effort on only one method of warfare are in the ascendancy in Washington as they were in Berlin, London, and Tokyo before 1939.

The naval arm of the United States is in peril. So also is amphibious warfare as developed and perfected by our Marine Corps.

One of the greatest military organizations of all times—the carrier Navy and the Marines of the United States—is in danger of disruption.

The process is a simple one. Control of funds means control of what weapons shall be developed.

Without consulting the Chief of Naval Operations and without giving the Secretary of Navy the hearing he pleaded for, the Secretary of Defense, Louis Johnson—acting with the approval of President Truman—canceled the construction funds of the Navy for its new carrier. Previously Mr. Truman had twice authorized the building of the new carrier, and so had Congress on two occasions.

In public protest, John L. Sullivan, Secretary of the Navy, resigned last week. It was a courageous act, comparable to the valor of Winston Churchill and Anthony Eden in their protest against wrong policy in Britain.

A carrier navy is the only kind of navy needed today. It's naval air, plus submarines for offense and defense, that makes a navy. The carrier, of course, does not proceed alone. It is part of a task force protected by other warships with antiaircraft batteries and radar to detect the approach of enemy planes and submarines.

A carrier Navy gives us mobile bases, thus making it unnecessary for America to be at the mercy always of European politicians. It is inexpensive insurance against the possibility that land bases might suddenly be wrested from present control by Communist infiltration into European governments before a war begins.

A carrier Navy can furnish bases in any of the seven oceans where wars are fought in modern times. We will need such mobile bases in the next war, particularly for use in the Indian Ocean and in and around the Persian Gulf and in the Mediterranean to protect our bases in North Africa.

A carrier Navy was never intended to do the job of strategic bombing. This was well done by the Army Air Corps in the last war. Strategic bombing should be the primary function of the Air Force. That is what the Key West agreement said. But it also said that there was no reason why the Air Force should not be given assistance from the naval arm and that this would be an important part of our operations.

A carrier Navy hunts down submarines and protects the supply line of a land-based Air Force.

A carrier Navy bombs shore installations where submarines are concentrated and drops mines in narrow straits and passages inland through which submarines must pass on their way to the seas.

Mine operations are a technical business in which the Navy has spent long years of experimentation.

FIGHT OVER 100 FEET

The new carrier was to have been only 100 feet longer and 30 feet wider than carriers now in the fleet. Yet this change in dimensions meant that our naval aviators could go 1,700 miles and come back to the same ships, instead of going out only 900 miles. This added range meant not only increased efficiency in dropping mines but it also meant protection for the carrier fleet against the land-based aviation of the enemy.

The new carrier called for a kind of construction which would make it unsinkable. Security regulations prevent disclosure of details, but it can be stated positively that no submarine operation known today could sink the new carrier. It would carry its own protection against air attack, too. It should be remembered that no big or fast carrier of the United States Navy was sunk from the air or by submarine in the last war.

The cost of the new carrier is relatively small—the equivalent of the cost of two battleships at 1944 prices. The upkeep expense would be no more than that of any other large ship. The carrier planes themselves would have cost lots of money, but the Navy was willing to sacrifice other parts of its program to build its new carrier.

WEAKENING OUR DEFENSE

This, however, isn't the real point. It isn't merely the desire of the Navy to build a particular type of ship that is the heart of the controversy. The basic principle at issue is whether the Navy can run the Navy and the Air Force can run the Air Force and the Army can run the Army.

Today the veto of what one service shall do is held by the other two services in the Joint Chiefs of Staff. This is a grave mistake.

The first principle looking toward a sensible solution of all this is to insist that the strategy of the war be decided by the three armed services in collaboration in the future as has been the case in the past. This really has been accomplished already by the unanimous agreement reached at Key West last year by the Joint Chiefs of Staff. In that agreement missions were specifically outlined and everybody agreed as to their meaning. Now that agreement has been torn to shreds.

The next principle is to permit each service to be the judge of what tools it needs to carry out its missions.

Once a lump-sum budget for each service is approved by the President, the Secretary of Defense, and the Director of the Budget, the technicians of each service should decide for themselves how to use to best advantage the money allotted.

To allow the Secretary of Defense to decide technical issues of armament could

weaken America's defense. One-man decisions have weakened the arms programs of other countries in the past. It has already done so for America. It's the way to lose a war.

The Basing-Point System and the Federal Government—Cement Bids Over the Years Show Identical Prices—Big Business Expects To Use Moratorium in Monopoly Drive—Congress Must Protect Small Business and Free Enterprise; Monopoly Must Not Be Given a Green Light by Congress To Continue After Being Outlawed by the Supreme Court

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. PATMAN. Mr. Speaker, the basing-point system of pricing, as practiced by the cement industry, operated with the same precision on purchases by the Federal Government as it did in purchases by State governments and by dealers, contractors, and anyone else who purchased cement. Identical bid prices over the years were as uniform on bids to the Federal Government as to any one other purchaser of cement. Millions upon millions of barrels of cement have been used by the Federal Government on construction projects by the Tennessee Valley Authority, the Reclamation Service, the Army engineers in flood-control projects, the Navy in docks and wharfs, and in fact in all of the far-flung activities our Government undertakes in the interest of public welfare and safety.

ANY DIFFERENCES IN CEMENT BIDS PURELY COINCIDENTAL

Today I summarize several different abstracts of bids to the Federal Government showing absolute identity of prices with one exception. The one deviation which occurred in all these bids appeared to have stemmed from an unintentional error made by one bidder in applying the basing-point formula, since his bid was fractionally above the basing-point price. These abstracts will show the continuing effectiveness of the system, over the years, in producing identity of bids.

In 1934 the Tennessee Valley Authority opened bids on a large quantity of cement for shipment to four destinations. Bidders with plants as far away as Cape Girardeau, Mo., and Clinchfield, Ga., as well as others in nearby Tennessee, northern Georgia, and Alabama submitted bids to the Tennessee Valley Authority which were identical for each destination to the fourth decimal place as follows:

TABLE 1.—*Abstract of bids for shipments to Tennessee Valley Authority on bids opened Oct. 15, 1934. (200,000 to 800,000 barrels or partial quantity at Coal Creek, Tenn.; 100,000 to 700,000 barrels or partial quantity at Wheeler Dam, Tenn.; 100,000 to 700,000 barrels or partial quantity at Wheeler Dam, Tenn.; 100,000 to 700,000 barrels or partial quantity at Sheffield, Ala.)*

Bidders	Plants nearest to destination	Coal Creek, Tenn.	Wheeler contractor	Wheeler Authority	Sheffield, Ala.
1. Alpha Portland Cement Co	Phoenixville, Ala	----------	$1.8798	$1.8398	$1.7008
2. Universal Atlas Cement Co	Leeds, Ala	----------	1.8798	1.8398	1.7008
3. Marquette Cement Manufacturing Co	Cape Girardeau, Mo	----------	1.8798	1.8398	1.7008
4. Lehigh Portland Cement Co	Birmingham, Ala	----------	1.8798	1.8398	1.7008
5. Hermitage Portland Cement Co	Nashville, Tenn	$1.7384	1.8798	1.8398	1.7008
6. Cumberland Portland Cement Co	Cowan, Tenn	1.7384	1.8798	1.8398	1.7008
7. Signal Mountain Portland Cement Co	Chattanooga, Tenn	1.7384	1.8798	1.8398	1.7008
8. Lone Star Cement Co	Birmingham, Ala	----------	1.8798	1.8398	1.7008
9. National Cement Co	Ragland, Ala	----------	1.8798	1.8398	1.7008
10. Georgia Cement & Products Co	Portland, Ga	----------	1.8798	1.8398	1.7008
11. Pennsylvania-Dixie Cement Corp	Kingsport, Tenn. / Richard City, Tenn.	1.7384	1.8798	1.8398	1.7008
12. Volunteer Portland Cement Co	Caswell, Tenn	1.7384	----------	----------	----------

All bids subject to 10 cents per barrel discount for payment in 15 days.

BASING-POINT BIDS BETWEEN YEARS 1934 AND 1947 SHOW SAME IDENTITY OF PRICES

Whether the bids for cement were for large or small quantities, the basing-point system operated with the same perfection. The abstract of bids in Table No. 1 represents a tremendous quantity of cement. The following tables of bids received by the Tennessee Valley Authority during the year 1947 were for relatively small quantities of cement. However, the prices at destination, as you will see, show the same identity in pricing as existed in 1934. The tables follow:

TABLE 2.—*250 barrels of cement for Cherokee project, f. o. b. cars, Jefferson City, Tenn.*

(Bids opened Jan. 24, 1947)

	Price per barrel	Discount terms
Pennsylvania-Dixie Cement Corp.	$2.59	10 cents per barrel—15 days.
Cumberland Portland Cement Co.	2.59	Do.
Signal Mountain Portland Cement Division.	2.59	Do.
Hermitage Portland Cement Co.	2.59	Do.
Volunteer Portland Cement Co.	2.59	Do.

Awarded to Hermitage Portland Cement Co. by drawing between equally low bidders.

TABLE 3.—*1,500 barrels of cement for Kentucky project, f. o. b. Gilbertsville, Ky.*

(Bids opened Feb. 14, 1947)

	Price per barrel	Discount terms
Cumberland Portland Cement Co.	$2.81	10 cents per barrel—15 days.
Pennsylvania-Dixie Cement Corp.	2.81	Net.
Hermitage Portland Cement Co.	2.81	10 cents per barrel—15 days.

Awarded by drawing between equally low bidders to the Cumberland Portland Cement Co.

TABLE 4.—*1,500 barrels of cement for Chemical Engineering Division, f. o. b. cars, Sheffield, Ala.*

(Bids opened Feb. 14, 1947)

	Price per barrel	Discount terms
Universal Atlas Cement Co.	$2.67	10 cents per barrel—15 days.
Pennsylvania-Dixie Cement Corp.	2.67	Do.
Lone Star Cement Corp.	2.67	Do.
Cumberland Portland Cement Co.	2.67	Do.
Hermitage Portland Cement Co.	2.67	Do.

Awarded to Cumberland Portland Cement Co. as the only bidder offering firm price.

TABLE 5.—*500 barrels of cement for Cherokee project, f. o. b. cars, Jefferson City, Tenn.*

(Bids opened Apr. 24, 1947)

	Price per barrel	Discount terms
Signal Mountain Portland Cement Division.	$2.59	Net.
Cumberland Portland Cement Co.	2.59	10 cents per barrel—15 days.
Hermitage Portland Cement Co.	2.59	Do.
Pennsylvania-Dixie Cement Corp.	2.59	Do.
Volunteer Portland Cement Co.	2.59	Do.

Awarded to Volunteer Portland Cement Co. because their bid was most advantageous to the Authority.

TABLE 6.—*500 barrels of cement for Construction and Maintenance Division, Knoxville, f. o. b. cars, Knoxville, Tenn.*

(Bids opened May 7, 1947)

	Price per barrel	Discount terms
Volunteer Portland Cement Co.	2.60	10 cents per barrel—15 days.
Lone Star Cement Corp.	2.60	Do.
Hermitage Portland Cement Co.	2.60	Do.
Pennsylvania-Dixie Cement Corp.	2.60	Do.
Cumberland Portland Cement Co.	2.60	Do.
Signal Mountain Portland Cement Division.	2.60	Do.
Universal Atlas Cement Co.	2.29	Do.

Awarded to Volunteer Portland Cement Co. because their bid was most advantageous to the Authority.

BASING-POINT SYSTEM AND THE FORT PECK, MONT., PROJECT

The great Fort Peck Dam, located on the Missouri River, designed to furnish electric power for the great Northwest, has required in its building millions of barrels of cement. Prior to the Supreme

Court decision in the Cement case, April 26, 1948, bids on cement for the Fort Peck project produced prices that were identical to the fourth decimal place. One such bid follows:

TABLE 7.—*Abstract of bids on 600,000 barrels of cement in bulk, and 10,000 barrels in paper, received by the Army engineers for the Fort Peck (Mont.) Dam in 1935*

Name of bidder and plants nearest shipping point	Price destination	
	Bulk, per barrel	Paper, per barrel
Universal-Atlas Portland Cement Co., Duluth, Minn	$2.5054	$2.7145
Huron Portland Cement Co., Alpena, Mich	2.5054	2.7145
Three Forks Portland Cement Co., Trident, Mont	2.5054	2.7145

THE BASING POINT IN THE NAVY DEPARTMENT

The Cement Trust in the operation of the basing-point system is no respecter of persons. The Navy buys cement and on bids received by the Navy Department at Brooklyn, N. Y., opened May 29, 1946, for 8,000 barrels of cement, destination Brooklyn, N. Y., on 18 bids received, were identical as follows:

TABLE 8

Name of bidder	Price per barrel	Name of bidder	Price per barrel
Allentown Portland Cement Co.	$2.43	Lone Star (New York)	$2.43
Alpha	2.43	National	2.43
Coplay	2.43	Nazareth	2.43
Edison	2.43	North American	2.43
Giant	2.43	Pennsylvania-Dixie	2.43
Hercules	2.43	Standard Lime & Stone	2.43
Keystone	2.43	Universal	2.43
Lawrence	2.43	Vulcanite	2.43
Lehigh	2.43	Whitehall	2.43

THE BASING-POINT SYSTEM AND THE BUREAU OF PRISONS

The operation of the basing-point system was perfection itself; however, even the Cement Trust, which operated the system, could not maintain a batting average of 1,000 because an occasional weak batter would appear in the basing-point batter's box. On a small order of 1,000 barrels of cement for the Leavenworth Penitentiary on which bids were submitted in September 1935, seven of the bidders batted a thousand, but the eighth one struck out by bidding a price which was 0.5856, ten-thousandths of a cent per barrel higher than the other prices. I feel sure the basing-point player had a tough time explaining to the coach how this happened. The table showing this grievous error follows:

TABLE 9

Name of bidder	Price per barrel	Name of bidder	Price per barrel
Universal	$2.163424	Lehigh	$2.163424
Ash Grove	2.163424	Monarch	2.163424
Missouri	2.163424	Dewey	2.163424
Lone Star	2.163424	Consolidated	2.175280

All bids subject to 10-cent discount per barrel for payment in 15 days.

THE BASING-POINT SYSTEM AND THE FLOOD-CONTROL PROGRAM

The basing-point system of pricing was as effective on bids to the Army engineers for flood control as it was on bids for other Federal projects. The following abstract of bids received by the United States engineers office, Vicksburg, Miss., is of special interest because the invitation called for bids two ways, namely: First, on commercial bills of lading, freight prepaid to destination at Monroe, La., and second, on Government bills of lading with the Government paying the freight on basis of land grant freight rates to the same destination, Monroe, La. The bids showing total value at destination on each of the two methods of bidding resulted in the same identity of prices because of the perfect observance of the basing-point system by each and every bidder. The table follows:

TABLE 10

Name of bidder	Destination cost on Government bills of lading f. o. b. Monroe, La.	F. o. b. local switch, Missouri Pacific R. R., Monroe, La.
Pennsylvania-Dixie Cement Corp	$2,772	$3,060
Arkansas Portland Cement Co	2,772	3,060
Universal-Atlas Cement Co	2,772	3,060
Cumberland Portland Cement Co	2,772	3,060
Trinity Portland Cement Co	2,772	3,060
Signal Mountain Portland Cement Co	2,772	3,060
Alpha Portland Cement Co	2,772	3,060
Lehigh Portland Cement Co	2,772	3,060
Lone Star Cement Co	2,772	3,060

[1] No bid.

BASING-POINT SYSTEM PRODUCES AUTOMATIC IDENTITY OF PRICES

These abstracts amply prove that the basing-point system automatically produces such identity of prices as to reduce the basis for awarding supply contracts to award by lot. Neither distance, nor method, nor cost of transportation, nor differences in efficiency and cost of production, nor number of bidders, produces any differences in prices bid.

The Supreme Court in the Cement case decision referred to the basing-point system as a "handy instrument." The 6-to-1 decision of our Supreme Court effectively outlawed the basing-point system after many years of consideration by the Federal Trade Commission and additional consideration by the circuit court of appeals. The identity of prices produced through the use of the multiple-basing-point destination-price system absolutely defeated the Federal Government in its time-honored method of securing the lowest and best bid for commodities paid for with funds authorized by the Congress. The restraint exercised upon the occasional cement producer, who would have gone out and marketed his products on a competitive basis, was often in evidence during the operation of the basing-point system. The combination of cement producers which formed the Cement Trust exercised absolute power over the production of the sale and distribution of cement in the United States. For Congress to pass a moratorium bill, which even remotely permitted the return of the outlawed basing-point system, would be unthinkable.

THE BASING-POINT SYSTEM AND SMALL BUSINESS

I have previously demonstrated the identity of prices to small cement dealers in 20 cities in the United States. Quotations and sales to dealers were no different under the basing-point system than sales to the Federal Government or any other governmental agency. In the case of dealers the Cement Trust allowed practically no profit on carload shipments and on projects requiring a large quantity of cement. Dealers were excluded by the cement mills from submitting bids at the same price which the cement mills bid. Thus, a cement dealer became by custom a handy instrument for the distribution of small quantities of cement in less carload lots. The profit to a dealer on less carload shipments was so small in relation to the cost and handling of the product that dealers, in ordinary times, carried cement more for the convenience of their customers than to make a profit. If cement dealers had not had a variety of items in stock and had he had to depend on his cement sales, he would not have been in business very long. No dealer in cement expected a basic commodity to yield a large profit but through the operation of the basing-point system, which controlled the price and the markets, I doubt very much whether a dealer in cement could show a mark-up which produced more than the cost of handling and distribution.

CONGRESS REQUESTED TO STUDY PUBLIC RECORD AND VOTE AGAINST A MORATORIUM ON ANTITRUST LAWS

We must penetrate the disguises of group monopolies and protect whatever freedom of competition which may still exist in industry and trade instead of amending our antitrust laws by way of a moratorium, as powerful industry pressure groups are urging us to do; let us do the opposite and strengthen our basic charters of economic freedom. Let us protect and foster freedom in the market place and true competition through the only means available—our antitrust laws.

I appeal to my fellow Members of the Congress to study the public record and decide for themselves whether or not we should, in the name of the people, take the risk involved in the passage of a moratorium bill. The public press has contained articles which clearly point out the attitude of big business toward a moratorium of our antitrust laws. Big business expects to use any moratorium, no matter what it says, to climb back into its diamond-studded, solid gold carriage and again drive roughshod over

all competition toward its goal of absolute monopoly. Small business and free enterprise walk hand in hand contemplating the future with outward calm but inward qualms. These twins of our economy must be protected from the onslaught of price- and market-control mechanisms. In the words of the Christian Science Monitor of April 19, 1949—

The vigor of small business is of topmost importance in a nation that prides itself on the existence of free enterprise. Whether small enterprise can survive in the presence of industrial giants or merchandising chains has been warmly debated in the United States.

I hope that the Congress will not enter the debate on the negative side of weakening our antitrust laws but will array itself on the positive side of the question of strengthening our antitrust laws. Small business and free enterprise must survive, and we, as the legislative body of the Government, are in the best position to see to it that these twins of economic freedom do survive.

Slum Clearance and Public Housing Program

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a copy of the testimony submitted by Mayor Thomas D'Alesandro, Jr., of Baltimore, chairman of the standing committee on legislation of the United States Conference of Mayors, on H. R. 4009, before the House Committee on Banking and Currency on May 6, 1949:

My name is Thomas D'Alesandro, Jr. I am mayor of Baltimore and chairman of the standing committee on legislation of the United States Conference of Mayors, the membership of which comprises practically all of the larger cities of the Nation. Approximately 60,000,000 American people live in the cities represented in our organization.

I am appearing before this committee to record the support of the United States Conference of Mayors for H. R. 4009. The Conference of Mayors has had a consistent record of support for a broad slum-clearance and public-housing program. As early as 1935 it took affirmative action in support of a national public-housing program. Each of our annual conferences since 1937 has gone on record in favor of an expanded public-housing program. We vigorously backed S. 866 in the Eightieth Congress.

My own interest in the problems created by bad housing and slums precedes my connection with the United States Conference of Mayors. The city in which I was born and grew up, and of which I am now mayor, has slum areas as bad as any in the country and I have long realized the need for remedial action. During my nearly 10 years in Congress, I was further impressed with the fact that bad housing is not confined to a few large cities but exists in practically all urban areas, and in many rural sections as well. The need for action is Nation-wide.

Earlier this year I had the privilege of appearing, on behalf of the conference of mayors, before the Senate Committee on Banking and Currency in support of S. 138, which subsequently became S. 1070, the housing bill which has just been overwhelmingly approved in the Senate. Since H. R. 4009 corresponds very closely with the Senate bill, my remarks today will necessarily be similar to the statement I made before the Senate committee.

There is probably no single group which is more aware of all the ramifications of the housing and slum-clearance problem than the Nation's mayors. In the last few years our offices have been besieged by distressed citizens pleading for assistance in finding homes for their families. We know of the disrupting effect of the housing shortage upon normal family life, of the families which have broken up, of the children who have had no proper homes during their growing years, and of the marriages which have had to be postponed.

The post-war housing shortage has made the headlines but it is only one aspect of the problem. The evil effects of our slums and blighted areas are more basic than a temporary shortage, and have long been a major concern to the Nation's mayors. We are familiar with the toll that these areas have taken as breeders of crime and disease, and the price paid in warped and twisted lives. Through studies made by various city agencies we have learned of the excessive municipal costs in these areas for public health, fire protection, police protection, and similar services. You have undoubtedly heard the figures which have been collected to prove these points and I will not take your time to cite them again.

The Nation's mayors have been the closest observers of past efforts to remedy these conditions. We know that private enterprise is unable to touch the housing needs of our low-income families despite the notoriously inaccurate claims of certain selfish interests. Private enterprise has not been able to handle this problem in the past and there is no evidence that it would be more successful in the future. If private enterprise could do what has been claimed for it by some who indicate that they are representing the building interests, we would not now have any slums. I do not blame private enterprise for this, but I do blame the exaggerated claims made by the real-estate lobby.

The mayors of this country are completely convinced that public low-rent housing is the only means of providing decent housing for our low-income families. Let me quote you some very impressive figures on this point. Last year a subcommittee of the Joint Committee on Housing under Senator WAGNER sent questionnaires to all governors, all mayors of cities over 50,000, and to a number of prominent citizens. Here are some of the results:

1. Practically all of the mayors replying reported that their cities contained a substantial number of low-income families living in slums or other substandard housing conditions.

2. Nine out of ten mayors agreed that within the foreseeable future private enterprise could not provide decent housing, new or old, for these low-income families at rents or costs they could afford.

3. On the other hand, 93 percent of the mayors of cities with existing low-rent public housing reported that these projects, to the extent that they had been provided, were adequately serving low-income families. All said that they had been built and operated efficiently, and that conditions of health, delinquency, and crime had been improved. More than five-sixths of them thought that the cost of city services in the neighborhoods had been reduced and real-estate values increased. All agreed that the projects are not presently competitive with private housing of acceptable standards, and only one mayor indicated that the projects had ever presented any such competition.

4. Sixty-seven out of seventy mayors favored continuation of Federal assistance to local communities in providing public low-rent housing.

This last figure is, I think, really amazing. If any of the charges which have been made against public housing were at all true, certainly the mayors would know, since they have seen public housing operate at close range. If these charges were true there would have been many more mayors opposed to a continuation of the program than a mere 3 out of 70. I can think of no other public issue which could command such complete agreement among mayors.

I have mentioned the charges which have been made against public housing. Let me dispose of a few of them briefly.

It has been alleged that public housing is not serving low-income families and that many upper-income families are residing in public low-rent housing projects. It is true that in the period after the war there were a number of families whose incomes exceeded the limits for continued occupancy. This was primarily due to the fact that during the war a number of projects were diverted from their original purpose and were used to house war workers regardless of income. This diversion was, of course, authorized by Congress. When the war was over these projects reverted to their low-rent status, but it was impossible immediately to remove the over-income families due to the housing shortage. These families have, however, been removed as fast as local circumstances permitted.

In Baltimore, for example, the program for removing over-income families started in May 1947. We have about 5,000 low-rent dwellings in Baltimore, and at that time about 1,000 families were over the limits for continued occupancy. A certain proportion moved out each month, but even so the number continued to rise to a peak of 1,200 in February 1948, since this was a period of rising incomes and additional families became ineligible. Now, however, I am informed by the Housing Authority of Baltimore that, as of the end of March of this year, there were only 416 ineligible families in our low-rent projects, and that even these could hardly be regarded as upper income. The median income of these 416 over-income families was only $2,874 per year. The average annual income of all 5,000 families in our low-rent projects (including the ineligible families) was only $1,742 as of the end of 1948. Furthermore, the average income of all the new families who moved into our low-rent public housing during the year 1948 was only $1,410 per year. I'll leave it to your imaginations to figure out how a family can be raised on such incomes at today's prices.

It has also been claimed that public housing is not needed in order to get rid of our slums. Slum conditions, it is said, could be eliminated if each city were to adopt an adequate set of housing standards and then see that these standards were enforced. These claims seem to have been based, to a great extent, upon our experience in Baltimore with a housing law-enforcement program. This program has attracted national attention as the Baltimore plan. As Mayor of Baltimore and as the responsible head of the city government which is carrying out this law-enforcement program, I want to clear up once and for all the confusion and exaggerated claims which are being made in various parts of the country about the Baltimore plan.

We in Baltimore are justifiably proud of our law-enforcement program. It is chiefly a health and sanitation measure. It is based up a housing code, which sets certain minimum health and sanitation standards, and upon a vigorous program of enforcement of this code. Our enforcement revolves around a specially created housing court, which I believe is the only one of its kind in the country.

The program is designed to relieve somewhat the worst slum conditons until such time as the slums can be torn down and satisfactory housing supplied. It does not do more, simply because to do more would be completely impractical in view of the dilapidated character of the present buildings. The standards set up in the housing code are as high as feasible, but even so are well below those of decent and adequate housing. For example, the code requires the installation of an inside toilet fixture, but it does not require the provision of a bath because there is no space for a bath in most of our slum dwellings. Even the small amount of space needed for a toilet must come from some other room, already too small and crowded.

The Baltimore plan might be compared to first aid administered in the temporary absence of a doctor, which would not be necessary if the doctor were present to begin with, and which in no way eliminates the eventual need for the doctor's services.

Our law-enforcement program does not add one dwelling to our supply of low-rent houses, and at the moment our crying need is for more low-rent dwellings. In fact, a strict law-enforcement program reduces the total supply of dwellings, since some buildings must be completely demolished. Furthermore, such a program must rely upon the availability of an additional supply of low-rent dwellings if it is to be effective in curing one of the principal causes of slums—that is, the crowding of more than one family into a single dwelling unit. I strongly believe that other cities should consider adoption of the Baltimore plan as an interim method of relieving slum conditions to some extent, but don't let anybody kid you into thinking that it is, in any sense, a substitute for an adequate slum clearance, redevelopment, and public low-rent housing program.

An excellent description of the Baltimore plan has just been published in the issue of Atlantic Monthly. Let me quote a few pertinent sentences:

"Anyone who believes that the Baltimore plan is an adequate substitute for tearing down the worst slum areas and building anew is hopelessly deluded. The plan does not provide much-needed minimum housing, nor does it actually rid a city of its slum areas. It does eliminate some of the more obvious sources of disease and provide children, under ideal circumstances, with off-street play space. Yet even if such results could be accurately measured, they would not add up to immense dividends.

"The slums in Baltimore remain slums, with not a single new dwelling unit in all the jam-packed blocks. Some houses have been patched up, to be sure, and there is less sewage standing in backyard puddles, but the blight remains. The sense of achievement that comes with getting a particularly dilapidated house repaired is offset by the knowledge that the occupants of the house are still sleeping three and four to a bed, with all the hazards that accompany overcrowding. Also chastening is the realization that so far, fewer than 30 out of an estimated 2,000 slum blocks have been crossed off as 'completed' in the block-by-block campaign. As one health official remarked, 'We won't live to see the end of this program.'"

I have a copy of the entire article here which I should like to submit for the record as part of my testimony.

It has been said that housing and slum clearance are local problems and should be handled directly by the cities and States without Federal assistance. I am not going to debate the theoretical merits of this question, but I will say that without Federal assistance nothing effective will be done, except in a few of the wealthier States. The areas which have the worst housing needs are those which are least able to help themselves. The problem is one of the most urgent domestic issues confronting the country. For the Federal Government to turn the whole matter back to the States and cities would represent an indefensible neglect of its proper responsibility for the national welfare.

I have so far spoken mainly about public housing because it has caused more controversy than any other aspect of the proposed legislation being considered by this committee. I do not, however, want to overlook two other items included in this bill or in other pending legislation—redevelopment and middle-income housing.

My support for public housing is not inconsistent with my belief that private enterprise should be encouraged and assisted to handle as much of the housing and slum-clearance problem as it can. Private enterprise has not heretofore been able to operate in slum areas because of the high cost of existing properties and the difficulties involved in assembling an area sufficiently large to be usable. Redevelopment, as proposed in title I of H. R. 4009, provides a formula to overcome these difficulties. Use of this formula should enable private enterprise to assume a portion of the job of slum clearance.

The necessity for Federal assistance to redevelopment is illustrated by our experience in Baltimore. The Baltimore Redevelopment Commission was one of the first to be created in the country. Eight official redevelopment areas have been established covering a total of about 400 acres. These areas represent only a portion of our total slum areas. Last November the city overwhelmingly approved a $5,000,000 bond issue for redevelopment purposes. This is the most that the city can afford and yet it will serve to treat only one, or at most two, of the eight areas. H. R. 4009, if adopted, will, in effect, triple our resources and enable us to use private enterprise in tackling a real job of slum clearance.

H. R. 4009 is primarily designed to assist low-income families. These are, of course, the families most urgently in need of assistance, but in centering our attention on this group we should not overlook the fact that there is a middle-income group above the public-housing level, but below the point at which private enterprise is currently providing decent housing. Certain additional legislation has been introduced into Congress designed to deal with this problem through either a liberalization of FHA mortgage insurance or a system of direct loans to cooperatives and nonprofit corporations. I do not wish to comment in detail on this legislation other than to state that the United States Conference of Mayors heartily endorses its purpose.

In speaking before the Senate committee on S. 138 I concluded with a number of recommendations for changes in the bill which were also advocated by other witnesses. I am very happy to note that practically all of these changes have been incorporated in the Senate bill and in H. R. 4009. The two bills are virtually identical except that H. R. 4009 authorizes 1,050,000 low-rent public dwellings in 7 years as against the Senate bill's 810,000 dwellings in 6 years. We believe that the higher figure in the bill before your committee represents a more realistic appraisal of the size of the problem and we strongly urge you to hold to this figure.

As you know, when the housing bill was debated in the Senate a determined effort was made by a small group to cripple the bill through amendments. Many of these amendments appeared plausible on the surface but if adopted they would have effectively blocked proper administration of the bill. Fortunately, all such amendments were decisively rejected in the Senate, but it appears probable that the effort to have them adopted will be renewed in the House. The bill as it now stands is in excellent shape. It is based upon several years of careful study of the problem and of past experience in administering the present public-housing program. Amendments either hastily conceived or deliberately injurious can easily nullify all of this past effort. We would, therefore, urge you to give each proposed amendment the most careful examination.

During the debate in the Senate on the housing bill a number of Senators informed themselves at first hand by touring slum areas here in Washington. I am familiar with these areas for during part of the time I was in Congress I was chairman of the District of Columbia Subcommittee and made many trips through the District's slums. Bad as these areas are they are not unique. We have sections in Baltimore which, if anything, are far worse—some so bad that they have literally sickened hardened policemen. I would like to extend a personal invitation to any Member of Congress to visit Baltimore and see for himself what these conditions are. Baltimore is very close and a trip over would not take long. If the members of this committee, or any other Members of Congress, wish to make such a trip, please let me know.

We have worked long and hard for adequate housing and slum clearance legislation. Last year the prospects appeared uncertain, but I for one have never lost hope. In Baltimore we have been so confident that the urgency of the problem would eventually be recognized that exactly a year ago the city made a special allocation of funds to our housing authority to undertake a program of advance planning. Now that it appears certain that we will get some action it is gratifying to know that we will be in a position to start work quickly.

Allow me to thank the committee for the privilege of appearing here for the United States Conference of Mayors in support of H. R. 4009.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two editorials which appeared in the New York Times, one on May 4, 1949, entitled "Federal Aid To Education," and one on May 7, 1949, entitled "A Victory for Education."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 4, 1949]

FEDERAL AID TO EDUCATION

A Senate committee remarked, in discussing the problem of extending educational

opportunity, that "the facts are now legion, the arguments patent." Senate debate on the bill for $300,000,000 in Federal aid to education, and the attempts at amendment, clearly illustrate, however, that no formula for such aid will ever be reached that pleases everybody. There is no way to be sure that precise justice will be delivered in any formula. Nor will it be possible to institute all desirable civil-rights reforms through the back door of an educational bill without losing the bill.

It was predicted before debate began on this measure, as on the housing bill, that efforts would be made to kill by amendment. We wish such efforts complete failure, in Senate and House. The facts as to need for Federal aid to education are so compelling that side issues and even some honest doubts must yield, we believe, to a principle of putting first things first.

The case for Federal aid to education rests on a simple and obvious set of facts, and it seems to us rather surprising that enlightened people would oppose it. "In our Federal form of government," says the Senate Labor Committee, "the youth of our country are not only citizens of the States in which they reside but all citizens of the entire Nation." If there were no State lines, no one could sensibly argue that a child in Tennessee should be permitted to receive educational opportunity inferior to that received by a child in New York or California. Yet we must assume that such inequality exists when, 2 years ago, about 700 teachers employed in Tennessee's schools had not even been graduated from high school, and many of them had barely been graduated from elementary school. Or in Kentucky, where the committee was informed, in its study 2 years ago of this problem, that more than half of the State's teachers were receiving less than $1,400 a year.

If all States had equal income per capita, if all States had equal pupil population as measured against adult population, then no basis or need for Federal aid to education would exist. Obviously that is not the case. In 1947 the income per capita ranged from $659 in Mississippi to $1,781 in New York State. As for number of children as against the number of adults, which is a crucial measure of the school-financing problem, there were in 1946, 52 children under 1 year old per 1,000 adults in Mississippi, and 29 infants under 1 year old in New York State per 1,000 adults. There you have the combination of facts that demonstrates that no matter what heroic efforts the poor State makes to lift the level of its schooling, it cannot, when faced with a disproportionately large pupil population, provide educational opportunity to match the wealthier States. United States census estimates found about 4,000,000 children between the ages of 5 and 17 attending no school whatever in 1947.

It is not only humane and in the democratic tradition to equalize educational opportunity. The constant migration of our people from State to State makes it of national interest. Our welfare, economically and politically, rests upon a well-informed people. An outlay of $300,000,000 in Federal aid to education will not cure, or even satisfactorily allay, all the defects in our educational system. It is a beginning, however, and we cannot in good conscience do less.

[From the New York Times of May 7, 1949]

A VICTORY FOR EDUCATION

Federal aid to education passed the Senate in April 1948 by a vote of 58 to 22. Now, it has passed again, with an even better margin of 58 to 15. This vote does not tell the full story of the strength the $300,000,000 aid measure had behind it, however, for 13 other Senators not voting had announced their support, and 4 others were in favor of the bill, but paired. So the position of 94 Senators is known, and of these 75 were for the bill and 19 were against. This is an impressive testimonial to acceptance of the principle of Federal aid to education, for which a fight has been waged for 30 years or more. The subject has once more been thoroughly and thoughtfully debated. We submit the results to the House with the question whether there is not an inescapable moral responsibility in that body to bring this bill to a vote at the present session.

Last year the House was content to let aid to education die in committee, the same kind of irresponsible treatment given to housing legislation. Here again, as on housing, the Democratic membership, which is in control, now has a mandate from the party's own platform. There are 261 Democrats and 171 Republicans in the House. We shall now see whether the Democrats in that body will make good on their party promises by at least bringing this issue to a vote. There will also be a chance for the Republicans to substantiate their party's platform pledge to advance equality of educational opportunity for all.

The Senate profited by lessons of the past, and refused to be tempted into amendments and byways that would have wrecked the bill's chances. The bill gives even the wealthiest States a minimum payment per child, but it gives a State like Mississippi six times as much as this minimum. Yet the formula safeguards against the mischance that a State might relax its own efforts because of the Federal aid.

The bill proceeds on the assumption that a child's right to a good education shall not be abridged because of the State in which he happened to be born and reared; that, as far as educational opportunity is concerned, all shall be born equal as citizens of the United States. We find this a principle to cherish and fight for, and one whose enactment has been delayed too long. We congratulate the Senate on reaffirming its faith in this principle.

Labor Bosses Defended

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a column by Thomas L. Stokes which appeared in the Washington Evening Star on May 9, 1949. In this column Mr. Stokes exposes one of the propaganda campaigns to which the American people are being subjected.

(By Thomas L. Stokes)

In connection with labor legislation in Congress there's lots of loose and irresponsible, and often angry, talk about labor bosses who are caricatured as ogres or evil spirits who somehow or other are trying to dictate to Congress and Government.

Long years of covering Government and politics and civic affairs, whether in city or State or here in Washington or both, gives the newspaper reporter a good insight into both labor leaders and business and financial leaders. In such experience one learns that the labor boss, if one wants to call him that, stacks up over-all very well alongside those in business and finance who sit at the top of our corporate economy and across the table in bargaining, some of whom are pretty big bosses themselves. Often the edge is distinctly in favor of the labor leader when it comes to sincerity of purpose for the general public welfare. There are some few in both groups who get overly conscious of their power, as in any human society.

But as for dictation of Congress by labor, that is the most absurd myth of our times to any one who lives here daily with Congress and has seen the impregnable barricade raised here in the last 10 years against measures for the interest of millions of people, including labor.

Now that there seems finally a chance to penetrate that barricade, only if a little bit here and there, to get through a few much-needed bills—housing, education, health, increased minimum wage, modification of the harsh Taft-Hartley law—those who are working earnestly at this, as they have been for years, suddenly become evil labor bosses.

TACTICS CALLED VERY QUEER

It's very queer tactics, though understandable, to any one who knows the facts about national politics and forces operating in it.

To get at the real problem involved, it is necessary to go back of the labor bosses to the millions of individuals who work daily in the greatest industrial machine the world ever has seen. They may be set apart as some sinister element called labor, but they are just people, good Americans, who live in your neighborhood, work hard to make ends meet and put their children through school and pay their doctor bills, and who help to make all your comforts and conveniences as well as necessities.

The basic economic fact of today is that those millions must be kept at their jobs and at good wages if the democratic capitalism that we have struggled so to build up is to operate successfully, for that depends upon putting enough into the pockets of our people constantly to buy what they produce. Upon that, too, depends the maintenance of our place in the world at large, and the spread of our sort of system to the world at large. It all goes back to that man and woman in the mill, shop, or forge.

SYSTEM FAILED ONCE

Twenty years ago our system broke down temporarily because we failed to recognize that basic fact in our still new industrial economy. Out of our awakening, among other things, came the organization of labor to protect itself, so it could live, and out of that came leaders to represent working men and women and handle their problems, just as the same sort of leaders arose in business and industry.

It is a humanitarian thing to provide for our people. But that doesn't have to be considered at all. It is a hard-boiled necessity of economics, just plain good business. Big bosses on the industrial management side, some of whom complain so about the labor bosses, should be thankful that labor organization has come along, as a great many of them are. It has done much for them, as for all of us. They are doing nicely. We owe them much, too, for their skill and know-how. But they didn't do it all themselves and they can't keep it going themselves. Some of them seem to think so.

That appears to be the attitude, too, of some in one of our great political parties, the Republican Party, judging from what goes on in Congress. If that attitude persists, if the objective in labor legislation continues to be to punish something called labor and some legendary Frankenstein labor bosses, it can be forecast that the Republican Party never will win another election and will pass away.

That would be the tragedy of our times. For we need two healthy political parties to check on one another. That was the way our great political democracy has been built up, and that is the only way it can survive.

An Answer to McGraw-Hill's Full-Page Advertisement

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 9, 1949

Mr. PATMAN. Mr. Speaker, McGraw-Hill has again published a full-page propaganda message in the interest of the corporate community and its monopolistic members. This is the seventy-fifth in a series designed to protect the interlocking control of the big corporations over American economy. This latest article which appeared in the Washington Post of Monday, May 2, 1949, is even more fantastic than the preceding articles in the series. It is based on a comparison of Russian and United States industrial progress in an attempt to persuade the Members of Congress and the public that unless large corporations are allowed to retain excessive profits for use as costless capital our industrial capacity will fall behind that of Russia. The figures on which this false assumption is based are from the London Economist, which is recognized as one of the outstanding journals in the field of economics, but McGraw-Hill's article completely omits the qualifying reservations given for each percentage by the author of the series of articles in the Economist.

The author of the Economist articles, whose identity is not revealed, has this to say about the results of the third year of Russia's postwar five-year plan:

> Unfortunately it is not easy to evaluate those results on the basis of Russian statistics. This is not because the statistics are essentially false, but because they are presented in propagandist fashion, and because the set of indexes, published by the Gosplan at quarterly and annual intervals are as a rule not related to one another.

The figures from the Economist article were based on information contained in books by N. Voznesensky, chief of the Russian State Planning Commission, and A. I. Notkin, noted Russian economist. McGraw-Hill has assisted the Russians by passing on pure propaganda about Russian accomplishments. The figures quoted by McGraw-Hill indicate that in percentage of national income Russia, in 1948, used 13 percent for national defense, as compared to 5 percent by the United States. But McGraw-Hill does not include the following statement of the London Economist writer in regard to those defense percentages:

> Since every percentage of the American income on defense represents two to three times as much in real armament as every percentage of the Russian income, it follows that Russia can support its present military power out of a lower national income only by spending a higher proportion of it on defense.

I have analyzed this article by McGraw-Hill carefully, and I want to point out some further discrepancies, for the reason that if we accept this article and the others in the series at face value and adopt their recommendations, we are building up the power of a few big corporations which could lead to a Fascist state and to the destruction of our American form of life.

Here is a particularly striking example of the misleading and oversimplified statements contained in the McGraw-Hill article: "Russia is gaining industrial strength as fast as we are—and may soon be gaining faster. The more she gains, and the faster she gains on us, the greater is the danger of war." Contrast that statement with the following sentence regarding Russian steel capacity which is contained in the July 1947 issue of the International Reference Service, United States Department of Commerce: "In terms of American production, the 1950 planned rate of output of the Soviet steel industry, assuming that a substantial proportion of it will be achieved, will just about bring it up to the level of the annual production of the United States in 1913." And here are the figures which are given by the Department of Commerce:

[In million metric tons]

	Soviet planned output for 1950	United States output in 1913	Percent of United States margin	United States output in 1948	Percent of United States margin
Iron ore	40.0	60.6	50.0	103.0	157.5
Coke	30.0	47.0	57.0	67.4	124.6
Pig iron	19.5	31.5	62.0	55.2	183.0
Steel	25.4	31.8	25.0	80.3	216.1
Rolled steel	17.8	25.2	42.0	[1]62.8	252.8
Steel pipe	1.5	2.5	67.0	[1]6.7	346.6

[1] Estimated—figures not yet complete on these two items for 1948.

Most propaganda articles, when they are designed for an intelligent reading public, include figures of some kind to substantiate their statements, but this article by McGraw-Hill (with the exception of the Economist percentages) is noteworthy by its omission of figures in the comparison of United States and Russian industrial progress. The article also fails to mention the heavy percentage of Russian industry in the West and Ukraine which was completely destroyed during World War II.

I am going to give you a summary of United States Government figures on the comparative strength of the Russian and American industrial capacity. For instance in coal production in 1947, the United States produced 561,000,000 tons; the Union of Soviet Socialist Republics plus its satellites, 254,000,000 tons—roughly one-half of the United States production. In electric power, the United States produced 282,000,000,000 kilowatt-hours; Russia plus her satellites, 71,000,000,000 kilowatt-hours — about one-fourth that of the United States. In the oil industry the United States produced in 1947, 1,856,107,000 barrels of crude oil as compared to 221,506,000 barrels for Russia plus her satellites—about one-eighth that of the United States. In the production of steel ingot and casings the United States had 77,016,000,000 tons; Russia plus her satellites, only 18,366,000,000 tons—about one-fourth of the United States production. These figures show that no one (even McGraw-Hill) should be seriously concerned about the ability of the United States to compete with Russia on the basis of industrial capacity.

Now let us turn to the real reason behind these series of articles by McGraw-Hill. McGraw-Hill states its purpose in various ways as being that of protecting American industrial progress by insuring that sufficient capital is retained for replacement and expansion purposes. The true motivation for these articles stems from the desire of McGraw-Hill to assist the great operating corporations, big financial institutions, trade and business associations to retain their great degree of control over the American economy. These large companies and corporations with billions of dollars in assets are interlocked into an almost inviolable corporate community through the activities of major financial institutions, through particular interests, through firms which render legal, accounting, publishing (McGraw-Hill) and similar services, and through the interlocking directorates of their managements. McGraw-Hill designs these articles to convince the public and the Congress that this corporate community should be allowed to retain its costless capital in the form of profits and to continue to expand its sphere of influence.

Each year it becomes more difficult for an individual to establish his own business. Long-term credit is almost unobtainable by the small-business man. This situation has been influenced by two factors: First, the corporations do not distribute dividends which could be used by small-business men to finance their own ventures; second, the large banks and financial institutions of the country are interlocked so closely with the big corporations that there is little or no opportunity for a smaller plant or industry to receive loans. Even in times of prosperity the corporate community uses its power for its own selfish interests to prevent the establishment of new industries. For example, down in Texas, the Lone Star Steel Co. has met opposition from the big steel companies and from the large banks of the Nation in its efforts to obtain funds to provide for the construction of steel-making facilities. With the large financial institutions interlocked to the big steel companies, it became evident that RFC is the only place where money for a project of this kind can possibly be obtained.

McGraw-Hill expresses opposition to legislation which would provide for the extension of capital loans by the Federal Government to small plants and industries. However, it is the monopolistic control of capital sources by the very

groups represented by McGraw-Hill that has brought our one-time free competitive enterprise to the necessity of turning to the Government for loans with which to establish new businesses and expand existing businesses.

The staff of the Committee on Small Business of the House of Representatives has prepared a table on the interlocks between 110 companies in the steel, cement, and railroad industries, banks, and other financial institutions. The companies were selected from the largest corporations in the country on the basis of total assets and production. There were 496 interlocks in directorships between the 110 corporations. Only 24 of the companies included in the group, by reason of size, had no interlocks. I want to point out that there were 166 interlocks between the 20 banks and companies in the other 4 groups, and 117 interlocks between the 7 financial institutions and the other companies. With the largest financial companies in the country interlocked so completely with the other members of the corporate community, it is not diffcult to understand why credit channels for small-business men have been almost completely blocked.

Interlocking directorates in 110 American corporations, 1949

[Figures refer to number of interlocks [1] by industry]

	Steel [2]	Cement [3]	Railroads [4]	Banks [5]	Other financial institutions [6]	Total
Steel	0	2	8	20	7	37
Cement [7]	2	0	2	4	0	8
Railroads	8	2	46	72	40	168
Banks	20	4	72	10	60	166
Other financial institutions	7	0	40	60	10	117
Total	37	8	168	166	117	496

[1] If a company shares 2 or more directors in common with another company, each interlock is counted.
[2] Includes 10 largest steel companies on asset basis.
[3] Includes the 11 cement companies which had 62.4 percent of total United States cement capacity.
[4] Includes 39 of largest railroad companies on asset basis.
[5] Includes 30 banks having largest total assets.
[6] Includes 17 insurance companies plus 3 other financial institutions.
[7] Although there appear to be few interlocking directorships in cement, Universal Atlas Cement, which ranks first in capacity, is a subsidiary of United States Steel Corp.

What will be the result of these un-American tactics on the part of the corporate community to control credit sources and prevent the establishment and expansion of small business? One result will almost certainly be a source of greater satisfaction to Russia than the fact that by 1950 her steel capacity will equal that of the United States for 1913. As the concentration of power in the hands of the directors of a relatively few large corporations becomes greater, the danger of our country turning to socialism or fascism is increased. If the policy of retaining profits for costless capital is not checked—and McGraw-Hill, in Business Week, January 22, 1949, states that three out of every four companies plan to get almost all the capital for expansion during 1949–53 from profits and reserves—then, inevitably, a few big concerns will control our entire economy. Certainly Russia will favor such a development, for the next step from such fascistic control would be constant pressure from Communists, both from within and without America, for the establishment of a communistic form of government. A totalitarian government, whether it is Fascist or Communist, is completely inimical to the traditions of our free American people.

The administration's program, with its proposals to distribute to the stockholders their rightful profits and to open credit sources, is an attempt to restore a proper balance to our economy in order that free and independent enterprise can again flourish. It is not an attempt to destroy big business. We all know that big business is absolutely necessary in the present era and is responsible for many achievements which could not have been accomplished by small independent businesses. But big business which stifles competition will eventually stifle itself and our American way of life, and to quote the last sentence from the McGraw-Hill article: "Nothing would please the Communists more."

Friends of the Workingman in the Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include the following chart taken from the US News, issue for the week of May 13, 1949, which shows labor's gain in the House of Representatives from the Eightieth Congress to the Eighty-first Congress.

I wish to call specific attention to Ohio, where labor had only 4 friends in the Eightieth Congress, as compared with 13 against the Wood bill in the Eighty-first Congress. This represents a gain of 9 votes, 8 of whom are recently elected Democrats and 1 a Republican who had a change of heart. The other 4 were Democrats who also were Members of the Eightieth Congress.

I should also like to call attention to Connecticut, which had no friends who would stand up and be counted in the Eightieth Congress, as against four in the Eighty-first. West Virginia is another good example. The entire West Virginia delegation in the Eighty-first Congress being Democratic and being friendly to labor, as against only two Democrats in the Eightieth Congress who voted for labor.

This chart will show very clearly what labor did in the 1948 election and also point out that labor has a job to do in the 1950 election to pick up the additional 25 or 30 votes that it needs in order to get a fair and honorable labor law through Congress.

LABOR'S NEW STRENGTH IN THE HOUSE

Labor's gain in the House of Representatives from 1948 to 1949 turns out to be 120 votes. That gain still leaves labor short of a majority in the House to get what it seeks. The table below shows the vote in 1948 to sustain the President's veto of the Taft-Hartley Act. It shows the vote just taken in 1949 against the Wood bill, which labor leaders opposed. Labor leaders mustered 83 votes in 1948 and 203 votes in 1949.

State	To sustain Taft-Hartley veto	Against Wood bill	Labor's gain
Alabama	0	3	3
Arizona	2	2	0
Arkansas	0	2	2
California	7	11	4
Colorado	1	3	2
Connecticut	0	4	4
Delaware	0	0	0
Florida	0	3	3
Georgia	1	1	0
Idaho	0	1	1
Illinois	7	13	6
Indiana	1	6	5
Iowa	0	1	1
Kansas	0	0	0

Distorted School Picture

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Distorted School Picture," published in the Wall Street Journal of May 9, 1949.

There being no objection, the editorial was ordered to be printed in he RECORD, as follows:

DISTORTED SCHOOL PICTURE

From the Council of State Chambers of Commerce has come an analysis of the Senate Labor Committee's report on the Federal aid to education bill (S. 246) which merits

more attention than it has had. That is the measure which would distribute $300,000,000 annually (to begin with) among the States for school purposes. A thumping majority of the Senate passed the bill last Thursday.

Of the committee's allegation that present State and local financial provisions for education are "critically inadequate" and have become more so in recent months, the council says:

"Between 1936, when the first real drive for a $300,000,000 Federal school subsidy began, and 1947, the last year for which office of education figures are available, State-local support for schools rose from $1,656,800,000 to $3,124,550,000, an increase of $1,467,750,000, or five times $300,000,000.

"Since early 1947, when Congress last held hearings on the Federal aid bill, State-local support has been further increased by over $900,000,000, which is three times the $300,000,000 sought from the Federal Treasury. Every State has shared in this increase, with the greatest progress being made in the so-called poorer States in the South, which have made the greatest general economic gains since 1940."

The Senate Committee report says:

"According to the United States Census estimates for 1947, about 4,000,000 children between the ages of 5 and 17, inclusive, attend no school whatever."

And the Council retorts:

"This statement implies that 4,000,000 children are not in school for lack of schools or teachers. Most States require school attendance only for age groups from 6 to 7 to 15 inclusive. Five and 17-year-olds and in many States 6- and 16-year-olds are not required to be in school. Of the 4,000,000 above referred to, 2,063,000 were only 5 years old, 156,000 were 6 and 1,406,000 were 16 and 17."

These are only two counts in the council's severe and convincing indictment of the Senate Labor Committee. We do not know whether the council is right in suspecting that the committee members negligently signed a report prepared by agents of one of the pressure groups bent on raiding the Treasury, but the suggestion is at least arresting, particularly as the committee held no hearings on S. 246.

Victory on Education

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Victory on Education," which was published in the Washington Post of May 9, 1949. The editorial gives good evidence of the fact that the passage of the Federal-aid-to-Education bill was not only a victory for education throughout the United States, but was a personal victory for our esteemed colleague, the senior Senator from Utah [Mr. THOMAS]. For a dozen years the senior Senator from Utah has been fighting for the passage of legislation of this sort; so I say the passage of the bill represents a victory not only for education, but a personal victory for the Senator from Utah by reason of his persistent, patient, and intelligent work in that direction.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VICTORY ON EDUCATION

Many persons and organizations have helped to shape the Federal-aid-to-education bill that passed the Senate last week. In its final form the bill had bipartisan sponsorship and overwhelming support in the Senate. Special credit for its enactment goes, however, to Senator ELBERT D. THOMAS, chairman of the Committee on Labor and Public Welfare. Since he came to the Senate from a professorship in the University of Utah, Mr. THOMAS' influence in this field was doubtless felt long before he got into public life. Certainly he has been persistent since he has been in Washington. Twelve years ago he was one of the chief sponsors of a bill that had been worked out by the National Education Association following the report of the President's Advisory Committee on Education. Since then successive bills on the subject have borne his name, and he has never lost an opportunity to promote the cause.

Two major obstacles stood in the way of the policy the Senate has now adopted. One was the fear that Federal grants to the educational systems of the States might lead to Federal dictation as to what should be taught in our schools. The other was the feeling that, since education is a local function, the States can finance it amply without aid from the Federal Treasury. In his quiet way, Senator Thomas has probably done more than any one man to expose the fallacy of those beliefs.

It is now well established that Congress can aid the States in various activities in which the people as a whole are interested without plunging those activities into national politics. The insistent demand of the people that their schools be free from governmental pressures and propaganda is probably enough to insure them against Federal control following in the wake of Federal aid. Over a long period of years Senator THOMAS also repeatedly emphasized the inexcusable disparity of educational opportunities between the poor and the wealthy States. The spectacle of an educational system operating on only $24 a year per pupil before the war in Mississippi and other systems spending more than five times that amount in some of the States came to haunt the Senate and everyone else who thought about it. We have a national economy that tends to concentrate income in certain favored areas and compartmentalized educational systems that lay a terrible handicap upon youngsters who happen to be born in the wrong place. Most men who honestly face this fact quickly lose their prejudices against Federal aid to education. By keeping up a drumfire of facts about the inequalities of our educational system and by improving his own bills on the subject from year to year, Senator THOMAS has won a notable victory and we think he is entitled to special congratulations.

Intrigue in the Middle East

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. MULTER. Mr. Speaker, the following article, which appeared in the New Republic of May 2, 1949, I am sure, will prove of considerable interest to my colleagues:

INTRIGUE IN THE MIDDLE EAST

(By J. T. Teller)

The Big Three of the Atlantic Pact—the United States, Britain, and France—are agreed on the need for drafting the states of the Mediterranean region into the western military alliance, but cannot agree on the precise nature of such alinement, whether it should be direct or subsidiary, through an interdependent regional-security pact.

This division of opinion is rooted in a basic disagreement among the Big Three with regard to the peacetime role each should play in that region. A direct consequence of this dissension was the failure to include Turkey in the Atlantic alliance, although America has poured millions into that country because of the general consensus that the Dardanelles might be one of the first targets for attack in the event of an East-West clash. The Turkish Parliament was dismayed by the exclusion, particularly since Foreign Minister Nejmeddin Sadak had made several trips to Paris and London, where the opposition prevailed, to assure his country's inclusion, and since Italy, primarily a Mediterranean country, had been invited to join the North Atlantic Pact.

Press reports indicate that the primary opposition to Turkey came from Britain's Ernest Bevin. He would rather see her enlisted in an East Mediterranean alliance, formally distinct from the Atlantic Pact, although interacting with it. This East Mediterranean plan is basically not new. First efforts in this direction began some 2 years ago, when the British sought to prevail on Turkey to join the League of Arab States. King Abdullah of Transjordan and the Iraqui Regent, as well as the sisters of King Farouk of Egypt who were ostensibly vacationing in Turkey, visited Ankara at that time in the hope of persuading Turkey to accept the Arab League proposals. Bevin's newest version, as reported in several responsible metropolitan newspapers, omits all mention of the too patently British-sponsored Arab League, and proposes instead that the East Mediterranean alliance in its initial stages consist of Italy, Greece, Turkey, France, and Britain. While thus audaciously barring the United States from direct participation, and hoping in this way to weaken America's peacetime status in the area, this scheme nonetheless seeks to precipitate American commitments in behalf of the new organization by making it a subsidiary of the Atlantic Pact.

However, the conspiracy to exclude the United States is too obvious. If the actual location of the mainland is a qualification for membership in the proposed alliance, France may have some claim to membership because of her Mediterranean shoreline, but Britain has none; if, conversely, it is based on interests in the Mediterranean area, then the United States qualifies for membership no less than Britain and France although it has not a single protectorate, crown colony, or mandate in the area.

America's emergence as a major Mediterranean power is so recent and has been so sudden that neither France nor Britain has had time to become accustomed to the new reality. It was Great Britain who helped make America Mediterranean-conscious (although eventual American awakening was inevitable) by enlisting our military collaboration on a global scale in World War II and welcoming our nominal presence in Iran a couple of years ago, when that country and neighboring Iraq seemed to be threatened by a Soviet demarche.

As a consequence of increasing calls on American collaboration in that region, most effectively dramatized by Britain's proposals, not so long ago, for a joint Anglo-American policy on Palestine, and recalling the shabby treatment accorded American business before the war by British, French, and Dutch oil companies, American planners naturally proposed that it was high time to coordinate our financial and strategic interests, and for America to assert herself as an independent operator in the area, instead of relying on the mediation of European powers.

Even a quick glance at the map reveals the progress made by United States interests in a couple of years. Without a single strip of Mediterranean soil actually administered by our country, the United States has become the foremost western power in the region.

Both Yemen and Saudi Arabia, with American moneys in their treasuries and dependent on American enterprise and technical assistance for the development of their resources, are solidly in the American orbit. Although hugging a policy of neutrality in the east-west conflict, Israel undeniably prefers America over the other western powers, if only for the reason that financial and moral support, as well as manpower reinforcements from the more than 4,000,000 American Jews, are indispensable to the new state if it is to survive.

Egypt, vociferously xenophobic and implacably anti-British, is not averse to doing business with the United States and accepting technical and financial assistance. This places America solidly on both the Mediterranean and the Red Sea. With Israel in control of strategic Elath, on the Gulf of Aqaba, British Far East traders nervously consider the prospect of an Israeli-American competitive combine. Britain's last toeholds in the region are Iraq, where pro-British Nuri as Said Pasha rules through terror, and Transjordan.

By becoming partners in a Mediterranean alliance from which the United States is excluded, Britain and France hope to undermine somewhat American gains in the Mediterranean region and at least become mediators between the United States and the native governments. The inclusion of Turkey, keystone of any east Mediterranean alliance, in the Atlantic Pact, would only have increased American influence.

But added to these major obstacles to the extension of the western alliance to the Middle East is the subsidiary quarrel between Britain and France. Wanting absolute domination of the area, Britain lent her moral support to Syrian and French nationalists at the end of World War II with the result that France was forced promptly to terminate her mandate over Syria and Lebanon.

But France has never really abdicated her interests in the Levant strip of the Mediterranean region. She has been biding her time for a possible return and revenge on Britain. For several years now the Mediterranean experts of the Qual d'Orsay and the British Foreign Office, respectively, have been "jockeying" for position. Thus, it is general knowledge that leading Lebanese politicians, until recently members of the opposition, have been diligently conducting sub-rosa negotiations in Paris for 2 years.

Britain, conversely, has long entertained plans for a Greater Syria, which would be ruled by Abdullah, and in addition to Transjordan and Iraq would include all Palestine, Lebanon, and Syria. Transjordanese agents have for several years been distributing arms among justifiably disaffected religious and ethnic minorities in Syria and Lebanon, in regions contiguous to Transjordan, in anticipation of a day when these groups would rise against their governments and invite Abdullah to annex them.

Hoping to effect a greater pro-British Arab union through the Arab League, Abdullah's British advisers have long discouraged him from making any untoward move against his neighbors while helping him prepare against the day when the Arab League might fail and a greater Syria would be the only way to assure British dominance. That day now seems to have come as a consequence of the repercussions the emergence of Israel has caused in all Arab lands.

Abdullah's invocation of the British Transjordan mutual-assistance pact, on the pretext that Israeli troops had made incursions into his territory, allegations recently disproved by UN observers, has not been lost on Lebanon and Syria. Abdullah's request that British troops take over patroling of the Transjordan-Israeli frontier means to them that he wanted the Arab Legion relieved for operations elsewhere, and they were taking no chances.

An unofficial delegation was dispatched to Paris for the second time in several months. Earlier they had sent delegations to negotiate new backing for their currencies, although the cocky Syrians early in 1948 renounced past financial arrangements with France and asserted that their currency required no foreign backing. This time the delegation was seeking military assistance. Before the French could move in to help the Syrian Government, General Zayim, rumored to be pro-Greater Syria, effected a coup. This stroke, however, has no air of finality, and does nothing to resolve the Anglo-French conflict.

Simultaneously with the news of the invocation of the British-Transjordan treaty by Abdullah, the story broke from Tel Aviv, under the byline of New York Times' Gene Currivan, that the French had promised the Lebanese-Syrian delegation they would send arms "for internal security," which within the context of current events in the Mediterranean region probably means arms for quelling uprisings by those of their nationals who might request annexation by Abdullah. Although a French foreign office spokesman has formally denied the Currivan report, it has received credence in high diplomatic circles in the Middle East, including Hakirya, where Israeli foreign policy is forged. The Israelis bitterly warn that such a move by France would be in violation of the UN Security Council's embargo on the shipment of arms and fighting personnel to the countries involved in the Palestine war. Although for the time being at least the arms would not be used against them, the Israelis are anxious nonetheless because the successful development of their country requires a tranquil Middle East.

The western big-power intrigues in the Mediterranean area not only delay the extension of the North Atlantic Pact to that region, but produce combustive situations which give comfort—and maybe even aid—to the Soviets.

Desperate over the dangers created by Anglo-French-United States dissension, Turkish Foreign Minister Nejmeddin Sadak may soon fly to Washington to tell our Government bluntly what the score is. If his trip brings no results, he may become more amenable to the feelers put out by Israeli Prime Minister David Ben-Gurion for the formation of a third bloc, a bloc of Middle East states to bar foreign intrigues and keep the area neutral in the event of an East-West clash. Not that the failure to bring about an eastern Mediterranean alliance is discomfiting to Israel. Intent on steering a middle course between the two great power blocs, Israel would be clamped in a western vise should the proposed western-backed eastern Mediterranean alliance ever materialize.

To Preserve World Peace

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. MITCHELL. Mr. Speaker, the legislature of the State of Washington, during its recent session, passed House Joint Memorial 13, calling upon the Congress to support a move "to strengthen the present form of the United Nations so that it shall possess the means and legal authority to preserve world peace." Because I believe this resolution represents a widespread feeling in my State, it is of special interest and importance to note the supporting resolutions adopted at the annual convention of the Washington State Branch of the United World Federalists, meeting in Yakima, April 9 and 10. The Washington State Branch of United World Federalists is working actively and intelligently in the cause of world peace.

RESOLUTION ON THE ATLANTIC PACT

The Washington State branch of United World Federalists approves the policy statement on the Atlantic Pact adopted by the national executive council of United World Federalists.

The State branch emphasizes those points in the statement which indicate the urgency for the United States basically to alter its foreign policy by increasing its support of the United Nations Organization and seeking to transform that body into a genuine federal world government. This is the only alternative to future pacts, alliances, and a general competitive arms race.

STATEMENT OF UWF NATIONAL EXECUTIVE COUNCIL APPROVED BY THE FOREGOING RESOLUTION

"UWF has already recognized, in the resolutions adopted at Minneapolis the inevitability of the United States being adequately armed to defend its people and territory against the threat of aggression while at the same time recognizing that the probable result of an arms race will be war. However, we have taken the position that any such program for our national armament is no solution to the east-west problem, and that it is essential that a program for the transformation of the United Nations into an effective federation be carried on urgently and simultaneously.

"The North Atlantic Security Pact is essentially a further phase of military preparedness. UWF makes no attempt to predict whether the pact or any rearmament attendant upon it may succeed in postponing war. We urge with respect to proposals to arm Europe that no diversion should be made from ECA assistance to European countries designed to develop their industrial strength for peaceful purposes, inasmuch as such diversion of western European energies and resources from recovery to rearmament would seriously weaken resistance to Communist penetration and subversion.

"UWF reiterates that such success as the pact may achieve will necessarily be of limited duration, that the pact does not and cannot solve the fundamental problem; and that there is no solution to the problem of war except in terms of a universal world government upon which the peoples of the world can rely for that security which their national governments now seek through national military establishments."

RESOLUTION ON SUPPORT OF THE UNITED NATIONS

Inasmuch as responsible persons of all parties believe the United States Government has failed to give that full and complete support to the United Nations which was pledged during and after the war, and has increasingly relied upon foreign policy based on force;

And inasmuch as the urgent crisis precipitated by reliance of all nations upon force alone for their security now clarifies beyond argument the immediate and drastic necessity for the rehabilitation of the United Nations by the only effective and conclusive step that can now be taken to prevent war;

We therefore resolve that the Congress, the Executive, and their duly appointed representatives should immediately employ greater determination, efforts, and publicity than those used in the development of power associations, in proposing and supporting in the United Nations amendments to the Charter which would make the UN a federal world government with powers adequate to preserve peace. Only in this way can the United States prove its good faith in its announced postwar objective of seeking peace by world agreement.

Uniform Code of Military Justice

EXTENSION OF REMARKS

OF

HON. EDWARD deGRAFFENRIED

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 5, 1949

Mr. DEGRAFFENRIED. Mr. Speaker, I wish to thank the chairman of the Armed Services Committee for the kind remarks he has made on behalf of the subcommittee which handled this bill now before the House, the Uniform Code of Military Justice bill. As a freshman Member of Congress and as a newcomer to the Committee on Armed Services, I want to say that it has been a pleasure and privilege to have been assigned to the subcommittee which has had under consideration for the past 5 weeks the bill now before this body. We had the expert guidance and learned counsel at all times of the chairman of our subcommittee, the gentleman from Louisiana. Meetings of this subcommittee were held practically every day while this bill was under consideration and I recall two instances when the committee worked all day on Saturdays. It has been an extreme pleasure to me to have worked with each and every member of the subcommittee and I want to say that in my opinion we now have to present to the House a bill which is workable, a bill which has the unanimous approval of the Committee on Armed Services and a bill which I hope and sincerely believe will be adopted and passed by this body.

This proposed code covers both the substantive and the procedural law governing military justice and its administration in all the armed forces of the United States. It provides the sole statutory authority for:

First. The infliction of limited disciplinary penalties for minor offenses without judicial action;

Second. The establishment of pretrial and trial procedure;

Third. The creation and constitution of three classes of courts martial corresponding to those now in existence.

Fourth. The eligibility of members of each of the courts and the qualifications of its officers and counsel;

Fifth. The review of findings and sentence and the creation and constitution of the reviewing tribunals; and

Sixth. The listing and definition of offenses, redrafted and rephrased in modern legislative language.

The code is uniformly applicable in all its parts to the Army, the Navy, the Air Force, and the Coast Guard in time of war and peace.

The drafting of the code was accomplished by the following procedures adopted by the committee:

Initially, the differences which existed between the Articles of War and the Articles for the Government of the Navy were isolated. To accomplish this, a comparative study of the Articles of War and the Articles for the Government of the Navy was prepared. A brief was written on each of the 121 Articles of War containing:

First. The text of the articles of war in question;

Second. The text of any amendment in Public Law 759, Eightieth Congress;

Third. Excerpts from the Army Court-Martial Manual construing the article;

Fourth. The text of the corresponding or similar article for the government of the Navy;

Fifth. The text of the proposed Articles for the Government of the Navy.

Sixth. Excerpts from Naval Courts and Boards;

Seventh. A discussion of the differences, if any, between the Army and Navy procedures; and

Eighth. Excerpts of comments on the subject matter of the Articles of War under consideration from the various studies listed in material before the committee.

This background material enabled the committee to consider the differences in the Army and Navy systems, to consider the recent amendments to the Army system, and to study, at the same time, various comments, suggestions and recommendations which have been made in the past in connection with military justice.

A working group of military personnel from the Army, Navy, and Air Force was appointed, which processed all the material before it was submitted to the committee. The working group discussed the difference in the systems and attempted to reach agreement on a uniform provision. Its views were reported to the committee, which either adopted, modified or rejected them. Both the members of the committee and the members of the working group consulted with their own Departments on any questions they deemed appropriate.

To the extent possible, tentative drafts of proposed articles were submitted to the committee. After consideration and upon decision by the committee, the article was drafted in accordance with its instructions and later resubmitted to the committee for final approval. In addition, the committee adopted an outline of the new article, which was designed to segregate the different provisions into logical subdivisions. Under this plan, all the offenses were placed together and the different parts of the code were arranged topically.

The precept of the Secretary of Defense instructed the committee to draft a code uniform in substance and in interpretation and application, which would protect the rights of those subject to it, with a view to increasing public confidence in military justice and without impairing the performance of military functions. The committee has drafted the code in accordance with these instructions and attention is called to the provisions of the code which are designed to provide for uniformity in the adminstration of military justice, to those designed to assure the accused a fair trial, to those designed to prevent undue control or interference with the administration of military justice, and to those designed to preserve appropriate functions.

Among the provisions designed to insure uniformity are the following:

First. The offenses made punishable by the code are identical for all armed forces.

Second. The same system of courts with the same limits of jurisdiction of each court is set up in all the armed forces.

Third. The procedure for general courts martial is identical as to institution of charges, pretrial investigations, action by the convening authority, review by the board of review, and review by the court of military appeals in all the armed forces.

Fourth. The rules of procedure at the trial, including modes of proof, are equally applicable to all the armed forces.

Fifth. The Judge Advocates General of the three Departments are required to make uniform rules of procedure for the board of review in each Department.

Sixth. The required qualifications for members of the court, law officer, and counsel are identical for all the armed forces.

Seventh. The court of military appeals, which finally decides all questions of law, is the court of last resort for each of the armed forces, and also acts with the Judge Advocates General of the three Departments as an advisory body with a view to securing uniformity in policy and in sentences and in discovering and remedying defects in the system and its administration.

There are many provisions included in this code which are designed to insure a fair trial to the accused. First, and foremost, to my mind, is the provision that enlisted men, if this bill becomes law—and I am convinced it will—may serve on general and special courts. I personally

have long felt that the service of enlisted men on military courts would have a most beneficial effect. This provision will serve to engender in the enlisted man the feeling that he is a part of the system of military justice.

Another provision is the pretrial investigation, at which the accused is entitled to be present with counsel to cross-examine available witnesses against him and to present evidence in his own behalf. It has some features of a preliminary hearing and some of pretrial discovery as used in our civil courts. It contains a prohibition against referring any charge for trial which does not state an offense or is not shown to be supported by sufficient evidence. It carries a provision, and one which is of paramount importance, and that is, competent, legally trained counsel at the trial for both the prosecution and the defense is provided for. There is also a prohibition against requesting any statement from the accused without warning, and against compelling self-incrimination, and against reception in evidence of improperly obtained statements, and the provision for equal process to accused and prosecution for obtaining witnesses and depositions and the further provision of allowing only the accused to use depositions in a capital case. This bill provides for the law officer to instruct the court on the record concerning the elements of the offense, presumption of innocence and the burden of proof; provides for an automatic review of the trial record for errors of law and of fact by a board of review with the right of the accused to be represented by legally competent counsel and a provision for the review of the record for errors of law by the Court of Military Appeals, which review is automatic in the case where the sentence is death or dismissal and is upon petition showing probable error of law where the sentence involved more than 1 year's confinement, with the right to be represented by competent counsel. Then there is the provision prohibiting receiving pleas of guilty in capital cases. As to special and summary courts martial this bill completely eradicates all of the differences in the nomenclature, composition, procedure and powers of the intermediate military courts as exists under the present law and establishes complete uniformity as to these courts.

Upon the basis of these considerations, Mr. Speaker, I fully endorse the legislation now before you and I sincerely believe its enactment will provide the most enlightened system of military justice that has ever been enacted.

A Colony of Spiders

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. MULTER. Mr. Speaker, the following article by Harold L. Ickes, which appeared in the New Republic of May 2, 1949, briefly but vigorously directs our attention to the conditions in Germany that may soon get out of hand unless we do something about them:

A COLONY OF SPIDERS

(By Harold L. Ickes)

For many months a colony of black-widow spiders has been busily weaving webs intended to cost the United States and its allies the fruits of the crushing defeat of Germany. They would restore to those who made Hitler possible the industries of the Ruhr, without which he would not have ventured to commit his depredations against the democratic nations of Europe. Conspicuous among them are members of the Cabinet, Congressmen, diplomats and soldiers, as well as bankers and industrialists who have been commuting between Wall Street and Washington. In short, American military and civilian officials who are supposed to be solving problems in Germany, preparatory to the State Department assuming a jurisdiction and control that, so far, it has timorously evaded, have been rendering yeoman service to Wall Street financiers and German cartelists, preparatory to World War III.

Instead of listening to the shrill silences of the newspapers, which at times neglect to keep even themselves informed, the people should begin to din into the ears of their Congress their demand that the original plan to dismantle the Ruhr shall be followed without evasion or further delay. They should call for the names of those in the seats of the mighty who have been conspiring to sacrifice the interests of America, and with them any chance of world peace, to the gluttony of the bankers and the industrialists.

If the people should insist upon a searching inquiry by Congress, they would soon learn that the biggest black spider that has been quietly weaving the biggest web of them all is Secretary of the Interior, Julius A. Krug, the well-known textile-mill owner of Tennessee. This official, as to whom there have been suspicions of sympathy for Germany, may not be acting in his own behalf. But certainly he cannot be credited with solicitude for his country, or for world peace. It is he who, despite his seeming sloth, has been industriously working to the end that the unexpurgated Nazis of Hitler may be put again in a position to revive and enlarge the war industries with which Hitler broke the peace of Europe.

Prior to the resignations of Secretary Anderson of Agriculture and Secretary Harriman of Commerce, there was an active cabal in President Truman's Cabinet, the catalyst of which was Secretary Krug, attempting to reverse the policy of President Roosevelt with respect to the coal and steel of the Ruhr. The great war President had promised American fathers and mothers that the war potential of the Ruhr would be scattered and destroyed in grateful recognition of the sacrifice of their sons to Moloch. Naturally, these three associates had the support of ex-Secretary James Forrestal, who, although no longer connected technically with that important former financial ally of the Nazi, Dillon Read & Co., was concerned about its fortunes.

What should be done with the war industries of the Ruhr was a pending question with the Cabinet for months. Finally, President Truman, yielding to the pressure of Messrs. Krug, Anderson, and Harriman, appointed a Cabinet committee to make recommendations. He named as members Secretaries Krug, Anderson, and Harriman, all of them vocal advocates of the policy of handing back what remained of the Ruhr industries to the Germans. No conflicting view was represented. This Cabinet committee, as is the Washington custom, proceeded to appoint a subcommittee, called a mission, to view the supposed corpus delicti and bring in a report. The mission was selected personally by Secretary Krug. The four men constituting it were one Norman H. Collisson, a former naval captain, and sometime on the legal staff of United States Steel; Frank J. Baumis; Julius E. Grof; and Edward Falck. All of these men, particularly Captain Collisson, were close associates of and subservient to Secretary Krug, so that he was in control.

The reparations program itself was not supposed to be subject to the review of this mission. Nor was it authorized to reexamine the facts on which the reparations program was based. However, it did both of these things. One of the members of the commission spent approximately 5 weeks in Germany, and the others, 2 weeks. Chairman Collisson wrote the report and formulated the recommendations. As a contribution to the desired result, Paul G. Hoffman designated this same Collisson as ECA representative in western Germany. The others, who had opposed the recommendations while in Germany, approved them later in Washington.

The supposed object of the mission was to select a small group of plants which should be retained in Germany, the better to serve the purposes of European recovery. As a matter of fact, the report recommended the retention in Germany of practically every steel and heavy-industry plant on the reparations list, without regard to the possibility of utilizing the plants in Germany in the near future. The criterion actually applied was whether the plant could possibly be useful to the German economy at any time in the future. Despite the fact that an international agreement limited the German steel industry to 10,700,000 tons annually, the Krug-controlled mission recommended the retention of plants which would leave German steel capacity close to 20,000,000 tons, with supporting capacity in steel finishing, processing, and engineering. The mission's recommendations would leave in Germany practically the entire plant capacity that existed there at the end of the war, plus that which has been rebuilt since 1945, minus only such plants as were classified as war plants.

The Krug-controlled mission made no attempt to assess the needs of European countries for German machinery. It was concerned only with the needs of Germany. Pursuant to the recommendations, Germany would retain an industrial capacity much higher than it had in 1936, and almost as high as it had at the peak of its war production. As his contribution to World War III, General Clay even supported a $5-a-ton increase for German export coal which would place an added burden upon the steel industry of France and other countries.

The mission naturally maintained intimate liaison relations with Secretary Krug, as well as with Ambassador Harriman. It seemed to regard the Department of State, and that of the Army, as alien organizations. The mission recommended that Marshall plan aid be used as a club to force the abandonment of most of the dismantling program. This was not alien to Hoffman's own desire. It proposed the scrapping of crucial American policies on the basis of the unsupported opinion of its own members that dismantling was technologically wasteful and inefficient. Unfortunately for Captain Collisson and his merry men three, when their report was presented for signature by their principals, only Krug remained of the original Cabinet committee. Krug, of course, was more than willing to recognize the offspring of his personally selected mission, but Secretaries Brannan and Sawyer, after careful consideration, declined to do so. So far as is known, the revival of the German Ruhr

has never been presented to the entire Cabinet.

Whether instigated and directed by King and Collisson or not, an intensive underground campaign has been waged to undermine the German reparations program. According to an article in the November-December 1948 issue of Prevent World War III, by Dr. Jean Pajus, a naturalized Frenchman who has won a high reputation in this country as an economist, "Many pro-German organizations, American firms with prewar economic tie-ups, several Senators and Congressmen, some Quakers such as Felix Morley, speaking for the Sun Oil Co., and others, have been involved in the program." The author also refers to the activities of the [Representative] HERTER subcommittee on Germany, the chairman of which is Representative Francis Case of South Dakota; Prof. Carl Friedrich, of Harvard University; William H. Draper, Jr., at the time Under Secretary of the Army, but now again a vice president of the Dillon Read firm; Prof. William Elliott, also of Harvard, and close to former Reichs-Chancellor Brüning, as well as to Professor Friedrich. Dr. Pajus makes special mention of Representative John Taber, who, according to him, refuses to listen to any arguments in favor of the western nations. He lists as the most active Members of the Senate in the drive to eliminate German reparations, former Senator Henry Dworshak, of Idaho, and Senator Styles Bridges, of New Hampshire. He alleges that the latter, when in Germany some months earlier, had publicly called upon General Clay to stop all reparations, regardless of the promises and agreements made with our allies.

There have been other powerful influences at work to bring to a stop the reparations and denazification programs that have been in progress, not only to destroy, or at least to modify, the German war potential, but to reimburse, in part, the Allied countries of western Europe whose industrial plants had been ruthlessly destroyed by the Germans when they could not be dismantled and reassembled in Germany. The record shows that Secretary of the Army Royall (now, fortunately for the people, about to leave the government) testified before the subcommittee on appropriations of the House of Representatives on March 2, 1948. He admitted he had no sympathy with the prosecution of German war criminals in general. In reply to a question by Representative WIGGLESWORTH, Secretary Royall replied "I do not think it would be terribly serious if we stopped them all. * * * The prime objective we have now in Germany, and that we must have now in Germany, is to build a strong nation, both politically and industrially."

It would appear that what America especially has to fear at this time is not active traitors within, or potential enemies without, who would strike a deadly blow at our vitals. So far as the present and the near future are concerned, what we should beware of are the Krugs, the Collissons, the Harrimans, the Drapers and the Royalls, men who are not necessarily wicked or unpatriotic. Such men, in their stupid disregard of what the Germans will do if given the chance, would restore to the Nazis of Germany, the war potential of the Ruhr upon which a new war machine could be erected. It may be that some of these Americans, and others who could also be named, are more fools than knaves, although in justice it must be said that some are more knaves than fools. Into whichever classification they may fall, it is the duty of America's President and America's Congress to protect from such dangerous machinations those overwhelming numbers of Americans whose only desire is to live in a world that is safe, not only from war, but from a threat of war.

Health Insurance

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. MARSHALL. Mr. Speaker, probably few issues before this Congress have created as widespread interest as the various recommendations made regarding a national health policy. Because I realize that every Member of this House is gravely concerned with this problem, I would like to call attention to several serious questions raised in an editorial by Mr. Chuck Rathe, editor of one of Minnesota's outstanding rural newspapers. For 82 years the Sauk Center Herald has played a remarkable role as a community leader, and Mr. Rathe upholds that tradition well. In this editorial he raises questions that we must honestly answer.

HEALTH INSURANCE

WHY MUST IT BE COMPULSORY?

The thing that strikes us quick about the health program that President Truman has submitted is why must it be compulsory? Is everyone in this country no matter his income beyond the pale of good medical care?

The program among other things would set up a vast national insurance network in which everyone who is now eligible for social security would be an automatic member. Membership—prepayment for medical care—would be by withholding from wages matched by an additional payment from the employer.

The medical profession, even as we, all of us, would if this thing seemed aimed at our business, doesn't like the idea. They say it is socialized medicine. Period. At the very least it is nationalized health insurance, and if there's any difference, it's fine as frog's hair.

The thing that really perturbs us is that our freedom of choice about a medical insurance policy is at one fell swoop lost to us. Some indefinite power in the Federal Government, should it come to pass, has suddenly said: Here it is. Take it.

It's utterly silly and stupid to believe in these days the Federal Government will not find its way into almost every business. This is the tone of a lot of our people's thinking. They are asking for security of a sort; this requires some regulation. But the intent of this health program is to improve the health of the Nation, to insure a certain security against the bugaboo of medical costs. But will it any more attract doctors to areas not now being served? Why does a doctor go where he goes? Is it entirely money? The impact of this program is to suggest it is. We're not so naive as to think that all medical men are so high-minded (or so independent of their medical earnings) that their love for medicine is their only pay. As a matter of fact, some of the profession's utter disregard for humanitarian aspects the public thinks their oath binds them to and a certain new-world predilection with collecting bills, almost above all else, has brought the profession to this situation partly. There is, we sense, in the desperate something-must-be-done feeling about too high medical costs a certain lessening of respect for the profession that was once almost a hallowed reverence for the general practitioner.

Medical men are not unmindful of this. There is room for rate adjustment, for more preventive medicine, for community service by the profession, and even for government subsidization for people and areas who cannot have the full care.

A careful casing of the country's medical difficulties will show the areas and the people now without adequate medical care. But any such survey will almost automatically show it to stem from other lacks: proper diet, good housing, warm clothing, and enough education. And no amount of national health insurance planning will correct this in itself.

Why not, then, let the Federal Government aid these areas and these people alone, starting from the influences that add up to improper health and therefore a vast unlimited load of medical attention? Why not let them aid local and State agencies in preventive health programs, in child and student detective clinics, in building hospitals?

Compulsion is a nasty word in our vocabulary. And we would honestly rather have the inadequate care of a harried doctor who didn't know where his next payment was coming from than to be told we must accept a prepayment plan and assembly-line medicine.

Private Utilities Provide Major Funds for Washington State Reclamation Association

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. MITCHELL. Mr. Speaker, the president of the National Reclamation Association, in testimony before the House Committee on Appropriations, stated that not a single private utility company made any financial contributions to the National Reclamation Association. Upon being questioned further, this witness admitted that some State associations might receive private-utility funds, but he doubted that such was the case in many instances. Inasmuch as the National Reclamation Association is financed in part by the affiliated State associations, or has some kind of reciprocal financing relationship with them, it is of interest to know more about their sources of funds. Recently the editor of the Wenatchee (Wash.) World, Rufus Woods, published the 1948 financial report of the Washington State Reclamation Association. This report shows that almost 70 percent of the total collections for the year 1948 consisted of contributions by private utilities and railroads. The power companies contributed $5,250 and the railroads $400 to the State Reclamation Association in 1948. A notation, "P. P. & L. $1,000 listed as 40 sustaining memberships" presumably refers to Pacific Power & Light Co. contributions in the form of employee memberships.

Mr. Speaker, I include with these remarks the article by Rufus Woods together with a copy of an earlier letter which I addressed to the Washington State Reclamation Association requesting information on its membership and finances:

IN OUR OWN WORLD

(By Rufus Woods)

Congressman HUGH B. MITCHELL has tied in on the National Reclamation Association, declaring that it has become a propaganda

lobby for the private power companies with the power companies contributing two-thirds of the total revenues.

It begins to look as though Congressman MITCHELL may have something there. Some funny things have been happening in this Association. It fostered the iniquitous Rockwell bill which brought out a lead editorial blast even from the strong Republican newspaper, the Portland Oregonian. Among other things, that newspaper said on January 29, 1948:

"The Rockwell reclamation bill as amended and passed by the House of Representatives 232 to 120 last week is the most dangerous threat yet made against the industrial and agricultural development of the Pacific Northwest. It is also a loaded gun aimed at the Republican presidential nominee and Republican Members of Congress, because if the Senate approves it in its present form President Truman doubtless will veto it. The President will make votes and the Republican Party will lose them in the Northwest.

"Powerful interests of the East, the South, and California have at last a vehicle to realize their long-time hope of stifling industrial growth in the Northwest by forcing upward the basic rates of electricity from the Columbia River system. * * *

"The amended Rockwell bill is political dynamite for the Republican Party. But it is also sabotage of the Northwest's future, which intimately is linked with low-cost power. The Senate should bury it beyond hope of revival"

The Senate did bury it. And the voters buried Rockwell under an avalanche of votes.

So the fight for the grand old Columbia Valley still moves on. There are some indications that a Columbia Valley Administration bill may be passed by the present Congress. Of tremendous importance it is, however, that such a bill should be made to properly fit our program in the State of Washington.

In the meantime, there are organizations formed and reformed for the purpose of turning control of the Columbia to the power crowd of New York City. The fiscal report for 1948 shows where Washington State Reclamation Association gets its money:

Washington State Reclamation Association, financial report, 1948

RECEIPTS

Cash on hand Jan. 1, 1948	$64.52
Collections:	
119 sustaining memberships at $25	2,975.00
14.75 active memberships at $10	147.50
National Reclamation Association	687.50
Refund post-office-box rent	7.49
Refund telephone rental	4.90
Contributions:	
Jan. 6: Washington Water Power	2,000.00
Jan. 19: Puget Sound Power & Light	1,500.00
Oct. 7: Washington Water Power	1,000.00
Oct. 23: Puget Sound Power & Light	750.00
Nov. 22: Northern Pacific Ry	100.00
Nov. 22: Great Northern Ry	100.00
Nov. 22: Union Pacific R. R	100.00
Nov. 22: Chicago, Milwaukee & St. Paul R. R	100.00
Total	5,650.00
Total collections	9,536.91

(Pacific Power & Light, $1,000 listed as 40 sustaining memberships.)

It was the State Reclamation Association, too, which joined with the National Reclamation Association in trying to put over the nefarious Dondero and the Rockwell bills. The Dondero bill would have made it impossible to get any power from Grand Coulee Dam except by those concerns big enough to build a main transmission line to the bus bar at the dam. That, too, could have made a duplication of transmission lines.

The Rockwell bill was an effort to double the power rates in the Northwest.

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 31, 1949.

Mr. L. W. MARKHAM,
Secretary, Washington State Reclamation Association,
Yakima, Wash.

DEAR MR. MARKHAM: Thank you for the copy of the Washington State Reclamation Association's resolution relative to valley authorities.

I have examined the resolution, which contains sweeping statements and allegations not necessarily related to the facts, and it occurs to me that when the new CVA legislation is introduced, your organization may want to give it a more careful and specific analysis than is indicated by the resolution.

You will find, I am sure, that this CVA legislation gives due and careful regard to appropriate State functions in natural resource development and is designed to encourage the utmost in State and local cooperation. The TVA, as the governors of all the Tennessee Valley States have publicly testified, has worked no injury to State's rights. Constitutional problems as to the respective spheres of State and federal jurisdiction in natural resource development have a long history of judicial decision, and under our system of government are always reviewable in the courts.

CVA legislation is designed to meet practical and urgent needs; namely, to effect coherence and amity of purpose, and operating economies, in the Federal agencies now at work in the Pacific Northwest. As you are doubtless aware, some thirty major departmental units or divisions of the Federal government are involved in one or another phase of resource development in the region. The Hoover Commission has examined these administrative arrangements and has made far-reaching recommendations for reorganization. Because this is a nonpartisan matter, I might quote with approval at this point a recent public statement by Congressman Walt Horan: "To those who have smugly insisted that the existing Federal agencies were doing a good enough job and that no need existed for a program of comprehensive river development, the findings of the Commission's task force are more devastating than any statements I might make."

The CVA, which is an effective answer to these findings, will actually make government resource administration more responsive to the needs and desires of the region than the reorganization at the Washington, D. C., level proposed by the Hoover Commission.

A correspondent who is a responsible person and well-informed about reclamation problems in the State of Washington, writes to me as follows: "The power companies and railroad companies are using the State Reclamation Association merely as a tool to further their selfish interests. They care little about the original intent of the Reclamation Association. Very few farmers and actual irrigationists belong to the Reclamation Association."

In view of the foregoing, I would greatly appreciate receiving from you information in response to the following questions: (1) What proportion of the total receipts of the Washington State Reclamation Association for the year 1948 represents the contributions of private power and railroad companies? (2) How many of the association's sustaining membership payments for the year 1948 were derived from persons employed by private power companies? (3) How many bona fide farmers are paid-up members of the association? (4) How many of the 100 irrigation districts in the State of Washington have contributed to the association during the year 1948?

Sincerely yours,

HUGH B. MITCHELL.

American Farmers Want an American Farm Program

REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. JENSEN. Mr. Speaker, several months ago I wrote a letter to a friend in my district, a copy of which I have sent to other constituents, setting out my reasons for opposing the 90–60 slide-down scale for agricultural products and my reasons for supporting a 90-percent floor price as a minimum. I will insert the letter as part of my remarks.

In connection with my letter, I will also include an analysis of the Brannan farm program, which was prepared by Carl H. Wilken, economic analyst for the Raw Materials National Council, of Sioux City, Iowa.

Mr. Wilken's analysis and my letter are very much in accord and outline a program which can give to the farmer an average of 100-percent parity without any great cost or complicated methods of curtailing production. Through a common-sense program of soil conservation, a shift of crop acres to grass can be obtained at a relatively small cost, as provided in my soil-conservation bill, H. R. 2368.

Such expenditures for soil conservation should be considered as a national investment in the future production and income of the United States. With each $1 of gross farm income translating into $7 of national income, it is imperative that we maintain full employment and a solvent national economy.

I feel that one of the most necessary steps which this session of Congress can take is to restore the 90-percent price floor for 1950 and make it a permanent policy. Such a step will restore the confidence of the American people, which has been severely shaken by the recent drop in commodity prices.

Unless we can fully realize the absolute necessity of maintaining a continuous flow of new wealth from the soil at a prosperous level as a foundation for our national income, the future of our Nation is in great danger. The Government as such has no money and if the huge Federal budget is to be met, we must have a high national income, an impossibility

without first having the proper farm income to create it.

I will also include in these remarks an analysis of my soil conservation bill, H. R. 2368, which I introduced March 23, 1949.

HOUSE OF REPRESENTATIVES,
Washington, D. C., January 31, 1949.

DEAR FRIEND: Regarding the 90 to 60 percent slide-down scale for basic farm crops, versus the 90-percent support prices now in effect on such commodities, in order that you will know just why I am for the 90-percent support base, I will give you the background of what brought about the 90–60-percent provision which goes into effect January 1, 1950, as provided in the Aiken bill.

You know, of course, that the labor leaders made a lot of noise about high cost of food long before the last Presidential campaign got under way. They knew, of course, that it would be popular with most members of the trade-unions to do so, but they did not tell their members that their food bill was costing them a less percentage of their wage dollar than it had during any peacetime period of full employment in the history of our Nation.

The New Deal party has constantly worked overtime in their great desire to prove to labor that they were the champions of high wages and cheap food, while out of the other corner of their mouth telling the farmers they were for a high price for his products. Hence, the New Deal have received a great majority of labor's votes. However, in the last campaign they felt it would be necessary for them to further prove to labor that they were still for cheaper food in order to hold the labor vote. So here is exactly how they did it.

The labor leaders collaborated with high officials of the Department of Agriculture in writing the so-called Aiken long-term agriculture bill. One of the provisions in the bill was the 90–60-percent slide-down scale for basic farm-crop supports. And between the New Deal campaign strategists and the labor leaders the Aiken bill was sold lock, stock, and barrel to the top men of our farm organizations.

The bill came to the Agriculture Committee of the House and the Senate very late in the last regular session of the Eightieth Congress. The House Agriculture Committee turned thumbs down cold on the 90–60 percent provisions. The bill came to the House with the full 90 percent provisions in the bill and was passed by the House in that form.

The Senate Agriculture Committee also held hearings on the bill and inserted the 90–60 percent slide-down scale provision. The bill was then taken to the floor of the Senate at about 2 a. m. one morning during the last week of the regular session of the Eightieth Congress, where Senator AIKEN, from Vermont, chairman of the Senate Agriculture Committee, put the bill through the Senate with very little debate. After which the Senate and House conferees met in almost constant session for several days and nights to thrash out their differences in the bill. The 90–60 percent slide-down scale provision inserted by the Senate versus the full 90 percent House provision was the main point of contention between the two Houses. These conferences between the House and Senate were held during the very last few days of the regular session. The House Members held out for the full 90 percent of parity until about 4 a. m. on the morning of June 20, the very day Congress adjourned. However, a compromise between the Members of the two Houses was effected, and the 90 percent support provision to remain in effect until January 1, 1950, after which time the 90–60 percent slide-down scale was to go into effect. Then the compromise report was brought to the floor of the House about 30 minutes thereafter. The bill was passed by the House and the Senate within a very few minutes thereafter, and in due time the bill was signed by the President.

It is noteworthy that the very next day after the bill was passed prices on most all farm products began to drop and have been on the decline since, and from that day on the unemployment rolls have mounted. Now I am thoroughly convinced that until we repeal the 90–60 percent provision in the bill prices on farm commodities will continue to slide down and unemployment rolls will continue to mount proportionately. Not only will grain prices tumble further, but hog, cattle, and poultry prices will go right down the toboggan with them.

Let us not forget that farm prices were 66 percent of parity on an average in 1931–33, and that during those times not only the farmer, but the businessman, the laboring man and everybody in America were in a serious predicament. I need not remind you of this, I am sure, for I know you are old enough to remember it. There was on an average of 14,000,000 American people who were unable to find work during that era, for the very simple reason that the farmer's buying power was almost nil. Now certainly that should be a lesson we dare not forget, regardless of our politics, faith, or vocation.

Ever since my first year in Congress I have cooperated very closely with common-sense economic analysts and many Congressmen, most of whom are from farm States, in search of facts and figures to guide us in the right direction to avoid, if humanly possible, another depression, and possibly the complete destruction of our system of government and everything worth while in our blessed land.

Here is what these many years of research has brought to light. For the past 20 years the records of the Department of Commerce, which are compiled from the records of the Department of Agriculture, Labor, and from other accurate sources in Government records, show that whether it be periods of peace, depression, war, or postwar prosperity such as we now have, the national income has been and is now approximately seven times the farm income. The postwar prosperity which we have enjoyed since World War II has held up mainly because we have had a high farm income due to the fact that basic farm commodities have been supported by our 90 percent parity law.

If you will remember, it was less than 2 years after the close of World War I that farm prices took such a terrific drop which brought about a national depression in 1920. And during the several years thereafter many farmers lost their farms and a lot of business houses closed their doors for the very simple reason that the farmer's buying power was almost nil. I remember that era only too well, as I was at that time running a lumber yard in Exira, Iowa, dealing with farmers almost exclusively. Certainly that horrible experience should be a lesson to all of us. It must not happen again. I am thoroughly convinced, after much study, that the 90–60 percent slide-down support scale on basic farm prices will bring about a repetition of a like condition during the era which I have just described.

Doubtless you have heard the argument it is necessary to reduce the price on farm commodities to avoid great surpluses from piling up, which the Government would have to buy and store in greater quantities than would be possible for the Government finances to stand. That argument falls flat with those who have made a deep study of what causes surpluses to pile up, which is, when the buying power of the people is not sufficient to purchase the goods they need for the high standard of living we Americans want and expect. The facts are that a greatly reduced American standard of living will very surely be brought about by a great reduction in prices of farm commodities, since all wealth springs from mother earth, and because as I said before, the national income each year is approximately seven times the farm income; so, unless we maintain a high farm income sufficient to generate a high national income, and thereby assuring high consumption of all goods, Americans will be in serious trouble, and you can bank on that.

Here is something else to think about. Who in America would expect the good Lord to continue to bless us with such abundant crops as we have enjoyed the past 8 years? I am sure, you, like I, will agree that that would be too much to expect of Him who runs nature's business. We are bound to have crop failures in some degree most any year now, and should it become our lot to suffer, say even a 25 percent crop reduction on an average for a period of 2, 3, or 4 years all over America, below the average of the past 8 years, how I ask in all sincerity would we feed and clothe the American people the way they like to be fed and clad, let alone help to feed the world, when now we are exporting only about 3 percent of our farm production?

You will also hear the argument that unless the Secretary of Agriculture is given the authority to reduce support prices as is provided in the 90–60 percent slide-down provision, that surpluses will pile up to such a degree that acreage control will again be necessary. That argument also falls flat when we know that it was cheap farm prices that brought about acreage control in the AAA bill of the early thirties. And the result of that program was that the farmers so fertilized and mined their allotted cash-crop-producing acres, that they produced more than ever, and were obliged to do so to meet their bills.

The 90-percent support-price program on basic farm products—corn, wheat, tobacco, cotton, peanuts, and rice—has not cost the American taxpayer one thin dime to date. It has actually made a profit to the United States Treasury, to say nothing about the great benefits to the farmers of America and to our whole economy, and for these reasons I certainly will not be a party to a program which I honestly believe will be destructive to not only the prosperity of our Nation, but also to the peace and progress of our Nation and the world.

You, no doubt, also have heard the argument about the potato situation. I agree that potatoes, which are perishable and cannot be stored for any definite period, should not be supported at the full 90 percent of parity. The facts are that the Potato Growers Association of America suggested to Congress that the support price on potatoes be materially reduced. And the provisions in the Aiken bill directs the Secretary of Agriculture to do so. Hence, that argument made by the sliding-down-scale advocates also falls flat.

If our national income is drastically reduced the American market, which is the only stable and good market of the world today, will lose its buying power, and when that time comes we will neither be able to pay our own way nor help foreign nations with loans or free dollars with which to buy our goods or other nations' goods, or to ward off communistic aggression any place in the world, America included.

Records of the past 20 years also prove that for each dollar of gross farm income, labor (which includes all kinds, blue denim, white collar, and professional) receives an income of over $4, so the laboring people have a mighty big stake in keeping the farmer's income on a high level, the source of all wealth. Regarding the businessman's interest in this proposition, I am sure I need not explain to them the need of keeping a high farm income for they know that is the only thing which will insure good profitable trade for them.

A $42,000,000,000 annual Federal tax take from the American people means that each American family pays on an average of over $1,000 per year in direct and indirect Federal taxes. Add to this around $300 which each family is paying per year in local, county, and State taxes, it makes a total outlay in taxes per year for each family of over $1,300. That being a fact, we must surely do two things, keep our national income at the highest possible figure and stop wasting the taxpayers' dollars.

I hope this will explain my reason for opposing any law which will reduce farm income.

Sincerely yours,

BEN F. JENSEN.

THE BRANNAN FARM PROGRAM—DO WE WANT SOCIALISM OR OUR AMERICAN SYSTEM?

(Prepared by Carl H. Wilken, economic analyst, Raw Materials National Council, Sioux City, Iowa)

Memorandum to Members of Congress:

ANALYSIS OF SECRETARY OF AGRICULTURE BRANNAN'S FARM PROGRAM

Stated briefly, the Brannan farm program as presented to the Agricultural Committees of the House and Senate, if analyzed with the use of arithmetic and the record of our economy, is a socialistic gimmick.

Secretary Brannan in his preliminary analysis admits the importance of a stable farm income and makes the important admission that depressions are precipitated by a drop in farm prices. The conclusion is verified by the past record of our economy and is not recognized by some interests that have opposed proper price supports. Price supports are not a form of socialism.

In fact, the basic economy of the United States has always had a price support in the form of the tariff. Over a period of 150 years, the tariff, although at times giving some groups an advantage over others, indirectly helped all groups. For example, the South, with an exportable surplus of cotton, had to sell in the world market, but because of a higher income in the United States the American people consume five times as much cotton as the average citizen in the balance of the world and in this way the South did receive an indirect benefit.

The net result of the tariff was an American price level which averaged approximately 30 percent above the world level. With our natural resources and a higher price level, we were able to create the income for greater per capita consumption and to create the new capital to develop and buy better tools of production to increase our efficiency, the real measure of our standard of living. Price is relative and the real cost of living is dependent upon per-man production.

COMPARISON WITH OTHER NATIONS

This differential in price has created a standard of production and consumption in the United States that, when compared with the rest of the world, is almost fantastic.

It can be illustrated by a few simple facts. The United States has approximately 6 percent of the world's population and produces 25 percent (physical quantity) of the world's goods. Because of our tools of production and the use of power energy the average American worker produces five times as much goods as the average worker in the balance of the world.

As a result of this per man efficiency more goods and services are exchanged and we have a greater turn-over of the dollar value of our raw material or new wealth production. In the case of farm products, the gear wheel of our prosperity, each $1 of gross farm income translates into $7 of national income. (See table attached for the period 1929–48.)

In comparison, the balance of the world has an income approximately two times its gross farm production. As a result of this increased turn of new dollars created by new farm production the 6 percent of the population of the world living in the United States has 45 percent of the income in terms of dollars annually created by world production. With this buying power the American people consume approximately 50 percent of the goods produced from mineral raw materials. Therefore, we have become the gear wheel of world economy. We use 70 percent of the automobiles, half the radios, half the telephones, etc.

To illustrate this differential, over a billion people living in other nations could not afford to use an automobile even though we gave it to them.

IGNORES FACTS

Secretary Brannan and his experts, however, completely ignore this differential and ignore the need of a tariff to adjust the differences in incomes and purchasing power. Without a tariff, the United States will be forced into a position of having to support farm prices throughout the world to protect our own solvency and prosperity. Secretary Brannan seems to have a vague conception of this basic fact and, therefore, brings forth the idea of permitting prices to seek their own level.

On a free trade basis this would be the world level. As an illustration of what this level would be, we can make a comparison with Great Britain. It requires the English worker 19 hours to earn $10 as compared to 8 hours required by the average American worker. In other words, the English worker has a buying power of less than one-half in terms of goods, etc. Following the Brannan proposal to permit prices to seek their own level under a policy of free trade would reduce our price level approximately 50 percent.

This would mean a reduction of over $100,000,000,000 in national income. Out of the remaining $100,000,000,000 Secretary Brannan would have to collect the taxes to pay one-half of his parity income support of $26,000,000,000 or approximately $13,000,000,000. It can't be done and the program will result in a depression and planned scarcity with agriculture under a dictatorship of price and production.

Secretary Brannan doesn't point out that the Federal Treasury has no money except what it can collect from taxes against the national income or by an increase in the national deficit.

SIMILAR TO TRIPLE A

The basic philosophy of the program is similar to the triple-A program of the thirties with its acreage control and marketing quotas. The principal new feature is the direct offer of cheap food to the consumer. This makes it an ideal program to get the votes. By fooling the farmer with a program of assured income, promising cheap food to the consumer, and high wages to labor, he expects to get the support to put into operation a program which will socialize agriculture, the foundation of our American system. The public appeal of this proposal should not be underestimated.

Secretary Brannan's program is quite similar in pattern to English socialism with its subsidized food, etc. Since one of the British leaders has stated that the system of English socialism is the happy medium between our system of capitalism and Russian communism, the program may be the result of a compromise between our economic experts and those of Great Britain. It is in line with the wheat agreement which provides for the sale of wheat at the end of 5 years to the rest of the world at $1.10 per bushel or one-half the price needed to keep the United States solvent.

It is also in accord with the program of the ITO (International Trade Organization) which would divide world markets and allot production in a program of international socialism.

MATHEMATICAL MONSTROSITY

But, even though Secretary Brannan has thrown arithmetic to the four winds, two times two will still make four. The program, if put into operation, will lead the American people and the world into economic chaos. The rest of the world needs a prosperous United States, an impossibility unless we maintain our farm price structure at a proper level so that through the seven times turn of agricultural income we can generate the national income for national solvency, full employment and prosperity.

Instead of thinking in terms of reducing our price to world levels, we should recognize that world problems are the result of too low a price for its raw material production, and that the only way in which we can help the rest of the world is to reorganize foreign exchange and prices at a par with our own. Then the world can earn its income and the international WPA carried on by ECA will be unnecessary.

The key fallacy leading to Secretary Brannan's program is the "cost of living" complex. His experts don't seem to realize that farm income is the source of national income and that higher farm prices do not increase the real cost of living. Stated simply, if the American people are willing to pay 80 cents for beefsteak, the current wage level and national income level can be maintained. If, however, they wish to have 40-cent steak, then they will have to be content with one-half of the current wage level and one-half the national income.

I would like briefly to analyze why agriculture is the gear wheel. In the United States we have about 6,000,000 farms and approximately 3,800,000 other business units. In other words, agriculture has two-thirds of the business units in our economic cycle. It produces approximately 70 percent of all raw materials and 70 percent of all goods sold at retail are made up of the simple items of food, tobacco, beverage, clothing, and shoes. Directly and indirectly approximately 70 percent of our labor is employed in the production, processing, and distribution of farm products and the services incident thereto. A drop in farm prices is immediately reflected in the dollar volume of this 70 percent of our economy and a depression is inevitable as farm prices go below parity, which in business terms is the average cost of production plus the average profit of all business. The severity of the depression will ratio in direct proportion to the percentage of parity.

This constant balance can be illustrated by the following table which sets forth the various incomes at the 1939 price level and at the 1948 price level:

	1939	1948	Percentage increase
Gross farm income [1]	$10,000,000,000	$32,000,000,000	220
National income	72,500,000,000	224,500,000,000	209
Total wages	45,000,000,000	137,000,000,000	207
Retail sales	42,000,000,000	130,000,000,000	209
Expenditures for food [2]	15,800,000,000	48,800,000,000	208

[1] Gross farm income is all products sold for cash and all farm products consumed on the farm or the total value of all farm production.

[2] Expenditures for food are taken from Survey of Current Business, U. S. Department of Commerce, and do not include tobacco and alcoholic beverages.

1939: Farm price, 84 percent of parity. 1948: 110 percent of parity.

AUTOMATIC BALANCE

Of major importance is the almost equal rise in dollar value for the major segment of our economy since 1939. In 1939 we had 8,000,000 unemployed because of too low a farm price structure and a national deficit of over $3,000,000,000. In 1948 our economy

had recovered from most of the dislocations of World War II and the different ratios were almost the same as 1939.

The record of our economy over the period 1929–48 proves that these segments adjust each other very quickly to the price change in farm products and are a practical constant in their percentage of national income.

In spite of all the comment in regard to the high cost of living in 1948, the Nation didn't spend any greater percent of its income for food in 1948 than in 1939. In fact the percentage was 21.8 percent of the national income in both years. The constancy of the ratio can be illustrated with a further comparison. In 1930–39, an era of low farm prices, the cost of food was 24.28 percent of the national income. In 1946 it was 24.1 percent and 1947 it was 23.9 percent.

When analyzed on a real basis the average American citizen received approximately 15 percent more food per capita in 1946–48 for the same percentage of income than he did in 1930-39. Stated in similar terms, the American worker received more food for an hour of work in 1947 and 1948 than any other period in history. It might be well to point out that the $48,800,000,000 of food expenditures in 1948 was only slightly less than the Federal revenue. Therefore, Secretary Brannan and his aides should be more concerned about governmental expenditures which are extremely high while the cost of living is no greater than in 1939.

Secretary Brannan's experts, instead of realizing this fact, now intend to reduce the price of foodstuffs. If they do, they will reduce the national income in direct proportion and a depression will result. Those who still have a job will have a lower food cost at the expense of the unemployed and Federal deficits for WPA and other Federal projects to create employment. If they pay the taxes for the WPA and food subsidies they will find that their cost of living has increased.

This factor can again be illustrated by the record. In 1948 the Nation spent approximately $90,000,000,000 for food, tobacco, beverage, clothing, and shoes. If, under the Brannan program, the prices of these items are permitted to seek their own level, which as I have pointed out under a free trade program is the world level, the retail sales of these products will drop approximately 50 percent or $45,000,000,000.

As this drop in retail sales volume takes place, the retail merchant will lose the income to pay taxes and current wages. As wages in the retail trade are reduced underconsumption will follow. Secretary Brannan would cure this underconsumption with curtailment of production. Curtailed production will means a reduced flow of raw materials through our economy and further unemployment will take place. This in turn will pyramid the spiral downward and we will find our economy in a regimented depression. Any attempt to collect taxes to balance the budget will give further impetus to the depression.

And with labor and agriculture voting together because of their economic dependence upon the Government, the rest of American industry will be easy to subdue through taxes and capital levies. It's not a very pleasant future to contemplate and becomes utterly ridiculous in the light of facts.

We will continue in our confusion in an attempt to get something for nothing. Lower farm prices, instead of making it possible for the underprivileged to eat, will force the inefficient to be unemployed and a ward of society.

POSITIVE ANALYSIS

With the use of the record of the United States for the 20-year period 1929–48, a clear-cut and positive analysis can be made. For example, the record will reveal that for each 10 percent of parity for agriculture, using the simple comparison of prices received by the farmer as compared to prices paid, there is involved 10 percent of national income, 10 percent of total wages, 10 percent of employment, 10 percent consumption, and 10 percent retail sales volume. In the period 1930-39, using farm prices and factory employment as 100, farm prices averaged 82 percent of 1929 parity and employment was 81 percent.

Parity prices for agriculture cost society nothing. Not until farmers, businessmen, laboring people, and their representatives in government take the time out to check this simple fact, which the record of the United States so clearly proves, will we be able to solve our economic problems.

Brannan and his aides in analyzing the importance of agricultural income seem to recognize that farm income must be maintained to prevent a collapse of our economy. But in some way or other they seem to have gotten their signals mixed up and have started for a touchdown march to the depression goal line.

In all fairness to them, I would like to point out that they are going in the same direction set out in the Aiken farm bill with its 60-percent price floor. The impossibility of the 60-percent price floor can be proved from the record.

In the 5-year period, 1930–34, using the current parity formula, agriculture received 66 percent of parity, or 6 percent more than the floor price in the Aiken bill. We all can remember the unemployment that existed in that period. In the 5-year period 1935–39, agriculture received 84 percent of parity, and in 1939 the census gave our unemployment as 8,000,000, which was approximately 16 percent of our available labor force in 1939, or 1-percent unemployment for each 1 percent that farm prices were below parity. No program can maintain full employment and national prosperity unless it provides an average of 100 percent of parity for agriculture.

Once we realize that the seven times turn of gross farm income into national income is a positive force regardless of price level and that all groups are benefited in direct proportion by an increase of farm production and parity prices for agriculture our problem simplifies itself. It is not a question of what it will cost to maintain farm prices at parity. It becomes a question of what we will lose if we do not support the farm price structure at an average of 100 parity. It becomes a question of general welfare and good business operation. A return to 1939 price levels would mean a loss of at least $125,000,000,000 of national income.

WAR PERIOD

The war period proves the effect of parity prices. After 12 years of depression, 1930–41, in which we spent about $3,000,000,000 per year in boon-doggling—curtailment of imports as a result of the war—gave our economy an opportunity to adjust itself to full production and war costs. By the end of 1941 or before our entry into the war, we were back to a level of full employment and our farm prices had recovered their 1925–29 parity with finished goods:

Price ceilings during the war prevented our economy from adjusting itself to the increase in the national debt. We could have paid for the war on a pay-as-you-go basis. In the 3-year period, 1943–45, our national income exceeded all consumer expenditures during the 3 years by $200,000,000,000. Instead of levying taxes to pay war costs we borrowed the funds from our income. The most ridiculous part of it all was that we even subsidized our food bill during the war and charged it to the national debt.

With the removal of the price ceilings, these adjustments to carry the national debt took place and in 1947–48 we had the highest employment in ratio to population that we have ever had; we had a balanced national budget and the highest per capita consumption of goods in history. Now, however, the effect of a return of foreign production becomes a competitive item under a policy of free trade and currency devaluation. Future expectations of these imports and the reduction of price floors to 60 percent of parity January 1, 1950, under the Aiken bill, have set the stage for lower prices all along the line.

In 1948 the 35 key commodities carried in the Associated Press Commodity Index averaged approximately 186 percent of 1926 as 100. The current level is 160. This represents a reduction of 14 percent Therefore, the national income of $224,500,000,000 in 1948 will drop back at least 14 percent or approximately $31,500,000,000. Our experts call this a mild adjustment. This reduction in national income will force a reduction as compared to 1948 of 14 percent in retail sales volume and 14 percent in total wages, either through a reduction in wages or through unemployment and fewer hours of work per week. A recent report of the United States Department of Commerce points out that 21 percent of our labor is working only 35 hours per week as a result of the price drop. The price drop since January 1 translated into lower tax returns will materially reduce the Federal revenue.

GOVERNMENTAL CONTROL

Much of this price drop can be attributed to the miserable handling of our economy by the departments that now ask for still further controls. The different departments of Government had complete control over the imports and exports of fats and oils. Our annual production of fats and oils represents about 10,000,000,000 pounds. All told, they are about 10 percent of our agricultural economy in the way of income.

In the year 1947 these departments refused to properly allocate fats and oils for the export market even though Europe was desperately in need of fats and oils. They carried out the same policy in 1948 but permitted unrestricted imports. As a direct result in the 2 years 1947–48 we had a net import of approximately 840,000,000 pounds of fats and oils. This glutted our market and resulted in a complete demoralization of the fats and oil prices. Lard dropped from 28 cents per pound to 11 cents. Tallow from 25 cents to 5 cents and other fats and oils, like corn oil, cottonseed oil, peanut oil, etc., in direct proportion.

This in turn had a repercussion on the livestock market. The packer, in order to recover the losses resulting from a low lard price, penalized the farmer for heavy hogs and penalized the consumer 10 to 15 cents per pound through a higher price for pork chops. The end result was a very bearish situation and hog prices started to tumble. In fact the miserable handling of the fats and oils situation was the prime mover in the commodity price drop.

I would like to apply the fats and oils situation to Brannan's farm program. The support price under his program for corn is $1.46 per bushel. On the 13 to 1 ratio of corn to hogs this would mean a support price of 19-cent hogs. On the basis of 19-cent hogs lard should sell for 25 cents per pound wholesale. But, the planners have permitted it to drop to 11 cents. Now they are going to ask Congress to vote funds to support the hog price, etc.

TARIFF SUPPORT

All of this could have been avoided by the simple process of a tariff at the parity level. The tariff would have prevented the glut in our market and would have supported the fats and oils price and in turn the hog price, etc. If Brannan carries through his program and permits lard to sell at 11 cents per pound, hog prices to balance with it would have to drop to 8 cents per pound. This would force Secretary Brannan to pay the

farmer $22 on every 200 pounds of hogs live weight. Current lard prices are similar to those existing in 1939, and if farm prices were permitted to drop to that level in order to give the consumer cheap food, the Department of Agriculture would have to pay out approximately $18,000,000,000 to maintain Secretary Brannan's $26,000,000,000 parity income level. In addition, 1939 farm prices would reduce our national income to $100,000,000,000.

AN AMERICAN FARM PROGRAM

What has happened in the case of fats and oils can be repeated many times with other products on a free-trade basis. It can happen in textiles, fruits, butter, vegetables, wool, and woolen manufactures, metals, petroleum, etc.

I feel that everyone realizes that the world problem and the danger of communism has its roots in poverty. Why then should we try to solve the problem by helping to perpetuate the low prices for raw materials in the rest of the world and jeopardize our own price level? The greatest aid we can render the world is to maintain a prosperous economy.

Therefore, Secretary Brannan should have come forth with a program to maintain farm prices at parity so as to maintain full employment and prosperity in the United States.

Then he should have recommended that this price be protected with a tariff at the parity level and that this tariff be flexible and in direct proportion to the difference in world prices and the American cost level.

From that as a foundation the State Department could notify the world that we expect them to reorganize their exchange and price structure to conform to that of the United States, and if a wheat agreement is to be signed it should be on the basis of a world price of $2.20 instead of $1.10. Further, that as the world adjusts its economy on a sound and prosperous basis which will not require an international WPA financed by the United States, the tariff will be reduced in direct proportion to the increase in world prices.

Such a tariff would automatically provide an indirect price support at no cost for 85 percent of American production and would be equitable to all groups. To this could be added commodity loans at 90 percent of parity on the eight principal nonperishable crops, representing approximately 85 percent of our harvested production. The tariff at the parity level would support our price level in the same way that it has for 150 years. The farmer should be permitted to produce to the fullest extent compatible with good soil conservation. If a shift in crops is desired it can be carried out through soil-conservation payments, which in turn should be considered as an investment in a future supply of new wealth for the generations to follow. Commodity loans on a known and permanent basis can be carried by the banks in our local communities and would represent an investment in real wealth in the same manner that we maintain the price of our gold supply. A reserve of basic nonperishable crops in case of drought and war would be more valuable than gold.

The cost of such a program would be very minor as compared to a loss of $100,000,000,000 of national income which will result if we do not support farm prices, and could easily be borne out of a national income comparable to the $224,500,000,000 which we had in 1948.

The surplus in the United States has been grossly misrepresented. In 1948 our total exports of agricultural products amounted to $3,420,000,000 and our imports amounted to $3,150,000,000. If we had charged the net export of $270,000,000 to profit and loss, it would be an infinitesimal part of the $224,500,000,000 of national income generated in 1948 through a $32,000,000,000 gross farm income.

In fact, if we had to charge off the entire export of $3,470,000,000 out of a national income of $224,500,000,000 which we know we can have with a $32,000,000,000 gross farm income, it would be a small charge, indeed, to pay for full employment and a solvent United States.

With such a program we can give the world the leadership it needs if the cold war against communism is to be won. If we follow the Brannan proposal, we will end up in a depression that will make 1932 seem like a Sunday-school picnic and communism will have a field day and our socialized economy will be a close counterpart to the Russian system.

The real danger in Brannan's proposal is the confusion it will create. It may tend to confuse Congress and prevent it from repealing the Aiken farm bill, which, if permitted to operate after January 1, 1950, will also plunge us into a depression.

To head off what may be a full-fledged collapse of our economy, Congress, before voting all the funds for foreign aid from an unknown national income, should restore the 90-percent parity-price floor and protect it as I have outlined. From that as a foundation we can make a realistic attempt to restore world economy on a sound basis. Without that as a foundation we will continue to pour the resources of the United States down the rat hole and destroy the economic system that has given 6 percent of the population of the world 45 percent of the income and the highest standard of living in history.

In conclusion, I wish to state that parity for agriculture is the solution to our economic confusion. To have such an economic program does not require socialism, although it does require a better understanding of our own economy.

If retail merchants and the factory workers realized that unchangeable laws of exchange and arithmetic will force a loss of approximately $4.20 in retail sales volume and $4.20 in total wages for each $1 drop in gross farm income, they would want to impeach the President and Members of Congress if farm prices are permitted to fall below an average of 100 percent of parity.

The program of 90-percent commodity loans and a tariff at parity would permit our prices to fluctuate between 90 percent of parity and 110 percent as a ceiling, the indirect effect of the tariff at the parity level. Our economy would average approximately 100 percent of parity, the automatic balance in exchange of goods. It would be strictly in accord with our own American system.

Our forefathers in the Constitution gave Congress the power to levy tariffs and to "regulate the value of the dollar." To provide stability of price at the parity level, the point of equal exchange, is nothing more than a stable monetary system.

The so-called depressions of the past have been due to price dislocations resulting from wildly fluctuating farm prices.

There can be no social security without price stability. Provisions for Government doles become a myth as falling prices destroy the income of the Nation and preclude taxation to pay the bill.

Our annual cycle of production if priced at an average of parity will automatically give us a level of income and prosperity in direct proportion to our ability to produce goods—the real wealth—which determines our economic welfare.

The record of the United States, if properly analyzed, reveals the "key to prosperity," namely, farm prices at parity. We are in a position to give the world a new message of prosperity and peace. Instead of that we find our Secretary of Agriculture and his assistants trying to get something for nothing with a proposal that is neither based on sound economics or our American system.

If we insist on pricing wheat and other farm products at a level of $1.10 per bushel for wheat instead of $2.20, then we must be content with only one-half of our current income and wage level. Yes; then we must be content with socialism and communism instead of economic and civil freedom.

Year	Gross farm income (billions)	Percent gross farm income of national	Mineral production (billions)	Combined or total raw material income (billions)	National income (billions)	Percent of raw material income to national
1929	$13.0	14.8	$5.8	$18.8	$87.3	21.4
1930	10.5	14.0	4.7	15.2	75.0	20.2
1931	7.6	13.9	3.1	10.7	58.8	18.2
1932	5.7	13.6	2.4	8.1	41.7	19.4
1933	6.4	16.2	2.5	8.9	39.6	22.4
1934	7.8	16.0	3.3	11.1	48.6	22.8
1935	9.0	15.8	3.6	12.6	56.8	22.1
1936	10.0	14.9	4.5	14.5	66.9	21.6
1937	10.6	14.4	5.4	16.0	73.6	21.7
1938	9.4	13.9	4.3	13.7	67.3	20.3
1939	9.9	13.6	4.9	14.8	72.5	20.4
1940	10.3	12.7	5.6	15.9	81.3	19.5
1941	13.1	12.6	6.8	19.9	103.8	19.1
1942	17.7	13.0	7.5	25.2	136.4	18.5
1943	23.0	13.6	8.0	31.0	168.2	18.5
1944	23.6	12.9	8.5	32.1	182.2	17.6
1945	24.0	13.1	8.9	32.9	182.8	18.0
1946	27.1	15.2	9.1	36.2	178.3	20.3
1947	33.0	16.2	12.4	45.4	202.5	22.4
1948 [1]	32.4	14.4	15.6	48.0	225.0	21.3

[1] Estimated for 1948.

NOTE.—Gross farm income is total farm production sold, plus farm products used on the farm. Total average percentage of gross farm income to national income 14.3 percent or approximately $1 of gross farm production to $7 of national income.

Average percentage of total farm and mineral production 20.2 or approximately $1 of raw material income, farm and mine, for each $5 of national income. Percentage of parity for raw materials determines the percent of prosperity and each 1 percent of parity for raw materials represents approximately $2,000,000,000 of national income. Society cannot afford to permit raw material prices to go below parity and employment and national income will ratio directly to raw material income in ratios set out above.

ANALYSIS OF H. R. 2368 BY HON. BEN. F. JENSEN, OF IOWA

On February 7, 1949, I introduced in the House of Representatives the Soil Conservation Act of 1949. This new bill, H. R. 2368—a revised and improved soil-conservation program based on H. R. 4417, which I introduced in 1947—provides for lasting benefits to the farmer and to every American.

This legislation provides a national land policy, and the legislative framework for the effective administration of a United States Department of Agriculture soil-conservation program that will assist our farmers and ranchers to conserve and make proper use of their soil and water resources—and will get the job done in the shortest possible time.

In addition, there are provisions which will help to correct the problem of surplus in certain crops. Land-use-conversion payments will encourage farmers to use some of the land contributing to such surplus for the production of crops for which there is greater demand, such as gras. for meat and dairy livestock and timber. When the proper and necessary changes in land use are made I am sure there will be no need for acreage allotments. In bringing about a balance in agriculture production the Government will be better enabled to support farm prices permanently at a full 90 percent of parity.

By using about $100,000,000 annually of the funds now being used for soil-conservation payments, for land-use conversion payments, as provided in my bill, 24,000,000 acres of land could be converted from soil-depleting crops to soil-conserving crops in the next 6 years. This would bring our food, feed, grain, fiber, and meat production into better balance, and greatly assist in flood prevention, and soil, woodland, and water conservation.

Conservation payments and grants-in-aid are provided in such manner that the taxpayer can be assured that the Nation will receive a dollar's worth of benefits in true, effective soil conservation for every dollar spent. Farmers receive more responsibility in administering their own national soil and water conservation program. No new agencies are established. The Soil Conservation Service, Extension Service, and Production and Marketing Administration are each given more responsibility and without duplication.

If H. R. 2368 becomes the law of the land it will begin to bring "soilicide" to an end, the crime too often committed against the priceless topsoil of mother earth. It will insure a more stable income for our farmers, which in turn will insure an adequate and stable income for workers, business, and industry. It will be an effective program to help reduce price-depressing surpluses; increase the speed and quality of soil-conservation work in the Nation, while strengthening the farmer-managed institutions engaged in such work; keep more rainfall on the land where it falls, and thus lower flood crests and reduce reservoir sedimentation; give better protection of our rich agricultural uplands and bottom lands, human lives, livestock, and buildings; save the taxpayers'—your—money through a more efficient and effective farmer-managed water, woodland, and soil-conservation program; provide the legislative and administrative framework to put our agricultural house in order—for any national or international emergency.

NATIONAL LAND POLICY

A productive and prosperous agriculture is a must for the Nation's prosperity. The wealth of our Nation is wholly dependent upon the productivity of our soil. As the topsoil is destroyed or weakened through erosion or overuse, the productive capacity of that land is lowered. Food costs rise and a lowered standard of living results. This legislation provides that we use our agricultural land within its capabilities for safe production, and that we treat each acre in accordance with its needs.

NATIONAL CONSERVATION SURVEY

Early completion of a Nation-wide survey of our farm, ranch, and woodlands to determine the productive capacity and conservation needs of each acre is provided. A land capability map shall then be made available to each landowner, showing how each acre should be used according to its capabilities for safe production.

CONSERVATION TIMETABLE

A conservation timetable shall be developed as a guide to the Nation in determining the speed with which our farm, ranch, and woodlands should be treated to prevent further extensive damage.

SOUND FARM UNITS

H. R. 2368 will assist landowners in acquiring acreage to complete a profitable farm, and thus reduce much land overuse resulting from uneconomic-size units.

TECHNICAL ASSISTANCE

Technical help for effecting proper land use and conservation treatment shall be made available to all farmers. Inside conservation districts, technical help shall include on-site assistance to plan and apply a properly coordinated conservation program. Until a district is organized, such help shall be limited to helping farmers carry out the more simple but effective conservation practices.

CONSERVATION PAYMENTS

To encourage proper use and conservation of our agricultural resources, land-use conversion, soil-conserving, and soil-building payments and grants-in-aid shall be made available.

Class A: To avoid surpluses resulting from overuse of the land, payments shall be made to assist farmers in converting the use of land that has been for the previous two or more years in grain, row, and other soil-depleting crops. This will encourage a balanced production of food, feed, grains, and fiber, and promote a greater production of meat and dairy livestock, and timber crops.

Class B: Payments shall be made to help farmers defray the cost of applying certain permanent or semipermanent soil- and water-conservation measures. Generally, such payments shall be made only once.

Class C: As an added incentive to encourage farmers to hold their topsoil through proper land use, and other soil- and water-conservation practices, class C payments may also be made annually for recurring practices that will retard depletion of soil fertility.

LOCAL CONSERVATION DISTRICTS AND FARMER COMMITTEES

This legislation recognizes that farmers themselves are best qualified to administer their own national conservation program on a local and community level. Farmer-voted conservation districts organized under the laws of respective States and directed by their respective boards of soil-conservation commissioners and supervisors, and county agricultural conservation association, and State Production and Marketing Administration committees shall be the principal farmer-managed organizations through which the Government shall assist farmers with their soil- and water-conservation problems.

AGENCIES TO BE USED

Primarily, three governmental agencies shall carry out the provisions of this act. Each is well-schooled in the art of doing its part in soil and water conservation.

SOIL CONSERVATION SERVICE

Because it is impractical to separate the technical, conservation payment, and grants-in-aid assistance in soil conservation, erosion control, drainage, irrigation, water-conservation development, and flood prevention on farm and ranch land, the Soil Conservation Service shall be responsible for all such provisions of this act, except for the specific responsibilities of County Agricultural Conservation Association and State Production Marketing Administration committees.

EXTENSION SERVICE

This legislation provides for the needed personnel for county extension staffs for educational work in conservation districts and in areas critically in need of conservation treatment not now in conservation districts.

PRODUCTION AND MARKETING ADMINISTRATION

The County Agricultural Conservation Association and State Production and Marketing Administration committees shall be the agents of the Secretary of Agriculture in making all class A, B, and C conservation payments.

FEDERAL LANDS

With cooperation of the agency having jurisdiction, all of the conservation survey, time table, and technical assistance provisions of this act may be made available for the conservation of federally controlled lands.

We must save the soil by which we live. Rich productive soil will insure the survival of America.

A Friendly Analysis of the Columbia River Bills—Part 3

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my remarks today, I include the third and final part of my analysis of the four major proposals for Columbia River regional legislation pending before this Congress. The first part appeared in the RECORD for April 26 and the second was printed in the May 3 issue.

A FRIENDLY ANALYSIS OF THE COLUMBIA RIVER BILLS—PART 3

Wherever the subject of Columbia Valley resource development has come up in the past several years, people all over the Pacific Northwest have almost without exception found themselves saying: Certainly, we favor the principle of coordinated development—certainly, we feel that the present methods can be improved—certainly, we hope to find a way of composing our differences—but whatever solution is arrived at, we want to keep for ourselves a definite measure of local control.

In every discussion of this subject, the overriding factor has always been the question of local control. Objectors to the original Columbia Valley Authority bills usually centered their fire on the fact that the CVA would be dominated entirely by Washington, D. C., that the people living in the region would have absolutely no voice in determining the policies according to which the Columbia region would be developed and ruled.

So I think it fitting and necessary that I conclude this series of three discussions of the Columbia River legislation before the Eighty-first Congress with a comparison of the effect upon local control of the Columbia region's resources which would be worked by each of the four major proposals with which we have been dealing. If there is any one consideration which will be overriding in importance when and if these bills are given public hearings in the Pacific Northwest and in the Halls of Congress, that overriding consideration will be, local control.

It was precisely because of the utter contempt for local control—the complete disregard of participation by the people in policy matters—contained in the first CVA bills that I began to work on a proposal to achieve the end of coordinated development and still give the balance of control to the people who live in the region to be served.

It has always been my contention that the people of the Pacific Northwest have no more desire to be ruled from Washington, D. C., than from Wall Street. It has been impossible for me, therefore, to support any bill having to do with the setting up of a new agency for Northwest development in which the people who live within the drainage area of the Columbia River were not given an effective voice in the determination of policy and the administration of the program. In this I have been supported by thousands of farmers, workers, and businessmen, who over a period of many years have been in the "yes, but" category whenever CVA was under discussion. They are the ones who always say, "I'm in favor of the principle of CVA, but I want some provision for local control."

I have said it before—and I want right now to say it again—of the four major proposals for Columbia River development, there is only one in which there is an effective provision for local participation. That one is my own bill for a Columbia Interstate Commission.

Anyone in the Pacific Northwest who says he wants local control of a CVA will be able to do so honestly if he insists that the administration bill be so amended as to include the major local control provisions of my CIC bill. That includes the dozens of Granges, labor unions, and other organizations which in the past few months have sent resolutions and petitions to Congress, placing themselves on record as favoring a CVA, provided it assures a measure of home rule or local control.

Now, let us examine these four proposals and see just what they do provide in the way of participation by the people whose lives and futures depend upon the activities of any Columbia regional agency which might be formed.

The first bill, you remember, was the original Columbia Valley Authority. In it there were only two places in which local interests were even mentioned. The CVA, in drawing up its master plan for the area, would be instructed to enlist the advice and assistance of State and local governments. The CVA was perfectly free to reject that advice. There was no provision for local hearings, formal protest on the part of parties injured by activities of the CVA, or any hand in the selection and approval of the personnel selected to run the agency. There was a statement to the effect that State laws regarding water rights were to be respected—except that the rest of the bill gave the Authority sufficient power to circumvent them almost at will.

There is, to be sure, the joint Reclamation Bureau-Army engineers plan, which was announced April 14 of this year and heralded by the bitter CVA opponents as a States' rights plan. It is, of course, no such thing. It is based on a series of compromises between the differing proposals of these two Federal construction agencies, in which the States concerned had very little to say. It would be carried out through the present Columbia Basin Inter-Agency Committee, which is purely a voluntary organization existing only by will of the several Federal agencies, which set it up and invited the State governors to sit in on its meetings. This Inter-Agency Committee has no statutory authority, can make no decisions binding on anyone, and is not authorized to speak on behalf of any of its member agencies or States.

I have pointed out time and again that many of those who constantly speak of carrying on development of the Columbia region through existing agencies are the same ones who constantly criticize those same existing agencies either for not paying enough attention to the desires of the people or for allegedly meddling in local affairs which are none of their concern. As things are constituted today, it is utterly impossible for the administrators of those agencies to do their jobs and not run afoul of one criticism or the other. I have developed this particular argument several times before and have yet to have any of these States-righters explain the paradox.

The fact remains that today in the Pacific Northwest the people who actually live there have very little to say directly toward determining the policies according to which the Columbia region will be developed. The fact is that on many occasions in the past, the will of the people of the Northwest has been frustrated by action of Federal agency heads or a Congress in which the Pacific Northwest States have only a fraction of the strength necessary to have any real effect upon the majority. This is not a question of partisan politics; it is a question of simple mathematics that the people of the Northwest will have an effective role in the determination of their own future only when it is guaranteed to them by law.

It was because of these objections to the original CVA bill and the impatience I felt with the status quo that I first proposed the Columbia Interstate Commission bill. In it, I have combined a formula for giving to the people of the area the measure of local control they desire and should have. I feel that, regardless of the name given to any agency for the Northwest—whether it be called an Authority, an Administration, or a Commission—the important thing is that the principle of effective local control be incorporated into it.

In my CIC bill, I made two specific sets of provisions for participation by the people. First, I required that a majority of the Board of Directors—four of the five—be residents of the States in the Columbia Valley. One director would come from Washington, one from Idaho, one from Oregon, and one from Montana. These directors would be selected by the President of the United States from lists of nominees to be submitted by the governors of the States concerned. Thus, my CIC bill is the only proposal for Columbia development in which the States themselves have a direct part in naming the operating heads of the agency. Since these directors would be appointed for staggered 7-year terms, there would be a continuity of operation which is required for such an agency. In most other respects, the directors would have the same duties and authority as in the administration bill.

The second provision in my CIC bill which makes it different from the other proposals which have been offered to date, is the Columbia Interstate Advisory Council. This council, under my bill, would be a statutory body representative of the five Columbia region States—Washington, Oregon, Idaho, Montana, and Wyoming—whose membership would be appointed by the governors of the States. This council, whose membership would reflect the changing opinions of the people through the normal regular elections, would be the body which would hold public hearings on the Federal resource proposals, would investigate the policies and operations of the agencies in the area, would hear protests and make recommendations to the Congress on behalf of the people of the Northwest.

Since the Advisory Council, under my bill, would be directly representative of the people of the States and would have a positive statutory function under the CIC, it can truly be said that my bill does provide a real measure of local control over the activities of the Federal agency.

Now let us consider the gestures toward local participation which have been included in the administration's new CVA bill. In the statement of policy contained in the opening section of the Truman CVA bill, the agency is required to seek the advice, assistance, and cooperation of the people of the region and their public and private organizations. It even says that this advice shall be relied upon to the fullest possible extent. But, while two members of the Board would have to be residents of the area, the people of the area would have no part in their selection.

In section 5 of the Truman CVA bill, there is a provision that the administration shall make arrangements for consultation and exchange of views with the appropriate representatives of State and local governments, of the agricultural, labor, and business interests and of the general public of the region. These arrangements, according to the CVA bill, are to be made through the establishment of an indefinite number of advisory boards and councils, of indefinite size and composition, none of which shall have any real authority nor even any function other than what the three-man Board of Directors chooses to give them.

The Administration made one further concession to my proposals in stating that these advisory councils shall have the privilege of making reports on the particular phase of Columbia development on which they are supposed to be expert, which reports would be included in the CVA's annual report to Congress. However, since these councils are formed merely at the whim of the directorate, there is nothing in the bill to prevent the Board of Directors from dissolving any council whose report it dislikes or whose advice it cares to spurn. The Board always maintains the power and privilege—in effect—of appointing only such advisory councils as it can be sure will always agree with the Board's own opinions.

Since the advisory councils provided for in the Administration CVA bill have no specific statutory membership, form, or tenure of existence—indeed no existence at all other than what the CVA Board cares to give them—it cannot be inferred in any other way but that these councils will be mere puppets. In no sense can they be said to be in a position effectively to represent the people of the region. Certainly, these very illusory advisory councils provided for in the Administration bill cannot be said to give anything even remotely resembling local control.

Like every other resident of the Pacific Northwest who sincerely wants to see this gigantic program of resource development handled in the most efficient, economical, and representative manner, I do hope that we can have some full-scale public hearings on these Columbia legislation bills—held in the Pacific Northwest where the people most affected can participate in and listen to the evidence—so that all of us can use every good and sound and valid idea we have toward working out the most acceptable solution. It may be that in that manner we can evolve a better approach toward the problem of regional development, of which we can all be proud. To that end, I stand ready and willing to supply, to anyone who will write me, copies of all four of these major proposals, so that you who live out there can study them for yourselves and determine which method you think best. That is the only basis upon which you should make the decisions you must make.

Standard Cyaniding Mine

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Lovelock Review-Miner:

STANDARD PLANT CLOSES, WILL BE SOLD, TORN DOWN—INCREASED COST OF OPERATION CAUSES FOLD-UP—GOVERNMENT INTERFERENCE, GOLD MONOPOLY ALSO BLAMED

Complete close down of the Standard cyaniding mine and mill took place Wednesday, according to Manager H. L. Hazen.

The big 500-ton cyaniding mill has been taken over by the Western Machinery Co., of Salt Lake City, and will be dismantled and sold. The mining camp of over 100 people will be completely wiped out.

Cause of the fold-up is the stable price of gold while all operating costs rose from a fifth to over twice what they were when operations started.

Figures showing why Standard Mine failed to pay out

	Prewar costs	Present costs	Percentage increase
Mill labor, hourly pay	$0.80	$1.42	77
Electric power, per kilowatt-hour	.0125	.0125	None
Burned lime, per ton	17.50	21.00	20
Cyanide, per pound	.1215	.1475	21
Zinc dust, per pound	.1750	.2275	30
Blasting powder, per pound	.1000	.1400	40
Liners for crusher, per pound	.3167	.4509	43
Liners for rod mill, per pound	.100	.1500	50
Grinding rods, per pound	.0700	.1271	82
Diesel fuel oil, per gallon	.0775	.1460	89
Gasoline, per gallon	.1150	.2460	118

BLAME FEDERAL GOVERNMENT

Those involved in the operation blame the Federal Government for the loss of the plant. The Government's monopoly of gold and refusal to allow it to be sold on a free market is blamed directly by them for the shut-down. Had gold been allowed to be sold on a world market, the county and State would have continued to benefit from the big operation.

EMPLOYED 65 WORKERS

The mining, trucking, and milling outfits involved have employed an average of 65. A monthly pay roll of $10,000, was maintained with an estimated $8,000 being spent in Lovelock and a considerable amount in Imlay and Winnemucca. Labor accounted for approximately half the operating costs.

The only cost that didn't go up was power furnished by the Sierra Pacific Power Co. The price remained the same throughout the operation.

STANDARD OIL MEN START WORK

The property was acquired by a group of Standard Oil men, known as the Standard Syndicate in 1935. They took a bond and option on it from a prospector, Jim Lally, and his grubstaker, the former Supreme Court Justice J. A. Sanders. Both are dead. In 1935 development work started and one of the best developed properties in the history of Nevada resulted. The deposit was thoroughly engineered by shafts, winzes, raises, tunnels, and drillings. Numerous checks were made on assays. It was found to be a giant slab that had slid into the area from some unknown region.

The Western Machinery Co. erected a mill on the property, said to be one of the finest in the United States. Nearly all parts were automatic. Essential machinery was in duplicate to prevent break-downs.

All mining was by power shovel and the ore was trucked a short distance to the mill by large trucks. Until the last year all mining and trucking was contracted, the Kirkman Pitt Co. doing most of it. At one stage of operation, the shovels dug into ore that was comparatively rich for the area, but was considered in too far for pit operation. The terraces were carefully watched as some of it was mined. They slid in when no men or machinery were at work but ended operations on that phase.

One of the greatest expenses was removal of overburden, but the decisive thing was the high cost of labor and milling.

The total amount of waste through stripping was 2,335,000 tons. The total tons of ore milled was 1,005,262. Total bullion recovered amounted to $1,634,437. For every ounce of silver recovered, one ounce of gold was obtained, or about 10 cents worth of silver to every dollar's worth of gold. If 40 cents worth of gold that was locked in a form not touched by cyanidization could have been recovered, the mine could have operated indefinitely even at today's prices.

During the last 2 years, average heads fell to $1.65 per ton and average costs increased to $1.60 per ton. The tail loss averaged 40 cents per ton, so it required $2 per ton in the heads to break even. As much as 750 tons of ore was put through the mill over a 24-hour period.

During one period, when stripping could not keep up with milling, old Rye Patch dumps were milled. Only 250 tons per day could be handled but an operation, at least rich enough to pay expenses and keep the crews together, was carrried out.

The life of the mill could have been prolonged had the mine investors been able to get a lease on all the old Rye Patch mine property. They succeeded in making a deal on patented ground but holders of Government ground refused to work anything out. The Standard people refused to take a chance on ore being discovered on patented ground outcropping on other property.

One of the biggest blows given the operation was dealt by the Federal Government Order No. L-208 closing down all gold mines. It was the only industry so treated, except horse racing, which was closed down for a period of 8 weeks during the recent war. The company was practically forced to sell its crushing plant for $25,000. Replacement cost $125,000. The mill, priced at $500,000, had $325,000 paid on it.

As a result of the Government wartime order, the mine was closed from 1942 to the fall of 1945. It took real sacrificing to prevent the mill returning to the constructors.

The company filed on and prospected a large deposit 2 miles north of the original mine. For a time it appeared that it might save the set-up. Recently the mill operated on development ore that proved very profitable, but it turned out to be a pocket. Ore was discovered that could have been milled but the overburden was great. Large sums of money were advanced on the chance that the set-up could be maintained. When it was found that a profitable operation could not be maintained, the close-down order was issued.

Last year it appeared that the Standard plant could be converted to a concentrator of fluorspar. An option was taken by a well-known Nevada financier on the large fluorspar property in Black Canyon, now owned by Schwabrow and Schendel. A search of the market revealed the fact that there was not a large enough market on the Pacific coast to absorb the output and that most of the fluorspar is used in the steel industry in the East.

General Clay and His Great Services

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial entitled "Blockade Off May 12," appearing in the Boston Post of May 5, 1949, commending Gen. Lucius D. Clay, and properly so, for his outstanding services and leadership in Germany. General Clay merits the thanks of the American people for his exceptional work and results.

The editorial follows:

BLOCKADE OFF MAY 12

The world heartening announcement is made that the four powers, United States, Britain, France, and Russia, have agreed to lift the Berlin blockade on May 12, preparatory to a new meeting of representatives of these powers to take place May 23.

To be strictly factual it should be said that the Berlin blockades are being lifted on that date, for actually there were two blockades—one imposed by Russia on goods moving to Berlin and a counterblockade by the Western Powers on goods going into the Russian, or eastern zone of Germany. In recent months reports have been leaking out that the Russians were feeling the ill effects of this counterblockade, while because of the air lift their blockade against Berlin was ineffective. So it appears Russia has had enough of this game.

It is more than a coincidence that the man who was responsible for carrying the Western Powers successfully through this perilous crisis, Gen. Lucius D. Clay, has at the same time announced his retirement as military governor of Germany to take effect on May 12. He held on to this post against his desires until the job was completed—and now he should be welcomed home with a great tribute.

For General Clay proved to be an exceptional administrator in a situation where one false move or mistake when the Berlin blockade was boiling might well have precipitated the third world war. At times we were probably closer to a renewal of war than most people realized.

Incidentally, President Truman's policy of retaining outstanding military men in key diplomatic posts, which has been so severely criticized by his opponents, has proved its value in each instance. Who among the pseudo politicians who usually are appointed to these posts, because of their large contributions to campaign funds, could have done so well as Generals MacArthur, Marshall, Bedell Smith, and Clay?

What Russia will now request at the forthcoming conference remains to be divulged, but intimations are being handed out by the Russian press. These suggest that Russia will strive to upset the creation of the new western German state and contend that Germany be unified, with, of course, the object of Communist influence away out of proportion to their present numbers. There will be demands for modification of Allied control of the great steel and coal resources of the Ruhr to guarantee to Russia a certain percentage of this industrial output.

That is a hurdle still to be overcome; but at least we have gained one great victory in the cold war by the lifting of the blockade.

Radio Address of Hon. Donald L. Jackson, of California

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. ALLEN of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Representative DONALD L. JACKSON, of California, over the American Broadcasting Co. network on Saturday evening, May 7, 1949:

Good evening, ladies and gentlemen, as a Member of the Congress and as an American who has a vital interest not only in where we've been but where we are going, I deem it a privilege and an obligation to discuss with the listening audience tonight President Truman's proposal for compulsory health insurance for the American people.

I do not question the President's motives in suggesting another step along the road to all-out and complete control of the lives and destinies of every American citizen, but I must take issue with any program which proposes to extend the area of compulsion by government, which area has spread during the past few years until no life, no home, no business is today in the sunlight of total liberty of action under law.

We Americans recognize and subscribe to the necessity for a reasonable measure of compulsion in our relationships with constituted authority.

We complain about the police officers and the red tape of local bureaucracies in our home communities, but we accept the inevitability of these conditions because of an underlying knowledge in our own minds that the alternative to order and law is chaos and turmoil.

But compulsion from our Federal Government is another matter. The President of

the United States is not Joe Jones, the local constable; nor is Mr. Ewing of the Federal Security Agency a member of your local city council. These gentlemen in Washington are, to most people, simply names, names which have too frequently been associated with raids by the Federal Government upon your weekly pay checks.

Social security is a wonderful thing. To be socially secure means that you have nothing to fear in a social and physical sense. Were it possible to accomplish this desirable end without penalty, such a legislative measure would pass the Congress without dissent. What, then, are the practical obstacles to the achievement of this immediate Utopia without further delay.

Let us consider for a moment the problems of the national health. With respect to health insurance or socialized medicine, as some prefer to call it, I think that we must discuss several basic considerations.

Is there a current need for such legislation? Secondly, if a need does exist, how, and by whom, should it be met. Thirdly, if met by an agency of Federal Government, what will be the probable effects upon (a) those who receive such free medical services; (b) upon those who do not receive them; (c) upon the medical profession itself; and (d) upon those, who for one reason or another do not want such a Federal program. Last, but by no means least, what will be the effect of such programs of Government assistance upon our Federal Treasury, and upon the vigor, initiative, and character of the American people.

Let us first of all consider the need for such a program of compulsory health insurance. Are the health standards of America indeed so poor as to require, under penalty of law, that each citizen subscribe to such a program and make contribution to the Federal Government for insurance under the program whether he desires it or not?

American health standards are among the highest in the world—our mortality rates among the lowest. Statistics tending to indicate that other nations have higher standards should be carefully weighed to determine whether or not the published mortality figures exclude the aboriginal or native populations. The Maori tribes of New Zealand, which country is one of only two nations in the world with a better health index than the United States, are not computed in arriving at mortality and clinical data. In our own case, every segment of our population is considered in arriving at national health figures.

Proponents of compulsory health programs view with alarm figures compiled during the war by the Office of Selective Service, which appear to indicate that American youth is on its last legs. Again, omission of vital information must be charged to the advocates. We had a high rate of rejections during the war, solely because our standards for admission to the armed services were higher than anywhere else in the world. It was not because our young men were physically inferior to the nationals of other countries, but rather because of the fact that we did not induct into service one-armed fliers or nearsighted truck drivers.

Another point that is often overlooked in discussion of our national health is the clinical factor. The school health programs have reached a high state of efficiency here in the United States. Certainly, one out of four American children needs care taken of his teeth, but we know it and are doing something about it. Certainly, there are hundreds of cases of incipient tuberculosis among the school children of America, but American medical men, working hand in hand with American education are discovering these cases, where elsewhere they would go unheeded until too late to arrest.

In brief, American health standards are more adequate and more comprehensive than those of any other country in the world. When one looks for disease it will be found, but no one should draw any hasty conclusions or make comparisons of our national health on the basis of discovery and knowledge. We know of illness and disease here at home only because our efficient clinical methods have brought the conditions to light.

It is generally conceded that the greatest need for adequate medical attention is among the middle class. One entirely unable to pay for hospitalization obtains it in great and modern institutions provided through tax funds for that purpose in almost every city and county of the country. The man of wealth obviously has no problem in this regard. Our concern is the wage-earner, who may or may not, have a few hundred dollars in the bank, but over whom the fear of illness hangs like a constant cloud.

Assuming then, that a need for some type of health insurance does exist, we can move logically to the second consideration of the proposed program—to wit, how, and by whom, should the need be met?

It has long been my conviction that an American hates compulsion, and from this conviction has come my belief that the average American would prefer an honest program directed to his particular needs on a voluntary basis. It is estimated that payroll deductions for compulsory health assistance may approximate as much as 6 percent of a pay check. Add to this amount other deductions for social security, compensation, and sundry other withholding taxes, and the day is not far off when the American workingman will pay out in pay-roll deductions as much as he takes home to the little woman on Saturday night.

If the Government is to assist in insuring better health to the American people, it is my opinion that the assistance can be better rendered at the local levels of government than by building a new Pentagon Building in Washington, D. C. Grants and loans might be made available to States and counties for the construction of additional hospital facilities. Contrary to popular opinion, American doctors represent one of the hardest-working professions in this country. Any projected health program must first of all provide additional qualified personnel. In Great Britain, doctors participating in the socialized health program are required to see and treat from 50 to 100 patients a day, none of whom are required to make any payment at all, and many of whom are not suffering a condition which requires medical attention. The fitting of wigs and false teeth has become a large part of the practitioner's art, all of which penalizes those who are actually in need of medical attention.

With funds placed at the disposal of States, counties, and cities, to be spent according to a plan approved by the Congress, those subdivisions of government could establish realistic programs designed to meet the need of its citizens. I believe that American ingenuity, proceeding on a voluntary and American basis, can meet the need for completely adequate protection.

Ours is the only country in the world today which is expending vast sums of money for research into the causes and cure of those diseases which are the great killers of our day. Funds for the study of cancer, heart disease, and infantile paralysis have placed American medical science in the forefront of research on these medical question marks. Almost every American city provides X-ray and fluoroscope services free of charge in the fight against disease, and the voluntary organizations have mapped and are carrying on a score of battles against other but nonetheless important diseases.

By an extension of, and assistance to, local governments in the fields of health and housing, the Federal Government can make a substantial contribution to American life and living. Conversely, if the Federal Government attempts by force and coercion to demand compliance in programs which are not wanted nor needed by the American people, it can only succeed in a complete demoralization of national and voluntary efforts to solve these great problems.

Let us consider some of the practical difficulties to be encountered in a program of national compulsory health insurance by those who would be most intimately concerned. In the first instance, those who receive the health services would receive a standard of mediocrity of service instead of the present high and efficient standards now accepted. Lack of personnel, complete loss of doctor-patient relationships, bureaucratic dictation, reduction of take-home pay, and an ultimately increased cost of medical attention are the immediately apparent drawbacks to the proposed plan.

Those who do not receive benefits would, of course, be paying for the treatments, the wigs, and the false teeth of those who did. Religious objections on the part of several creeds is a very real problem. Can Congress, which is barred by the Constitution from passing any measure affecting religion, take legislative action to require Christian Scientists to comply with a compulsory health program despite their objections?

What about the millions of Americans, former veterans and nonveterans alike, who are already covered by provisions of other adequate laws and contracts, both with Government agencies and private health agencies? Is the framework of all that has gone before to be destroyed in order to force compulsion upon the balance of the people?

What about the effect upon the medical profession itself, and upon the high clinical and medical standards which have been established through many years of effort? Will the patient of tomorrow become just a number with a slip of paper in his hands, or will he continue to be a human being with problems he can discuss in frankness and confidence with his own doctor.

I have talked with a great many doctors during the course of the past year about these very problems, and almost without exception I have found them to be concerned about their patients and sincerely hopeful that an answer to the admitted problems can be found. To call the members of America's medical profession heartless and self-seeking is to fly in the face of facts, facts which have recorded their unselfish devotion to duty at the scene of every disaster and emergency in our Nation's history. Would the people of Texas City, Tex., call our doctors and nurses callous and unfeeling? Would the parents of little Kathy Fiscus, the youngster who died such a tragic death in San Marino, Calif., a few days ago, call the doctors who stood by day and night waiting the call if needed—would those parents call doctors unfeeling and penurious? I think not. The history of American medicine, from the fever swamps of Panama to the tragedy of Texas City, has been a history of service and of sacrifice, and to render these men and women robots at the beck and call of a Washington bureau would be to consign not only them, but us, to a worse fate than any of us deserve.

In conclusion, and largely because it is one of the most important features of the entire discussion, what about the millions of American citizens, black and white, rich and poor, Republican and Democrat alike, who want no part of the proposed program, because they sense that the Socialist state is inherent in its provisions. They know, these free Americans, that every dictatorship ever conceived in history has made the national health one of its fundamental steps to power. Lenin said, "Socialized medicine is the keystone to the arch of the Socialist state," and

it is of interest that all of the Communist-front organizations in this country are in favor of the system for this country. Are they supporting Lenin's words and Truman's proposals for love of America and its heretofore free institutions? Not on your bottom dollar.

We can have better health and a better America, but not by using the methods and the tools of the totalitarian state. Remember, then, when a little of your liberty goes to Washington, it never seems to find its way home again.

Good night, ladies and gentlemen.

Republicans Err By Forming Alliance With Dixiecrats

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Buffalo Evening News of May 6, 1949:

THOMAS L. STOKES SAYS REPUBLICANS ERR BY FORMING ALLIANCE WITH DIXIECRATS

WASHINGTON, May 6.—The loud huzzas about a Truman defeat and a labor defeat over the dogfall in the House on labor legislation may turn out to be premature.

It takes only a short memory to recall similar shouts of jubilation over original enactment of the Taft-Hartley Act 2 years ago and the smug joy of conservative Republicans and their allies when the Republican House leadership bottled up and killed the party's social welfare program in the Eightieth Congress.

Then came, like the dawn, an election wherein the Republican Party found it had played right into the hands of Harry Truman.

There are signs that the party is repeating that performance in the cute trick that its House leadership tried to put over, and almost pulled off, with the Wood bill, a rather good copy of the Taft-Hartley Act for which it enlisted a Southern Democrat, Representative JOHN S. WOOD, of Georgia, as sponsor. That familiar strategy has worn thin.

Where does this leave the Republican Party today as symbolized in the House, one of its two showcases between elections?

Once again it stands before the public as tying itself up with an economic-political element in the South which backed the Taft-Hartley Act originally and now the Wood bill as an instrument to crush labor unionism in the South.

That is no secret to anyone familiar with the South. In fact, as related here previously, the secret was spilled frankly to the House by another Georgian, Representative HENDERSON LANHAM, one of the few southerners who voted against the Taft-Hartley bill originally. He said during debate on labor legislation that he voted against that measure because: "I was convinced that whatever its purpose, its effect would be just what its effect has been, and that is to hamper union organization."

Mr. LANHAM declared further that in the South the Taft-Hartley law also has had the effect of "actually destroying unions that already were in existence."

One owner of a small chain of textile mills in Texas, who had contracts for several years with the Textile Workers Union of America and had maintained excellent relations with the union, went to officials of the union recently and told them that terrific pressure was being brought upon him by powerful financial, business and political forces in Texas to break with the CIO.

Such forces backed the Dixiecrat movement in the South last year, as this reporter revealed in a tour of the South before election. This Dixiecrat spirit expresses itself through some Members of Congress in the House from the South, though happily not nearly all any more.

President Truman would appear to be in a good position politically, as a result of what happened in the House. He divorced himself long ago from the Dixiecrats.

Now he has as exhibit for the Nation another example of the alliance between it and the Republicans in the House, which is not a pretty exhibit. Republicans in general can't be pleased about this tail to their kite. Senator TAFT indicated as much when he promptly introduced a more moderate bill in the Senate to clear the party's stand.

While labor leaders were resentful over some phases of the compromise that Speaker of the House RAYBURN offered, which was defeated, particularly the injunctive provisions, they cannot turn to the Republicans after that party tied up with its worst enemies.

The Battle of Hollywood

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Fortnight magazine for April 29, 1949:

THE BATTLE OF HOLLYWOOD

This fortnight Hollywood's collection of congenital fools, infantile pacifists, and actual traitors are making ready for another big show. The Communist People's World has, for several weeks, been grinding out its usual treasonous propaganda about the peace meeting. Lights have been burning late in some Hollywood homes as small groups of party members putter over headline-seeking details. Yes; Henry Wallace is coming to town (Gilmore Stadium, May 13, evening).

There will be the same pack of confirmed anti-Americans and petty intellectuals out beating the tub for Wallace. Charlie Chaplin, Edward G. Robinson, John Howard Lawson will undoubtedly be on hand to act as window dressing—hoping to convince the world that they speak for Hollywood when they stand against ratification of the North Atlantic Pact. Author Thomas Mann, who has been quite useful to Stalinists in the past, has probably been asked to front up the show, lend intellectual dignity, and reiterate the outdated and once-potent pleas of antifascism. Maybe Paul Robeson will be asked again to act as the self-appointed spokesman for his race. This month the singer took it upon himself to discredit his race when he declared in Paris that the American Negro—after the pact—would never again fight for his country. Naturally, reputable colored leaders denied this Communist prattle.

Wallace, as usual parroting the Stalinist line, will devote himself to the topic that war is the inevitable result of Americans fighting Communist aggression. It is slightly akin to racketeer Mickey Cohen leading a panel discussion on the subject Is the Los Angeles Police Department Really Necessary?

Wallace and his booby-trap liberals have lined up the usual Communist cup-bearers to aid in pouring out the party line. Included will be a Swedish lecturer, a left-wing Italian politico, and a British party liner. Nothing like giving the meeting an international tone—which is, indeed, ironically true. Wallace will travel down the coast, speaking in Seattle, Portland, and San Francisco before he reaches Hollywood. You may rest assured that the Hollywood date line is the most remunerative to the Reds.

This event in itself is scarcely worth outlining. But there's a fresh and encouraging involvement in Hollywood this time which deserves laudatory comment. Finally, loyal Hollywoodians have discovered that they have in the past been politically naive—both in their apathy and action—and have organized to effectively fight back.

It is particularly pleasing to add that the group that has banded together to fight Wallace represents the most divergent mixture of political, economic, and social factors conceivable. On less pressing issues they have often been at sword's point. This new organization is called the Hollywood Committee for the North Atlantic Pact. Explains their spokesman: "Our purpose is, first, to prove that the entertainment world stands solidly behind American foreign policy—not that of Russia—and, second, to demonstrate that Hollywood overwhelmingly favors the ratification of the North Atlantic Pact. Our people are weary of the spectacle of a ragged Red fringe claiming the right to speak with authority for Hollywood."

Included in the strength of the group is the American Legion, the CIO, and the AFL, representing all of Hollywood labor, the Motion Picture Alliance, headed by Actor John Wayne, representatives of the Republican and Democratic central committees, many of the industry's producers. Often these organizations have held bitter views of one another. Today they are united against a common enemy.

Also, on the entertainment side, composer Igor Stravinsky, who was attacked by Shostakovitch in New York recently, pianist Artur Rubinstein and Jascha Heifetz, famed violinist, have been asked to take part in the counter-demonstration. The pro-American group will hold its affair at the Hollywood Bowl, either the night preceding or after the Wallace affair. Even crusty James Petrillo of the musicians' union has for the first time in his union's history relaxed his ruling and announced that his musicians will play without pay.

More important, this should definitely separate the sheep from the goats. No movie figure who appears at the Wallace affair can, in the future, assert with a straight face that he's just a liberal. All the liberals will be elsewhere. It will clearly identify that segment of big-name Hollywood which is dedicated to working for the Soviet cause.

Perhaps, too, this pro-American group, built properly, will act as a bulwark against the Hollywood elite who are loyal Americans but have a habit of being nincompoops. It is time that more folk who have propaganda strength usually far exceeding their political wisdom should think seriously of the danger they create by attaching their names to wild-eyed causes. It is time they met their responsibilities as Americans.

Going back but a short time it is interesting to see the names of people who have been used by the Communist Party. While there are undoubtedly multitudinous rationalizations to explain away these connections, the stark facts prove that these people were political saps. Look back at the old American League for Peace and Democracy, the name alone has the usual honeyed tone of a CP front. Included on the list of notables who supported this group were such names as Melvyn Douglas, Donald Ogden Stewart, Dudley Nichols, Irving Pichel, Sam Jaffe. Today most of them must realize they were fooled. But how much damage did they do by lending their names before they found out?

Or take the infamous group, the old Committee for the Arts, Sciences, and Professions. Here again the early rosters were full of names of Hollywoodians who played footsie with the CP. Of course, they didn't know it, they'll say. But was it not their responsibility to find out?

Here are some of the big names who gave the CP a helping hand: Larry Adler, Humphrey Bogart, Charles Boyer, George Burns, Abe Burrows, Eddie Cantor, Joseph Cotten, Olivia De Havilland, Joan Fontaine, Rita Hayworth, Arthur Hornblow, Walter Huston, George Jessel, Dalton Trumbo, Lena Horne, Dore Schary, Frank Sinatra, Katharine Hepburn, John Huston. Out of this long list only the Hustons, Dalton Trumbo, and Katharine Hepburn still flirt openly with the far left. But, once again, these many citizens of never-never land lent their names to a cause which was far past the reaches of liberalism. Again, after doing their harm, they stepped out, bewildered, to discover they had been used. It is indeed a sad commentary on our civilization to realize that the man who can lift an intriguing eyebrow or the woman who has an interesting cleavage and thus achieves movie fame is per se a person whose political ideas are eagerly sought and considered by many people.

We hasten to add this is not meant as an unfairness to the film industry. There are too many sensible folk in Hollywood who have not been seduced by fake pleas of liberalism and the usual catch phrases. Many of them are liberals and many conservatives. To name a few: Ronald Colman, George Murphy, Robert Montgomery, Dick Powell, Ronald Reagan, Clark Gable, Jimmy Stewart, Bob Hope, Bing Crosby, Doug Fairbanks, Jr., Ty Power, Joe E. Brown, Frances Langford, Jerry Colonna, Jack Haley, Jack Benny, and many others.

The fact is obvious. These people must realize their obligation to America. The influence of their names far outreaches their political wisdom. It is time that they realize their obligations as citizens or find less dangerous hobbies. Dabbling with America's safety should be avoided by juvenile minds.

Brannan's Farm Program—What Is It All About?

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. PATTERSON. Mr. Speaker, the May issue of the Connecticut Farmer contains a most provocative analysis of Secretary Brannan's farm program by two eminent educators in agricultural economics, Stewart Johnson and George Brinegar, of the University of Connecticut. This subject is currently of tremendous interest to all our citizens as its effects will be felt by everyone, be he consumer or farmer. We, who must pass upon the merits of the administration proposal, should examine closely the total impact upon our economic system which would result from its enactment. With the analysis are included the views of the American Farm Bureau and the Connecticut Farm Bureau on the program advocated by the Secretary of Agriculture.

BRANNAN'S FARM PROGRAM—WHAT IS IT ALL ABOUT?

(Ever since April 7, the State Farm Bureau Federation has been besieged with requests for information about Secretary of Agriculture Charles Brannan's suggested new farm program for the United States of America. Here is an analysis of Mr. Brannan's program as prepared especially for the Connecticut Farmer by Stewart Johnson and George Brinegar of the Department of Agricultural Economics, University of Connecticut. These economists have explained the program thoroughly. They have also expressed their opinions of it and have suggested some changes and improvements. The opinions which they express are, of course, their own and do not necessarily reflect the opinions of the Connecticut State Farm Bureau Federation.)

(By Stewart Johnson and George Brinegar)

The new farm plan proposed by Secretary Brannan on April 7 has been described as spectacular. And differ it does in many respects from the present support-price program based on parity. On the other hand, it is similar in many ways to various proposals made in the past. The purpose of this article is to describe and to appraise the new farm program.

First of all, why do we have any farm program at all? In the past quarter of a century we have seen the McNary-Haugen farm bill passed by Congress and vetoed by President Coolidge, the Federal Farm Board Program under President Hoover, AAA acreage and livestock reduction programs under President Roosevelt, and price supports at 90 percent of parity under President Truman. Why has agriculture in the United States been given special consideration by Government in such programs?

Part of the answer lies in sticky industrial prices and wage rates. As isolated individuals, each supplying a very small part of the total output, farmers have no way to adjust their total market volume to changing demand, and thus have no control over the prices they will receive. They go ahead and produce, and take whatever they can get for their product. Farm prices, therefore, go down faster and further than other prices when our economy is heading downward.

Stripped to its essentials, the basic objective of the new farm program is to prevent a general collapse in farm prices such as those of 1920–21, 1929–33, and 1937–40. If this objective is accomplished, it can help prevent a possible depression which would hit city and farm people alike.

Any farm program, to be successful, must be in the public interest. It must be consistent with a stable, prosperous economy in the United States, it must permit trade among nations, much the same as we now have among the 48 States, and it must make its contribution toward world peace. To a limited extent we will examine the new farm program from this standpoint in the latter part of this article.

Under the present farm program we seem to be heading for trouble. The Government has acquired huge stocks of many farm products through purchases which have been necessary to keep the price as high as that pledged to producers. For even such a minor product as flax, more than $130,000,000 has been spent to keep up the price. For wheat, the cost last year has been about $600,000,000, and for cotton, about seven hundred million. Already the program has cost about $2,500,000,000, and seems likely to cost as much more, barring drought, before the end of 1949.

For this huge expenditure, the producers of some products have obtained material benefits, particularly farmers who produce cash grains, flax, cotton, tobacco, wool, and potatoes. Dairy farmers, on the other hand, have had little direct benefit to date from Government purchases, and have had their dairy-ration prices held high by Government support of grain prices. The program also favors producers distant from their markets relative to those with markets nearby, as in the Northeast.

Despite these differences among products and regions, there seems no doubt that farmers in the United States, as a whole, have had much higher incomes in the past year with the program than they would have had without it. From the standpoint of the public interest, however, the following two weaknesses of the program are evident:

1. Consumers have had to pay twice, once for the taxes to finance the support-price purchases, and again in high retail prices at the grocery store. Using potatoes as an example, a consumer pays not only the cost of the program to divert potatoes out of the market, with millions of dollars' worth of Government potatoes rotting and wasted, but also pays the high retail price resulting from the limited supply after Government purchases are made.

2. The program has retarded world trade, and has been a stumbling block in the way of world peace. It has been said that if goods cannot cross international boundaries, armies will. We cannot sell farm products in the world market if we keep their prices artifically high through price supports. The loss of our world cotton market during the 1930's is an example. Neither are we inclined to permit imports if the market for some product is made attractive, through support-price operations, to producers in other countries. Last fall, for example, we took action to strengthen trade barriers against Canadian potatoes. We are also not inclined to permit goods made from farm products, such as textiles made from cotton, to enter the United States if we are spending huge sums to keep the price of the product high here at home. The writers of this article recognize that many other reasons, some associated with the destruction of resources during World War II, currently are tending to dislocate world trade, and that the support-price program is only one of several obstacles in the way of freer exchange of commodities.

A revision of the present farm program, embodied in the Agricultural Act of 1948 and to become effective in 1950, would substitute flexible supports ranging from 60 to 90 percent of parity for rigid support of prices at 90 percent of parity. Secretary Brannan has recommended that this revision be abandoned before it becomes effective, however, and that the new farm program described below be adopted.

FOUR-PART PROGRAM

The new farm program recommended by Secretary Brannan has four parts:

1. A minimum goal would be established for gross farm income, in other words, for cash receipts by farmers in the United States. This goal would fluctuate from year to year depending on changes in the index of prices paid by farmers for goods used on the farm and in the home. For 1950, the program would assure a gross income of about $26,000,000,000 for agriculture as a whole. This figure is lower than the peak-year cash receipts in 1948 of $31,000,000,000, but three times higher than prewar cash receipts in 1938 of $8,000,000,000.

2. To reach this goal, support prices would be fixed on individual products. To arrive at the support price for a given product, assuming a farm-income goal of $26,000,000,000 in 1950, 25 percent would be added to its 10-year average price in 1940–49.

3. For products which can be stored, such as wheat, corn, wool, and cotton, farmers would sell their products to the Government if market prices were not up to the support level, and the Government would hold the product in storage, much the same as under the present program. For perishable products, such as fruits, vegetables, meats, milk, and eggs, farmers would sell their product in the market in the regular way, and if mar-

ket prices fell below the support level, farmers would receive a Government check for the difference. For an individual farmer the Government check would be based on the average market price received by all farmers, and not vary according to the particular price each farmer received.

4. Farmers would not be eligible for price supports if they did not comply with requirements for acreage restrictions and other limitations on output which might be established. Neither would they be eligible if they failed to carry out certain specified soil conservation practices. For any products on which quotas for individual producers were not established (probably fluid milk, meat animals, poultry, and eggs) large farms would receive support only on part of their production; on dairy farms, the price support would not extend beyond 20 cans daily per farm.

These four points cover the new farm plan in brief. In the remainder of the article, comments are designed to indicate wherein the plan conforms with, or departs from, suggestions made in the past, and possible modifications of the plan.

INCOME SUPPORT DESIRABLE

The first point in the new plan, the setting up of a goal for annual farm income, appears to be desirable. There may be some question of whether the initial goal, a $26,000,000,000 farm income in 1950, is the optimum amount, or whether the index of prices paid by farmers, which has been chosen as the formula factor to adjust the goal from year to year, is the best possible mover, but the principle of establishing an income goal each year appears to be desirable.

It should be recognized, however, that we also need to maintain a stable over-all economy in the United States. To do this, the first need is to define the goal in specific terms. The writers of this article are of the opinion that it would be desirable for the Government to guarantee that the wholesale commodity price index, using the present as a base, be kept between say 90 and 110 for the indefinite future.

This could be done through changes in monetary and fiscal policy from time to time, allowing individual prices to fluctuate freely, but so adjusting tax rates, money supply, interest rates of Government debt, etc., that booms and busts would be prevented. A new national monetary council, as suggested recently by the Hoover commission, could adjust national monetary and fiscal policy to reach this over-all goal, or it could be done by any of several other different ways.

If the whole economy is maintained on a suitable level, if reasonable farm-income goals are set, and if a few other modifications as outlined below are made, it appears to the writers of this article that the suggested method of establishing income goals has considerable merit and could be operated without undue cost to the taxpayers.

ARE SUPPORT PRICES DESIRABLE?

The question may also be raised as to whether support prices on individual products are desirable to reach whatever goal is set. Government payments, if necessary to achieve the minimum set as the goal, could be made according to the value of farm products sold, less purchases of such major items as feed and livestock.

If a goal of $26,000,000,000 farm income were set for 1950, and farmers' cash receipts were $27,000,000,000, no Government payments would be made. But if the cash farm income were only $25,000,000,000, the $1,000,000,000 deficit would be made up by Government checks to farmers at the rate of 4 percent on the value of sales which were made in the preceding year. If an individual farmer had gross sales of $10,000 after allowing for purchases of feed and livestock, he would receive a check for $400. It would not matter at all what the $10,000 was received for—whether wheat, hogs, milk, or eggs.

Administratively, the plan could be operated in a simple manner by basing payments on sales as reported on Federal income-tax returns. This change would be a marked variation from the proposed plan, but probably would receive support from the majority of agricultural economists as being a decided improvement. The elimination of support prices for individual products would avoid the problems of marketing quotas, acreage allotments, etc., resulting from the relative prices of agricultural products being out of line.

Some may object to the direct-payment feature of the new farm plan—the fact that farmers will receive checks directly from the Government to the extent necessary to achieve the income goal which is established. To the writers of this article it appears, however, that such payments have a great advantage in their directness.

Just as there is merit in direct taxes in that the payer more fully recognizes the cost of Government, there is merit in receiving Government payments in a way recognizable as such rather than disguised in the form of loans through bankers, pegging market prices, and other indirect subsidies.

If the new farm plan is not changed so as to base payments, if required, on the value of sales off farms rather than setting up support prices by individual products, there appear to be important advantages to use the production-payment plan proposed for perishable for storable farm products as well. For all farm products, then, consumers would pay only the market price, whatever that might be, with the Government paying the difference if the average selling price for all farmers fell below the support standard.

This change would prevent the piling up and wastage of storable products which, to the authors of this article, appear inevitable under the plan exactly as proposed. Northeastern dairy and poultry farmers who buy large quantities of feed from the Middle West also have a special interest in changing the support procedure for grain to the same as for perishable so that they will have the benefit of cheap feed in years of bumper crops.

If the change were made to payments based on sales value regardless of what particular products were sold, or if the proposed new plan were modified to extend the payment method suggested for perishables to storables, it appears to the writers that it would be possible and desirable to operate the program without the use of any production restrictions—acreage allotments, individual farm marketing quotas, limits to payments based on size of farm, tie-in with soil conservation requirement, and the like, The proposed production restrictions appear to the writers to be the worst feature of the new farm plan recommended by Secretary Brannan. Modifications so that such restrictions are unnecessary are highly desirable. And either of the two ways mentioned at the beginning of this paragraph would help to accomplish the objective of eliminating the need for any and all quotas, acreage allotments, etc.

Let us look for a moment at the question of whether the new farm plan will allocate resources most efficiently as between agriculture and nonagricultural occupations. Whether it will or not depends in large part on the level of national farm income chosen as the goal.

If the goal is on the high side, giving agriculture a higher percentage of the total national income than it has obtained in recent years, too large a share of our resources will be used in agriculture. But if the goal gives agriculture only as high a percentage of the national income as in the recent past, and is adjusted downward if payments under the program exceed a certain specified percentage of farm income from regular marketing, little difficulty would be expected in resource allocation as between agriculture and industry.

Any farm program which bases payments on sales does not meet the problem of those who do not produce a large enough volume to make a good income at any price. And there are several hundred thousand small farmers in the United States who are on the economic border line, not far from the self-sufficient type of inefficient operation which gives them enough to subsist and little more. To give these farmers sufficient income through a price program would mean prices so high that too many resources would be attracted into agriculture, and would wreck the program. For farms on the economic border line, assistance to move to other areas and fields of work should be given through other programs specifically designed to accomplish this end.

As among agricultural products, there is danger that under the new farm plan exactly as proposed, there will be resources used for the production of commodities which are wasted, never reaching consumers, resulting from setting prices of individual products out of line in relation to other farm products. Extending the payment method recommended for perishables to storables would lessen or eliminate this danger. Similarly, the danger would not exist if payment were based on the value of sales rather than establishing support levels for individual products.

One of the chief merits of the new farm plan compared with the present program is that for perishable farm products consumers get the benefit of low retail prices. The objection to the present program illustrated with potatoes—that consumers pay twice, a high retail price plus the taxes to buy excess potatoes which are washed or spoiled—are eliminated. Unless modified on one of the ways already suggested, wastage and spoilage will continue with storable products. If modifications are made, however, the cost to the public of the proposed plan will likely be less than the present program after giving consideration to the benefits consumers will receive through lower retail prices. This will hold true even though payments from the Government probably will be greater under the proposed plan, modified as suggested, than under the present program.

Another important advantage of the new farm plan is that it fits in with free world trade better than the present program. Again, modification of the recommended method of price support for storable farm products is required to make the plan consistent with international welfare. If this is done, the changes made may be expected to contribute toward world peace, certainly a major objective of our time.

It has been pointed out that the new farm plan has certain important advantages over the present farm program, yet needs modification in several important respects in the opinion of the writers. In conclusion, it should be pointed out that perhaps we have not yet advanced far enough in political science to use wisely as much "government" as is called for in the new farm plan. With the modifications suggested, the plan would give individual farmers more freedom in the business decisions they make then they would have under a continuation of the present program; and would guarantee that there would not be a general collapse in farm prices such as occurred in 1920–21, 1929–30, and 1937–40.

Hydroelectric Developments on the Columbia and Snake Rivers

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 10 (legislative day of Monday, April 11), 1949

Mr. MAGNUSON. Mr. President, last week I presented testimony before the Senate Appropriations Committee on the subject of hydroelectric developments on the Columbia and Snake Rivers, which involves the area represented in part by the present distinguished occupant of the chair. I ask unanimous consent to have printed in the Appendix of the RECORD my testimony before the committee.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

PACIFIC NORTHWEST PROJECTS

(Statement of Hon. WARREN G. MAGNUSON, a United States Senator from the State of Washington)

Senator MAGNUSON. Thank you, Mr. Chairman.

I am interested, of course, in all the projects in this bill because they involve a great deal regarding the policy of the United States in relation to western development. Today I want to speak specifically on four Pacific Northwest projects. These are projects of great magnitude not only to us but to the entire country. They are the so-called Chief Joseph Dam which this committee has discussed on many other occasions under the name of the Foster Creek Dam, the Ice Harbor Dam, and McNary Dam which the committee is well familiar with, I am sure.

Senator GURNEY. The Ice Harbor Dam is the one located on the Snake River?

Senator MAGNUSON. Ice Harbor Dam is on the Snake River in Idaho just above the confluence of the Snake and Columbia Rivers. Its effect would cover both States, Idaho and Washington.

The CHAIRMAN. The budget estimate is $12,000,000 and the House did not allow anything.

Senator MAGNUSON. The House allowed amounts for Chief Joseph and for the McNary Dam but cut out the Ice Harbor. I will just direct my testimony to those three projects. I have two other projects here. They are not of secondary importance to me but they are secondary in their magnitude as to power dams and flood-control projects.

BUDGET ESTIMATES FOR THREE PROJECTS

The President's estimate on each of these projects is as follows: For McNary the estimate was $40,000,000; for Chief Joseph, $5,000,000; and for Ice Harbor, $12,000,000.

I want to address myself, as I said, to these three dams. I know your committee has received testimony from the Army engineers, Members of Congress, and others from the Pacific Northwest States. To conserve your time and to avoid repetition, therefore, I will make my remarks as brief as possible.

NEED FOR POWER

First of all, I need not go into the matter of the power deficit in the Pacific Northwest. I think that is pretty much common knowledge to all of us.

The CHAIRMAN. Are all three of these multiple-purpose dams?

Senator MAGNUSON. Ice Harbor and McNary. They are not as much as Grand Coulee. Their primary purpose is power although there are irrigation features and of course flood-control features, very important on the McNary and Ice Harbor Dams.

In the latter part of November the Public Utility Departments of Washington, Oregon, and Idaho held concurrent hearings in Seattle to devise ways and means of reducing power consumption among industrial and home users to avoid a complete break-down of the power grid. As a result of the hearings, the Department of Public Utilities of the State of Washington issued certain regulations aimed at reducing power consumption. In addition, a voluntary campaign was instituted to alert all users in the area to the necessity of conserving electrical energy in every way possible at peak hours. In many cases we had brown-outs.

QUOTATIONS FROM TESTIMONY OF CHIEF CONSULTANT ON POWER AND UTILITIES, NATIONAL SECURITY RESOURCES BOARD

I might report from one of the witnesses so that the record will show what we mean by a power shortage. The chief consultant on power and utilities for the National Security Resources Board, Mr. Edward Falck, testified. I need not tell the committee the reason why the National Security Resources Board was there. We know confidentially we have another important use for power in the State of Washington and in the Pacific Northwest, namely, for the great Hanford project.

Mr. Falck stated in part as follows:

"The load data for this region after 1948 includes some new industrial load which, it is estimated, would be located in the region if adequate power were available, but which will probably not actually exist by 1951 because of power shortage."

He is talking about another industrial load. In my opinion we all know, also, that we have plans afoot for the development of our supersonic laboratories and the only place they can be adequately developed is where there is a great power potential.

"The requirements of such potential new plants, which will probably not be actually served, amounted to 140,000 kilowatts in 1951.

"However, no amount has been included for aluminum-reduction loads in excess of the existing plants of the area."

I might say, for the benefit of the committee, that the aluminum plants which are important to us in this country are taking almost 40 percent of our power load in the area, the greatest power pool there is. The atomic-energy plant, of course, has a stand-by order on a percentage that I should not divulge here.

"Also, included in the estimated loads are about 130,000 kilowatts of industrial load in existing plants, which will not be operated during the peak periods, 1948–49, or at any time when hydroelectric conditions are adverse. Such plants would like to operate but will be prevented from doing so by the power shortage."

Similar testimony was given and substantiated by other witnesses. I think this statement by a representative of the National Security Resources Board is highly significant.

As you know, the National Security Resources Board, the Munitions Board, Bonneville Power Administration, and the Secretary of the Interior have all communicated to the Chief of Army Engineers their deep concern over the existing power shortage and their conviction that all authorized projects on the Columbia and its tributaries should be pushed ahead at maximum speed. These are the agencies of the executive branch most closely concerned with our national security. Their testimony and their judgments have added validity for this reason.

USE OF POWER DESCRIBED

The funds we are investing in multiple-purpose dams in the Pacific Northwest must be evaluated from both regional and national points of view. To the region, an adequate energy base means industrial, agricultural, and business expansion. To the Nation, such expansion means the Pacific Northwest can make its proper contribution to the economic health and strength of our country.

This year private enterprise in the United States invested over $19,000,000,000 in new plants and equipment. It is estimated that in our highly industrialized age the investment of approximately $8,000 is required in plant and equipment to create one job. To maintain employment at a high level, therefore, there must be a continuing flow of investment into new industrial enterprises. It is obvious that such investment will not take place unless there is energy to turn factory wheels.

Failure to bring the great hydroelectric dams in the Columbia and its tributaries into production at the earliest possible date, therefore, has a national impact. In addition, of course, delay in getting generators on the line postpones the time when these investments begin repayment to the Treasury.

I might say again the committee knows those dams that have been built in my area are way ahead of schedule on their repayments.

PRODUCTION DATES FOR POWER

With these general propositions in mind, let us take a look at the specific appropriations for McNary, Chief Joseph, and Ice Harbor Dams.

I am informed that a $45,000,000 appropriation for McNary will permit the first generators to come on the line in December 1953. If the funds for Ice Harbor Dam, cut off by the House, are restored, that dam can be brought into production in 1953.

Senator GURNEY. Is that the $12,000,000?

Senator MAGNUSON. That is the $12,000,000.

If the appropriation for Chief Joseph is increased to $21,300,000, its first generators can come on the line in December 1955.

Senator GURNEY. What would that make the total for Chief Joseph?

Senator MAGNUSON. That would make the total $21,300,000.

I recognize your committee is faced with a very difficult problem. The budget estimates transmitted to Congress proposed expenditure on these three projects, for fiscal 1950, of $57,000,000, divided, as I stated before, $40,000,000 for McNary, $12,000,000 for Ice Harbor, and $5,000,000 for Chief Joseph.

As you and I well know, these estimates represent a recommendation to the Congress from the President. Your committee and the Congress, however, still have the responsibility of deciding, on the basis of all facts available, whether to follow that recommendation, whether to increase one or all of the estimates, or whether to decrease them. Congress does and should decide through appropriations how fast each of these projects should be moved to completion.

INCREASE IN FUNDS REQUESTED

I believe the facts warrant an increase of funds for McNary and Chief Joseph Dams, and restoration of funds for Ice Harbor Dam The committee has already received extended testimony on McNary and Ice Harbor Dams, but I want to make just a brief comment on the latter.

ICE HARBOR DAM

There has been much misunderstanding and controversy over Ice Harbor Dam and the 1950 appropriation for it. Immediately the House committee reported the bill now before you, I noted funds for this project had been denied House action, according to the report, was predicated upon the prohibition in the Bureau of the Budget's submission against use of any of these funds for fish passageways.

POWER PRODUCTION AT ICE HARBOR DAM

The CHAIRMAN. Let me stop you long enough to ask how much power Ice Harbor will produce.

Senator MAGNUSON. I do not have the exact figure.

Colonel JEWETT. The first units on the line will be two units or a total of 130,000 kilowatts.

POWER PRODUCTION AT CHIEF JOSEPH DAM

Senator MAGNUSON. What estimate do we have on Chief Joseph?

Colonel JEWETT. Chief Joseph will bring in three units or a total of 192,000 kilowatts.

Senator MAGNUSON. The full potential of the dam will run into a million kilowatts when they get to all the generators.

Colonel JEWETT. Yes.

The CHAIRMAN. You said awhile ago this was the largest producer of hydroelectric power in the country. Does it produce more than the Tennessee River?

Senator MAGNUSON. I meant the whole Bonneville pool which these dams will all check in with, Mr. Chairman.

CONTROVERSY OVER FISH LADDERS AT ICE HARBOR

The House cut this out, as I said, because the budget submission said they could not use any of these funds for fish passageways. I appreciate there has been a controversy out there with the so-called fish people and the people who want to build Ice Harbor Dam.

The CHAIRMAN. There has been a controversy on fish ladders?

Senator MAGNUSON. Way up the river, and those in the lower Columbia where there is a substantial fishing industry, are worried about it, but I have found in my experience that on every dam we have ever built out there, with one exception, Grand Coulee, which is so far up the river, and even then we have had this controversy, it is due to a lot of misunderstanding and fears. I think we have always worked them out satisfactorily. They work out in the long run.

RESTRICTION ON FUNDS FOR FISH LADDERS REMOVED

Now I checked with the Bureau of the Budget to ascertain the reason for this restriction and found out that, while engineering plans for the dam include an estimated expenditure of $9,000,000 for such passageways, there was an honest difference of opinion as to whether such expenditures should be allowed at a time when we are already embarked upon a broad gage fisheries rehabilitation program in the lower reaches of the Columbia. In recent days the Bureau of the Budget has removed the restriction in expenditure of funds in 1950 for fish ladders. In view of the House report, using this as a reason, it seems to me that these funds should now be restored.

CONSTRUCTION AT CHIEF JOSEPH DAM

I am deeply concerned about the appropriation for Chief Joseph Dam. As you know, figures on which the President's estimates are based were submitted by the Corps of Engineers to the Bureau of the Budget last fall in September or October.

On April 1 I wrote to the Chief of Engineers to obtain from him a statement on this subject. Attached to my testimony is a copy of my letter to General Pick and a copy of his reply. Let me quote from his letter. This is what General Pick has to say:

"As you state in your letter, the President's 1950 budget estimate included an item of $5,000,000 for initiation of construction on the project (Chief Joseph). There is also included in the 1949 deficiency estimate an amount of $2,000,000, which if it becomes available in the near future, will greatly assist in getting the job under way. The sum of these two amounts is practically the same figure as was recommended by the Corps of Engineers for inclusion in the 1950 budget. Thus, if both amounts were to be allowed by the Congress, we would be able to perform the work we had originally programed for fiscal year 1950. This program was based on the following appropriations:

"Fiscal year:	
1950	$7,209,000
1951	26,889,000
1952	31,848,000
1953	41,693,000
1954	43,000,000
1955	38,201,000
After 1935	16,518,000
Appropriated to June 30, 1948	642,000,000
Total estimated cost of project	206,000,000

"This program would permit the first three generators to come on the line in December 1956 adding 192,000 kilowatts to the Northwest power pool. Three additional units of 64,000 kilowatts each would come into service each year thereafter until the initial installation of 960,000 kilowatts had been installed."

I want to call your particular attention to the next paragraph. It reads as follows:

"Subsequent to the preparation of our original budget estimate, the Munitions Board, the National Security Resources Board, and the Bonneville Power Administration requested information as to the earliest possible date that power could be made available from Chief Joseph Dam, and what funds would be required to accomplish this objective. It is from this study that the figures, $15,000,000 and $21,000,000, mentioned in your letter, were derived. If a 1950 appropriation of $15,700,000 and a 1949 supplemental appropriation of $3,300,000 were made available, power could be placed on the line by December 1955. * * *

"It was also estimated that the December 1955 date could be met if $21,375,000 were made available in fiscal year 1950, with no supplemental 1949 funds. December 1955 is the date the Bonneville Power Administration estimates power from Chief Joseph must begin to come on the line in order to be of the greatest help in making up the deficit in generating capacity which will exist in the area by 1960. * * *

"In summation, if $21,375,000 is made available in fiscal year 1950 and adequate appropriations are made in subsequent fiscal years, power from Chief Joseph Dam can be added to the Northwest power pool in accordance with the estimated schedule of requirements prepared by the Bonneville Power Administration; otherwise, there will be a delay of at least 1 year."

INFORMATION NOT AVAILABLE UNTIL AFTER BUDGET SUBMISSION

Mr. Chairman, it is quite clear from General Pick's statement that the $21,000,000 estimate was not submitted to the Bureau of the Budget, that the facts upon which this estimate is based became available after the Bureau had prepared the estimates submitted to the Congress by the President. As a matter of fact, it was not until the middle of December that Bonneville Power Administration submitted its so-called schedule R to its advisory committee. I sincerely believe that had the Bureau of the Budget and the President had an opportunity to consider the $21,000,000 estimate and the facts behind it, that amount would have been recommended.

Chief Joseph Dam was authorized by the Seventy-ninth Congress. In its 1946 advance program, Bonneville Power Administration urged a construction schedule that would have brought the first three generators on the line in December 1953. Each year since that time construction has been postponed. The time has come when the Congress should appropriate the funds needed to move construction ahead at the maximum engineeringly feasible rate.

The engineers tell me, through this letter and informally, that they can adequately and reasonably and wisely spend the $21,000,000 which would move this whole project for an additional $16,000,000 1 year ahead, a project in which a potential of 960,000 kilowatts will be generated for the area.

HIGH BENEFIT-TO-COST RATIO

This dam boasts the highest benefit-to-cost ratio of all major structures in the Columbia River system. In other words, this is the cheapest dam. This will produce power cheaper than any other dam, I understand, in the world on this power site. In addition, the power generated at this dam will be transmitted to the whole area of the Pacific Northwest, Wenatchee, Spokane, Seattle and Tacoma, where the power deficit is greatest.

Since the first deficiency bill contained $2,000,000 for Chief Joseph, I now urge your committee to increase to $19,375,000 the 1950 appropriation for the project. This will bring the total appropriated by the Eighty-first Congress to $21,375,000, the amount which must be available to bring this dam into production by December 1955.

As a final word on this subject, I go back to my original premise, that the Northwest cannot make its proper contribution to an expanding national economy until the energy required for new, existing, and expanding industrial and home uses is available.

Now, Mr. Chairman, I have two other projects here which, as I say, are not secondary in importance to me but secondary in their magnitude. If the committee desires me to go ahead with them, I shall be glad to continue. If not, I shall place them in the record.

The CHAIRMAN. Without objection, that will be placed in the record at this point.

POINT CHEHALIS

Senator MAGNUSON. I might say one of them, the Point Chehalis, is a jetty project with which we have had some trouble. I will put that in the record with the permission of the committee.

(The statement referred to is as follows:)

"POINT CHEHALIS

"May I now say just a few words about Point Chehalis? On the south side of Grays Harbor on the Washington coast there is a long narrow peninsula separating the ocean from an inland bay. Near the end of the peninsula there is a jetty which projects into the sea approximately 15,000 feet. Heavy storms have destroyed about 2,400 feet of this jetty and the ocean currents sweeping through this break are washing away the peninsula. The bay in behind the peninsula serves as one of the most important fishing bases along the Pacific coast. Unless this peninsula, Point Chehalis, is protected it will soon be destroyed.

"The Army engineers have recommended the construction of a rock levee 7,500 feet long to protect the entire point and a breakwater 1,000 feet long at the entrance of the cove. This project was authorized last year in conjunction with other necessary work in Grays Harbor and the Chehalis River, at an estimated cost of $3,780,000. The budget contains a recommendation of $800,000 for fiscal 1950. I believe this figure should be doubled, if we are to avoid the serious risk of having the fishing basin destroyed through erosion of Point Chehalis before the Army engineers can get sufficient construction under way.

"It is my understanding the $800,000 recommended will permit some trestle work and some enrockment, but is not sufficient to finance enough work to avoid the risk of losing this important asset.

"I hope your committee will consider this question, will interrogate the Army engineers in regard to it, and on the basis of the facts thus developed will appropriate at least $1,600,000 for the project."

The CHAIRMAN. I should like to refresh my recollection at the moment about the Ice Harbor Dam. How much are you asking for, Senator?

Senator MAGNUSON. For the restoration of funds recommended by the budget and the President.

The CHAIRMAN. How much are you asking for McNary Dam?

Senator MAGNUSON. I am asking for $45,000,000. I have not broken those figures down but the recommendation was $40,000,000. What the House bill reported I do not have before me.

The CHAIRMAN. It did not pass in the House.

Senator MAGNUSON. I do not have the figures before me, but whatever they had in the committee. I have the figures in my office.

GREEN RIVER FLOOD-CONTROL PROJECT

Now the next project is a flood-control project. I will put the data in the record to save time. In just 2 minutes I can tell the committee what it is.

From the mountains right behind Seattle where the Cascades rise almost abruptly we have several rivers that drop very fast to the sea. None of them is as large as the Columbia River or Snake River about which we have been speaking, but some of them are of quite some magnitude. We have snow in the mountains. Last year the flood worked the other way down the Columbia rather than on the west side of the mountains. We have had the most unusual snow conditions in our State in the mountains that we have ever had in the history of the State. Right behind Seattle, as many of you know, there are two or three passes. In each pass there is an average of 269 inches of snow. If we have a quick thaw with a rain, we are in for a great deal of flood trouble on the west side of the mountains. I only cite that to show the danger now. Next year we do not know, but despite that, even under normal conditions, there is a river called the Green River which rushes down into a place called the Puyallup-Green River Valley, which is the flood plain of Seattle. If you have been in Seattle, you know you can look down on the shipbuilding area within the tidal area. We have had recurring floods every year there causing great damage to this whole valley area, causing damage of millions of dollars. We have tried many things. The engineers are very familiar with the project. It has been going on for a long time and finally we have come to an engineering agreement as to how to control the fields on the Green River and the other two rivers that run in there by construction of a dam.

The matter has not been authorized but a complete agreement has been reached whereby King County, where part of the floods occur, has appropriated $250,000 and have in their next year's budget a subsequent $250,000. The State legislature passed a law, which I will put in the record, after this agreement was reached with the engineers for the contribution of their share which is $1,500,000.

FEDERAL COST

The CHAIRMAN. What will be the Government's share?

Senator MAGNUSON. The actual amount is estimated between $15,000,000 and $16,000,000.

Colonel GEE. The total estimated cost is $16,300,000, of which the State is to furnish $2,000,000. So, $14,300,000 is the Federal Government's share.

Senator MAGNUSON. The State has appropriated $1,500,000 and King County expects to appropriate the other $500,000.

Here is this thing all ready to go, and I understand it will be in the omnibus bill for authorization. Here are $2,000,000 lying there, which will expire at the end of a year and 3 months unless we do something about it. The engineers tell me informally that if they could get from the Congress approval now of, say, from $40,000 to $50,000 for planning money, they could go ahead with this project and we could be almost a year ahead of time.

I appreciate this is an unusual procedure, but in view of the fact that we have the money there available and in view of the fact that we know these conditions are going to continue to recur, I am almost positive that the Congress will approve this project with the State and county participation. Engineers have given it high recommendation as to its feasibility and the financial arrangement that was made. If we could get a small amount, we could go ahead and be almost a year ahead of time on planning. The project, I might say, has cleared the budget.

BENEFIT-TO-COST RATIO

Senator GURNEY. What is the cost-to-benefit ratio on this project?

Colonel GEE. The benefit-to-cost ratio is 1.07 to 1.

CHOICE OF SITES FOR DAM

Senator GURNEY. Senator MAGNUSON, do you feel the Army engineers have selected the best sites for power-development purposes out there? I go back to Grand Coulee, Bonneville, Ice Harbor, Chief Joseph, and McNary and all those other sites out there. Do you feel they have selected the best sites for the maximum benefit in hydroelectric power?

Senator MAGNUSON. Not being an expert on that, I do feel that the proof of the pudding is that these power projects that have been selected, that have been completed, have served their purpose and the selection of the site has been well justified. There has been some controversy, I appreciate, but I think that is so technical, and whatever the sites that everybody agrees upon on the Columbia River, which might include some other sites than what we are discussing here, or that have been completed, we hope that ultimately they will be in the power system. So there could not be any controversy; there are only so many sites available.

Senator GURNEY. That is what I am getting at, Senator. Do you feel the people in your area—Oregon, Washington, and Idaho—feel that the Army engineers have hit on the spots that should be first developed?

Senator MAGNUSON. I think so; yes. I think that is the opinion of almost all the people. What controversy we have had has been, in my opinion, a technical controversy, which would be hard for us to know exactly. But now Chief Joseph is probably the finest selection that has ever been made. It might have been built before Grand Coulee had not Grand Coulee been so much a part of the Columbia Basin, the whole multiple program, but for a power site, the Foster Creek site, which is now Chief Joseph, will produce power the cheapest of any other known site in the world, 960,000 kilowatts.

Senator GURNEY. That would indicate then that the Army engineers have selected the best sites.

Senator MAGNUSON. I think so, Senator.

Senator GURNEY. They have selected the best site if it will produce the cheapest of any other power site in the country.

Senator MAGNUSON. I think so, and surely McNary was a good selection for the simple reason it also included navigation and flood control in the lower reaches of the Columbia.

Senator GURNEY. Do you think in the selection of the sites, with Congress appropriating the necessary money for building them, that the Army engineers have provided for the total benefits wherever possible on irrigation, power, and flood control?

Senator MAGNUSON. I think the Army engineers have done an excellent job in the development of the Columbia River Basin insofar as they have had a part of it.

Senator GURNEY. There has been no justifiable criticism then?

ARMY ENGINEERS' ACTION APPROVED

Senator MAGNUSON. Not in my opinion over-all. They have given it good attention; they have shown a deep interest in it. They have done good planning. They have had a vision which sometimes you do not find in these matters, a vision of the potentialities of the area. I think their last report was one of the finest jobs done by any Government agency that I have ever read. It is excellent, complete, and well done.

Senator GURNEY. You would speak just as well of the Bonneville Power Administration and those other bureau-operated projects out there?

Senator MAGNUSON. Yes. We have had some little controversies. I do not think they have been of too great importance. I think the Bureau of Reclamation has done its job well, particularly on the Columbia Basin.

We happen to have, which the Army engineers all know, one of the finest men in the world, Frank Banks, whom you people have heard on many occasions.

JOINT STATEMENT ON GREEN RIVER FLOOD-CONTROL PROJECT

I should like to submit this joint statement for the record on the Green River flood-control project, Mr. Chairman.

The CHAIRMAN. Without objection, the statement will be included in the record at this point.

(The statement referred to is as follows:)

"SUMMARY OF GREEN RIVER FLOOD CONTROL PROJECT—JOINT STATEMENT BY SENATOR WARREN G. MAGNUSON, CONGRESSMEN HUGH B. MITCHELL AND THOR TOLLEFSON, AND SENATOR HARRY P. CAIN

"Prolonged efforts to control periodic floods on the Green-Duwamish River in Washington State have now advanced to the stage where action by Congress is essential.

"We are asking for a provision in the Army civil functions appropriation bill, authorizing the preparation of plans for the work and setting up funds for that purpose. Precedent for this was set in the Civil Functions Appropriation Act, approved July 31, 1947, in which the committee stipulated '$200,000 shall be made available for the preparation of detailed plans for the Dyberry and Prompton Reservoirs in the Lackawaxen River Basin, Pa., recommended for construction in the report of the Chief of Engineers, United States Army, in House Document No. 113, of the Eightieth Congress, and the preparation of such plans is hereby authorized.'

"The latter course demonstrates that Congress has, on the strength of approval by the Chief of Engineers, authorized and appropriated funds for such work prior to other authorization and before the project has cleared the Bureau of the Budget and other agencies concerned. The suggestion that authorization and funds be sought through action of the Army Civil Functions Subcommittee on Appropriations is advanced because of two unusual circumstances which, it is believed, Congress will recognize. These are: First, the Green River project can be started almost immediately with $2,000,000 in State and local matching funds, three-fourths of which were voted without objection by the State legislature and one-fourth of which has been earmarked for this purpose by King County. Unless used in the current biennium, the State funds would revert to a special fund and it would be necessary to reappropriate then through action by the next legislature; and, second, State matching money in the sum of $1,500,000 was voted contingent upon the approval and appropriation by Congress of funds to carry forward construction of the project.

"The necessity for the Green River project consisting of construction of a flood-control dam at Eagle Gorge, on the upper reaches of the Green River, has been surveyed carefully and approved by the district and division engineers of the United States Army, the Board of Engineers for Rivers and Harbors, and the Chief of Engineers.

"The engineers' report estimates cost of the dam, to the United States, at $16,300,000 with the $2,000,000 in matching money in addition thereto.

"While the project would not be revenue producing, it is estimated $893,000 in annual benefits would accrue, mainly from abatement of floods, pollution control, and benefit to fish life.

"The following facts relative to the Green River project were compiled from the survey and report of the Army engineers:

"GREEN RIVER BASIN

"The Green River rises in the Cascades at an elevation of approximately 5,000 feet and flows north and west 60 miles to its junction with the Black River. Below the junction, it is known as the Duwamish River and flows north another 12 miles before emptying into Puget Sound at Seattle. The flood plain starts just above Auburn (population 6,000) and comprises a fertile valley 2 to 3 miles wide. Exclusive of Seattle, the basin has an area of 474 square miles and a population of 32,000. Kent (population 3,000) is, next to Auburn, the principal town affected by recurring floods. Tracts of three continental railroads traverse the basin.

"FLOOD HISTORY

"Between November and February are the worst flood months on the Green River. The December 1933 flood inundated 13,800 acres and the December 1946 flood 12,000 acres. The gross area subject to inundation from a flood flow of 40,000 cubic feet per second would be 19,000 acres. The area subject to flooding contains a considerable portion of urban property and facilities, agricultural land and improvements, and transportation and service facilities. The tangible damages from the 1933 and 1946 floods are estimated at $1,750,000 and $1,350,000, respectively, based on 1947 prices.

"ENGINEERS' RECOMMENDATIONS

"Several methods of controlling the floods were surveyed by the Army engineers. A dam and reservoir at Eagle Gorge was deemed most feasible and the best means of controlling floods, providing water storage for municipal purposes, irrigation, and conservation. The dam, with spillway crest of 1,205 feet would create a reservoir with a capacity of 106,000 acre-feet, more than 3 times the amount necessary to control the greatest flood on record (first measurements established in 1931). The project design would provide protection from the standard project flood by reducing its crest discharge of 65,000 cubic feet per second to the safe capacity of the existing channel below the dam. With the end of the spring run-off, water would be stored for release during summer to maintain stream flow.

"COST OF PROJECT

"Cost of the project is estimated at $18,300,000 and the annual carrying charge at $823,139. With $2,000,000 of the cost borne by State and county, total annual carrying charges would be $831,658 due to the interest rate of 3.5 percent applied to non-Federal costs. Maintenance and operation is estimated at $80,000 annually.

"BENEFITS FROM PROJECT

"The Army engineers estimate total annual benefits at $893,000, consisting of $429,000 from prevention of tangible flood damage, $214,000 from increased return from protected agricultural lands, $191,000 from increased returns from industrial lands, and $59,000 from benefits to fish life."

REQUEST FOR POWER PRODUCTION INFORMATION

Senator GURNEY. Mr. Chairman, I should like to have the whole picture before the committee in the matter of hydroelectric power out there. I am wondering if the Army engineers could not furnish the information listing all the dams that are before this committee today and also those that have been completed. What I should like to have is the total power that is being produced now from each dam. I should like to have it in one table. Then in another table I should like to have the extra power you can get from these dams that are proposed; the initial installed capacity and the ultimate. Then I should like to have, too, the amount of practically produced power. There must be some information on that. I am not including just the State of Washington; I am talking about the Northwest power pool. I should like to see that all in one place, just a table with the names of the dams and so forth. Finally, I should like to have a listing of the total power produced privately that is hooked in, I understand, with the same system.

Colonel JEWETT. We can furnish that.

The CHAIRMAN. Furnish that for us and we will include it in the record.

AGREEMENT BETWEEN PUBLIC AND PRIVATE POWER INTERESTS

Senator MAGNUSON. I can remember years ago when I was in the legislature there was a public and private power fight and it became political in many cases, unfortunately; but long since that time there has been a complete agreement between the private power people and the public power people, the PUD's, as to the development of these things we are speaking about before this committee. They meet regularly; they have their own group. There is complete agreement, so far as I know, between them because the private power people realize that when they can buy power from the Bonneville pool at this wholesale rate they have found they can make just as much profit on their investment as when they attempted to build these dams themselves. The private power people, as you will see from these figures, could come nowhere near taking care of these great power demands that we have had in that area, particularly since the aluminum plants and the Hanford atomic-energy plants have showed up.

REQUEST FOR INFORMATION ON EFFECT OF FISH LADDERS

Senator ELLENDER. Mr. Chairman, I have listened to most of the testimony with respect to these projects. The only criticism that I have heard is regarding the Ice Harbor project and the objection was based on the fact that the dam was going to be built at 100 feet. A Member of the House of Representatives testified that he feared the fishing industry would be hurt considerably because salmon could not climb the 100 feet in order to spawn. I am wondering if the engineers could put in the record some information to clarify that situation. The Congressman stated that the salmon industry is very large, and I know it is. I should like to know what effect, if any the building of the Ice Harbor Dam will have on the production of fish. I also would like to know whether or not it would be possible to build fish ladders so that the salmon can mount the dam and spawn in the streams above the dam.

Colonel JEWETT. We shall be glad to submit such a statement.

The CHAIRMAN. The statement will be placed in the record.

(The statement referred to is as follows:)

"The design plans for Ice Harbor lock and dam include fish-passing facilities of the improved type being incorporated in the McNary project. These facilities have been developed through cooperation with Federal and State fish and wildlife agencies as required by law (Public Law 732, 79th Cong.). Based on records kept in connection with the operation of similar facilities at Bonneville, it is believed that the proposed Ice Harbor fish-passing system will be equally successful."

Senator MAGNUSON. The basis of the House rejection, at least in their report, was on the basis that the Bureau of the Budget had made a prohibition against the installation of fish ladders. Now the Bureau of the Budget has since that time, I believe it was last week, removed its objection to that and said it is all right.

The CHAIRMAN. That must be because they have found a way of building fish ladders so the fish can go up to spawn.

Senator MAGNUSON. That is a technical matter. I have always found out there in all these controversies, which are pretty much a fight between the fish and the dams, they resolve themselves. There are ways and means of taking care of that which I cannot technically testify to but I am sure it can be worked out, particularly in view of the removal of this prohibition that the Bureau of the Budget had on the fish ladders.

I thank the committee very much.

Senator GURNEY. I will just say this: The Army engineers say they can build a fish ladder, but to go back to an old saying that we hear so much, you can lead a horse to water but you cannot make it drink. You can build the fish ladders but what information do the Army engineers have as to whether or not the fish will use them? I think that is the question.

Senator ELLENDER. I do not see why the ladders cannot be made almost as natural as the present stream. I was in Alaska 2 years ago and saw salmon climb as much as 20 feet.

Visit of the Minister of External Affairs of Ireland

REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, I received a letter from the Irish Legation which reads as follows:

IRISH LEGATION,
Washington, D. C., May 9, 1949.

The Honorable EDITH NOURSE ROGERS,
House of Representatives of the United States, Washington, D. C.

MY DEAR MRS. ROGERS: Knowing how terribly busy you have been in recent weeks in connection with the very important legislation being considered by the Congress, it occurred to me that you may not have had the opportunity of reading the remarks made by the Most Reverend Dr. Richard Cushing, archbishop of Boston, on the occasion of Mr. Sean MacBride's visit to Boston on the first of May and I therefore take the liberty of sending you a copy of them.

With all good wishes,

Sincerely yours,

SEAN NUNAN.

Mr. Speaker, I ask unanimous consent that the enclosed copy of Archbishop Cushing's speech at a solemn pontifical high mass, celebrated at Boston, be included as a part of my remarks.

The SPEAKER. Without objection, the request is granted.

There was no objection.

(The matter referred to follows:)

My principal purpose in speaking at this morning's mass is to bid the Minister of the Irish Republic a thousand, ten thousand-times welcome. This is a historic morning in the history of our cathedral because of the presence of the very distinguished first Minister of External Affairs for the Irish people. I want Mr. MacBride to know that in this region he is very much at home. He is among his own people—and they are very proud of him, both because of the nation he represents—the mother nation of so many Boston people—and because of his personal

gifts and accomplishments. This cathedral has welcomed among its worshippers and visitors many illustrious persons. In my own life I have seen the heads of great states and the leaders of mighty movements present in the pew occupied this morning by Mr. MacBride or in this sanctuary. We have welcomed kings, ambassadors, many and great dignitaries—and our welcome to them all was sincere and cordial. None, however, was more completely taken to our hearts than the representative of a Republic, youngest of the republics in the world, which in turn represents holy Ireland, oldest of the nations of the west.

This is not the place to discuss the political problems of Ireland—nor is it the time to recall the history of Erin and the story of our indebtedness to her. It is not the time nor is it the place to trace the heroic, divinely sustained struggle of the Irish people to preserve their faith and to achieve their freedom. I certainly shall not attempt to tell that story in the presence of a man, who, following in the high destiny of his valiant father and his almost legendary, patriotic mother, has played so brilliant a part in the latter chapters of that struggle. Both in your personal family history, Mr. MacBride, and in the office which you now hold, you are a living symbol to us of the fulfillment of the dreams of Dark Rosaleen's sons—the dreams plus the determination that the Dear Dark Head would one day wear her own crown and Kathleen ni Houlihan would break her bonds and take her free, proud place among the nations of the world.

But without discussing either politics or history, I can and do promise the Republic of Ireland our prayers. Whatever else we owe Ireland, and we owe her much on every level of culture and faith and all good things, we owe Ireland our prayers. Ireland has never ceased to sanctify the earth with prayers; more even than Gaelic, certainly more than English, prayer has been the language of the Irish for these 16 centuries and more. The prayers of the people of Ireland have been the strength of Europe in centuries gone by—they have been the strength of America since her sons and daughters began to come here. We all owe Ireland prayers.

You know, when you come to think of it, prayers are almost the only thing the Irish have ever asked of any other nation—prayers and the recognition of their right to live their own lives in their own way within their own sovereign nation. Other nations have never hesitated to ask us for money—our arms—our very blood. Ireland has only asked for prayers. Other nations, much stronger nations, nations which have always asserted their own superiority and their independence, have invited us to wage their wars and share their adverse fates. Ireland has only asked that we understand her problems, that we sympathize with her aspirations—the aspirations of every self-respecting people, the people of America above all—and that we give her our prayers. To that appeal we respond wholeheartedly this morning.

Her friends in America believe that the prayers of Ireland are close to fulfillment so far as they include the unconquerable Irish dream of national unity. As she was in the days when she sent her missionaries into devastated Europe to revive the embers of the faith of a thousand years ago, so again in these days which once again call out to all the energies of Christian peoples, Ireland is destined to be totally united and completely free. Those who love peace and righteous order will join with those who love Ireland in the prayer for her early and peaceful unity. All the logic of our generation is on the side of the confident belief that Ireland can be united and completely freed without any further bloodshed and without any sorrow to herself or to the present and future generations of the alien people whose rules in days gone by sought to divide and to destroy the Irish Nation. People are wiser now than once they were. New problems from other directions bring them better hopes that old problems, unnecessary problems, can be more graciously solved than once seemed likely. It is to the interest of both England and Ireland, it is to the interest of all the Western World, that any unjust heritage out of the past be rectified and that ill-advised policies perpetuating the mistakes of the past be corrected or abandoned. Certainly the policy of attempting to divide the Irish Nation—the policy of artificially splitting for political purposes a people whom God has united on every other level—is one of the mistakes which all the logic of peace, security, and good order will speedily correct. Good sense and good morality are closely allied. Good sense is bound to prevail in the questions which remain to vex the Irish Republic—and thus all cause for rancor between the two great people who share the Irish Sea will be eliminated and both will be the better for it—and the Western World will be the more united—and the peace will be the more secure.

This summer we propose to visit Ireland in our "Come Back to Erin" pilgrimage. We are going back to visit the parishes and the little towns whence our people came. The mood of our return is one of piety, natural piety and supernatural piety. Hence we style our trip a pilgrimage in the literal sense of the word. Some of our towns and parishes are in the six counties—some are in the present territory of the republic. But we do not say that we are going to Northern Ireland or to southern Ireland. We are going to Ireland—there is only one Irish land. We do not think of our people as northern Irish or southern Irish. There is only one Irish nation. It is to that whole nation that we are going in pilgrimage—in the hope that by our presence we can encourage them and in turn derive inspiration from them. It is for that whole nation that we pray—that God may keep it spiritually, culturally, and in its inward loyalty one, united Irish and holy family—that God may make it in all other ways and in the outward, civil organization of its loyalty one, united, free, God-fearing, and friendly nation.

Your presence here this morning, Mr. Foreign Minister, suggests these thoughts and prompts these prayers. We beg you to bring back to your people the promise of our prayers. We ask their continued prayers for us. It is from the Irish priests and parents that many of us here in Boston first learned to pray. Certainly it would be a great ingratitude if we forgot to pray for Ireland—and a great tragedy if Ireland ceased to pray for us.

God bless you—God bless your people—God bless all who are good to them.

Railroad Mail Rates Called Subsidy for Federal Government

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. VAN ZANDT. Mr. Speaker, David Lawrence, in his daily column in the Washington Evening Star of May 9, says there are plenty of instances of subsidy furnished by the Government to private business, but there is apparently only one conspicuous case in which a private business actually subsidizes the Government.

Mr. Lawrence discusses the subject in his daily column, which follows:

RAILROAD MAIL RATES CALLED SUBSIDY FOR FEDERAL GOVERNMENT—SENATE AUTHORIZES PROBE TO ATTEMPT EQUITABLE SOLUTION OF PROBLEM

(By David Lawrence)

There are plenty of instances of subsidy furnished by the Government to private business, but there apparently is only one conspicuous case in which a private business actually subsidizes the Government.

This is what the railroads are doing in carrying the mails. So they are asking the Interstate Commerce Commission for an increase in mail pay. This has led to over-all study of the whole question of transportation policy with respect to the mails.

Now the Senate has just adopted a resolution authorizing an inquiry designed to find out how an equitable solution of the problem can be found, with particular reference to the fact that there are three different rates paid by the Government for carrying mail.

For the Government subsidizes the air lines and pays out more than 80 percent of the revenue from air-mail stamps to pay the air-line companies. The Post Office Department, however, collects $668,000,000 a year from the public for first-class stamps and pays the railroads about $26,000,000. So that a very small fraction of the 3-cent stamp goes to the railroads—that is, only 4 percent of 3 cents—while the air lines get nearly all of the present 6-cent air-mail stamp revenue.

EXPENSES INCREASE

Not since the 1920's has there been a real study made of the problem. Meanwhile, operating expenses have gone up so that it costs the railroads, for instance, twice as much as it did then to carry mail. But they have not been able to get from the Government a proper charge for service rendered. The laws of the land say the railroads should get a fair return but, owing to the involved system of making rates, the railroads find themselves stymied. When they ask for an increase, the Interstate Commerce Commission naturally takes testimony from the Post Office Department, and there have been substantial delays because the subject is one of great complexity. Likewise, the Post Office Department is faced with a deficit, anyway, so it hesitates to agree to any increases that augment its expenses.

The railroads, on the other hand, see their competitors, the airlines, being heavily subsidized. While they do not question the wisdom of keeping the airlines going, they do wonder why the railroad should be required to render service without even meeting actual costs. One railroad executive puts it this way:

"The Government is subsidizing some activity through all the processes of the American economy. In transportation the barge lines are subsidized, and we pay taxes to make that up. It is true of the highways; it is true of the airways; it is true with all the various authorities. But the question is why, when all our competitors are subsidized, we should subsidize the Government, and that is what we are doing when we haul mail at less than cost. For our present mail rates, even including the 25 percent interim increase, and considering the 40-hour week to go into effect on the railroads, are just about half our costs."

COMPETITION IS ISSUE

The question of price and competition enters into the picture, too. Thus, the railroads aren't making any money out of handling express or out of handling mails. The more they try to raise their express rates to bring them up to a profit point, the more business they push over into parcel post. The same thing happens with less-than-carload freight. What it amounts to in the end is that the railroads subsidize the Gov-

ernment so that it can handle parcel post at less than it costs the railroads to haul the same articles. This means the railroads are helping the Government to compete with themselves on both parcel freight and express.

Senator LANGER, of North Dakota, who sponsored the resolution which the Senate has adopted, points out that parcel-post rates are different on the air lines and the railroads and ships. He thinks the rates should be coordinated. The Post Office Department pointed out to the Senate that the inquiry proposed is interesting but that it is in the midst of a study of its own.

Meanwhile, the railroads, balked in their attempt to get some action, a few weeks ago filed a request with the Interstate Commerce Commission seeking a 35 percent further increase because the roads learned that the Post Office Department wouldn't be ready to present evidence before the Commission from its own study until sometime in the middle of 1950.

The railroads, unlike private business, cannot of their own initiative increase their prices to meet operating costs. They have to wait on Government agencies—and that is usually a long, long wait.

Ambassador Vijaya Lakshmi Pandit

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington (D. C.) Post for May 9, 1949:

PEOPLE IN THE NEWS—WOMAN AMBASSADOR TO UNITED STATES FROM INDIA HAS LONG STRING OF FIRSTS TO HER CREDIT

The first woman ambassador to the United States has an impressive number of firsts to her credit.

Mrs. Vijaya Lakshmi Pandit, in 1947, was India's first ambassador, man or woman, to the Soviet Union. The previous year she was the first and only woman to lead a national delegation to the United Nations General Assembly. At home, in 1937–39, she was India's first provincial woman minister, holding the portfolio of Local Self-Government and Public Health.

The sister of Prime Minister Pandit Jawaharlal Nehru, she has more than justified, in 30 years of public service, her early fight against traditional barriers to participation of women in Indian public life. And while performing these useful services, showing the way to her countrywomen, enduring three prison terms for her political views, and writing three books, she has been eminently successful as a wife and mother.

"PORTRAIT" IS PAINTED

Her beauty, her composure, and her persuasive and effective manner of speaking have inevitably attracted the same attention as have her humanitarianism and her political leadership. Author Pearl Buck once wrote of her:

"Vijaya Lakshmi is so beautiful that one must first become accustomed to the fact. Silvering wavy hair, great dark eyes lively with intelligence, a creamy skin, fine Aryan features, exquisite hands, small bare feet thrust into gold sandals, saris that mold her slender figure into statuesque lines—this is her physical portrait.

"Then one becomes aware of her voice, soft, clear, resonant, speaking a pure English. When one listens, one becomes aware next of what is being said—something very firm, gay, witty, fearless—something worth listening to, whether one agrees with it or not."

A reporter who observed her at the United Nations General Assembly in 1946, wrote:

"It is a joy to listen to her, to watch her snatch points from her platform opponents in debate. Seeing her in action, one understands better the spirit that has upheld both herself and her distinguished brother."

Born August 18, 1900, into a wealthy Brahmin family at Allahabad, Swarup Kumari (as she was named) grew to young womanhood with every advantage money and position could give her. When she was 5, she was taken to England, where a governess was engaged to return to India to lay the foundation for her education. In 1921, she was married to a young lawyer, Ranjit Pandit, and in accordance with Indian custom, was adopted into her husband's clan and renamed.

Mohandas Gandhi had launched his civil disobedience campaign 2 years before, and the Nehru family was drawn one by one into the Nationalist movement. In 1932, when she was the mother of three daughters, the youngest only 3, Mrs. Pandit was first imprisoned for taking part in Indian independence day. Twice again she was jailed for defiance of British orders, her husband and eldest daughter enduring imprisonment with her at different times. Her husband, suffering from the effects of his last imprisonment, died in 1944.

Mrs. Pandit's three daughters all were educated in the United States, the two eldest at Wellesley College under the Mayling Soong (Mme. Chiang Kai-shek) Foundation. She herself first came to this country in 1944 as a delegate to the Pacific Relations Conference at Hot Springs, Va. At the San Francisco Conference of the UN in 1945, she presented the case of India unofficially. As head of the Indian delegation to the 1946 UN General Assembly, Mrs. Pandit succeeded in securing a vote of censure for the racial policies of South Africa.

She is author of So I Became a Minister, My Prison Days, and her autobiography, Sunlight and Shadows.

M. A.

Text of Letter From Franklin D. Roosevelt, Jr., to Cord Meyer, Jr.

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of a letter from Franklin D. Roosevelt, Jr., to Cord Meyer, Jr., president of United World Federalists, Inc.:

In the present international crisis, I firmly believe that the United States must maintain its defensive military strength. Appeasement and disarmament by the United States alone are certainly no answers to the dangers that we face. I also fully support our effort to rebuild the European economy through the Marshall plan and I will vote for ratification of the Atlantic Pact in order to make it clear that we will stand together with western Europe against armed aggression from whatever quarter.

These measures of military preparation and defense are necessary now, while other nations are free to prepare for war and aggression. But they are only part of a sound American foreign policy. Atomic and biological weapons combined with long-range aircraft have fundamentally changed the nature of war, and no nation in another conflict can hope to protect its people and its cities from widespread destruction. To prevent the disaster of such a third world war, we must do more than prepare for it. We must support the UN and the work it is doing to raise world health and living standards. Rather than abandon the UN because its present structure is weak, we must act to give it the power that it now lacks. I personally believe that a primary goal of American foreign policy must be the transformation of the UN into a world federal government with the authority to make world laws to prevent war and control armaments, with world courts to interpret the law and with inspection and police forces adequate to insure prompt enforcement. By building such a structure of enforceable world law for the common protection of all nations and peoples, we can lift the burden of competitive armaments and use our great scientific resources to sustain life rather than destroy it.

When elected to Congress, I will work with the growing number of Representatives who want America to take the lead toward a governed world and I will vote to the end that our country may play its part in replacing the suicidal game of power politics with the rule of law.

FRANKLIN D. ROOSEVELT, Jr.

Congress Serves Notice That It Will Resist Dictation

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 9, 1949

Mr. MICHENER. Mr. Speaker, my attention has been called to a pertinent editorial appearing in the Ann Arbor (Mich.) News, one of the leading daily papers of Michigan. I believe this editorial expresses the sentiment of a majority of the people living in the district which I represent in Congress.

The editorial reads as follows:

CONGRESS SERVES NOTICE THAT IT WILL RESIST DICTATION

Once again President Truman's decision to meet a situation head on has caused defeat of one of his strongest campaign promises.

A few months ago he lost the battle over civil-rights legislation in the Senate because he chose a fight to the finish rather than to accept a compromise.

Now he has lost out in an attempt to repeal the Taft-Hartley law and restore the old Wagner Act, one large element in this defeat being his loss-of-patronage threat against southern Senators if they did not vote with the administration on its measures.

Two rather obvious conclusions may be drawn from these examples of Mr. Truman's tactics in dealing with the Eighty-first Congress: the executive branch cannot dictate to the legislative without bringing forth serious repercussions, and Congress definitely has not accepted the election last November as a people's mandate for the President's misnamed Fair Deal program.

When our Constitution was drawn up back in 1787, the framers of that document devised a system of checks and balances in the National Government which would give to each of three branches, executive, legislative, and judicial, equal independent status and certain specific powers.

The idea behind this plan was that no one branch of government should become so powerful that it could dictate to either or both of the other branches.

At certain times in our history the legislative branch, or Congress, has been too powerful and influential while at other times the executive has assumed too much power. But in the end, reaction against encroachment by any one branch of government resulted in a more stable balance.

It appears that this reaction is having its effect again today. Congress feels that the President has assumed too much authority and is seeking to exercise powers which belong to the legislative branch. As a result, President Truman, like President Roosevelt before him when he tried to "pack" the Supreme Court, has found that Congress guards its prerogatives jealously and will not tolerate dictation.

At the same time, recent votes in the House and Senate indicate that the people's mandate idea emphasized by certain labor leaders and party bigwigs is not accepted by the lawmakers. In fact, the coalition of Republicans and southern Democrats suggests that Mr. Truman doesn't have a majority party in either House of Congress.

Unless the President realizes these facts, and the evidence is all before him, there is a danger that he will ruin his chances of getting much of his legislative program. In regard to some elements of the program that is well and good and no harm will be done to the real interests of the people. In regard to certain other generally accepted or acceptable elements defeat might be unfortunate.

Extension of Old-Age and Survivors' Insurance to Farmers and Farm Workers

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Edward S. Foster, general secretary, New York State Farm Bureau Federation, before the House Committee on Ways and Means, Washington, D. C., concerning extension of old-age and survivors' insurance to farmers and farm workers:

EXTENSION OF OLD-AGE AND SURVIVORS' INSURANCE TO FARMERS AND FARM WORKERS

Mr. Chairman and members of the committee, I appreciate this opportunity to appear before this committee on behalf of the New York State Farm Bureau Federation. Our membership is composed of approximately 88,000 New York State farmers located in the 56 agricultural counties of our State.

We urge enactment of legislation to extend old-age and survivors' insurance to farmers and farm workers.

BASIS FOR RECOMMENDATION

Five years ago the New York State Farm Bureau Federation, in a series of regional meetings throughout the State, discussed with representatives of the executive committees of our 56 county farm bureaus the social-security program in general and old-age and survivors' insurance in particular.

OPPOSE UNEMPLOYMENT INSURANCE FOR FARM WORKERS

It was the judgment of those leading farmers at that time that there is little need of or place for unemployment insurance in the farming business.

For the most part, unemployment is not a problem in farming, in spite of the fact that there may be wide fluctuations in farm wages from time to time.

Farm wages are always a compromise between factory wages and farm prices. When industrial activity is high, farm wages are high. When industrial activity is low, farm wages decline.

During periods of high industrial employment, the numbers of farm workers decline due to higher wages and shorter hours in industrial employment. When industrial employment declines, our farms become a great blotter and absorb many of those who lose their jobs in industry. True it is that farm wages decline under such conditions but the number employed in agriculture increases.

FAVOR EXTENSION OF OLD-AGE AND SURVIVORS INSURANCE TO FARMERS AND FARM WORKERS

Agriculture, unlike industry and business, cannot shut down the production line during periods of recession or decline in the price level. During such periods more employment rather than less employment occurs on farms. Therefore, we quickly dismissed any need for unemployment insurance in connection with farm employment.

At that time many of our leading farmers expressed the opinion that if we are to have the type of year-round farm workers we need on New York State farms, we must seriously consider extending to these workers some of the privileges available to factory workers.

During the summer of 1948 we conducted a series of five regional meetings throughout the State with members of county farm bureau executive committees. Approximately 300 practical farmers, who are making their living by farming, attended and participated in these meetings.

The extension of old-age survivors insurance to farmers and farm workers was one of the principal topics of discussion. We were privileged by having present at these meetings Dr. W. I. Myers, dean of the New York State College of Agriculture, and Dr. T. N. Hurd, Department of Agricultural Economics, to participate in the discussion and to help weigh the advantages and disadvantages of old-age and survivors insurance for farmers and their employees.

At the conclusion of each meeting an informal vote was taken and it was found that well over 90 percent of those participating favored extension of old-age and survivors insurance to farmers and farm workers. In some meetings the vote was unanimous.

RESOLUTION ADOPTED

In the call of the annual meeting of the New York State Farm Bureau Federation, which was held in Syracuse November 14, 15, and 16, 1948, it was pointed out that the official delegates representing the 56 county farm bureaus would be expected to further discuss this question and formulate a policy for the State farm bureau federation.

The extension of old-age and survivors insurance to farmers and farm workers was given an important spot in the annual meeting program and the matter was discussed at length and the following resolution was unanimously adopted:

"FARMERS AND FARM WORKERS ARE NOW COVERED BY SOCIAL SECURITY

"Be it resolved, That we urge the inclusion of this group in the old-age and survivors insurance program of the Federal Government."

I do not intend to convey to the members of your committee the idea that this resolution adopted in the annual meeting of our State farm bureau federation expresses the thinking of each of our 88,000 members, for it is doubtful if a very large percentage of these members have given the matter careful study and thoughtful consideration. However, I shall say without reservation that this resolution truly expresses the opinion of the leaders of our 56 county farm bureaus who have given the matter thorough study and consideration.

FARM WORKERS

I doubt if there can be much difference of opinion concerning the wisdom of extending old-age and survivors' insurance to farm workers.

Twenty-five years ago most of our year-round farm workers were young men who were on their way to farm ownership. The situation is now different. Extensive mechanization of our farming operations has not only made possible but has made necessary enlargement of our farms. In New York State we now farm one-third fewer farms and one-fourth less acreage than we farmed in 1900. In spite of this reduction in number of farms and acreage farmed, we are now producing in New York State 20 percent more than we produced in 1900. We can expect much more mechanization in agriculture in the years ahead and undoubtedly we shall have still fewer farms but larger farm units. All of this means that a large amount of capital is now required for a young couple to establish themselves in farming in New York State under modern conditions. Consequently a large proportion of our year-round farm workers have little hope of ever owning farms of their own. More of them are tending to become professional hired workers. In the absence of the incentive of eventual farm ownership we must think seriously about devising ways and means whereby these workers can make more adequate provision for their old age and for their dependents.

Unfortunately, most persons do not think much about the problems of old age till they reach or pass middle life and that is too late to develop independently a very adequate program for one's later years. There is also a tendency, in spite of the relatively high wages now paid farm workers, for these workers to completely live up to current income. In fact many live beyond their current income and become involved in expensive deferred payment plans for automobiles, household equipment, and the like. Like all of the rest of us, some of these workers, through good management and good health, make savings and provide for old age but a very large proportion do not and they are likely to become a public burden on relief when they can no longer work and earn.

The year-around hired man, like the farmer, wants to enjoy a reasonably good standard of living, wants to provide educational opportunities for his children, and wants to enjoy a reasonably good social standing in his community.

We are convinced that extension of old age and survivors' insurance is the kind of protection these workers need most of all. Certainly, unemployment insurance has little or nothing to offer these people.

Systematic deductions from the wages paid these men, matched by employer contributions, will permit these workers to have as good a standard of living as they would otherwise enjoy and at the same time build up some security for old age. Building some degree of old-age security through this form of annuity insurance can certainly improve the morale of workers and contribute toward greater self-respect and peace of mind. Farmers would also find it easier to get and keep good help if they could offer the same incentive as city employers.

THE FARM FAMILY

The best security that could possibly be devised for farmers would be that of a stable price level in line with fixed costs. Violent rise and fall in the price level is the root of most farm ills.

Because of the large amount of investment required in modern farming most farmers have to begin with a substantial farm mortgage plus considerable indebtedness for working capital. The first objective is to liquidate the mortgage and get out of debt. If the farmer is lucky enough to have been born at the right time so that he can go through a period of good prices during his

early years, he may get out of debt relatively soon and be in a position to build reserves for old age. However, if he is unlucky enough to be born at the wrong time, he may be approaching old age before the farm is paid for, or worse yet, he may even reach his old age with considerable debt.

It is customary practice for the farmer and his wife to plow back into the farm business their earnings, consequently, many farmers and their wives when they reach old age have most of their equity tied up in their farm business. If they reach old age during a period of low prices and depression, they may have to sacrifice their farm at only a fraction of its true value to get money to live on and to pay doctor and hospital bills. Such cases are tragic and in spite of working hard and saving all of their lives they may wind up in misery and desperation, too proud to accept relief, yet too poor to live without it.

In the absence of governmental policies to bring about much greater stability in the price level, the farmer who is self-employed, in a highly hazardous occupation, should be given the security of old-age and survivors' insurance. True it is that the benefits to be derived could not possibly give him and his dependents, in the absence of other income, a good standard of living. However, modest payments from an assured source, such as the old-age and survivors' insurance fund, could help greatly in providing the bare essentials as a supplement to whatever other income he might have from personal savings.

It should be kept in mind that old-age and survivors' benefits are not a Government dole—they are not relief—they are systematic payments to those who have worked hard—who have saved and who have reached old age.

CAN FARMERS PAY THE COSTS?

This is an important question. Unlike 50 years ago or even 25 years ago, modern farming is keyed to cash income and cash expenditures. Gasoline has replaced oats as fuel for power on farms. In many cases the oil burner has replaced the chunk stove; electricity has replaced the kerosene lamp; artificial breeding is rapidly replacing the herd sire; taxes are increasing; expenditures for fertilizer, feed and other farm supplies have gone up greatly as a result of higher prices and much greater use. All of these changes while they have made great progress in food production and farm living, simply mean that farmers now have many fixed cash costs to meet. The question arises, can the farmer meet the increased cash costs involved in providing old age and survivors' insurance for his workers and for himself? Certainly, it would be unsound for him to let his buildings, equipment and livestock go uninsured against fire. It would be unsound for him to let his life go uninsured against premature death. It seems equally unsound for him to let his old age go uninsured against the bare essentials of food and a place to live when his earning power is gone.

If old age and survivors' insurance is desirable for farm workers and farmers themselves, and we are convinced that such is the case, then by some means or other farmers will find ways and means to meet the costs involved.

MORALE BUILDER

Of all of the industries in our country, and this applies to the great industrial Empire State, agriculture is the most basic and the most important. It will be in agriculture where we shall make our last great stand for the preservation of life, liberty and the pursuit of happiness, the defeat of communism and the preservation of self-respect.

I sometimes think that the greatest contribution made by our farm organizations and our Agricultural Extension Service has been that of helping farm people to be proud of their profession. Pride in one's profession is essential if one is to make his or her greatest contribution as a productive producer. The New York State Farm Bureau Federation is sure that extension of old age and survivors' insurance to both farmers and farm workers can help both toward greater pride in their professions, can add to contentment and peace of mind and can make many an old age a happy one which otherwise might be blotted with insecurity, despair, and relief dependency.

Belling the Tornado

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. BROOKS. Mr. Speaker, news of tornadoes that sweep the interior sections of this country periodically disturb me greatly. I accordingly asked for a conference with the head officials of the Weather Bureau and yesterday afternoon I met with Dr. Francis W. Reichelderfer, Chief of this agency, for the purpose of discussing possibility that some warning might be given threatened areas before a tornado strikes. The Weather Bureau indicates that it is possible to predict weather in which tornadoes are born and the general area in which this weather prevails although it is not possible to predict the germination of the actual tornado. I believe much good can be accomplished by the Weather Bureau in releasing special weather reports informing people in a threatened area that cyclonic winds might be expected and I have therefore asked this office to consider the possibility of a program warning areas that weather conditions exist from which tornadoes may be expected and urging these areas to take appropriate precautions.

I am told that in Louisiana an average of four tornadoes strike yearly and in certain States in the Midwest, as in Nebraska and Kansas, this number is increased to 16 tornadoes per year. Hundreds of lives might be saved and much property damage prevented by timely notice of the existence of cyclonic winds and proper education as to the use of simple safety means and devices to protect life. If this destruction were a result of fire or floods, the Government would have a program. I think we can do much to reduce loss of life and of property resulting from these fearful disasters.

Mr. Speaker, I have addressed a letter to Hon. Francis W. Reichelderfer, Chief of Weather Bureau, Department of Commerce, about this same matter. I produce a copy of this letter for insertion in the RECORD:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 2, 1949.

Hon. FRANCIS W. REICHELDERFER,
Chief of Weather Bureau,
Department of Commerce,
Washington, D. C.

DEAR MR. REICHELDERFER: It is probably not possible under the present development of meteorological studies to predict with any degree of accuracy the time or place when a tornado will strike a community. I have felt for some time, however, that atmospheric conditions in which tornadoes develop can be predicted and areas alerted as to these conditions. I have also felt that some suggestions might properly be made by the United States as to the methods that people in threatened areas might use in protecting themselves against a tornado in the event it strikes. It seems to me that methods of protecting life in such a threatened area might be reduced to a fairly simple formula, such as providing slit trenches, cellars, or other places for use during the short period when the devastated effects of the tornado strike. Such a service could easily mean the saving of hundreds of lives yearly and the prevention of thousands of injuries.

I am therefore writing to suggest that your service undertake the obligation of predicting in certain areas conditions in which tornadoes may be expected. I suggest that these predictions be limited as far as practical in area and be worded so as to not unduly excite, at the same time fully warn, those people who live within the area where atmospheric conditions indicate the possibility of tornadic winds.

I shall appreciate your careful study of this matter and your report to me at the earliest possible moment. Tornadoes have been especially frequent and severe this year and I think such a report is most timely.

Sincerely yours,

OVERTON BROOKS,
Member of Congress.

And the reply of Mr. Reichelderfer to my letter is as follows:

UNITED STATES
DEPARTMENT OF COMMERCE,
WEATHER BUREAU,
Washington, May 5, 1949.

Hon. OVERTON BROOKS,
House of Representatives,
Washington, D. C.

DEAR MR. BROOKS: After our telephone conversation of May 2 and our very pleasant visit to your office, I received your letter of that date in regard to methods of detecting tornadoes, forecasting their occurrence, issuing warnings and furnishing advice in regard to protection measures without undue alarm to the population.

I believe that the information which we left with you at the time of our conference will help to indicate the action that the Bureau has been able to take in this respect. I am quite in agreement with your thought that we should make every possible effort to improve the situation. After our conference, I wrote to the Regional Director of the Weather Bureau at Fort Worth for the purpose of renewing and initiating action in the area in which he is concerned, including Louisiana, and I have forwarded a carbon copy to your office.

In regard to protection measures, we have given considerable publicity from time to time to certain safety measures which the people might take in a tornado emergency. One example is shown in the enclosed copy of an article on the reverse of the Washington daily weather map.

We are giving additional study to the matter in accordance with your suggestion and I shall keep you advised of further action. In the meantime, if you have additional suggestions I shall be pleased to hear from you.

Sincerely yours,

F. W. REICHELDERFER,
Chief of Bureau.

And the suggestions of Chief Reichelderfer, of the Weather Bureau, which are referred to in the above letter, are as follows:

The Weather Bureau recognizes certain general weather conditions which are favorable for the occurrence of tornadoes, and weather forecasters sometimes foresee the probability of tornadoes somewhere within a relatively large region, amounting to two or three States, or even more, but it has never been feasible to indicate the exact locality in which a tornado may strike.

For that reason the Weather Bureau has generally restricted its warnings to a statement that destructive local storms are likely, in order that the population can be put on the alert. Often severe local thunderstorms occur, but without tornadoes. Under such conditions the Bureau wants to alert the population but is anxious to avoid needless alarm of the population in a large area.

The tornado, as is well known, is a very violent storm of small diameter, with an average path of destruction only about 1,000 feet in width. Long experience in issuing warnings of local storms has led to the conclusion that the alarm caused by tornado warnings will be widespread and very costly in needless disruption to business and commerce and rarely helpful even in local areas in protecting against tornadoes. Many tornadoes, of course, pass through areas which are sparsely settled and do little damage except to trees and crops, which cannot be prevented.

Even after tornadoes develop they are so small that they can slip between reporting stations without being observed. Also they move so rapidly that it is extremely difficult to issue warnings even if they are observed. During the war very dense networks were set up through cooperation of local citizens, with the hope that tornadoes would be seen and reported and warnings could be issued to cities and towns threatened. In the operation of these networks anyone seeing a tornado or funnel cloud is asked to report the facts to the local telephone operator, who will relay the information to the nearest Weather Bureau office. The Weather Bureau official would immediately go on the air over a local radio station to advise the public of minute-by-minute developments concerning the storm. However, tornadoes move very rapidly and often cause limited destruction after which they lift above the ground and skip a considerable distance before the funnel cloud again comes down and destruction is resumed. For these and other reasons, the warning networks have been successful in only a few instances in getting out advance warnings; in other cases a widespread alarm has been occasioned in cities and no severe weather has occurred. This leads to criticism and eventually to a situation where the public no longer heeds any warnings.

The possibility of issuing warnings of tornadoes has been studied intensively by the Weather Bureau since its establishment in 1891, and prior to that time the Weather Service of the Signal Corps made extensive studies beginning in the 1870's. These studies are continuing and are being intensified. It is possible that radar may be of assistance in finding and tracking tornadoes. The Weather Bureau has a few radar installations at the present time and experience with these may point the way to some better method. Radar, however, depends on rain rather than cloud, hence, the radar may simply show that rain is falling without indicating that there is or is not a funnel cloud present. Other studies relate to the charting of electrical discharges in the atmosphere and computation of the instability of the air. All of these possibilities and others that come to our attention are being studied exhaustively.

Mr. Speaker, I present an editorial from the Shreveport Times of May 5, 1949, entitled "Tornado Warnings." This editorial is important and indicative of the attitude of our people regarding Weather Bureau warning of tornado weather. This editorial is as follows:

TORNADO WARNINGS

Representative OVERTON BROOKS has suggested to the Federal Weather Bureau that it operate a tornado-warning service. And the Bureau has agreed to see what can be done, at least on an experimental basis.

The Bureau's objection to tornado warnings is that it is impossible to predict exactly where a tornado will strike, and that a warning broadcast to the entire area where tornado conditions exist would cause needless alarm to many thousands of citizens.

For example, atmospheric conditions conducive to tornadoes might exist over all north Louisiana. A broadcast warning would alert citizens from the Arkansas border to Alexandria, and from Mississippi to Texas. Yet, no tornado might actually be experienced, or one or more might strike in isolated woodlands, inflicting no loss of lives, no injuries, and no appreciable property loss.

The Weather Bureau's contention deserves consideration. Yet, it remains a fact, as Representative BROOKS stated in offering his suggestion to the Bureau, that the annual toll taken by tornadoes is heavy, and no concerted action is being taken by anyone anywhere to lessen that toll.

Our own impression is that a broadcast warning that atmospheric conditions favoring tornadoes exist would cause no consternation in this region. It is rather rare that such conditions develop without the public generally being aware of a tornado feeling in the air. There is no alarm or consternation on these occasions. The usual reaction is alertness, readiness to get indoors if the weather becomes threatening.

A policy of broadcasting warnings might have the beneficial effect of encouraging construction of more tornado shelters underground, in cities as well as small towns and rural areas throughout the Tornado Belt. A good many farms already have this sensible protection, and all of them should have it. Certainly the city dweller who has land to spare would be a good deal less than foolish if he spent a few dollars to provide a safe tornado haven for himself and his family.

And an editorial from the Stamford (Tex.) newspaper on the same subject entitled "Belling the Tornado."

BELLING THE TORNADO

Representative BROOKS, Democrat, Louisiana, had a bright idea this week. He called on the Weather Bureau to furnish public warnings of the approach of tornadoes.

The Bureau took it under advisement, and promised to see what could be done. But it wasn't very enthusiastic. In the first place, the giving of tornado warnings would disturb, perhaps panic, a lot of people, might even paralyze business in the area affected. And, in the second place, a tornado isn't much more predictable than the antics of a hunting pup looking for adventure.

Representative BROOKS pointed out that tornadoes occur mostly in the South Central and West Central States, when a cold front advances from the northwest. He says the Weather Bureau knows when such a front is advancing and knows in general its extent and direction. He thinks that with some analysis and study the weather men might be able to give fairly accurate and timely warnings.

They could not tell people exactly where a tornado would strike, but by alerting people in the area of possible visitation, they could be of some real service, he thinks.

The freakish behavior of these monstrous winds is one of their identifying characteristics. They dip and dab down, then bounce maybe a few hundred yards—or a few score miles—before striking again. They will remove the second story of a house—as happened last week in the edge of Oklahoma City—without harming the first story, or they will whack off a couple of rooms without touching the remaining ones. They will drive a scantling through the 2-foot trunk of a tree, or a wheat straw through a sapling. They will peel the surface of the soil for a depth of several inches, or pull the feathers off a chicken.

Lightning may not strike twice in the same place—usually it obliterates the place from further consideration—but a tornado strikes the same place time and again.

Any additional protection the Weather Bureau can give would be acceptable.

The following is an editorial taken from the Garden City Daily Telegram of May 4, 1949, entitled "What To Do in Blow":

WHAT TO DO IN BLOW

A woman called the CAA weather office during the turbulence Saturday afternoon and said in an excited voice: "I live out here in the country, 20 miles northeast of Garden City. A tornado is coming right at my house. What shall I do?"

What kind of advice would you have given that woman?

There are several suggestions you could make. Such as the fact that she could drive out of a tornado's path by going to one side or the other if she had a fast car. Tornado funnels travel at approximately 40 miles an hour. Or that if she had a good basement to crouch in the southwest corner of it as tornadoes almost always move from the southwest toward the northeast, as the one Saturday did.

With Saturday afternoon fresh in everybody's mind, this is just the right time to uncork some advice as passed along by the CAA weather bureau.

First of all, be sure it's a tornado that's coming and not just a violent thunderstorm. What does a tornado look like? That's not a foolish question. Frosty Flora is getting ready to retire as the Kansas weather man, but he admits in all his forecasting years he's never seen one.

Tornadoes may occur at any hour of the day, but they most frequently come along in the afternoon or early evening. Twister weather is characterized by a sultry, warm, oppressive condition with southerly winds. Great thunderstorms usually are in the vicinity.

A thundercloud approaches from the west or the southwest, usually from the southwest, showing great turmoil and agitation in the cloud, the base of which begins to belly down toward the ground. Suddenly, a rope-like funnel-shaped cloud reaches from the bellied-down part of the thundercloud toward the earth, spinning rapidly counterclockwise. Duck, brother, a twister is heading your way.

This funnel may vary greatly in appearance, but remember, a tornado must have that funnel and a low cloud, no matter how black, isn't bringing a tornado without one.

Tornadoes, which emit a loud roar when close by, travel at an average speed of 40 miles an hour and hardly ever exceed a mile in width, and most of them do not exceed a quarter of a mile in width.

In case of a tornado the safest place is in a cave or underground excavation. People in open country can watch one approach and avoid it by moving to the right or left of its path, preferably to the left of its path which would be to your right if you were facing it. That's because the winds on the left-hand side of a tornado are not as strong and destructive as on its right-hand side.

Persons caught in the open without time to escape from its path should lie flat on the ground in the deepest depression available. If a culvert is close by, crawl into it. In a city the southwest corner of a basement of a frame house ordinarily offers the best protection against injury and flying debris.

Maybe you knew all the things, but a lot of people don't.

Another important item is to report your tornado as quickly as possible. If you are in its path of course you shouldn't worry too much about that until the funnel is gone, but if you see one swirling past your farmhouse get to the telephone and call the weather station.

Which means if you live in the vicinity of Garden City call the CAA. They will report it immediately. Radio warnings will be flashed over radio station KIUL and your word of warning may save lives somewhere ahead. Remember that tornado is only going 40 miles an hour. There is 15 minutes time to warn people who are 10 miles ahead.

The Telegram also will want you to call when you can. Your calls will enable the editor to write the story of that tornado. When it strikes through open country as it did Saturday afternoon, your calls were the ones which gave us the facts and our readers the news.

If you have children old enough to understand, be sure they too understand what to do should a twister head your way.

Remember how to protect yourself best, and how to protect others by reporting that tornado as quickly as you can.

A Lot of Us Are Tired

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, fortunately more and more people are growing weary and disgusted with the propaganda handed out by so many "do good" speakers who have the ability to throw a lot of meaningless big words together which presumably earn them their daily bread, but benefit the hearers not at all.

The thought I am trying to express is quite adequately stated in an editorial from the News-Palladium, published at Benton Harbor, Mich., May 6, which reads as follows:

ONE-WAY STREET TO NOWHERE

The internationalist do-gooders must all get their lecture themes from a single source. Every time one comes to town he or she dwells on the importance of American understanding and sympathizing with the people of foreign lands,

Are we supposed to look upon all the shenanigans round about us with sweet tolerance, and at all times overlook self-interest, stupidity, and corruption in others? Maybe that's beautiful idealism, but bitter as they sometimes are, we prefer the facts of life.

Most recent among the sweetness and light school to coach us in brotherly love is Miss Anne Guthrie, of the World Council of Young Women's Christian Association, who delivered two speeches here this week, one before the Rotary Club and one at the annual YWCA dinner.

We read the accounts of both addresses and gathered that America is really to blame for the world's ills. Miss Guthrie exhorted her audiences to "more knowledge of the world, more understanding, and a greater imagination. * * *"

Miss Guthrie is quite right about the need for knowledge and understanding, even if she is a bit naive about the aims of the Chinese Communists, but why give the impression that we aren't sympathetic, and why is nothing ever said about the rest of the world trying to understand us?

If the European relief plan didn't require imagination we don't know what would. And if it didn't require knowledge of Europe's plight and need for aid, what did prompt the American people to rehabilitate Europe at a cost of billions of dollars?

Frankly, after-dinner speakers who earn their fees scolding us for not being altogether happy in our sacrificial role in the world, give us a deep-seated pain which has nothing to do with the chairs they furnish at banquet meetings. A swift kick in the shins is the traditional way to express gratitude for American sympathy and help.

Soviet Backward in Technical Processes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Boston Traveler, Boston, Mass., May 6, 1949:

CAN STALIN BE TRUSTED? REDS 50 YEARS BEHIND UNITED STATES IN ITS KNOW-HOW—STRONG ON NATURAL RESOURCES BUT CLUMSY IN TECHNICAL PROCESSES

(By Col. James C. Crockett, U. S. Army, retired, a former United States military attaché in Moscow)

The Soviet economy is strong in natural resources and in the volume of war materials it produces but, compared with the United States and Great Britain, it is clumsy and backward in its technical processes. Insofar as human rights and happiness play a part in the economy, the state is extremely weak.

WHOLE ASSEMBLY LINE QUIT FOR ICE CREAM

The manager of a Russian enterprise must be a combined politician, judge, and technical expert. These top men would not have their jobs if they did not belong to the Communist Party. The little bosses must have strong Communist Party supporters who can protect them from criticism and charges when reports from the MVD secret police officer stationed at the plant brings about the replacement, if not worse punishment, of the offender.

The manager of a large rubber-tire plant complained bitterly because once a week an ice-cream vendor would come to the factory gate and ring a dinner bell. At this, the whole tire assembly line would quit work and dash out for ice cream. By the time the workers got back, 40 tires in process would be ruined and have to be scrapped.

He could not stop this work interruption because the ice-cream vendor was a big party man.

It is, however, the workers in Russia who have the most troubles.

LUXURIES ARE OUT

I knew two families who worked in factories near Moscow and lived in apartments owned by the factories.

One, a family of four, occupied a one-room apartment, size 30 by 25 feet, sharing kitchen, bath, and hall with three other families. For this they paid 56 rubles ($6.72) a month. The man's pay was $60 a month, his wife's $48. After paying for food and rent, there was less than $10 left over for all other purposes.

The second family earned a little more and had 2 rooms, each about 25 by 20 feet. The monthly cost of this apartment is 84 rubles ($10.08) per month. After paying for rent and food, the father of this family had sufficient money to buy a suit of clothes and underwear every 2 years, a pair of shoes, a shirt and several pair of socks each year, an overcoat and pair of galoshes about every 5 years. He also could supply his wife and children with clothing on the same scale, but luxuries of any kind were out of the question.

WORKER HELPLESS

The worker can do nothing about his pay, for the state fixes all wage scales. Factory and office workers, according to the Soviet constitution, work 6 days a week and 8 hours daily. They are entitled to paid holidays; but many workers told me there was constant pressure by the bosses and by the trade-unions to increase production.

Wages are based on a norm and extra pay above norms. As efficiency rises, the state raises the norms but does not change the rate for extra pay above the norms. For example, in 1947, norms in several industries were increased as much as 20 and 25 percent. The workers privately griped, yet could do nothing about it because the laborers cannot strike and there is no collective bargaining. The trade-unions, to which all laborers must contribute monthly dues, are in reality organizations to speed up production, maintain discipline, and furnish controls for the laborers.

A laborer cannot get a job without a "popusk" issued by the police—a paper which shows previous places of employment and reasons and authorization for quitting. A workingman cannot quit his job without permission of the manager. Neither can he be absent or late without a proper excuse.

CAN TRY LABORERS

The plant manager in most industries and mines, acting as judge, can try laborers and sentence them to forced labor in the MVD prison camps. The term of punishment is dependent on what disciplinary code is broken.

Where we would use machinery, Russia uses much hard labor. For example, few stores, if any, have a cash register. The amounts due for purchases are figured on a wooden square which has wires strung with wooden balls stretched across it. These are manipulated to add, subtract, and multiply.

There are very few labor-saving devices such as electric irons, dishwashers, vacuum cleaners, washing machines, escalators, lawn mowers, corn shellers, taxicabs, belt conveyors, ditching machines, soap flakes, etc.

In the winter the Moscow streets are kept as free of snow as the streets of any northern city in the United States. But no modern snow-removal machinery is used. Laborers, mostly women, shovel the snow into small wooden boxes which they carry to the street curb or a vacant lot and dump. Later, it is shoveled into trucks and hauled away.

PROCESSES OLD-FASHIONED

Many Russian manufacturing, mining, and agricultural processes are old-fashioned. For example, on the collective farm where I lived for a few months, the wheat was threshed in a very inefficient way. The ends first were cut off the sheaves of wheat. The heads were put into a small shelling machine which chopped them sufficiently to loosen the grain. The grain and chaff poured out of the machine onto a large tarpaulin on the ground. Then, on the first windy day, women laborers with shovels would toss the wheat and chaff high into the air, as the wind blew the chaff away, the wheat would fall on another tarpaulin. From this it would be shoveled into bags.

Despite the great amount of hand labor used, Russia is not so backward in know-how as many people think. She produces masses of excellent tanks, self-propelled artillery, trucks, and tractors and large amounts of good airplanes, rockets, small arms, and other military equipment.

She has constructed great works like the Dneiper Dam and locks, the Moscow-Volga

Canal and locks, the Khimki Port and the White Sea Baltic Canal. Russia also builds engines, tools, and machinery of all kinds.

AIDED BY FOREIGNERS

In doing these things, Russia has received much technical help from foreigners. I have talked to factory managers, mine bosses, and agriculturists who have worked and studied in the United States. Marshall Federenko of the Soviet tank forces once told me that several of his tank experts had worked in Detroit motor plants, but he also claimed the Russian tanks were better than those of the United States. The present head of the Russian trade-unions, Kuznetsov, told me he received his technical education in an American university. These are only a few of the Russians who have gotten their know-how in the United States.

Not so long ago Russia employed thousands of foreign engineers and technicians, and imported great quantities of foreign machinery and tools. But today she has large corps of trained engineers and technicians; she has brought thousands of German technical experts to Russia as prisoners, and she no longer is dependent on foreigners for additional technical aid.

Soviet economy really is that of the Clausewitzian total state. It is geared to the war-making powers of the state and is organized primarily for war-making purposes. One of the ideas of the total state—often discussed in theory at the German War College, but never put into practical application by the Germans—was the distribution of food and industrial production in such a way as to create autonomous military areas within the state. These areas were to be economically and militarily strong enough to fight independently of each other.

HAS GONE A LONG WAY

This theory has become of particular significance in the light of the increased destructive power of modern air and rocket warfare.

Although the job is far from being completed, Russia has gone a long way in the organization of autonomous military areas.

The Moscow area, with its industrial center in the regions of Moscow, Tula, Rybinsk, supports central European Russia, including the Baltic states and Belarussia. With its strategic direction toward northern Europe and the Baltic Sea.

The Donbas area, with its industrial center in the region of the Donetz river, Krivoi Rog Zaporozhe, supports southern European Russia and includes Ukraina and the Caucasus, with its strategic direction twofold toward south Europe and western Iran.

The Magnitogorsk area, with its industrial center in the region of Magnitogorsk, Sverdlovsk, Ufa, Karaganda, supports western Kazakhstan, Turkistan, and Uzbek with its strategic direction toward eastern Iran and India

FIFTY YEARS BEHIND

The Kuzbas area, with its industrial center in the region of Kuznetsk Basin, Stalinsk, Novosibersk, Orsk, supports eastern Kazakhstan and Kirgiz, with its strategic direction toward Kingkiang and central China.

The Angara area, with its industrial center in the region of Irkutsk, Kansk, Cheremkhovo and the Tungas Valley, supports the Far East with its strategic direction toward Manchuria and the Sea of Japan.

The Pechora area, least developed of any, with its planned industrial center in the region of Kotlas-Vorkuta, is planned to support western Arctic Russia, the Karelo and Murmansk, with its strategic direction toward the Scandinavian peninsula and Barents Sea.

Certainly, the objective of Russia economy is to strengthen the fighting capabilities of the Soviet armed forces. There is no question but that it is effective in the production of war material. It is, however, at least 50 years behind that of the United States.

Ronne in the Antarctic

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks, I desire to list the firsts accomplished on the Ronne Antarctic research expedition in 1946–48.

The privately financed Ronne Antarctic research expedition returned to the United States on April 15, 1948, after a year's scientific exploration in the Antarctic. Detailed investigations were carried on in 11 branches of science, including meteorology, climatology, solar radiation, atmospheric refraction, terrestrial magnetism, tidal observations, oceanography, glaciology, seismology, cosmic radiation, and geology. Nearly all of these reports have been published through the cooperation of the Office of Naval Research.

A geographical exploratory program was carried out with three airplanes, two tractors, and two dog-team parties. Flights explored and photographed the Antractic's—and hence the world's—last remaining coast line—a 450-mile stretch from Palmer Land to Coast Land at the bottom of the Weddell Sea—and followed the inland extension of the Palmer Land Mountain Range to its termination in a 5,000-foot-high plateau toward the South Pole. Over 60 new place names have been approved by the United States Board of Geographical Names. The geographical and technical-equipment reports have been published and are available.

The narrative of the Ronne Antarctic research expedition will be published this year by G. P. Putnam's Sons.

The Ronne expedition pioneered in many ways. The list of original accomplishments are as follows:

First, the 23 members of the Ronne expedition, including scientists, pilots, and so forth, exclusively manned and operated their 183-foot, 1,200-ton Diesel electric ship 15,000 miles to and from the Antarctic. Only eight of the men had ever been to sea before.

Second, the expedition's vessel, *The Port of Beaumont, Texas,* was the first motor vessel ever to be intentionally frozen-in Antarctica's icy grip for the duration of the expedition.

Third, this ship made a new record in southern latitude penetration of the pack ice in the Marguerite Bay sector.

Fourth, in order to accomplish the difficult major exploratory objectives, the three airplanes of the expedition made use of a new technique in polar flying—the leap-frog method. Two planes, one the trimetrogon camera equipped exploratory plane and the other carrying gasoline as cargo, flew into the unknown as far as possible. Then both planes landed together. The exploratory plane was gassed and continued into the unknown, while the cargo plane stood by guarding the flight by radio. During the expedition, the three planes made a total of 86 landings in the field, over half of which were unsupported, that is dependent solely upon their own resources to return safely. This record far surpasses that of any other expedition. Up until this time it was considered extremely hazardous to make plane landings out in the field.

Fifth. The expedition was the first to ascertain what geographers had called the world's last remaining major geographical discovery, that is, whether the Antarctic was one or two continents. Flights into previously unknown territory explored the last remaining coast line—a 450-mile stretch—and followed the extension of the Palmer Land Mountain Range. High land was found where a frozen strait dividing the continent was thought possibly to exist. The Antarctic is one continent.

Sixth. A total of a quarter of a million square miles of new terrain was explored for the first time and almost half a million square miles of known area was photographed for more accurate mapping, making a grand total of 700,000 square miles photographed by aerial trimetrogon cameras and tied in with astronomical fixes or ground control points.

Seventh. The three planes flew a total of 39,000 miles and hold an all-time Antarctic expedition record of 346 hours in the air.

Eighth. The first seismological station was established in the Antarctic, which obtained a year's record of world-wide earthquakes. These data were radioed to interested agencies in the United States, permitting more accurate location of earthquakes occurring in the Southern Hemisphere than had been possible previously.

Ninth. A definite correlation between weather information and microseisms—minute earth vibrations—was observed. These data provide valuable research information for this very new science.

Tenth. A tidal station was established and obtained almost a year's continuous tidal data for the first time.

Eleventh. Numerous atmospheric refraction measurements were obtained for the first time.

Twelfth. Continuous recordings in solar radiation during the Antarctic summer months were obtained for the first time.

Thirteenth. Cosmic ray investigations were made on two special plane flights for this purpose for the first time.

Fourteenth. The expedition's geologist was able to spend a total of 154 days in the field, 52 of which were completely devoted to outcrop geologizing. This record is more than the geologists of any previous expedition have been fortunate enough to obtain.

Fifteenth. The expedition was unique in the history of Antarctic exploration in that two women, one of whom was Mrs. Ronne, were included in the group. This is the first time women have ever spent a winter on the Antarctic Continent, or as far as is definitely known have ever set foot on the Continent.

In this connection, I believe it will be of interest to include the following data from the monthly supplement and international Who's Who of January 1949:

Ronne, Finn (ron-e), Antarctic explorer; b. Horten, Norway, Dec. 20 1899; s. Martin Richard and Maren Gurine (Gulliksen) R.;

came to U. S., 1923, naturalized, 1929; degree 24; mech. engr. Westinghouse Electric Corp., Coll., 1922; m. Edith Maslin, Mar. 18, 1944. Designer ship machinery and equipment Bethlehem Steel Co., Elizabeth, N. J., 1923–24; mech. engr. Westinghouse Electric Corp., Pittsburgh, 1924–33; accompanied Adm. Byrd's 2nd expdn. to Antarctica, 1933-35; returned to Westinghouse Electric Corp., 1935-39; chief of staff and 2nd in command, East Base, Palmer Land, U. S. Antarctic Service expedition, 1939-41; head, Ronne Antarctic research expedition 1947-48, conducting research in geology, meteorology, tidal and salinity recordings, terrestrial magnetism, cosmic ray and atmospheric refraction measurements, solar radiation, climatology, seismology and geol. exploration using trimetrogon aerial photography; major geog. accomplishment in 250,000 square miles discovered, proved Antarctica to be one Continent with no connection between Ross and Weddell Seas. Served U. S. Naval Reserve, 1941-47. Awarded spl. Congressional medals for participation in 2nd Byrd expedition and U. S. Antarctic service expedition. Fellow Am. Geog Soc. Arctic Inst. of N. A.; mem. Geophys. Union, Am. Polar Soc. Mason. Club: Explorers. Lecturer on expdns. Contbr. news scientific and popular articles on explorations and research to professional jours. and popular mags. Home: 12 Shepherd St., Chevy Chase, Md.

Citizenship for Certain Americans of Japanese Origin

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. O'HARA of Illinois. Mr. Speaker, under leave granted me, I insert in the RECORD the following resolution adopted by the City Council of the City of Chicago on April 22, 1949, petitioning the Congress to enact H. R. 199 granting full rights of citizenship to certain Americans of Japanese origin:

RESOLUTION ADOPTED BY THE CITY COUNCIL OF THE CITY OF CHICAGO ON APRIL 22, 1949

Whereas approximately 4,000 Chicago residents of Japanese extraction are not entitled to exercise the rights of citizenship in this city or country because of a discriminatory action on the part of Congress in 1924; and

Whereas some 33,000 sons of these and other Japanese-Americans courageously demonstrated their loyalty to this country by serving in the armed forces during the last war; and

Whereas the President's Committee on Civil Rights in its report in 1948 recognized the inequality and injustice of barring these long-time residents of this country from the rights of citizenship: Be it therefore

Resolved, That the City Council of the City of Chicago do hereby petition the Congress of the United States to enact into law H. R. 199 which will give to Americans of Japanese origin who came to this country prior to 1929, the full rights of citizenship of which they have been denied up to this time: Be it further

Resolved, That copies of this resolution be sent to Senators LUCAS and DOUGLAS, and to the Chicago delegation in the House of Representatives.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of the certain resolution adopted by the City Council of the City of Chicago at a regular meeting held Friday, April 22, 1949.

Witness my hand and the corporate seal of the said city of Chicago this 5th day of May A. D. 1949.

[SEAL] LUDWIG D. SCHREIBER,
City Clerk.

Flag Day, June 14

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 10, 1949

Mr. MACY. Mr. Speaker, today when many of our country's best-intentioned people are vacuously mouthing of "one world" by way of intimating they are not as yet unanimously decided how to vocatively manage the solar system, it prompts me to pause a while to think on our flag. As it flies untrammeled, high on the mast, we cannot but be prideful, comprehending well how our Stars and Stripes, created for a narrow strip of thirteen freedom-loving colonies, has billowed, parallel by parallel and degree by degree, across a continent.

Expansion has meant the widening of a close-knit ideological unit, our political idea going before. Our Nation, under its flag, is circumscribed by commonality of purpose and interest, and, if we lose our awareness of this, merging into global affinity, we shall have the reverse of an iron curtain—boundaries so diaphanous as to be unnoticed. This, as I see it, this "all-embracingness," is a great and trending threat in the unsettling period of peace we are now undergoing. No longer driven to fever heat by the blood-rousing drums of war, we concentrate spatially on dividing our substance and complicating economic complexities. Now national fervor appears comatose. This is a time of great danger, when, in loving kindness, we may fix our eyes on vague horizons, not seeing what we have at hand.

Though there is less of this hazard in time of war, 8 days after D-day when our forces battered into Europe, and I had been invited as a regent of the university of the State of New York to speak at Flag Day exercises in Brooklyn, I said:

It is well that we should pause and take stock as to what we have builded so well and make sure that in this land of ours we do not cast loose lightly from the governmental moorings, such as the Constitution and the Bill of Rights, from which many are convinced, and I believe rightly, that our greatness has been derived.

Today, 5 years from D-day, the need to pause is more than ever with us for our "greatness" as a Nation will not outlast our concept of greatness, so singularly indigenous it is. Without intense love for democracy, there can be no understanding or acceptance of democracy, no lasting democracy anywhere, and no true cherishing of our meaningful flag.

The full text of my Flag Day speech on the steps of Borough Hall, Brooklyn, N. Y., on June 14, 1944, under the auspices of the BPOE, follows:

Exalted ruler and officers of Brooklyn Lodge No. 22 and distinguished members of our order, ladies and gentlemen of Brooklyn and Long Island who are here to observe this solemn ritual—Americans all—it has become my serious duty, and I deem it a signal honor to have been so selected, to say a few words which, whatever they may lack in doing justice to this important occasion, I hope may be compensated by profound earnestness within. For indeed is this a most thrilling spectacle, timed as it is to fit the most momentous period in the history of our country, if not the history of the world. It is not so much what is said, although the spoken word has some slight value, but it is what every one of us have in our hearts that counts.

A flag is a symbol of a group, a community, a country or a nation, and our flag, the Stars and Stripes, is the symbol of the greatest nation ever developed on the face of God's earth. The American flag, conceived in right, fairness, and consideration, which of course includes forebearance and tolerance, stands forth today as a beacon light to a storm-tossed world of battling nations. You all know the history of the American flag and to those, who may wish to have it repeated for emphasis or to refresh their minds, this glorious pageant through the solemn ritual of the Elks under the auspices of Brooklyn Lodge No. 22 of that benevolent and protective order has portrayed this so beautifully and magnificently that I would hesitate to even trespass upon the sacred exemplification you have just witnessed.

As did the mother of one of our earlier and most illustrious brethren physically create the Stars and Stripes, I hope I may not be overbold in making mention that another lady also helped in its creation, one of Quaker persuasion which was the persuasion of a long line of my forebears who were among the prominent whalers and sailing-masters who plied their whaling and clipper ships from the Island of Nantucket in an earlier period of our country's history.

No human emotion in mankind is so deep, so sincere, so moving and compelling as that resulting from patriotic fervor. Love of country through all history has stirred man, and woman of course, to the greatest unselfishness and heights of sacrifice, even unto the willing giving of life itself. Many beautiful and eloquent comments depicting this theme have been written into all literatures, so well known that I need not recount. Suffice it to say that the spectacle of our glorious flag floating to an easy wind creates within us emotions that confound ready speech. Today that flag is being carried on 53 battle fronts on land and sea, and everywhere now it marches triumphantly. Not only is the victory for us but for those oppressed people who have suffered so under the heels of malignant tyrants. We have made sacrifices of course and will continue to make them for a cause that we know to be just, but many there are about the world who have suffered ignominiously and horribly, the more so because they have been for the most part utterly innocent of any provocation.

In Philadelphia a little over a year ago I heard the statement made that peace was never the result of passivity, and that statement struck me as having unusual significance. People have always fought to achieve peace and have had to keep on the alert and fight to maintain it. To our Constitution and Bill of Rights many of our people attribute the growth and well-being of our country, yet few appreciate the long drawn-out battle that brought it into being. General Washington with all his power and influence was unable to bring his own State of Virginia into line until after the necessary

other nine States had ratified the Constitution. Unless Massachusetts by the narrowest legislative vote of 187 to 168 had approved, other States likely would not have followed, and there might never have been a government such as we have come to believe has given more health, welfare, and happiness to a larger number of people over a longer period of years than any other in the world. Of those who labored many months in Philadelphia in 1787, it was said that when they concluded their deliberations they stood in awe of the excellence of the document they had written. As the late Supreme Court Justice Oliver Wendell Holmes said, "No result is easy which is worth having." So I think it is with all of us that the only real satisfaction in life comes from surmounting what at first seem to be insuperable obstacles.

Of course this theory presupposes that the effort is made in behalf of the right. As Lincoln said in the Cooper Union address which brought about his nomination for the Presidency, "Let us have faith that right makes might; and in that faith let us to the end, dare to do our duty as we understand it." There is a doctrine spoken by a humanitarian of humanitarians that rings so true that it could not be wrong. Holmes, too, inspires high idealism when he speaks of man laying "his course by a star which he has never seen" or digging "by the divining rod for springs which he may never reach." Those were the pregnant thoughts, he mentioned as "jewels five words long which great men have given their lives to cut from the raw material."

When everything is going well, so many of us do not have the gratitude in our hearts for those who gave their all that we might benefit, but are prone to carp at and criticise our governmental weaknesses without any sound alternative to offer. It is only when adversity, that greatest of all teachers, visits us that we begin to have some realization of what may have been irretrievably lost. With all our much-vaunted material benefits and scientific advancements, in this half century shortly coming to a close will have been written the 50 bloodiest pages in all history. Hence, it is well that we should have pause and take stock as to what we have builded so well and make sure that in this land of ours we do not cast loose lightly from the governmental moorings, such as the Constitution and the Bill of Rights, from which many are convinced, and I believe rightly, that our greatness has been derived.

Just currently from overseas Hanson W. Baldwin, noted military analyst and correspondent of the New York Times, writes from the flagship *Augusta* of the Western Task Force in the Bay of the Seine encouragingly as to the aspects of the invasion of western Europe on D-plus-three-day. And is it not peculiarly fitting that as the first crusade, as it is known in history, was organized in France toward the end of the eleventh century for the liberation of the Holy Land, that the greatest of all crusades that the world has ever known, in today's vast movement of troops and munitions of war, should be in greater part for the liberation of France? It occurs to me that Flag Day, so prominently and properly a feature Elkdom, following so close upon the much-talked-of D-day of June 6, 1944, might well be synchronized therewith as D-plus-eight-day, linking the history of our flag from its first origin with the highest efforts in battle ever known, as we all most earnestly hope and believe will have proved to be the case before many days have run their course.

Flag Day is, I understand, established as a legal holiday on June 14 in the State of Missouri. Armistice Day, resulting from the last World War, is established as a legal holiday throughout the United States on November 11, though three of our States have named it Victory Day. It is believed that out of this present conflagration there must come a permanent anniversary of celebration, participated in not only by our boys who have returned to us but in after years by their children and their children's children. Fortunately in New York, speaking through the mouth of our governor, we have been able recently to announce a program which will super-add material cooperation to the deep emotional gratitude and appreciation, of which we noncombatants at home, the beneficiaries of the heroism and self-sacrifice of our soldiers in far-away lands, cannot fail to be profoundly conscious. Might it therefore not be well for us to consider for this permanent anniversary which we contemplate, June 14, the day of our flag, commemorating for all time the flag unsullied, the flag of deliverance, the flag of never-a-defeat, the flag of recognized predominance at this, we hope, the final stage of the supreme effort of all time.

While paying honor to our flag, we should have an awareness that 1,600 Elks lodges over this broad land are conducting ceremonies such as these here today, though perhaps not with the great attendance this mighty and most populous Borough of Brooklyn makes possible; yes, in every one of the 48 States and the Territories as well, with the sole exception of two, the Elks lodges in Manila and Guam, captured by a treacherous foe. But, not for long. For with our constantly strengthening sea power only awaiting opportunity to strike back and strike back hard, our flag will again fly in its old accustomed places. Always a believer in a big Navy as our country's first line of defense, I hope that never again can we be persuaded not to keep it strong on both oceans. It is appropriate also to remember that each night in Elkdom the eleventh hour is set aside in tender recollection of our brothers who will come no more and those whose homecoming is anxiously awaited. Among this group there are some 70,000 Elks now in the armed services of their country.

And, may I say in closing that, mindful of the past, we keep our eyes steadfast upon the immediate and all-important future, lest in lacking the foresight that though intelligence be ours, we find ourselves at a later day regretful that through impatience, greed, or selfishness we have again been led on to evil days. Power seems to be lasting only when exercised in moderation. And now to those of us whose hearts hang heavy with grief and torn by anxiety may I express the earnest hope and prayer that when another Flag Day rolls around our dear ones will be back with us hale and hearty, and should such unfortunately not prove to be the case, that loss of even life may leave the satisfaction that the sacrifice has not been in vain, but justified by the restoration of a greater and happier world for all mankind.

Evansville City Officials, Labor Group Back Repeal of Taft-Hartley Law

EXTENSION OF REMARKS

OF

HON. WINFIELD K. DENTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 10, 1949

Mr. DENTON. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD two resolutions; one passed by the Common Council of the City of Evansville, the other adopted by the United Labor Group of Evansville, Ind.

Whereas on the 4th day of April 1949, the Common Council of the City of Evansville, Ind., received and made a part of its minutes a resolution from the United Labor Group of the City of Evansville relative to the repeal of the Taft-Hartley law and the adoption of the Thomas-Lesinski bill, a copy of which said resolution is attached hereto and made a part hereof; and

Whereas the common council has determined to act in accordance with the request of the said resolution and to memorialize Congress for the repeal of the Taft-Hartley law and for the adoption of the Thomas-Lesinski bill: Now, therefore, be it

Resolved by the Common Council of the City of Evansville, That a copy of this resolution to which there is attached a copy of the resolution of the United Labor Group be transmitted by the clerk of the council to Senators HOMER E. CAPEHART, WILLIAM E. JENNER, and to Congressman WINFIELD K. DENTON.

Passed by the Common Council of the City of Evansville, Ind., on this 2d day of May 1949, and, on said day, signed by the president of the common council and attested by the city clerk.

FRED C. FISCHER,
President.

Attest:

THOMAS P. TOON,
City Clerk.

Whereas there is pending before Congress legislation to repeal the Taft-Hartley law and reenact the Wagner Act, known as the Thomas-Lesinski bill, with amendments as recommended by President Harry S. Truman; and

Whereas the Taft-Hartley law was designed to weaken labor's position at the bargaining table; it threatens the living standards of American workers, deprives them of fundamental human rights and unnecessarily injects the Government into the field of labor-management relations; and

Whereas this law has been directly responsible for a number of strikes in our community; has materially retarded the growth of new unions, and by its encouragement of antiunion employers, aided and magnified conflict between labor and management, and

Whereas the Taft-Hartley law was one of the major political issues in this community and the Nation in the last election. The voters in Evansville had a clear choice between a Congressman who supported the law and one equivocably opposed and favoring its repeal. By an overwhelming majority, the pro-Taft-Hartley candidate was defeated: Be it therefore

Resolved, That the United Labor Group hereby petitions the Common Council of the City of Evansville to memorialize Congress to repeal the Taft-Hartley law and replace it with a fair labor-management law, by passing the Thomas-Lesinski bill (H. R. 2032 and S. 249) as recommended by President Truman; be it finally

Resolved, That copies of this resolution be sent to the Common Council of the City of Evansville, to Senators HOMER E. CAPEHART and WILLIAM E. JENNER, Congressman WINFIELD K. DENTON, and the newspapers and radio.

Adopted Thursday evening, March 31, 1949, by the United Labor Group, John Soucie, president.
